FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 26, 1888.

VOL. XXX.—No. 1. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 50 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

THE NATIONAL FORESTRY BILL.

THE bill prepared by the American Forestry Association for the consideration of Congress at the present session is a wise and important measure. Its adoption at Washington would mark a turning point in our system of public land administration. Exploding the traditions which have to this time held sway, the framers of the bill recognize that the existence of timber on land gives an added value to it; and the bill provides for the recovery of the value of the timber from the purchasers of such United States land as may hereafter be thrown open to sale, or from the occupants of such lands thrown open to homestead entry. Lands which in the opinion of the Commissioner of Forests are more suited for agriculture than for State forests will be thrown open to sale or homestead entry as hitherto, but the timber will be valued by the Forest Department, and the purchaser or occupant will be called on to pay for it at that valuation. (Sec. II.)

The most important measures provided by this bill are: First, the withdrawal from sale of all unsurveyed public lands of the United States, embracing natural forests, or which are less valuable for agricultural than for forest purposes, together with all surveyed lands returned as timber lands; second, the classification of these lands in three classes (Sec. VI.); third, the absolute reservation of all lands in the first and third classes as national forest reserves (Sec. VII.), and, fourth, the restoration to entry of lands of the second class after due appraisement and classification.

The operation of the bill is apparently not extended to surveyed lands other than those returned by the public survey as timber lands, unless they are mountain lands, or lands situated near the headwaters of any stream, or lands more fitted for forest than for agriculture. These exceptions are not very clearly provided for in the bill, but it may be safely inferred from the provisions of Sec. VI. that the framers distinctly contemplated the reservation of all lands, which for economic or other public reasons should be held permanently as forest reserve.

The provisions of the bill most open to criticism are those embodied in Sec. 3. It is not for the would-be settler to decide whether the land he applies for is more valuable for agricultural or mining purposes than for the timber growing thereon; nor that it is not situated near the headwaters of any stream; the one is merely a matter of private judgment, the other a question of definition. The United States Surveys and State surveys are so far advanced in almost every State of the Union that, pending actual survey and classification, the Commissioner of Forests should have no difficulty in indicating all the most important blocks of land, which from their general elevation, or relation to the river supply of the region, it would be desirable on economic grounds to include in the forest reserve.

The facilitation of settlement on timber lands is of no vital importance to the well-being of the country. On the contrary, it would be to the public interest to withdraw all such lands from entry finally and unreservedly, and if after survey and classification, and a careful calculation of the area necessary to the supply of the permanent timber needs of the country, it should be decided that the reserved area is in excess of requirements, the lands best suited for agriculture might then be disposed of at their market value. Nothing can be more disastrous than the present system of giving land for nothing and allowing it to be exhausted with impunity. This country will never be on a sound agricultural footing as long as there is one acre of land open to homestead entry, or obtainable at a price per acre below the cost of an ordinary dressing of manure.

The forest bill puts an end to all further speculation in United States timber lands, and the sooner the several States follow suit and withdraw their timber lands from sale or entry, and make reservations of their mountainous tracts, the regions feeding the headwaters of their streams, or such area as may be required for the permanent local supply of forest products, the better for the public.

The passage of the United States forestry bill would render the present a very auspicious time for speculation in State timber lands. It is certain that the several States having timber lands would follow the lead of Congress without any very great delay, and that the moment they did so, inferior timber lands, which speculators have hitherto rejected, would be sold at a valuation over and above the assessed price of the land.

The bill it will be seen provides for the appointment of a Commissioner of Forests, and four assistants, and for the appropriation of a sum of five hundred thousand dollars for the payment of salaries, traveling, and other expenses. This staff is altogether inadequate to the duties required of them, and one of the most important matters demanding the attention of the Commissioner of Forests will be the selection of a suitable, efficient, and trustworthy staff of subordinates; for the administration of the forests will be practically in their hands.

This bill is in line with the reforms long advocated in this journal, and we hope we may congratulate its promoters on having secured the passage of so carefully considered and comprehensive a measure.

THE MENHADEN QUESTION.

THE men engaged in the menhaden oil and guano industry met the committee of the National Rod and Reel Association at Mr. Blackford's laboratory, on Thursday last, and answered such questions as the committee asked. The object of the inquiry was to learn to what extent, if any, their wholesale capture of the menhaden affected the supply of food fishes, and to devise, if possible, some way to remedy the evils claimed to result from the menhaden fisheries. Some wonderful stories were told, and the menhaden men assumed that the committee knew nothing of the habits of fish, an assumption which was not openly contradicted, but was received with a due allowance of salt.

The old statements, that bluefish and weakfish do not feed on the menhaden, were made, and when Capt. Jep. Hawkins was asked what did feed on this little fish, he answered that the sharks and porpoises alone did so. Capt. Hawkins admitted that all the other fishermen were prejudiced against the menhaden steamers and called them "pirates," but he was positive that this prejudice was founded on ignorance of the habits of fishes. He said that bluefish were bottom feeders and were mainly caught by boats out several miles from land; that he sold menhaden for bait to these boats, but the latter fish were only to be obtained near shore.

Hon. Daniel T. Church, of the menhaden works at Tiverton, R. I., repeated the saying ascribed to Prof. Huxley that "man is not a factor in the destruction of sea fishes," a statement that few men whose business interests lie outside of oil and guano will accept as true.

Man has been a factor in the destruction of all animals not under domestication, and he is destroying the balance which kept up the supply of menhaden against their other enemies. Mr. Church said that there was very little money in the capture of menhaden now; but he has not gone out of the business.

It was admitted that three times the amount of oil could be obtained from the fish in the fall that could be got from an equal number in the spring of the year, but when the committee asked if a close season, up to July 1, would suit them, they thought that it would not, and that they would obtain no more oil during the season by leaving the fish unmolested during the early months.

The replies of the menhaden fishers were so evidently governed by their business interests that it was apparent to all that their opinions were formed in their pockets. They disclaimed capturing food fishes for oil, and this is no doubt true, but the proposition that bluefish do not feed on menhaden will be difficult of belief by men who capture the bluefish with menhaden bait and find them gorged with the same fish.

NOTES AND COMMENTS.

AN instructive incident has been furnished by a number of millionaire owners of fast horses in this city who have had the audacity to demand that a considerable portion of the Central Park be taken from the people and given over to them for a speeding driveway. The effrontery of this proposition is clearly seen; the people of New York put a high value on their park; they cannot be cajoled nor bluffed into surrendering it for any such purpose as that contemplated by the horsey men. The instruction of the incident lies in this, that the attempt to seize the people's pleasure ground here in this city by fast horse owners is on a miniature scale just what certain railroad speculators have tried again and again to do in the Yellowstone National Park, when they have gone before Congress with their shameless demand that the people of this country should be compelled to give up a portion of their park to be destroyed for the benefit of the speculators themselves. The National Park schemers have been balked more than once, but they are now trying it again. Eternal vigilance is the price paid for the integrity of the Central Park of New York city, and nothing less than eternal vigilance will save the greater Park, which belongs, of right, to the whole people.

Assemblyman Flaherty, of Massena, comes to the front with an amendment to the game laws. It allows clubs which participate in side-hunts the privilege of shooting all animate things that come in range on the day of the hunt. This is a good specimen of the vicious, selfish, special legislation which is an annual curse at Albany. Mr. Flaherty's bill is not founded on reason. Certain birds are protected from destruction because they are useful allies of the agriculturist; they ought never to be killed; the community recognizes this principle and enacts a law to preserve them. The principle is not at all changed simply because some of Mr. Flaherty's Massena constituents want to go out and pot these birds for count. Their destruction would be unwise and harmful, whether or no the persons who shoot them belong to incorporated clubs and are divided off into sides and captained.

Senator Farwell, of Texas, has adopted for his barb-wire fence an electric fangle, by whose action anything coming into contact with the fence will receive a powerful shock. If the new device comes into general use, before the "true sportsman hies" to the wire-hedged field it will be just as well for him to see that the circuit is broken. The wire fence has already slain its quota of men with guns, which they have attempted to pull through after them. Perhaps electricity itself will not prove more deadly than the old combination of the man, the gun and the fence.

A New York shopkeeper displays in his window a brace of pistols which are alleged to be the identical arms used by Aaron Burr and Alexander Hamilton in their duel. The pistols have percussion locks. As the Burr—Hamilton arms were flint-locks, the New York shopkeeper is evidently playing upon the credulity of the populace.

THE ROCK CLIMBERS.

V.—FRUITLESS CLAMBERING.

"WELL," said Jack, as he entered the tent one afternoon, after changing the horses to fresh grass, "if we're going to start at daylight to-morrow, we've got to get the boat up the Inlet to-night."

"We may as well do it now," responded Yo. "It will take us till near sundown as it is. Come on, Appekunny."

They had determined to make a trip by water to the Upper Lake to try to get some goats. Yo urged this. So far, although they had been in camp here two or three days, nothing eatable larger than a chance duck or grouse had fallen before their rifles, and they were getting hungry for something more substantial in the way of fresh meat.

The Rhymer, it is true, had fired at a bear, but Yo did not care for bear meat, and besides, this particular bear, though pierced through and through by the hunter's deadly ball, turned out to be only an old black stump, and so was not brought into camp. The error of judgment which led to the firing of this shot must not be charged against the Rhymer. Jack was responsible for it, and no one else. The two men were going through thick pine timber on their way up Singleshot when they came on some very fresh bear sign. They followed the tracks which grew constantly more fresh, and at length they smelt the animal. They went forward as quickly as possible and yet with the utmost caution, and suddenly, 100yds. below them and lying down under the upturned roots of a fallen tree, Jack saw the bear, as he thought, and whispered to Rhymer, "There he is." There was no time for investigation, a single bound would take the black object out of sight, so the rifle jumped to the shoulder and spoke out, but the bear never moved. "Look at it through the glass," said the Rhymer in a hollow voice, for dreadful doubts began to force themselves upon him. Jack did so.

Afterward they had clambered all over the north point of Singleshot, and into the "hole" behind it, but had seen no game and very little fresh sign.

Meantime the others had walked their legs nearly off on Flat Top. The climb, always difficult, had been made more so than usual by the wet snow, which in the timber still covered the ground and made the steep hillsides, clothed with the slippery soap grass, very hard to ascend. Appekunny, who for two or three months had been roaming over the mountains, was in good training, and could march steadily along, but Yo, though not fat, was wofully scant of breath, and after every twenty or thirty steps had to stop and pant as though he were a consumptive. After they had reached the foot of the rocks the climbing became easier; not that it was less steep, but because it is not so difficult to clamber up a pair of stairs as it is to ascend a slippery hillside of equal steepness. In the snow on the rocks they had found quite a lot of fresh sheep sign, and had hunted all day, following these fresh tracks, but without ever coming within sight of game. In their peregrinations they had come upon a "lick," where a salt spring flowed out of the mountain side, and here the sheep had been not an hour before, but still they kept out of sight, and at last the approach of evening had forced the weary and unsuccessful hunters down the mountain side toward camp.

Grouse and ducks are capital eating, and had been greatly enjoyed, as had also the great lake trout that had been lured out of the depths of the lake, but the men all felt that one thing more was needed to make camp thoroughly comfortable, and that one thing was a piece of fat meat hanging upon the tree that stood close by the tent door. On the Upper Lake it was thought that they could surely get a goat or two, and it had been decided to try to secure one on the following day.

Appekunny, Jack and Yo went down to the lake shore and shoved off the boat. They had provided themselves with a line sixty or seventy feet long for towing the craft in the swift water of the Inlet, for the oars would be useless against its tumultuous rushing torrent. Half pushing, half poling, they forced the boat through the shallows to where the Inlet pours into the lake, and then Appekunny and Jack took the tow line ashore and Yo stood in the bows, ready with an oar to keep her off the bank, and a start was made. It was very hard work to get the boat along. The current was very swift and the thick brush on the bank made the walking laborious. At frequent intervals a thick, bushy spruce growing on the edge of the bank and leaning far out over the water would interrupt their progress. At such places, one man would hold the line, while the other went round the tree, climbed out on it, took the slack which was thrown to him, and drawing it tight, braced himself to hold the boat until the other had passed round the tree to take hold and start again.

Every now and then the timber growing on the bank became so thick as to be quite impassable, and it would be necessary to cross the stream, on one side or the other of which are sand or gravel bars, where the work of cordelling was much easier and their progress more rapid. Once or twice on the broader and seemingly still reaches of the Inlet they tried to row the boat, but the current was too swift for much advance to be made in this way. As they went on the bank became more and more difficult. On one side the bluff was ten feet high and overgrown with willows, through which it was almost impossible to force one's way, while on the other, though it was lower, it was cut up by sloughs too wide to jump, and filled with mud. Then Jack's patience gave way, and with two or three forcible expletives he sprang into the ice cold water close to the shore, where it was up to his knees, and began to wade.

The length of the Inlet is only about three-quarters of a mile, but it took an hour and a half to bring the boat up to the wide beach on the west side of the Upper Lake. Here it was securely fastened. Then the boatmen returned to camp.

Long before daylight next morning the camp was astir, and the first gray streaks were just appearing in the eastern sky when the four men, carrying only their rifles and the photographic camera, started for the boat. The morning was perfectly still, a fortunate condition, since, if the usual west wind had been blowing, it would have been hopeless with their heavy boat to attempt the seven-mile row which must be accomplished to bring them to the ground on which they proposed to hunt.

Before the sun had risen they had pushed off from the shore, and the boat was swiftly passing over the quiet waters. It was cold, and the ice which had formed during the night in the boat showed no signs of melting. At length the sun rose, flooding the scene with genial light and heat, and raising the spirits of the shivering men. The row up the lake was beautiful. On either hand were the mountains, which, as they advanced, came closer and closer together, till at length the boat passed through the narrow gap where the long steep ledge of rocks running down from Otu Komi almost reaches the mountains on the opposite side of the lake. Then the upper end of the lake came into view with its wonderful setting of snow-clad mountains, and jagged peaks scarred from base to summit with blood red gashes. Life was not wanting to make complete the lovely picture. Now and then a wild duck would be seen mirrored in the still water on which it floated, or the glassy surface of the lake would be dimpled by the touch of a gull's wing, or broken by the rise of a trout. Once the round head of an otter appeared near the boat, and for a few moments the rowing ceased while they watched the cautious animal as it dived and reappeared and dived again. A little later a mink made his appearance on the shore, prowling along in search of his morning meal, and afterward a flock of Bohemian chatterers flew close over the boat, uttering a curious sibilant whistle, which explained to the ornithologist the origin of the name of these usually silent birds.

After passing through the narrow gap the mountains rose almost vertically. Goat Mountain on the right and Red Eagle on the left, though equally steep and stern, were yet utterly different in appearance. The first, facing the south, was bathed in the bright sunlight, and with the reds, grays, browns and greens of its rocks and trees, presented a fine mass of warm and varied coloring. The last, looking northward, was in the shadow and white, except on the steepest rock faces where the snow could not cling, and these seemed black and gloomy by contrast with the snow. On the one side all was bright and cheerful, while on the other seemed to rest the shadow of some awful crime. It had been arranged that Appekunny and Yo should hunt on Red Eagle, while the Rhymer and Jack, after leaving them, should cross the lake and hunt in Monroe Basin, a locality famous for the numbers of goats which frequent its rough sides, and equally renowned for the difficulties of ascending those sides. The boat touched the shore and two of the hunters disembarked, and, after setting up the camera and taking two or three views of the lake, they started to climb the mountainside. Their prospects for success did not seem good, for in cold and snowy weather the north slope of a mountain is not the place to look for game. In the summer this would have been a capital ground for sheep or goats, but not so in the month of October.

Up, up they went, first through thick spruces and firs, where the undergrowth was thick and the branches grew low, so that it was necessary either to push them aside or to creep under them, then for a short distance over a comparatively open stretch of mountainside, where the ground was covered with great masses of rock, among which grew thickly the twisted stems of the mountain alder; then plunging down the almost vertical side of a gorge, at the bottom of which trickled a tiny ice-bordered stream, and up the other steep side over slippery, sliding shale, that started on a rapid journey downward as soon as the foot pressed it. It was hard and exhausting work, and the two breathless men, when they reached the top of the little cañon, were glad to throw themselves upon the ground and rest for a few moments while they regained their wind. The real climb was now before them, but it was over open ground and rocks, which promised hard work, but nothing near so bad as the labor of breaking their way through the undergrowth.

Presently they started, zig-zagging slowly up over the steep shale, which was moderately firm under the foot, but was slippery with tufts of soap grass. Before long they reached the snow, and after about an hour came to the foot of the rocks, which rose like the steps of a giant's stairway far, far above them. Each step was from twenty to sixty feet in height and the vertical face of the precipice offered no means of ascent. To proceed toward the summit it was necessary to follow along the foot of each wall until some little crevice was found where the water had cut its way through the rock, and to make their way up this. Sometimes after advancing half way up such a crevice it would be found that the way was barred by a vertical step ten or twelve feet high, on which there was no more chance for foot or hand hold than there would be on the wall of a room. Then they would be obliged to retrace their steps and look for another path. It was cold, slow and difficult work, and now and then a little dangerous. Everywhere tiny springs trickled out of the ledges, and freezing as they flowed, coated the rocks with a thin sheet of glare ice. Soft, wet green moss, yielding and treacherous to tread on, grew on the edges of the rocks, and sometimes the slate points, which offered an inviting place on which to rest the foot, broke down as soon as a few pounds weight was rested on them. The men moved along independently, and if the one behind did not like the looks of the path chosen by his predecessor, he would pass on and look for one that seemed to him easier.

After an hour of this climbing, during which neither game nor sign of game was seen, they came to a sheep and goat trail which passed along the side of the mountain, and as this promised easier going, they followed it. Although the snow had fallen three days before, there was not a track in this trail, and there seemed no likelihood that they would meet with anything on this cold, snowy side of the mountain. They followed this trail westward, constantly ascending, until they came to a deep gorge, down which, far below them, they could hear the rush of a mountain torrent. From the sides of the abyss the mountain rose on either side in a rough shoulder, and in the same steplike series of precipices, but guttered here by numerous ravines and chasms, through which the waters from the melting snows flow down in spring and summer to the stream below. Here they rested for a while, ate their lunch, and lamented the lack of game. The trail now divided, one branch going up the shoulder of rocks and the other plunging down into the gorge. They followed the former, and spent two hours more, constantly going higher, but without seeing game.

Meantime the boat had crossed the lake and landed in a little cove, where the Rhymer and Jack had left it, and made their way into Monroe's Basin. The climbing was rough and steep, chiefly over hills of sliding shale, though there were not wanting precipices to lend variety to the climb. The two followed up the basin for several miles, but saw no goats, although there was some fresh sign. But they did not get high enough up for the goats. At length, turning their steps toward the shore, they took to the oars, and by three o'clock were sitting about a fire that they had kindled on the beach where they had left their comrades in the morning. They shouted in the hope of hurrying them, for there was a long row before them, and the sun was lowering toward the mountain tops. At length their calls were faintly replied to, and presently the others, wet with perspiration and with trembling knees, came out of the timber and gladly drew near the fire.

Jack, who had been examining Goat Mountain with a glass, had detected a number of goats on it, and a careful inspection revealed eight or ten of these animals moving about and feeding over its sides, while a number of other objects looked like goats, but might be snow or white stones or weathered tree trunks. Here at last was something definite and positive, and the hopes of the hunters rose high.

Then presently all hands tumbled into the boat and the return journey began. A bitter wind blew from the west, and helped them on their way, but it was very cold. The row occupied but two hours, and by the time the landing was reached two or three of the party were so stiff with cold that they could hardly get out of the boat.

Yo.

On Wednesday, Jan. 18, Mr. Pays, the County Clerk of Yellowstone county, Montana, filed for record a mortgage on the franchise of the Billings, Clark's Fork and Cook City Railroad to the Farmers' Loan and Trust Company of New York amounting to $2,000,000. Charles F. Roberts of New York is President. The route is from Billings, on the Northern Pacific, up Clark's Fork to Cook City and the new mining district, with a branch to Red Lodge coal fields. This promises a second railroad route to Cook City, and will also if continued develop an important oil and cattle country in northern Wyoming Territory.

A club of Wilkesbarre, Pa., has undertaken to destroy vermin in the surrounding mountains by putting out numbers of dead English sparrows prepared with poison as bait for foxes and other creatures. The laudable purpose is to kill off the animals and birds that prey on game. The result of such poison is disastrous to woods life; the destruction is more extensive than is generally appreciated and certainly more than can be defended as wise.

The Sportsman Tourist.

CAMPING ON THE EASTERN COAST.

II.

IT was past the middle of a hot afternoon; there was a brisk sea breeze blowing, and the Scribe was lazily smoking in the shade of a large, spreading live oak, taking in the monotonous scenery in a listless dreamy way, and incidentally watching the dull expanse of dead mangroves to the southward, if perchance he might catch a glimpse of white canvas. For on this particular day the Skipper had promised to come in the gig, when the camping trip was to end and yachting life to be resumed.

The week had passed quickly, pleasantly, and not without sport, though game was by no means plenty. It would keep one good hunter pretty busy to supply a camp of four on Spruce Creek. But it is a pleasant stream to camp on, and the fishing is very fair for channel bass, sea trout, sheepshead and big-mouths. One soon comes to care little for the two latter, the others being so much better; and latterly the Scribe had only caught the big-mouths for fun, giving them their liberty as soon as unhooked, unless, indeed, there chanced to be a cracker handy with his cast net, in which case big-mouthed bass could be swapped for buck mullet on the most liberal terms. There is no accounting for tastes. The big-mouth is an insipid, tasteless fish. A buck mullet is equal to a Spanish mackerel or a pompano. But a cracker is always ready to trade mullet for bass, probably because the latter is more difficult to take and much scarcer.

En passant; the buck mullet is a young, half-grown male fish that is jealously driven off and kept at a distance by the older and stronger males. Leading a life of enforced continence and having little competition in the food line, he becomes exceptionally fat and sleek, and, as a pan fish, has few superiors.

The high shell bank on which the oak stood commanded a view of the river to the north, the bay looking westward, and a long stretch of dead mangroves to the south, with ocean and endless space beyond.

And presently, far down among the dead brush, appeared the sharp peak of the dingy's white sail, darting to port, to starboard, and forging ahead, as though a crazy man had hold of the tiller ropes; but she was only following the tortuous channel, and soon she rounded a distant point into the bay, and in a few minutes her keel grated on the sand at the foot of the mound, and the Skipper stepped ashore in full shooting rig.

"Well, old man, getting about starved out? Ready for civilized life again?" he asks.

It is answered that the camp is in no danger of famine. Bread, coffee, sugar, etc., may be a little short, but bacon, fish, game, sweet potatoes and hominy, plenty.

"Any beach birds or ducks around here?"

"A few scattering ducks—no beach birds; but there are squirrels and cottontails in the hammock, and quail about the old fields."

"No cottontails nor squirrels for me. Joe and I will go up to Brown's grove for a bag of oranges and a little trolling. You'll be ready when we get back? because the yacht is going to move to-morrow."

And away goes the gig, leaving her mast and sail ashore and giving Joe a chance to show his muscle at the oars.

It was nearly sundown when the gig returned, with Joe pulling wearily against the flood tide and the Skipper in high good humor. They had raided the orange grove with marked success, and the trolling line had brought half a dozen fine fish to hand, mostly channel bass. The Scribe was ready for a start, had been ready and waiting until he was tired of it, and the gig headed homeward under a stiff ash breeze, with the canoe hanging close under her counter to catch the benefit of her wake, which rather made it fair weather for the double blade.

It was pitch dark when the anchor light of the yacht was made out, and there was a deal of running aground on the flats before finally getting on board with everything "shipshape and Bristol fashion," the gig swinging to her painter and the canoe snugly nested inside the yawl on deck.

Next morning the yacht steamed up the inlet and dropped her anchor opposite the hotel at New Smyrna, and then followed two or three weeks of yachting life. Going to Detwiler's Landing for a few days, then to Ponce Park, from there up the Halifax to Daytonia, getting hung up on some sand bars, which the pilot always averred had "made" since the last time he was there, doing some fishing and shooting, visiting places of note, reading, writing, and notably loafing, killing time and mosquitoes, after the usual manner of yachtsmen who go to the Florida coast for the delectation of their souls and the depletion of their purses.

But the spirit of the Scribe was weary of mangrove desolations, and his heart turned longingly to green woods, open camps, and bright camp-fires. And thence it happened that, when the Stella was anchored at Ponce Park with promise of a few days' rest, the canoe was once more packed with a week's outfit and headed for the old camp on Spruce Creek.

The cruise began auspiciously. The morning was warm and bright, wind and tide were favorable, and supplies more ample than on the last trip. No mistakes were made in threading the tortuous channels, and in an hour the canoe was resting in the shade of the big live oak. The frame of the camp was standing intact, for the natives here do not burn your camp as soon as you leave it, which, I am ashamed to say, they mostly do on the upper Susquehanna. Two hours of indolent work made the camp snug, dry, and comfortable, and then came thoughts of dinner; but a camp dinner without fish or game is hardly in order, and it was not yet noon.

So the Scribe lifted the 12-bore Lefevre and sauntered off into the hammock. And just then a large, well-fed squirrel took it into his fool head to set up a drowsy, midday barking, whereby he was singing to his own destruction; for the Scribe sneak-hunted to within 30yds. of his perch and brought him down with a dull thud on the soft ground. In less than ten minutes he was parboiling over the camp-fire. Then the boiling water was utilized in cooking an Irish potato, while the squirrel was nicely browning in the frying pan. These with a cup of strong coffee formed the dinner. Not an epicurean layout for a well-fed pampered stomach; but the Scribe found it delicious. Perhaps hunger had something to do with it. And what's the good of the best cooked dinner without an appetite?

There is no lack of means and ways to pass an afternoon pleasantly. One may cruise around the bay, landing at points of interest, with a fair chance for duck and quail, or visit the two cracker settlers across the bay, who have extended a cordial invitation to the Scribe. And there is a darky settlement within two miles of camp that is widely and favorably known as a specimen of darky thrift and industry: a reputation that rests mainly on the doings of two colored people, known respectively as Gregory and Sally. Gregory is most decidedly a colored man, a very dark one. Sally is a bright quadroon, muscular, well made and very intelligent. Each of them has a "40," pre-empted soon after the war, and each has an orange grove and a good truck patch, for this region. Gregory is a family man, Sally is single, and both raise strawberries for market, which find ready sale at twenty-five cents per quart, also egg plants, cabbages, snap beans, tomatoes and (without marked success) Irish potatoes. This much the Scribe had found out on the previous trip, and, being an enthusiastic grower of strawberries himself, and having a curiosity to see how the king of berries succeeded in eastern Florida, he took his gun and headed for the settlement, via the dry hammock and pine barrens. There ought to have been some quail or squirrel shooting on the route, but the only living thing seen was a spotted woodpecker, and the Scribe reached the settlement guiltless of slaughter. Gregory was at work picking strawberries and hurrying to get off for New Smyrna on the ebb tide. It struck the Scribe at a glance that the strawberry was only a partial success in eastern Florida. The hills had no more than two to four crowns to a stool, and the picker had to go over about 1,000 hills for twenty quarts of berries; but the berries were fine, and yielded a daily supply for a long season. The hills do not last, but must be renewed every season; and it is surprising to a Northern culturist that the plants give out so few runners for renewal. In northern Florida, in Georgia and in South Carolina the strawberry succeeds finely, though it does not make the large productive stools seen at the North.

Gregory took time to walk over to his neighbor and introduce the Scribe with, "Sally, here's a Nordern gen'l'man come to see you 'bout yo'r truck patch." Sally was genial and talkative. "I'se allus glad to see Nordeners," she said. "Deys de bes' fren's I eber had. T'was a Nordern woman put me onter dis claim an' got my papers made out all right, so't no poo' thievin' trash could eber move me off. I was wid her fo' years when she was a gal, and she gib me de money to start on my place. I cla'red de lan' an' raised all de trees wid my own two han's. Kin I chop? Lord bless you! I kin make wages cuttin' steamboat wood. Ask de people roun' here."

The Scribe suggested that the only thing she seemed to lack was a good husband.

"No husban' fo' me," she exclaimed with energy. "Dar' can't no fool niggah come roun' me, eatin' me outer house an' home; I kin take keer ob myself. See dat?' And she bared a handsome brown arm that would have done honor to a pugilist. The Scribe admitted that she could take care of herself. She had sold 20,000 oranges at $10 per 1,000, and had many left. Her strawberries had done well, her garden truck had found ready sale, and on the whole she seemed to be getting along very finely without a "fool niggah" for a husband. In the sixteen years she had been living on her claim she had not been sick a day, she had a very comfortable cottage, for the climate, and her surroundings and belongings quite threw the average white cracker in the shade.

Just before sundown the Scribe started for camp, keeping a sharp eye on the chances for game; but there was nothing stirring worth a cartridge, and he was fain to make a supper on bread, butter and bacon. Late in the evening Gregory came back on the flood tide and stopped at the camp. He had sold his berries at Ponce Park, thereby saving a pull to New Smyrna, which is four miles up the inlet. Also, he brought news that the yacht was going to move up to the fish factory, and to start thence for home the following Monday. "Tell him to paddle down on Saturday," the Skipper had said. This left only four days for cruising, fishing and shooting, and it was to be the last chance on the coast. We are going North a month too soon, murmured the Scribe; but there is time to take in the surrounding country, a good many fish, and to explore Spruce Creek as far up as there is good canoeing. Also one might investigate that local mystery, "the Stone House."

On reflection it was decided to spend a day in cruising up stream as far as might be in one forenoon, returning in time to make camp before dark. The next day was one to be marked with the biggest kind of a white pebble. The weather was like a Northern June day, the tide was running up strongly, and the sun was just glinting through the treetops as the little canoe left the landing with a complete outfit for the day's cruise—knapsack, gun, trolling line, camp axe, coffee pot, frying pan, and a day's rations; for there are no carries on the route and one may take along all necessary conveniences. And here is the log for the day, written on the spot (*i. e.*, in camp).

March 3, 1887.—Paddled out at sunrise for a trip up Spruce Creek. Weather glorious. Cardinals, mocking-birds, etc., making the woods musical. Put out trolling line with a gaudy feathered spoon, and caught a fine red-fish just above the bridge, also a sea trout a mile further up, and a big-mouth bass opposite Mt. Altitude. Did not need them, so put them all back and took in the trolling line. Above the upper bridge the country is lovely to a degree, and I notice that alligators are very plenty and tame. They do not average as large as on the Gulf Coast, the largest being not more than 8ft. in length, and they are more slender and brighter colored, probably because of being in clear running water. I have no use for them and do not shoot, though occasionally a sleepy fellow dozes until the canoe is within 10ft. of him, and I could shatter his head with the greatest ease. They are seldom shot at here, which accounts for their tameness. Three miles above camp there is a sawmill on the left bank which seems to be doing lively work, and a quarter of a mile above is the upper bridge, beyond which there is little sign of civilization save an occasional log landing, and at one point a sort of timber yard, where a muscular and rather intelligent darky was at work squaring timber. He was not averse to conversation, and gave some points about the country above. "It's mos'ly woods, an' dere's right smart o' turkeys an' squirrels in de hammocks up de creek," he said. "Dere's lots ob partridge roun' de ole fields, an' you kin catch all de trout you want." (Partridge meant quail, and trout big-mouth bass.)

An hour's steady paddling brought the canoe to a point where the stream was narrower and swifter, with high wooded banks, and just where a cool spring was bubbling out of the sandy soil. This is so unusual in southern Florida that the canoe was run ashore and the crew sought the shade of a live oak, for it was getting hot, and paddling against a stiff current is warm work, also a clear cool spring is not to be passed lightly by in this region.

And while sitting in the shade, partially hidden by the rushes and saw grass along the water's edge, it happened that a little flock of beautiful ducks came swiftly around the point above, heading down stream. The gun was lying in easy reach, as it usually is when I go ashore, and as they were passing my stand within 30yds. I covered the rear of the flock and sent a charge of No. 5 crashing through their feathers. Three of them spread out loose on the water and the rest went off down stream on whistling wings. The three were young ducks and very tender. I only skin and cut off the breasts, which is all of them that I can use before they would spoil, and as it is already past 11 o'clock, and as no pleasanter place is likely to turn up, start a bright fire and put the breast of one duck over the fire to parboil. When a hardwood silver will pierce the meat easily it is taken from the water, rolled in meal and fried in bacon fat. It proves exceedingly juicy and toothsome, and I wonder what variety of duck it is, for it is new to me, but quite equal to a butterball or canvasback. Perhaps it was owing to exercise and hunger, but I have seldom enjoyed a dinner so well as that solitary dinner far up Spruce Creek.

Somehow the hearty dinner and the heat render me quite indisposed for paddling further up the stream, but it is likely to be the last time I shall ever have the chance, so I reluctantly pick up the paddle and face the current. An hour of it is enough. The stream narrows, and becomes more crooked and is much swifter, let alone that there is a deal of dead timber in the channel, and a rank growth of yellow lilies and other aquatic plants which tend to make heavy paddling. The country seems more gamy, however. In the first half hour I frightened a deer and a couple of turkeys from the banks, while squirrels are frequently heard on both sides of the river. The spring where I halted for dinner, with the live oaks and high dry banks, would make a fine site for a camp; and, though it is an old settled country, a good hunter and fisherman could keep a camp of four men in fish and game.

At 3 P. M. started for camp and went swiftly down stream with an ebb tide and strong current in my favor. Reached camp before dark and got in night wood, shook up the bedding and had a most enjoyable lay off and smoke.

Gregory came to camp in the evening; he had been to New Smyrna with berries and garden truck, and had a hard pull coming against the tide for some six miles. He suggests a quail hunt for to-morrow, and has a deal to say about the way his red setter dog will tree quail. Treeing quail may seem a strange notion to a Northern sportsman, but I had learned while on the Gulf Coast that the Florida quail tree readily before a lively dog; and so, waiving the question as to pot-shooting versus legitimate sport, I agree to put in an appearance early on the following morning for a day among the quail—with a setter dog that trees them.

March 9.—By a little after sunrise I am at Gregory's place, and find him just hitching a big gray mule to a little dump of a cracker cart. The dog is tied behind with a clumsy rope, and he is really a fine-looking animal, to all outward appearance a thoroughbred Irish setter. In point of fact, however, his dam was and is a genuine "coon dog"—sharp on the hunt for anything, from a gopher to a bear, but with a strong darky leaning to 'possums. His sire belonged to a noted pill maker in a Northern city, who has increased his own corporation and cash account wonderfully by pinching the bellies and bank accounts of his credulous fellow citizens. Gregory, who has a sense of the humorous, calls his dog Pills. When all is ready we tumble into the rough cart, Gregory takes the lines (represented by a jib halliard leading to the mule's nose) and we are off. For the first mile the rude wheels wabble noiselessly over or through a soft sandy road, and then we turn off into the scrub and go jolting and crashing through saw palmettos and stiff, spiny pin oaks. It is execrable, and I am on the point of proposing to get out and walk, when the mule makes a buck leap in the air and commences tearing through the scrub in a most decided attempt to run away. At the same time I catch a glimpse of two large animals scrambling rapidly along on their bellies, apparently from almost under the mule's nose.

I remarked energetically, "pigs!" and would proceed to make further remarks of more energy than elegance, but just then the wheels jump a palmetto root and I turn a somersault over the tail-board, landing helplessly on the back of poor Pills, who yells dismally and springs about wildly in a vain attempt to break his own neck. I am not hurt, and, gun in hand, get quickly on my feet, in time to see two fine bucks rise to their feet, and with heads thrown grandly back, stretch away for the nearest hammock. There is a moment of frantic endeavor to change a No. 7 cartridge for one with buckshot; but the deer go like arrows, and by the time the gun is ready they are 100yds. away. To shoot would be to miss, or what is worse, inflict a painful and useless wound on a noble game animal; so let them go. And go they do, in the lordly, magnificent way one always sees in pictures, but seldom in actual life. For it is a fact that a buck usually runs with his head held low like a cow, and in a manner more speedy than graceful. Only when racing for his life in the open, with all caution thrown aside, does he elevate his neck, lay back his antlers, and clear 30ft. at a bound.

The day's hunt is spoiled for me. I have been within 10yds. of two fine bucks in the open scrub, and let them both get away! In reporting the incidents of the trip to the Skipper when I get back to the yacht I think I will omit this affair of the two deer. The Skipper is apt to make sarcastic remarks and doesn't take kindly to explorations. When Gregory has succeeded in quieting the mule by pulling his head around on his shoulder with the jib halliard, I get on board and we go bumping over the palmetto root for a mile, which brings us to the edge

of an old field, where the mule is tied and Pills is given his liberty. He disappears in the weeds, and five minutes thereafter sets up a steady, persistent barking, but in a soft, low tone.

"He's found 'em," says Gregory, and we push through the weeds to the opposite side of the field, where we find Pills sitting on his haunches, his eyes riveted on the top of a small turkey oak, and barking steadily. A brief inspection of the tree reveals five quail among the branches, two sitting low down, and three close together near the top, all motionless as statues.

"Take de lowes' one fust," says Gregory, bringing his singlebarrel to shoulder and firing as he speaks. He drops one bird, I demolish another, and then cover the trio in the treetop, two of which fall to the shot, but the third one goes fluttering away badly wounded, and this starts the balance of the covey. They begin to scatter away very lively, but Gregory gets in one more shot at a laggard and then they are gone, making straight for a dense hammock 100 rods distant. Pills behaves admirably. He is perfectly steady to shot and tree, does not chase, and when the excitement is over proceeds to retrieve the birds in a businesslike manner and without orders. He first brings in the five dead quail, and then without a word from his master starts off into the scrub after the wounded bird, which it is evident he has marked down. He is back in less than five minutes with his bird.

"You've taught him to retrieve well," I said.

"Neber learned him nothin' 'bout it," said Gregory; "he jess tuk up de notion his ownse'f."

Pills soon finds another covey, and this time I have a fair chance to see him get in his work, which is simple but effective to a degree. On striking the trail he roads rapidly up to the birds, and as the first one rises he rushes on them at top speed with a succession of short, shrill yelps which sends the frightened covey into the nearest trees, where they sit immovably watching the dog as though fascinated. Then Pills squats on his haunches in plain sight of his game and changes his tone to mild, plaintive baying, remaining steady to tree and bark in spite of shooting and tumbling birds, until the remaining birds take flight, when he suddenly relapses into silence and becomes absorbed in marking them down. It is all very sagacious and shows, to my thinking, more of reason than instinct.

We follow up the scattered covey and succeed in getting a couple of stragglers, when, finding we have just fourteen quail, I propose to quit. But Gregory, like your "true" and "legitimate" sportsman, is intent on making a "bag."

I will shoot no more, however, and he reluctantly turns his face homeward. We find the mule in disgrace through getting a fore leg tangled in his halter and his rope harness in a tangle of twists and knots past understanding. Gregory soothes and relieves him by the vigorous applications of a club, after the manner of mule drivers the world over, and we start for home, I trailing along behind the cart, for I have been jolted and bumped sufficiently over palmetto roots on the way out. On the way home Pills, whose hunting blood is fairly up, makes some sport by racing the cottontails, which are plenty; and one particular fine chase through the open pine woods is made in plain sight for some two hundred yards. It results in the dog's fairly outfooting and picking up the rabbit, which he brings, kicking and squealing, to his master, and delivers up with a look of proud satisfaction. I would like to own that dog. I could afford to take him to Pennsylvania. But his owner declines to sell at any reasonable figure, and, leaving Gregory all the game save two plump quail, I make my way to camp, with two hours of daylight to spare.

And here, as I live, comes the dingy with the Skipper and Joe. I am admonished to pack up lively, as it is decided to start for the North on Saturday and the Skipper wishes to spend a day investigating the mysteries of the "Stone House," which, tradition says, was built more than 200 years ago. I think tradition lies; but all the same make haste to get my duffle on board the canoe, and, just as the sun gets behind the pines on the west side of the bay, pick up the double-blade for a tiresome paddle of six miles to the fish-factory. Two hours later I am in the Stella's cabin smoking lazily, and with a pretty decided notion that my camping on the east coast of Florida has come to a sudden end. NESSMUK.

THE COLLARED PECCARY (*D. tajaçu*). ADULT MALE; DRAWN BY THE AUTHOR; ABOUT ONE-SEVENTH THE SIZE OF LIFE.

Natural History.

THE PECCARY.

WITH INTRODUCTORY NOTES ON THE ORDER UNGULATA.

BY R. W. SHUFELDT, M.D., C.M.Z.S.

HAVING carried my sketches of the United States mammals through the Provisional List of the U. S. National Museum to include the Cetaceans (see FOREST AND STREAM, Oct. 27, 1887), I will in the present contribution take up the next group dealt with in that List, which we find to be the Order Ungulata, a group largely represented in the existing world's fauna, and which in our country is fairly represented by at least one species of peccary, some nine or ten species of deer and elk, an antelope, less than half a dozen bovine species, and as we pass into Mexico and Guatemala, by two species of tapir and another peccary. Still pursuing the plan adopted in the sketches already in former numbers of FOREST AND STREAM, I will here republish the Order Ungulata as we find it in full in the List alluded to above. It stands as follows:

ORDER UNGULATA. UNGULATES.

SUBORDER ARTIODACTYLA.

Family DICOTYLIDÆ. *The Peccaries.*

Dicotyles tajaçu, (Linné) Sclater. Common Peccary. Arkansas to Patagonia.
Dicotyles labiatus, (Cuvier). White-lipped Peccary. Guatemala to Paraguay.

Family CERVIDÆ. *The Deers.*

Cariacus macrotis, (Say) Brooke. Mule Deer. Central North America.
Cariacus columbianus, (Rich.) Gray. Columbia Black-tailed Deer. Pacific slope.
Cariacus virginianus, (Boddært) Brooke. Virginia Deer. Canada to Panama.
Cariacus toltecus, Brooke. Yucatan Deer. Mexico.
Cariacus rufinus, (Bourcier et Pucheran) Brooke. Black-faced Brochet. Mexico to Ecuador.
Cervus canadensis, Erxeleben. Wapiti. American "Elk." Virginia, California and northward.
Alces machlis, (Linné) Gray. Moose (elk of Europeans). Northern United States and northward.
Rangifer tarandus, (Linné) Gray. Reindeer. Arctic North America.
Rangifer tarandus grœnlandicus, (Kerr). Barren-ground Caribou. Arctic America.
Rangifer tarandus caribou (Kerr). Woodland Caribou. Northeastern North America.

Family ANTILOCAPRIDÆ. *The Prong-horn Antelope.*

Antilocapra americana, Ord. Prong-horn Antelope or Cabrit. Plains west of Missouri from Lower Rio Grande to Saskatchewan.

Family BOVIDÆ. *The Cattle.*

Bison americanus, (Gmelin) Gray. American Buffalo. Plains between the Rocky Mountains and Missouri River.
Ovibus moschatus, Blainville. Musk-ox. Arctic North America.
Ovis montana, Cuvier. Bighorn; Mountain Sheep. Rocky Mountain regions to Mexico.
Ovis montana dalli, Nelson. Dall's Mountain Sheep. Mountains of Alaska and southward into British America.
Mazama montana, (Ord.) Gill. Mountain Goat. Northern Rocky Mountains of the United States and British America.

SUBORDER PERISSODACTYLA.

Family TAPIRIDÆ. *The Tapirs.*

Elasmognathus bairdii, Gill. Baird's Tapir. Mexico to Panama.
Elasmognathus dowi, Gill. Dow's Tapir. Guatemala to Costa Rica.

Next following we find the List presenting us with the wonderfully extensive Order, the Rodentia, which I trust may furnish material for future articles; but right now let us turn our attention to some of the leading facts science has brought to light, in comparatively recent times, in reference to the history of the Ungulata; then pass to a short sketch of the Peccary, the first species which appears in the List accompanying this contribution. In the papers immediately following this one, and before we enter upon the Rodentia, I trust, too, to touch upon the life-histories of certain Cervidæ, Antilocapridæ, and Bovidæ enumerated above.

During the early part of this century, systematic zoölogists, guided by the knowledge then in their possession, were quite unanimous in dividing the easily recognized group of "hoofed mammals" into sections, designated as the *Artiodactyla* and *Perissodactyla*—a grouping which excluded such animals as the Hyrax and Elephants, and decided that these latter were not especially related to the true Ungulate types, but should be placed in separate groups, which were duly created for their reception. In recent years, however, the unceasing labors of the paleontologists, both in our own country and abroad, have brought to light the fossil remains of a vast host of extinct types, which careful study has shown to be the ancestral and linking kin among not only modern perissodactyline and artiodactyline ungulate species, with Hyrax and the Proboscidea, but with other outlying families formerly thought to be distinct. So that we are at present enabled to reconstruct this far more numerous assemblage of forms, and by associating both the existing representatives with those now extinct, we make our order Ungulata include them all. Whereupon again passing in review our knowledge of the structure of these animals,

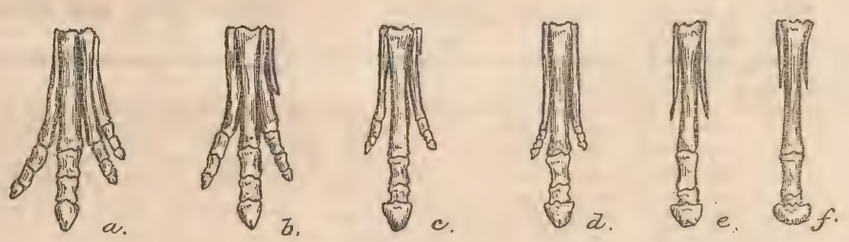
we find that we can still retain our old sections, the Artiodactyla and Perissodactyla, as two clearly defined suborders of the Ungulata, and designate them as the *Ungulata vera*; while we throw all the other species, upon whose structure we are not nearly so well informed, into other sub-orders, and collectively term them the *Subungulata*, or in contradistinction to the first, the *Ungulata polydactyla*.

This arrangement may be still more clearly shown thus:

	Suborders.		*Examples.*
Ungulata.. Ungulata Vera..	Artiodactyla....		Swine, Ox, Deer.
	Perissodactyla..		Horse, Tapir, Rhinoceros.
Subungulata....	Hyracoidea.....		Hyrax.
	Proboscidea		Elephants.
	Amblypoda.....		Dinocerata and other extinct forms.

Very excellent anatomical characters distinguish the Artiodactyla from the Perissodactyla, which our limited space will forbid entering upon here, but we will be permitted to notice the chief among these, and I refer to the differences which obtain in the skeleton of the feet of these two suborders. Aside from now well-known differences which exist in the arrangement of the bones of the wrist and ankle joints, we find that the artiodactyline animals are *even-toed*, as in the deer, pig and camel, the *median line of the foot passing* down between the *third and fourth* digits (see C and D of the figures). Now the perissodactyline animals are *odd-toed*, as in the horse and rhinoceros, the *median line* of the foot passing longitudinally down the center of the *third digit* (see A and B of the figures). It will at once be noticed that these types of feet are very different from what we find in the great elephantine ungulates, as in the elephant (see Fig. 4).

In the present connection it will be obviously impossible to enter upon the natural history or structure of the highly interesting species falling under the Subungulata. None of them are now represented in the existing fauna of the United States.



Taken as a whole, then, these are some of the distinguishing characters of the Ungulates: For the most part they are vegetable feeders, and of a terrestrial habitat; they are without a collar-bone; they walk on their *toes*, which latter are either armed with a true hoof, or protected by nails, which are broad, blunt and rough; their teeth are well developed and arrayed upon definite plans. A study of the skeletons of existing species, and the long array of extinct ones, recently brought to light, show a vein of kinship running through the entire group, linking them more or less closely together, and even in some instances pointing to a relationship with other orders, as perhaps the Rodents on the one hand, and the *Sirenia* on the other.

As engaging a subject as the study of the entire group of existing Ungulata proves to be, with its elephants, its quaint little puzzle the Hyrax (of several species); its vast variety of Horses; the Rhinoceroses; the Tapirs; the different types of Swine; all the Cavicorn ruminants; and all the numerous species of deer and their allies; the Camels and their kind; as interesting as I say this study is, its interest is simply trebled, when we come to trace back through the fossil forms referred to above, the extraordinary types which were the ancestors of this now living host of animals.

In a short article like the present one it will be out of the question to trace back into geologic times, even a few of these extinct lines of ancestors of existing ungulates, but to quote quite fully from Le Conte, "it will be interesting and instructive to run out one of these branches and show in more detail the genesis of one of the extreme forms. For this purpose we select the horse, because it has been somewhat accurately traced by Huxley and by Marsh. About thirty-five or forty species of this family, ranging from the earliest Eocene to the Quaternary, are known in the United States. The steps of evolution may therefore be clearly traced. In the lowest part of the Eocene basin (*Coryphodon beds*) of Green River, is found the earliest-known animal, which is clearly referable to the horse family, viz., the recently-described *Eohippus*, of Marsh. This animal had three toes on the hind foot and four perfect serviceable toes on the fore foot; but, in addition, on the fore foot an imperfect fifth metacarpal (splint), and possibly a corresponding rudimentary fifth toe (the thumb), like a dew-claw. Also the two bones of the leg and fore arm were yet *entirely distinct*.

"This animal was *no larger than a fox*. Next, in the *Middle Eocene* (Bridger beds) came the *Orohippus* of Marsh, an animal of similar size, and having similar structure, except that the rudimentary thumb or dew-claw is dropped, leaving only four toes on the forefoot. Next came, in the *Lower Miocene*, the *Mesohippus*, in which the fourth toe has become a rudimentary and useless splint. Next came, still in the *Miocene*, the *Miohippus* of the United States and nearly allied Anchithere of Europe, more horse-like than the preceding. The rudimentary fourth splint is now almost gone, and the middle hoof has become larger; nevertheless, the two side hoofs are still serviceable. The two bones of the leg have also become united, though still quite distinct. This animal was about *the size of a sheep*. Next came, in the *Upper Miocene* and *Lower Pliocene*, the *Protohippus* of the United States and allied *Hipparion* of Europe, an animal still more horse-like than the preceding, both in structure and size. Every remnant of the fourth splint is now gone; the middle hoof has become still larger, and the two side hoofs smaller and shorter, and no longer serviceable, except in marshy ground. It was about the *size of the ass*. Next came, in the *Pliocene*, the *Pliohippus*, almost a complete horse. The hoofs are reduced to one, but the splints of the two side toes remain to attest the line of descent. It differs from the true horse in the skull, shape of the hoof, the less length of the molars, and some other less important details. Last comes, in the Quaternary, the modern horse—*Equus*. The hoof becomes rounder, the splint bones shorter, the molars longer, and the second bone of the leg more rudimentary, and the evolutionary change is complete." Professor Le Conte took his figures from Marsh, and I copied them from the former. In mine the figures of the limbs and the teeth of these extinct and modern horses were not drawn. Cope has traced out the descent of the camel in very much the same manner, and this latter writer has of recent years marvellously added to our knowledge of these highly important extinct types, and in admirable schemes of classification, too extensive to be dwelt upon here, has shown the probable origin of existing families of Carnivores, Insectivores, Quadrumana, etc., from his Bunotheria; and as we have pointed out above, the various families of the order now under consideration, from the generalized extinct types of the Amblypoda. The study of the evolution of structure that is displayed in the remains of these ancient forms, as compared with the anatomy of species still living on the earth, affords a lesson pregnant with facts of the very highest importance, and well worthy of the profoundest contemplation of the trained zoölogist and philosophic naturalist.

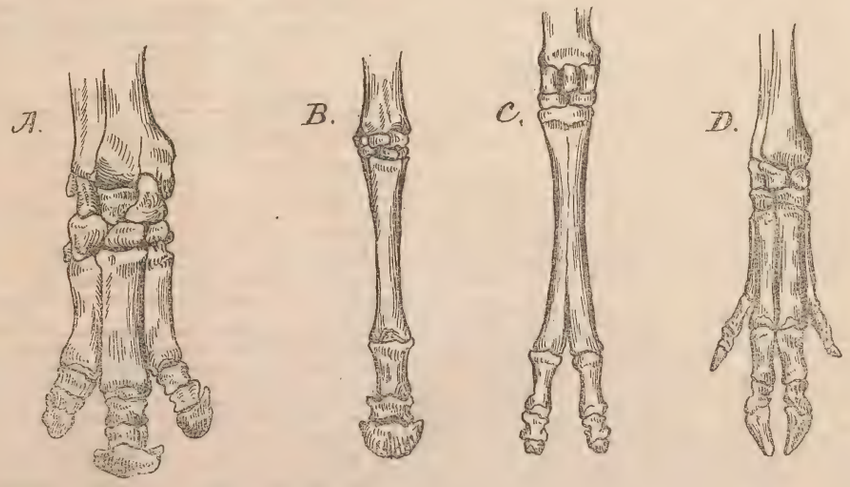


Fig. 2.—Left lateral view of the head of a male Babirussa, considerably reduced.

Fig. 3.—Head of a male Wart-Hog (*Phacochœrus africanus*); reduced. Figs. 2 ane 3 designed to show the extraordinary development of the canines in some of the relatives of the Peccary.

Figs. *a.–f.*—Forefeet of *Equus* and its extinct kin. *a. Orohippus* (Eocene); *b. Mesohippus* (Lower Miocene); *c. Miohippus* (Miocene); *d. Protohippus* (Lower Pliocene); *e. Pliohippus* (Pliocene); *f. Equus* (Quaternary and Recent).

Figs. *A.–D.*—*A. B.* Feet of Perissodactyles; *C. D.* Feet of Artiodactyles. *A.* Tapir (*Tapirus indicus*); *B.* Horse (*Equus caballus*); *C.* Camel (*Camelus bactrianus*); *D.* Pig (*Sus scrofa*). *A* and *B* are ×1-5, *C* ×⅓, and *D* ×⅛. (After Flower.)

We pass now to a brief consideration of the life-history of the Peccary. There are but two species of these animals, both being confined to the American continent; the larger of the two, the white-lipped peccary, being restricted to a range between British Honduras and Paraguay. This animal (*D. labiatus*) has a length of about 40in., and is characterized by its white lips and lower jaw; its general color being nearly black; and as in all wild swine, its young are longitudinally striped in their markings. A South American observer says, "This species lives in large bands, sometimes amounting to a thousand, and stretching out for a league, migrates from one dis-

trict to another. If they come across a plantation they devastate it by rooting up its crops; when they meet any thing unusual they are thrown into great alarm, which they express by a clatter of the teeth. If a hunter ventures to attack one of these herds, he is sure to be torn in pieces by the infuriated throng, unless he take to a tree or escape by flight. When excited by rage their eyes flash, they rub their snouts together, erect their bristles, and fill the air with their cries." Peccaries are notorious in possessing a powerful scent gland, giving forth through the oleaginous substance it secretes, the most offensive odor, and unless this be immediately removed after they are killed, it totally unfits their flesh for human consumption. This is best marked in our own species (*D. tajacu*), and this structure induced the early describers to believe it to be a second navel, an idea which led to its specific name of *Dicotyles*, bestowed upon the genus by Cuvier.

As will be seen from our figure of a peccary that these little, wild, pig-like animals not only resemble the domesticated species in their general form, but they also do, in so far as their different mode of life will allow them, in all their other propensities, habits and structure. One striking difference, however, for peccaries lack any external evidence of a tail, an appendage of almost historical fame in the common pig. Further, nothing of striking note particularly characterizes the canine teeth in these peccaries, whereas some of their foreign relatives are markedly favored in this particular, as for example the Babirussas of the island of Buru and the Celebes, a species wherein the upper canines actually pierce the lips as shown in Fig. 2, one of my drawings illustrating this article; or the still more remarkable canines of the Wart-Hog of the continent (see Fig. 3), where these teeth are great, upturned tusks, protruding far beyond the limits of the lips and jaws. Notwithstanding such marked differences as these, however, the many species of swine, the world over, both wild and domesticated, have nearly a common structure, and so far as palæontology goes to show us, they have held to it in former geologic periods "with characteristic pertinacity," as is evidenced by the several species of fossil types which have been discovered. It is said that these animals, if taken young, may be easily domesticated, but owing to their flesh being much inferior to that of the common varieties of swine, and to their frightful odor, and to their not being prolific breeders, there has been no special inducement to undertaking their domestication upon any great scale. Usually a female peccary will bear but once during a twelvemonth, and then bring forth but one or two young at the time. Omnivorous in their tastes, these animals will feed indiscriminately upon roots, fruit, fish, snakes, worms or even carrion, and I have already alluded to the manner in which they will lay waste the farmer's crops on certain occasions. Those who have enjoyed studying their habits in nature, tell us that they resort to the burrows deserted by other animals, or to the hollow trunks of trees, to dwell in them; but that for the most part they are usually met roaming in small or large parties through the trackless forests, where the hunter may easily follow them by their powerful scent.

Our species, the collared peccary, ranges from the Red River of Arkansas, southward, and is not as large an animal as the white-tipped one by 4in. in its total length. It is, moreover, less ferocious in its habits, being rather gentle than otherwise, and little disposed to attack any one or any thing. Commonly it is met either in a herd consisting at the most of not more than a dozen individuals, or at other times a single pair, or even a lone one may be found by the hunter. This species is at once distinguished from *D. labiatus* by the whitish band which passes across the back from shoulder to shoulder (see Fig. 1). For the rest the animal is clothed in a coat of dark-grayish, bristly hair, which is markedly lengthened along the back from head to tail, or where the tail ought to be, were one to be found there. One writer well describes the foot structure in the peccary in these words, and he says, "In the feet the two middle (third and fourth) metapodial bones, which are completely separate in the pigs, are united at their upper ends, as in the ruminants. On the forefoot the two (second and fifth) outer toes are equally developed as in pigs, but on the hindfoot, although the inner (or second) is present, the outer or fifth toe is entirely wanting, giving an unsymmetrical appearance to the member, very unusual in Artiodactyles. As in all other existing Ungulates, there is no trace of a first digit (pollex or hallux) on either foot."

As much as has been already contributed to our knowledge of the habits and structure of the peccary, and indeed to the *Suina* generally, there is a great deal of unwritten information in regard to them, which science will be very glad to have at her command; and any investigations in such directions should be encouraged, and accurate reports of researches will be highly valued.

While engaged in writting this article I have been much assisted through my perusal of the following works: Professor W. H. Flower's excellent contribution to the ninth edition of the British Encyclopedia, more especially the one on the "*Mammalia*," and several on the Ungulates generally, as "Hippopotamus," "Peccary," "Horse," and "Swine." Also the "Osteology of the Mammalia," by the same author. Prof. Sir Richard Owen's "Anatomy of Vertebrates," and his special monographs. Marsh's classic quarto volumes on the "Dinocerata" and other memoirs by the same writer. Cope's long series of papers in the *American Naturalist*, fully illustrated, and presenting the most exhaustive accounts of fossil ungulates. Huxley's "Anatomy of Vertebrated Animals," his "Elements of Comparative Anatomy" (1864), and many of his numerous other contributions relating to ungulate morphology. Caton on "The Antelope and Deer of America." Several of G. Baur's recent memoirs; and the excellent contributions of Scott and Osborn, of Princeton College, to the subject. Gill's "Arrangement of the Families of Mammals." Wortman's "Comparative Anatomy of the Teeth of the Vertebrata;" the general text books of Gegenbaur, Packard, Wiedersheim (Parker's trans.), Claus and Sedgwick, Bell and others. Wallace's account of the *Babirussa* in his "Malay Archipelago." Mivart's "Lessons in Elementary Anatomy." Chauveau's "Comparative Anatomy of the Domesticated Animals." Darwin's "Origin of Species" and "Animals and Plants under Domestication." Several of Garrod's special memoirs, more particularly the one on "The Order Dinocerata." Le Conte's "Elements of Geology," and numerous special contributions of a number of other writers upon the subject.

RANGE OF THE QUAIL IN NEW YORK.—The excitement created among dogs and older inhabitants by the appearance of two Bob Whites in our meadows last July has raised the questions, What is the exact range of the quail in Central New York? Where is it found north of Poughkeepsie and east of Onondaga county? And, in each case, is its presence normal, or has it been introduced? Can the readers of the FOREST AND STREAM enlighten us? FLORENCE A. MERRIAM (Locust Grove, Lewis county, N. Y.).

KINGFISHER IN NEW YORK IN WINTER.—New York, Jan. 22.—*Editor Forest and Stream:* When crossing from Pelham to David's Island, Long Island Sound, on Friday afternoon, Jan. 20, 1888, I was much surprised to see a kingfisher (*Ceryle alcyon*) flying over the water close to the bow of the boat, as we neared the Government dock. There was considerable ice in the bay, and with the fields white with snow, this bird, so characteristic of sunshine and summer weather, seemed sadly out of place. He uttered no sound as he flew along, and I doubt not the cheerless nature of his surroundings (or possibly a severe cold) had taken away all inclination on his part to wake the echoes with his familiar "rattle." We have had so little severe weather this season, until the last two or three days, our wanderer possibly thought he could manage to struggle through and so escape the long flight southward, but he must have found food rather scarce lately, and when he awoke this morning with the mercury in the thermometer coquetting with the zero point he probably wished himself far away among his companions in a warmer clime, where he could bask in the sun all day long and "rattle" in comfort the death knell of innumerable small fishes. I have never heard before of one of these birds staying with us so late. The only other instance of a late observation of this bird that I find in looking over my notes was on Dec. 19, 1880, when I saw a single specimen sitting on a tree over a brook in a swamp, near Flushing, L. I., when everything was frozen hard except the brook. I sent a note to the FOREST AND STREAM at that time about it.—ROBERT B. LAWRENCE.

ICE-BOUND RAIL.—New York, Jan. 11.—*Editor Forest and Stream:* On Dec. 23, 1887, some boys while playing on the salt meadows near Flushing, L. I., found four sora rail (*Porzana carolina*) and succeeded in capturing one alive. The boys stated that the birds seemed unable to fly. There was considerable ice and snow around, and it seems scarcely possible that these birds could have obtained food. There were no warm springs where these birds were found. I saw the captured bird the same evening; it was confined in a small box, and seemed uninjured and in good condition.—ROBT. B. LAWRENCE.

CARDINAL GROSBEAK IN NEW YORK IN WINTER.—On Tuesday, Jan. 17, I saw on 156th street, near Eleventh avenue, a young male *Cardinalis virginianus*. The species is not uncommon in Central Park in summer, and has been reported more than once as occurring in winter; but the circumstance is perhaps sufficiently unusual to warrant this brief mention.—G. B. G. (New York, Jan. 20).

OTTER IN DELAWARE.—An otter, measuring 4ft. in length and weighing 28lbs. was captured in Jones's Creek, three miles from this town, to-day. This is the first otter seen in this section for many years.—DEL. A. WARE (Dover, Del., Jan. 8).

GAME AND FISH PROTECTORS.

THROUGH the courtesy of Gen. R. U. Sherman we have been supplied with advance sheets of the following portion of the report presented to the Legislature by the New York Commissioners of Fisheries last Tuesday:

The reports of the Game and Fish Protectors annexed will show what has been done in this department during the last year. With a few exceptions, these officers have given vigilant and faithful attention to their duties and have been as successful as the circumstances permitted. The work reported is greater in volume and importance than that of any previous year, and the fact may be mentioned as particularly showing an advance, that indictments have been lately found by a grand jury in Hamilton county of residents of that county for violation of the game laws! Such an occurrence has hitherto been thought impossible. It has been the office of grand juries in that county to protect rather than punish offenders.

The protectors have been cramped in their work by the insufficiency of their allowance for expenses. This has been alluded to in former reports, and the remedy which has been suggested is now renewed, viz.: That there should be an appropriation of $5,000 put at the command of the Commissioners, to be expended in their discretion in necessary measures to facilitate the enforcement of the law by the protectors. The present allowance of traveling expenses is twenty dollars and a fraction per month to each protector. In the performance of a month's duty which necessarily involves a good deal of travel, this sum by no means suffices, and the protector must not only take from his salary to eke out his official expenses, but must be without any means to pay for necessary aid, such as the employment of special detectives and other assistants, and the hire of boats and other means of transportation essential to the service. The additional allowance recommended should not be made in stated sums to every protector, but should be given by the Commissioners as needed for special occasions as they may occur. If the appropriation should not be all required it would not be used.

The next great difficulty the protector has to encounter in the performance of his duty is the lax public sentiment that prevails in the principal game centers. This laxity is of the same nature as that which exists in regard to many other good laws founded for the protection of property and the maintenance of order and morality. The aversion of a community to the wholesome restraints of a law which bears upon the vicious appetites and propensities of any considerable class has its bad influence on all local officers charged with the adminstration of the law. Under this jurors learn to disregard the obligations of their oaths, prosecuting officers become lax and unfaithful and the evil effect extends often to the judicial bench itself.

It is difficult to make people who live in the neighborhood of streams and lakes containing valuable fish, or of forests holding choice game, understand that the protection of this useful food supply from improvident waste is more their concern than it is that of people living remote and enjoying its benefits only on occasional and expensive visitations. The local class are generally as zealous to destroy the choicest game as they would be to destroy noxious animals. They take no heed of the ultimate consequences which must come of their ruthless spoliation, but look only to the wants or destructive pleasures of the day. They exemplify in the fullest sense the story of the goose that was killed for the golden egg.

The repression of this vicious spirit of destruction can be effected only by means of laws wisely framed to promote the end in view and faithfully administered by honest officers.

One of the greatest obstacles at present in the way of the enforcement of the game laws is the neglect, from disinclination, of district attorneys to prosecute cases brought by the protectors. This criticism is not meant to apply to the prosecuting officers as a class; for as a rule they are as faithful as any other class of public officers. But in most places where the public sentiment is bad, prosecuting officers lack zeal and independence. Thus it will be found that in the worst poaching localities, as Hamilton, Franklin, Lewis, Cortland, Otsego and some others, the number of offenders prosecuted to judgment is small compared to the number complained of. A case has been reported to the Commissioner where a present of venison taken out of season was sent by the law breaker to the district attorney of his county, and that officer, instead of promptly reporting the offender to the grand jury, wrote a note thanking the poacher for the contraband meat!

In the larger counties, the pressure of business falling to district attorneys is so great that some must be necessarily neglected. The murder cases must of course have precedence, and the burglaries, robberies, arsons, rapes, and the higher misdemeanors must be attended to; so offenses against the game laws, which are not esteemed as of as high a grade as they really are, are pigeonholed and do not receive attention till business of supposed weightier concern has been disposed of. Where a wholesome sentiment prevails, in counties less burdened with crime than those which contain the large cities, the game law cases have better care, and there are some district attorneys whose prompt and vigorous action in such cases has made the law respected. But often the best efforts of the protectors are set at naught by the lack of the proper co-operation of the prosecuting officer. It is suggested whether, in view of these considerations, it would not be good policy to make provision for the protector's cases, either by creating a separate department in the district attorney's office in counties where these officers are over-burdened with business, or by permitting protectors to bring and prosecute suits through outside counsel.

How "not to do it" is well illustrated in a case stated in the report of Protector Drew of his experience in Otsego county. This report will be found in its place among the supplementary matter. The protector spent many weeks' time and not a little of his scanty personal means in looking up flagrant cases of violations that had been complained of by reputable residents of Otsego county, and after having, with much skill and pains, worked up some fifteen cases, in all of which he thought he had secured ample evidence to warrant affirmative verdicts, he brought suits accordingly. They were all placed on the calendar of the Supreme Court, where the judge, to relieve the pressure of an overburdened calendar, with the consent of all the parties interested, sent the whole batch to the County Court. Here, by some blunder growing out of the incoming of a new district-attorney, they were all knocked off the calendar, and a movement had to be made to the General Term to get them restored. Again they came on for trial. For some reason, which, it is hoped, the district-attorney will be called on officially to explain, the cases, which had been prepared with great care by the late district-attorney, were all withdrawn by his successor without consultation with the protector. The effect of this singular proceeding, whatever may have been its motive, was most disastrous to the interest of protection. There had been for years in Otsego county more or less violations of the game laws, but under the stimulus of the protector's efforts there was a growing amendment, and offenses which had formerly been committed with impunity were now done only by stealth; but when the poaching fraternity found that the district-attorney had, as it were by a wave of the hand, let them loose from the law's shackles, practical anarchy set in. Spearing, netting and every other device declared contraband by the law now ran riot on Otsego Lake, and a week had not elapsed before the lake was fairly gutted. The situation is thus described by an eye witness at Cooperstown:

"The spawning beds have been swept clean, over 1,800lbs. of trout (not one of them weighing less than 5lbs.) being lugged off to Oneonta as the result of one night's rascality, and bushels of spawn left rotting on the shore. Many of these fish—all of them utterly unfit to eat—being taken in the very act of parturition, were peddled through our own streets at two cents per pound, and all besmeared at that with spawn." For fifteen years or more the Commissioners of Fisheries have been adding to the fish supply of Otsego Lake, and have in that time planted over 1,500,000 salmon trout. The fishing of the lake when the Commissioners commenced to restock it, was at a low ebb, but at the time of the proceedings narrated, had become again very good, when by one day's bad work in the County Court the labor of fifteen years was undone and a blow struck at good order, which tends to the lasting disgrace of the county.

As in the case of the bomb throwing at Chicago, ultimate good, however, is likely to come out of the evil. It is no longer popular to truckle to the poacher in Otsego. In view particularly of the late outrageous proceedings, the Board of Supervisors have passed an iron-clad law, which forbids all fishing except with hook and line, for the space of five years, in Otsego Lake, and imposes the severest penalties on all violators. And it makes such provision for the trial of cases as will render possible their

conduct in the interest of justice. It is more than probable that the reformed sentiment which has followed the locking of the stable from which the horse was stolen, will sustain the law. But it cannot be expected of the Commissioners that they will do any more stocking in Otsego Lake till protection is assured beyond peradventure.

The protective service has also suffered by reason of the uncertain tenure of the incumbents of the office. The official terms of all expired, some less than a year, but most of them more than a year ago. There are among the number some who should be retired on account of their advanced age, which renders them unequal to the service demanded. There are others who have business avocations which interfere with the devotion of the time required to the public service; and there are still others, good enough in their way, who never ought to have been appointed, because they have none of the special qualities required for such service. The bulk of the force is good and efficient, and those who have proved themselves competent and worthy should be reappointed, so that they may know what they are to calculate on for the next three years. The views of the Commissioners on this subject have been communicated to the Governor, and their recommendation of the proper persons for appointment are before him. In the paper presented to the Governor the following standard is laid down, as the judgment of the Commissioners of the qualifications which should be possessed by a protector!

QUALIFICATIONS REQUIRED IN A GAME AND FISH PROTECTOR.

This office is one of trust and responsibility, calling for the exercise of diligence, vigilance, tact and much knowledge of men. The incumbent should possess the following stated qualifications:

1. He should be in the prime of life and in the full vigor of health.
2. He should be of sufficient education to be able to draft concise reports of his operations to the Board or head of department under whose supervision he acts, and to despatch promptly his official correspondence.
3. He should possess such tact and sagacity as will qualify him to cope successfully with the class of offenders it is his duty to look after.
4. He should be of sufficient intelligence to work up ready for trial the cases where he shall commence prosecutions, and to aid the district attorney in their conduct.
5. He should have no other business or occupation which will interfere with giving his first attention always to the duties of his office.
6. He should recognize that he is accountable only to the law and to his official superiors for his acts, and while he should not decline advice from any source when given in good faith,, he should not permit himself to be influenced by outside organizations and persons who may seek to control his movements for their own selfish purposes.
7. He should have no bad personal habits, such as tippling idling and debauchery.

In addition to these qualifications, that portion of the protector's force assigned to service in the wilderness districts should be experienced woodsmen, possessing a practical knowledge of the geography and topography of the region where their services are principally to be performed, able to follow foot trails and wood paths and to travel by compass, and upon occasion to pack and cook their own subsistence and make their own camps. It is desirable, too, that this portion of the force should have their own homes in the woods, at least during the season when they need to be on daily watch, and that they have no family or business ties to prevent their doing so.

RECOMMENDATIONS OF THE COMMISSIONERS.

It is presumed that the pressure of business before the Governor has been such as to prevent his giving this subject the consideration he would wish, and which he ought to give it, as to all cases where the responsibility of the appointment belongs to him.

But the Governor should be relieved of the responsibility of the appointment of these officers, and the protectors should receive their appointment from the board or head of department under which they are directly to serve.

What, from their observation, the Commissioners would specifically recommend in the case, is that there should be not less than twelve protectors appointed for the whole State. That the appointing power should be either the Board of Commissioners of Fisheries or the Board of Forest Commissioners. That the choice should not be confined to prescribed localities, but that fitness should be the rule in the selection; that one of the protectors, and that one possessing the best qualifications, should be designated as chief protector, and the remainder should act under his orders. The pay and allowance to be as at present, except that the chief protector should have $1,000 salary and $500 traveling allowance; and that an appropriation of $5,000 should be made annually to be disbursed by the Commissioners in payments at their discretion for such coöperative assistance and expenses as should be needed to give complete efficiency to the service. The tenure of office should be during good behavior. The appointing power should have authority to summarily remove any protector whom they should deem incompetent or unfaithful. From such improved system the Commissioners are certain, benefits commensurate with the cost would ensue.

MICHIGAN GAME AND WARDENS.

Editor Forest and Stream:

A hunter of my acquaintance has recently returned from the headwaters of Thunder Bay River. He reports having reached there early in November, expecting to still-hunt deer; but before snow enough for tracking had fallen, the deer were driven away by persons who hunted with hounds, so that he had no success. He is a good hunter, and says that when the hounds were first brought in, the deer were quite numerous.

I think that more deer were killed this season in Antrim county than last year—not very many indeed, but the game wardens have done some good.

The board of supervisors, at their October session, audited and paid the bills of the wardens at $2 per day, but rendered the law practically inoperative by a resolution that they should henceforth receive pay at the same rate for services rendered on complaint of any citizen. There will probably be no complaints, and without them the wardens can get nothing. Of course, they will not watch the forests under these conditions. KELPIE.

CENTRAL LAKE, Mich., Jan. 14.

THE MICHIGAN SPORTSMEN'S ASSOCIATION held its annual meeting at Detroit Tuesday and Wednesday of this week.

LONG ISLAND DUCK SHOOTING.

NEW YORK, Jan. 21.—*Editor Forest and Stream:* In reading your last issue I find that my name has been taken in vain in connection with shooting wildfowl on Long Island Sound. The only shooting I ever did from a steamer on the Sound was in November, 1886, and as it may be of interest to your readers to know what was done, I will give you all the particulars. I owned the steam launch Dolphin, 43ft. long; speed, an honest ten miles per hour. This boat was built by the Herreshoffs, of Bristol, R. I., and having a coil boiler she was very buoyant, and none of the boiler showed above the gunwale. I removed the permanent roof, put a very short smokestack on her, and painted her a sort of invisible slate color, and she looked like a diminutive blockade runner; in fact, when directly "end on" she would hardly attract the attention of the most wily of old coots at a couple of hundred yards. I had my four boys with me, and they each had a 12-bore Purdy, while I used an 8-bore Dougall. Our first day was on Nov. 2, and we killed thirty-six ducks, mostly gray and black coots, and three loons. These are what we picked up; what we knocked down would have filled the boat if we could have gathered them. The weather this first day was simply perfect, a sort of Indian summer.

On the 4th we had killed four coots when the rudder and rudderpost were carried away by backing, full speed, against a pretty heavy sea. It took until the 13th to make repairs, and on that day the weather was so bitterly cold that we were glad to go ashore after bagging six coots. On the 15th we got 21, on the 17th 14 ducks, one loon and one very fine Canada goose. We spied what we supposed were brant or black duck sitting about a mile away right off the Scotch Caps by the mouth of Mamaroneck Harbor. They happened to be to leeward so we ran right at them full speed, and when we got within 200yds. they began to get up in their awkward manner and of necessity coming toward us, up wind. As I was steering I was the last to fire, and choosing the last bird, I knocked him over with a charge of BB out of the 8-bore, but I am bound to say that we could hear the No. 1 shot from the eight barrels of the 12-bores rattle against them, sounding as though it were hitting the side of a barn.

On the 20th we got fourteen coots, and then I sent the boat home to Irvington-on-Hudson. Each of these days we were only out from 9 to 3, as we had to drive over to Mamaroneck, our objective point, from Irvington and back again in the afternoon, seventeen miles each way.

Our best shooting was done between Mamaroneck and Captain's Island. We ate the young gray coots and very good they were. We had some very pretty sport with the large flocks of old-wives by running slap at them without attempting to shoot, and then when the boat was over the spot just vacated by the birds that were on top of the water we would back full speed and wait for the divers to come to the surface. Up they would pop, one and two at a time, and finding us so near them they would get up and fly for dear life, giving a very fair chance at them, not unlike pigeon-shooting from a trap. On cutting open the crop of an old-wife we found two mussels, shells each an inch and a half long, and over two hundred diminutive clams, shells and all, each about the size of a green pea. No wonder that these ducks have a strong fishy flavor.

Having sold the Dolphin I tried sailing for coots in my 34ft. catboat May, last fall, but they would not have it at any price, and notwithstanding that I had added a 4-bore 16lb. gun to the armory we only coralled eight in three days' cruising about with a fine breeze, between Mamaroneck and Bridgeport. The sail frightens them as the boom is away out while running down wind to the birds.

With the steamer we certainly had great sport and I cannot see how this way of shooting the artful coot can do any more harm than by stringing a long line of boats off points, for in this style of shooting the slaughter is something awful. A careful calculation shows that it took about 3,000 cartridges to secure the 101 head of birds on the Dolphin! And this is accounted for by the fact that nine times out of ten one shoots at birds that are a long way out of shot for any weapon but a rifle, and also by the quick motion of the boat on the waves; still shooting is what we went for and hitting was of minor importance. You must also remember that about four ducks are knocked down for one that is gathered.

HOWARD S. JAFFRAY.

MAINE WARDENS AND FINES.

MEETING casually a prominent friend of game protection in Maine yesterday, he came down squarely with this proposition: "Why is it that in every Legislature there is always a pack of —— fools?" FOREST AND STREAM need not use this profanity, but it expressed the feelings exactly of the gentleman in question. We were talking over the position of large game in Maine, when the expression came out. It will be remembered by those who followed the doings of the Legislature of that State closely at its last session in 1886-7, that a resolve was passed turning the amount of fines collected for violations of the game laws into the county where the prosecution came up, instead of one-half going to the game warden who unearthed the poaching, and the other half to the State. What the law was framed for, no man could understand, and at once the Commissioners saw that a great deal of harm had been done. Soon after, in a private letter, Commissioner Stilwell remarked that he was afraid that there would be no money with which to enforce the law, and that the game and fish would suffer. But at that time he desired that the matter be kept as quiet as possible, in the hope that the average poacher would be a long time in getting hold of the fact that the game wardens could ill afford to take all the risk of bringing breakers of the game laws to justice without pay, while the appropriations by the State were not sufficient to begin to pay them for what they ought to do. But the latest reports from that State go to show that poachers and law breakers have got hold of the idea in real earnest, and that the large game is suffering seriously; in fact that before the winter is over all the good work done by the Commission and the wardens during the several years that the laws have been partially enforced is in danger of being undone. The latest dispatches to the daily papers indicate that the worst kind of poaching is going on in various parts of the State. In the upper Machias region deer are being killed regardless of the close season, and, worst of all, they are being hunted with dogs. It is known to a few that a mongrel—cur and hound—was shipped from Boston the other day to Machias, and it leaked out that it was for the purpose of running deer. The owner stated that "nobody would think that such a short-legged cur would run a deer, but that he would stick to a deer's track like h——l." Other packs of dogs are there.

Not all of the reports can be believed, but there is not a doubt but what the game is suffering badly because the Commission has no means with which to enforce the law. It is reported that the "noosing of caribou" is going on in the northern Machias region, and that in the vicinity of Nicatouse Lake the deer are being taken by every possible means. Game wardens cannot afford to follow up such wicked poaching without pay; besides the actual personal danger is very great.

It is certain, however, that but little of this ill-taken game is finding its way into the Boston market this year. The fact that the express companies refuse to take it, when aware of it, cuts off the shipment almost altogether. But occasionally a Maine deer is seen. I saw a couple on a local express wagon the other day. The buck had a tag on his antlers directing the shipment to a well-known commission house, but there was no statement whatever as to whence the venison came. Or rather the tag was originally a regular shipping tag, but the name of the shipper was cut off. I asked the expressman where the deer came from, but, as usual, he did not know. I asked him where he took them from, and he claimed that he took them from another well-known commission house. Western deer are being received here, but not in so great quantities as usual.

But to return to the trouble in Maine. About the only hope for the moose and deer is that the winter will wear away without much crusted snow. Thus far the winter has been mild, with only light snows—till within a week or two—very favorable to hunting. If deep snows fall as they have now begun to fall, and they are not covered with crusts in the spring, as they sometimes are not, then a good part of the deer and moose will winter in safety. But the skin hunters will be on the watch for the hard crusts of March, and even down into April, and the game is likely to be destroyed. If there was any reward for game wardens, a stop would be put to this illicit hunting, but the State is a large one and the wardens are few at best. It can hardly be expected that wardens and game officers will cover hundreds of miles of distance, over almost impassable roads, and take the personal risks alluded to above, all for nothing. The practice of allowing a game warden half of the fines collected from poachers could hardly be expected to be in favor in some of the sections of Maine, but after all the State must either appropriate the means for doing the work and take the fines herself, or the wardens must be paid for their services out of the fines. Otherwise the large game of Maine is doomed to go where the bison of the plains have gone. I have just learned, through hearsay, that the matter of the destruction of game in Maine this winter will be called to the attention of the acting Governor, in the hope that he may authorize the protection of some of the best game sections where the worst poaching is going on, and see that the bills are paid out of the treasury, but I am not sure that such a step could legally be taken, though it could be done in the case of crime more harrowing to society. There is one feature that will certainly operate against such a movement on the part of the government; unfortunately one or two of the members of the council are not very friendly to game protection. SPECIAL.

NOTES FROM MISSOURI.

SENECA, Mo.—Looking over your paper I see so many items about hunting which interest me so much that I think I must tell you about the sport along the line of the beautiful Indian Territory. Our town is a small trading point of about fifteen hundred inhabitants, located just half a mile from the Territory line, in Newton county, Mo. Our game in the timber and fields is chiefly quail. On the prairies we have prairie chickens, which afford us good shooting. On the creeks and rivers are a few mallard ducks, and in the river bottoms you will find a few deer and turkey. Our best sport is quail shooting, which I think is very good. I know one man who has killed over seven hundred quail this season. I have had some good sport, making some very good bags. Once I went in company with two others, and in five hours driving and shooting we had bagged five dozen quail, one duck, five rabbits and two snipe. We did some very poor shooting, or we could have bagged more than one hundred birds. I only had one day's shooting at chickens, and that was not good. There were two of us shooting, and we only bagged twenty-one. They were very wild and our dogs were both young and new at the work, so it took some of our good time to keep them at their places; but by close watching we got some fine work out of them, though all sportsmen know how it breaks a man up to keep his eye on his dog and game at the same time.

By going thirty miles west into the Territory we have fine sport shooting chickens. The sportsman must stand in with the officers or he is liable to be taken in, and may have to lose his dog and gun.

We have only a very few dogs here, but some of the lovers of good sport are trying to improve the stock, and we won't patronize any breeder unless he has pedigree stock. There are some good pointers here and we had some fine setters, but their owners had bad luck with them, and now there is only one left and she is fine. She is from a kennel in St. Louis.

We often go out from here from fifteen to twenty-five miles, and camp for ten days at a time, fishing and hunting; on these trips we usually get some deer and turkeys and plenty of fish. F.

NEW YORK GAME CLUBS.—Auburn, N. Y., Jan. 19.—*Editor Forest and Stream:* Will you kindly say that the addresses of all the gun clubs in New York State, whether members of the State Association or not, are wanted as soon as possible by Chas. E. Kerr, Secretary Auburn Gun Club.—CHAS. E. KERR.

A MICHIGAN WILD TURKEY.—East Saginaw, Mich.—Mr. W. H. Mershon recently shot the finest specimen of wild turkey seen in these parts for many years. It was a gobbler that weighed 26lbs. Richter mounted the bird and it was placed on exhibition in the parlors of the First National Bank.

WINTER IN THE PARK.

YELLOWSTONE NATIONAL PARK, Jan. 11.—*Editor Forest and Stream:* The weather here up to Dec. 20 was pleasant, with very little snow fall. The game that was on its winter range turned back to the higher country it had left with the first heavy snow fall, so that very little could be seen where usually at that season hundreds were feeding. I was out two weeks on the winter range for elk and only saw one band of eleven. The weather continued pleasant so long that the blacktail deer (the first to change their range) thought they had made a mistake in the season and went back to their summer feeding ground. I saw several higher up and further back in the mountains than ever before at this season. All the hunting parties out in the country adjacent to the Park met with poor success; some saw where hundreds of elk had been, but they had all gone back into the Park. Less game has been killed this season in Montana than ever before, owing to the absence of snow in the reservation to drive the game out.

Since Dec. 20 we have had more snow, and since 1888 came in, we have had some very severe weather, with a very heavy fall of snow, which ranges in depth from two to over four feet throughout the Park. Teams and men, who have been engaged in cutting ice for the hotels, experienced great difficulty in getting out to the Mammoth Hot Springs. They report seeing one fine buffalo between the Upper and Lower Basins, where he took to the road just ahead of their horses, keeping in sight and being sometimes only fifty yards off for half a mile, until he turned off on another road. He did not appear much alarmed, considering probably that he had a perfect right to the use of the Government roads, and preferred traveling them to the rough work in the timber. He went toward the part of the Lower Basin where I reported seeing buffalo sign last spring. He and several others will probably winter there or on the head of Alum Creek.

Thousands of elk are now to be seen. Elk in very large bands are in the Swan Lake Basin, near Mammoth Hot Springs, in the Blacktail Creek country, on the East Fork of the Yellowstone, around Mt. Washburn, on Alum Creek and all along the Cooke City road. Antelope are plenty around the Junction Butte and on Mt. Evarts. Mountain sheep have returned to the Gardiner Cañon and will probably become as tame as they did a year ago, when one could pass within a few yards of them without frightening them at all. Generally people show more excitement than the sheep at an unexpected meeting in the roadway.

The Gardiner River, below where the hot waters of the Boiling River join it, is free from ice, and much frequented by fishermen, who catch some fine strings of trout with flies. On any clear day the fish (mostly small) can be seen in still pools. The river above the Hot Spring is frozen over, and is uninviting either to fish or fishermen.

How cold it has been this year it is impossible to learn, except that the mercury froze in the thermometers at Soda Butte; that it was —28° at the Hot Springs and —29° at Gardiner. All this very cold and wintery weather is producing some very beautiful frost work at the geysers and falls. The mail to Cooke City is carried part way on horses, the rest on snowshoes, Dave Dobson making the weekly round trip of a little more than one hundred miles. Very few people are left in Cooke City now—not over twenty-five. Soon the use of horses will be abandoned and the mail will be carried all the way on snowshoes.

H.

THE QUEBEC CLUB.

MONTREAL, Jan. 16.—The twenty-ninth annual general meeting of the Fish and Game Protection Club of the Province of Quebec for the reception of reports, the election of office bearers, and the transaction of other business, was held in their rooms on Saturday afternoon, when there were present Mr. W. H. Rintoul, President, in the chair; Mr. J. Nelson, Jr., Hon. Secretary-Treasurer; Lieut.-Col. Massey, Col. d'Orsonnen, Messrs. Jas. Slessor, R. McKay, A. N. Shewan, I. H. Stearns, A. J. Dawes, L. A. Boyer, Alex. McDonald, R. C. Bagg, E. Levy, John McGillis, John A. Walker, E. B. Goodacre, Angus Grant, Selkirk Cross, C. C. Newton, George Horne, Jesse Joseph, Geo. de Beamer, A. McKeard, De Martigny, L. Huot, Geo. Cameron, J. A. Cantlie, R. L. Dillon, Duncan McDougall, Geo. W. Ahern and others. After the meeting had been called to order, Mr. Nelson read his report as follows:

Your executive committee, in laying before the members the work done by the club during the year just ended, have to report fewer actions taken than on previous years, due undoubtedly to the fish and game laws being better known, especially in the city. The first two actions taken out were against two noted "Chasseurs" of Three Rivers, for having killed a number of caribou some forty miles back of Three Rivers on the grounds of the Shewinigan Club. Your secretary proceeded to Three Rivers, where he remained a couple of days picking up all the information he could. When he had been assured by eye witnesses that these men had really been guilty of killing eleven caribou between them, and had openly driven to the city with them, he made sure of obtaining convictions against both, so took action out, but unfortunately the cases were dismissed. The next cases were taken against no fewer than ten parties in the Grand Nord for shooting ducks before the time, viz., Sept. 1. Your secretary procured a steam yacht and two small boats and spent one week cruising on Lake St. Peter and around the islands, but great difficulty was experienced in obtaining the people's names. Not only did they refuse point blank giving their names, but rebelled and refused to allow their boats to be examined. However, after securing the services of local men to identify them, the actions were taken out. A short time after the Hon. Mr. Mercier, the Premier of Quebec, was telegraphed to asking him to instruct Judge Dugas to proceed to Sorel, where the parties were to be tried. Playing police, or even game keepers, is not what it is cracked up to be, even in a good cause. Eight other actions were taken out, but of no great importance. A good many infringements of the law have taken place, and so will continue until our Government realizes the necessity of having paid game keepers.

Important changes have been made in the law for the protection of game during the year. These are mostly in the direction in which the club has been working for years. The first amendment to be noticed is the prohibition to hunt, kill or take moose up to Oct. 1, 1890, which is to be commended. Then the open season for deer and caribou is fixed at from Oct. 1 to Jan. 1. As regards deer, the latter date is also satisfactory. Your committee are of opinion that the old date for opening, viz., Sept. 1, should have been retained, as many sportsmen are in the woods during September, and that month is a perfectly legitimate season for hunting these animals. Your committee also think that the open season for caribou might have been extended to Feb. 1 without any detriment to them and to the advantage of sportsmen who desire to secure this kind of game in a fair and sportsmanlike manner. It has been enacted that hare may not be hunted before Nov. 1. Why it is would be hard to say. A most important and valuable amendment has been the closing of the duck season on April 15. On the whole the Government is to be congratulated on the enlightened way in which they have treated the subject. Wild rice has been sown this autumn on both sides of the St. Lawrence from River Beaudette to Lake St. Peter. In some localities what was planted two years ago is doing very well. Your committee takes this occasion to inform lovers of the rod that it can be used on Sundays as heretofore (but they mustn't say so). Some misunderstanding appears to have existed by an order-in-council which was recently issued, but which only applies to tidal waters, salmon is the fish aimed at. The Department of Crown Lands at Quebec have been written to as regards allowing this club the privilege of issuing shooting licenses, which is likely to be granted, the answer received being deemed satisfactory.

Mr. Shewan suggested the enforcing of the law prohibiting trout fishing through the ice during the winter. The club should urge the new officers to take action in the matter. In answer to a question, the chairman said that the secretary had acted as overseer, and thought that by next winter they would be able to legislate to put a stop to trout fishing during the winter. A member understood that they could not get this on account of this being a French province with so many holidays on which the people required to eat fish. The treasurer's statement showed the balance on hand to be $464.10. The election of officers for the ensuing year was proceeded with, resulting as follows: President, I. H. Stearns; Vice-President, G. W. Ahern; Secretary-Treasurer, John Nelson, Jr. Committee—Dr. Brainard, W. H. Atwater, L. A. Boyer, Stanley Bagg, E. B. Goodacre, Robert McKay, Geo. Matthews, Geo. Horne, L. Huot, H. R. Ives, W. H. Parker, W. H. Rintoul, Alex. McDonald, A. J. Dawes and Selkirk Cross.

Mr. Horne, in the course of a few remarks, paid a high compliment to Mr. Nelson for his zealous and untiring efforts in the interest of the club and moved that a recommendation be made to the new board to grant Mr. Nelson $100 for his services. Unanimously agreed to.

MASSACHUSETTS GAME.

ABOUT all the Worcester sportsmen are willing to admit that they have had a very good season for bird shooting. Very few woodcock bred about here, and the flight was hardly up to that of a year ago; but partridges were very plentiful, and we had about the usual number of quail. A very good stock is left over, and if the Massachusetts Fish and Game Protective Association, with the coöperation of the local clubs throughout the State, succeed in their efforts with the Legislature and secure a repeal of the snaring clause of the game law and cut off the month of August from the open season, we shall hope for another good shooting season next year. Since close of shooting, the Sportsman's Club have inaugurated weekly shooting at the trap, but the weather has been so cold and rough that the members have not turned out in great numbers. As the days grow longer and with warmer weather, the interest will without doubt revive, and it will again be lively at the club house.

E. SPRAGUE KNOWLES.

WORCESTER, Mass., Jan. 18.

PHILADEPHIA, Jan. 20.—A reception and an informal banquet was given by the Anglers' Association of Eastern Pennsylvania last evening at the rooms of the association, 1,020 Arch street, to the Commission of Fisheries of the Commonwealth of Pennsylvania, consisting of Henry C. Ford, H. C. Demuth, A. S. Dixon, W. L. Powell and James W. Long. Letters of regret were received from Governor Beaver, William Spencer, Charles N. Pine, W. H. Bowman and N. Y. Seltz. Remarks of unusual interest were made by the president of the association, A. M. Spangler, State Senator General Osborne, Dr. Kingsbury, Dr. Rushrod James, James Long, of Pittsburgh; president of the Connecticut State Commission Dr. Hudson, Rev. Dr. Wiggins, of Philadelphia, and a report was read by H. C. Ford, president of the Fish Commission of Pennsylvania. Reference was made to the important action of the association in its untiring efforts to abolish the unlawful means used by the menhaden pirates who are devastating the coast and the active part the members have taken in reference to this great abuse, both in New Jersey and Congress.

NARCOOSSEE, Fla., Dec. 20.—Yesterday saw six of us seated in a couple of wagons jolting over the roots and stumps for which our Florida roads are celebrated, on our way to a marsh, where it was reported there were a great many ducks. Our expectations were far from being fulfilled, only seeing some half-dozen ducks, which carefully kept out of range, but having taken the precaution to bring some small shot, four of us decided to try our success at snipe. In the evening on reaching camp we found we had bagged forty-eight. Sun-up saw us busily engaged preparing breakfast, and shortly after we might have been seen walking through the marsh very gingerly, as the wind had backed into the north and was blowing pretty stiff, consequently the water was none too warm, but we soon forgot that as we got among the birds. Having exhausted our ammunition about two hours before noon, we returned to camp, and on counting the birds we found we had grassed fifty-two, making in all 105 snipe. Not having fired a shot at duck we struck camp and drove home after a very pleasant shoot as regards snipe.—GENERAL.

KENT COUNTY CLUB.—Grand Rapids, Mich.—At the annual meeting of the Kent County Sportsmen's Club the following officers were elected for the ensuing year: President, E. S. Holmes; Vice-President, S. F. Aspinwall; Secretary, A. B. Richmond; Treasurer, N. Fred. Avery. Directors, one year, T. Stewart White; two years, C. D. Spaulding; three years, W. C. Dennison; four years, H. Widdicomb; five years, N. A. Earle. The club expects to arrange for a series of friendly and competitive shoots between teams selected from the members of clubs in Grand Haven, Spring Lake, and other towns during the coming season.

ORANGE, N. J.—Rabbits are very scarce in this vicinity, more so than previous years, possibly owing to the numerous sportsmen who can nearly every day be met with on the Orange Mountains.—CRACK SHOT.

THAT WIRE FENCE INCIDENT.—Meriden, Conn.—If it is a fair question I would ask the writer who described a wire fence incident, what point he is endeavoring to make. In this advanced age of hammerless guns with safety under your thumb, such an accident could not happen. If I was so careless as to push a hammer gun at full cock along the ground in a way to discharge it, it seems to me I would not advertise it.—J. F. I.

QUAIL FOR LONG ISLAND.—The Brooklyn Oxford Rod and Gun Club, which owns 7,000 acres of land at Patchogue, L. I., have received from their agent in Virginia 300 pairs quail, 120 pheasants and about 50 wild turkeys, which they have turned loose on the grounds.

ST. AUGUSTINE, Fla., will have a tennis tournament in March. Particulars may be had on application by letter to Geo. Stuart Smith, St. Augustine.

THE ALBANY GAME LAW MILL.

[Special correspondence Forest and Stream.]

ALBANY, Jan. 24.—The session of the Legislature has passed thus far without any very great excitement. No one has been able to procure a copy of the short code that has been introduced at the instance of Mr. Roosevelt, a brief outline of which was given in FOREST AND STREAM last week. No one, however, seems to care to push the bill along; and it is not likely that any one will do this unless it is Senator Laugbein. It is known that Mr. Hadley, the chairman of last year's game committee, in the Assembly, will oppose it with all the power at his command. It is well known that Mr. Hadley has considerable influence in the Assembly, and that his idea is not to change the laws.

Assemblyman Roesch's bill amends Sec. 6 of Chapter 427 of the laws of 1886, as amended by Sec. 1 of Chapter 641 of the laws of 1887, so that the last clause shall read: "It shall be lawful to shoot robins and blackbirds on Long Island and Staten Island from the 1st day of October to the 1st day of January in each year."

Assemblyman Ainsworth's bill extends for thirty days the time of killing deer. That is to say, deer killing need not stop until Dec. 1, instead of Nov. 1, as at present.

Assemblyman Fort has introduced a bill which changes the time of killing woodcock from Aug. 1 to Sept. 1, thus making a uniform law throughout the State. Assemblyman Knapp has a bill allowing the shooting of woodcock in Delaware county on the 1st of August.

Senator Coggeshall has introduced his amendment to the game laws of 1884 (his bill of last year), providing that the woodcock and gray squirrel and partridge seasons shall be only during September, October and November. The bill also provides that no snare or bird lime shall be used; and at the 1st of April the wild duck season shall begin.

Assemblyman Flaherty has introduced a bill, No. 188, for the further protection of game and the protection, benefit, and convenience of sportsmen's clubs and hunting associations, organized within the State of New York. It provides that to be recognized as a sportsmen's club or hunting association for the purpose of this act there must be an organization having a president, vice-president, secretary and treasurer, elected for one year; and such clubs or associations may select captains once each year, who shall choose sides from the members of the club for an annual hunt, which shall take place either in the month of September or October. It shall be lawful for the members of such sportsman's clubs or hunting associations, so chosen on either side, and on the day of the annual hunt of the club of which they are members, as above described in Section 1 of this act, to shoot and kill for the purpose of count, the following named birds and animals, to wit: Bear, deer, panther, wolf, lynx, wildcat, fox, raccoon, skunks, porcupine, mink, woodchuck, muskrat, otter, beaver, rabbit, hare, squirrels, wild turkey, wild goose, wild duck, raven, gray eagle, blue heron, loon, bittern, brant, rail, coot, mudhen, gallinule, surf bird, gull, sandpiper, partridge, grouse, prairie chicken, quail, crow, owls, hawks, woodcock, wickup, bluejay, lark, plover, tattler, curlew, kingfisher, pigeons, snipe, woodpecker and blackbird. This act applies only to the regular sportsmen's clubs as above described, organized and residing in this State, and to no other persons or clubs, and no person shall engage in more than one hunt under this act in any one year, and no members of any clubs are hereby given any privileges under this act further than any other person, except on the day of their annual hunt, as above described. This act shall take precedence over any and all acts affecting the rights of sportsmen to the contrary now existing, and this act shall take effect immediately.

The original law of 1885, Chapter 283, creating the Forest Commission, was altogether too sweeping in many of its provisions. It was provided that no lands of the State within certain counties should ever be sold. The fact appeared to be overlooked that lands are constantly coming to the State through mortgages. It has, therefore, been thought desirable to change the law so that the land commissioners may sell as they did before the law of 1885 was passed. Senator Sloan has, to this end, introduced a bill which amends Section 7 of the act so that it shall read as follows, the additional part being placed in brackets: All the lands now owned, or which may hereafter be acquired, by the State of New York, within the counties of Clinton (excepting the towns of Alton and Dannemora), Essex, Franklin, Fulton, Hamilton, Herkimer, Lewis, Saratoga, St. Lawrence, Warren, Washington, Greene, Ulster and Sullivan, shall constitute and be known as the forest preserve, [except such lands as have been, or may hereafter be, acquired by the State of New York upon or by foreclosure of or sale pursuant to any mortgage upon lands made to the Commissioners for loaning certain moneys of the United States, usually called the United States deposit fund; and all such excepted lands acquired by the State of New York may be sold and conveyed as provided by law.]

Simon Loder and Christopher Raymond, lumbermen working in the Pine Creek woods, in Lycoming county, Pennsylvania, declare that while they were driving from English Centre, on Pine Creek, to White Pine, near the head waters of Larry's Creek, on Monday night, they were pursued by six wolves for several miles. One of the wolves attempted to jump in the sleigh, and was shot by one of the men with a revolver. Another of the pack approached so close to the sleigh that it was also shot and wounded. The wolves then gave up the chase. The Pine Creek region is a very wild one, but, although bear and catamounts are still numerous in the swamps and forests, this is the first time in many years that the appearance of wolves has been reported thereabout.—*New York Times.*

On Thursday William Dempsey of Rondout received a quantity of smelts and pickerel which were frozen stiff. He put them in a barrel of water to thaw out. About three hours after (so Dempsey said) he went to the barrel and found that the pickerel had thawed back to life, but he could find no smelts. The pickerel had eaten them.—*Albany Argus.*

A fine diamond-back terrapin, weighing seven pounds and nine inches long, was received yesterday by the steamer Enoch Pratt. It was sold for $1.25 a pound. It is very unusual to find a diamond-back as large as this. One sent to President Cleveland last year weighed, it is said, nine and a quarter pounds.—*Baltimore American, Jan.* 19.

NOTES ON THE SUNAPEE TROUT.

A SUPPOSED NEW SPECIES FROM NEW HAMPSHIRE.

ON Oct. 31, 1885, Colonel E. B. Hodge, Fish and Game Commissioner of New Hampshire, sent to the National Museum a fresh trout from Sunapee Lake weighing 5¼lbs. On Dec. 10, 1886, he sent several more large specimens from the same lake. It was supposed at first that this trout is most closely allied to the blueback of Maine, but as our specimens of *oquassa* were uniformly smaller than any of the Sunapee fish no satisfactory comparison could be made at the time.

During the summer of 1887, however, Dr. John D. Quackenbos obtained three young specimens of the Sunapee Lake species and Colonel Hodge added another somewhat larger. The longest of the young trout sent by Dr. Quackenbos measured about 7in. I have compared it carefully with bluebacks from Maine of about the same size and find some differences which I had not observed before.

I have all along believed that the Sunapee Lake *Salvelinus* without mottled fins is identical with *oquassa*. It is possible that the identity of the two forms will yet be established, but so far it has been impossible to obtain specimens of the blueback from Maine which show a perfect agreement with the large individuals found in Sunapee.

The National Museum has numerous small examples of the blueback, the largest of which is about ten inches long. One significant fact which I have not seen recorded is that all of our bluebacks show very distinct parr marks and are consequently young. It is true that bluebacks begin the reproductive act before they have reached a length of ten inches, but the number of eggs in trout of that size is always small, about fifty to one hundred, and parr marks are always present. In my opinion the blueback reaches a large size. In a pamphlet entitled "Down East Latch Strings," published at Boston by the Boston & Maine Railroad in 1887, page 119, will be found an illustration of a species of *Salvelinus* caught in Lake Moosehlucmeguntic, Maine, which measured 28¾in. in length and weighed 10¾lbs. It is highly probable that this trout was not *fontinalis*, and it may have been the blueback; it shows a strong resemblance to the large trout of Sunapee Lake. It will be necessary to determine the species to which this trout belongs before we can say with certainty that the blueback does not reach a large size.

In FOREST AND STREAM of June 23, 1887, "The Large Trout Record" is reviewed by Geo. Shepard Page, A. N. Cheney and "Special." I do not believe that all of the large trout referred to in that record were *fontinalis*, but I cannot prove that they were not, because I have not seen any of the specimens. It is to be hoped that one of the Maine angling associations will send some of the very large trout from the Rangeley Lakes to the National Museum; specimens which have been in the collection a few years are usually unsuitable for comparison with fresh material from other sources. Salmon and trout are among the most difficult of all fishes to preserve.

FOREST AND STREAM during the years 1886 and 1887 published numerous articles relating to the trout from Sunapee Lake and the blueback, and to those columns the reader must turn for particulars as to the discovery and the subsequent history of the Sunapee trout in New Hampshire. Various theories as to the origin of the fish in Sunapee Lake have been proposed and discussed. My opinion at present is that the species have lived in the lake a great many years. It has probably not been distinguished from the common brook trout (*fontinalis*) until Colonel Hodge, Dr. Quackenbos and others called attention to its peculiarities. More than one ichthyologist, including myself, at first glance supposed the species to be *fontinalis*, but after subsequent careful examination it was found to belong to another group of species, namely the one having teeth well developed upon the hyoid bone. These teeth in *Salvelinus* are found on the bone between the lower extremities of the first two gill-arches. In the Sunapee Lake species this patch of teeth is very conspicuous in medium and large-sized individuals. If future investigations show that large trout like those in Sunapee Lake are found in the Rangeley Lakes of Maine, the origin of the Sunapee trout may be traced to some early introduction of the blueback into New Hampshire. This, however, is at present only a matter of opinion. The material now in the National Museum will not enable me to say positively that the Sunapee and blueback trout are identical. There is nothing left for me, therefore, but to describe the species from New Hampshire as probably new. This I have done in the current volume of the Proceedings of the National Museum and have given to it the name *Salvelinus aureolus*.

There are at least six apparent points of difference between the Sunapee trout and the blueback: 1. *Salvelinus aureolus* has eight developed rays in the anal fin besides three rudiments, while the blueback has ten developed rays and three rudiments. 2. Blueback trout begin spawning when they are about 9in. long, but Sunapee trout of the same length in our collection are all immature. 3. Blueback trout in the fresh state are described as having the back uniform steel blue, while in the young Sunapee trout there are numerous dark blotches on the top of the back which give the fresh fish a mottled appearance. 4. It is stated by Fred Mather that the embryos of the Sunapee trout have a white line at the upper and lower edges of the caudal fin, and no such character has been observed in embryos of the blueback. 5. It is said that the blueback spawns in streams while the Sunapee trout is a lake spawner. 6. The gill-rakers of the Sunapee trout are shorter and usually less numerous than in the blueback, and they are almost invariably curled up at ends, while in the blueback they are always straight and slender. This may be due to a difference in the character of the food.

In FOREST AND STREAM of Jan. 14, 1886, Colonel Hodge thus describes the colors of Sunapee trout: "The females have a brownish back; sides lemon color. Males, small ones, bluish-black back, large ones much lighter, in fact, almost cream color; some are very light olive; sides and belly golden orange. They are the most brilliant colored of any fresh-water fish that I know. The fins are very large, much larger than in the common trout, and the fish is entirely destitute of mottlings on the back, in fact, there are none of the usual characteristic mottlings of brook trout."

The fresh colors of the blueback are thus described by Mr. Henry O. Stanley in FOREST AND STREAM, May 5, 1887: "I have watched the bluebacks (*Salmo oquassa*) carefully, habits and characteristics, and have taken all the eggs that have ever been taken at Rangeley, have hatched them a number of years and watched them through all their stages till turned loose, and have never noticed any white line on the lower edge of the tail fin you speak of. Had there been any (even if very slight) I think I should not have failed to notice it. I am sorry to say we have not any eggs hatching this season to verify my opinion, but I feel very sure there is none. The adult fish does not have any white on the fins at all like the brook trout. The fins of the males are bright red, or the color of bright autumn leaves. When taken from the water they are of a dark color, after death turn to a bright yellowish cast. The spots are very minute, very thick, very bright yellow and red, both thicker and brighter than on the brook trout."

Dr. John D. Quackenbos describes the colors of the Sunapee trout as follows: "The coloration of the sides varies from a dead lustre cream tint or a delicate olive to a dazzling orange, which in some specimens deepens into a dark steel blue on the back; always destitute of mottling and with none of the characteristic of the brook trout. The spots are generally secondary, though in some fish vermilion specks are a conspicuous feature, while in others spots of any hue are hardly perceptible. Occasionally the females are as highly colored as the males."

On Oct. 31, 1886, Colonel Hodge thus described the colors of the Sunapee trout in a letter to the late Professor Baird: "During the summer they are very light colored, almost white; they are not mottled on the back like the other trout in the lake. The smaller ones, from one to two pounds, are almost black on back, but orange on sides. These fish grow very large, reaching ten pounds and over, and at this season (Oct. 31) when first taken are in color on sides a deep golden orange, and as the males roll up in the water look like a broad band of gold. In swimming these fish move along exactly like a salmon, that is they swim with their whole body from head to tail."

On Dec. 10, 1886, Colonel Hodge sent some fresh specimens of the Sunapee trout to the National Museum. When received the colors were as follows: Head and upper parts brownish gray; caudal the same, with the exception of a narrow white margin on the lower lobe; under surface of head in most examples brownish gray, in others whitish; belly orange, this color extending up on the sides, but not to the middle line of the body, and orange with white margin in front; ventrals orange with broad white margin on the outer rays; upper half of pectoral gray, lower half orange; dorsal gray, lighter along the base; sides, both above and below the lateral line, with numerous orange spots fading out to whitish, the largest of these spots are a little more than one-third as long as the iris; no mottlings anywhere.

The young specimens received from Dr. John D. Quackenbos, which were collected in Sunapee Lake during last summer, have the following color marks: Sides, silvery white; back, with six or more well-defined, band-like dark markings, besides some irregular intervening dark blotches. There are about ten parr marks on the sides and numerous small roundish white spots. A female 11in. long sent by Colonel Hodge from Sunapee Lake, November 28, 1885, has a few free eggs in the abdominal cavity; it seems to be nearly spent. This example has numerous parr marks on the sides and band-like markings on the back are still very evident.

T. H. BEAN, Ichthyologist, U. S. Fish Commission.

U. S. NATIONAL MUSEUM, WASHINGTON, D. C., Jan. 23.

SENSIBLE ICELANDIC FISHERMEN.

IN the nineteenth century many a fisherman is foolish enough, in order to obtain a single meal, to destroy fishes that would have sufficed, if not interfered with in breeding times, to feed twenty families for a week. A recent letter from Iceland shows a remarkable contrast in this regard, and its people are certainly entitled to call us barbarians, as compared with themselves in the matter of securing a permanent supply of fish food.

Dr. Labonne, member of a scientific mission to Iceland, met a young Scotchman, who, like many of his countrymen, passes six weeks every year in Iceland, fishing for trout, salmon, and the red-fleshed char. "Being permitted to accompany him," he writes, "on lake and river, I was astonished to meet frequently, at short distances apart, rectangular boxes with gratings at each end, fixed in the middle of the stream by cords attached to the basaltic rocks on the banks. On raising the lid of one he saw inside a number of small trout and salmon, a few inches long, grouped on a bed of small stones and volcanic mud, carefully arranged on the bottom. He explained this to me as follows: 'When an Icelander catches a trout, salmon, or char, filled with eggs or milt, he thinks of others than himself, and does not cook the whole. Before eating his fish he never fails to place in the boxes above alluded to, the reproductive contents of the fish. The eggs retained by the gratings find themselves under the same circumstances as if they had been laid in the stream, and hatch out perfectly. The little fish are fed with the refuse of the kitchen, and when they have attained a sufficient size to look out for themselves, are distributed in the neighboring streams.'"—*Translated for D. T. Curtis by Dr. Samuel Kneeland.*

ICE FISHING.—Worcester, Mass., Jan. 28.—Ice fishing has been excellent the past four weeks and many fine strings of pickerel have been taken; so plenty have they been in the markets that citizens who do not care to indulge in the sport could purchase them for their Friday fare at a very moderate price.—E. S. K.

"RANGELEY SPAWNING GROUNDS."—In Capt. Barker's communication, Jan. 12, page 489, first paragraph, the writer is made to say that the Kennebago stream empties into the Cupsuptic stream. He wrote, "empties into the Cupsuptic Lake about three miles below the Cupsuptic stream."

SUNAPEE LAKE.

WORCESTER, Mass., Jan. 10.—All last winter I watched the columns of FOREST AND STREAM for some account of the fishing at Sunapee Lake, N. H., but seeing none and being unable to learn much about the lake I gave up the trip and went up to Lake Champlain after bass again. I once lived in New Hampshire and when there contracted (took it from the New Hampshire boys I think) a severe case of "Sunapee fever," which I have never been able to entirely shake off. I have seen occasional accounts of the peculiar trout taken there, the re-stocking, etc., but never a word, as I remember, about the fishing. Why is it? Don't any one fish there? Don't they catch enough to pay for a trip up there, or don't they care to have outsiders come in and share their sport?

I always commence laying out my vacation plans right after the holidays, and have already several Maine lakes under consideration for the coming season, but I can't get over the glowing description the New Hampshire boys used to give me of Sunapee. Neither can I learn of a lake in Maine where there is good fishing that is not overrun with sportsmen or else hard to reach. By good fishing I mean a fair day's sport with fair sized trout. Trout running ¼ to 2lbs. are large enough for me, and I enjoy paddling along a pretty shore if I don't catch many.

You see my companion and I go fishing to fish, and be by ourselves. Now, don't set us down for a pair of unsocial cranks, for we are not, but when a fellow is limited to one week's outing a year, he can't afford to spend much of it visiting. I can stand a heap of fishing. A week solid does not tire me of it a particle, and when I come in after an all day's session I am ready to lie off and listen to a good story, swap lies with the guides, etc., but I don't enjoy being kept awake till daylight by those members of nearly every large party who do their heaviest fishing after supper, "sounding" for the bottom of a glass bait can. They usually find it before they quit, too.

Now, if this catches the eye of any one lucky enough to have been to Sunapee I hope he will give us the benefit of his experience there. Tell us how to get there and where to go when we do get there.

We are both poor fishermen and mighty unlucky at that, but we do like to drop into a place where we can have a good week's fish.

We feel obliged to spend about so much of our yearly stipend and a week's time in somebody's woods looking for somebody's fish or game every summer, and we would just as soon have it in New Hampshire as in Maine. In fact we would prefer to, as it is nearer. Let us hear from Sunapee. SWIRL.

CHUBB'S CATALOGUE.

THOS. H. CHUBB, the well-known manufacturer of fishing tackle, has issued a new catalogue which is a valuable guide to the purchase of angling supplies, and gives also a series of well-written papers on fishing subjects. Dr. James A. Henshall discourses of black bass and black bass fishing. Mr. A. N. Cheney writes luminously of trout fishing. There are several pages of fish lore from the pen of Geo. P. Goff, A. M. Mr. W. H. H. Murray talks of practical angling. Hints on salmon fishing are followed by notes on the manufacture and choice of hooks by Mr. John R. Bartin, and "Old Izaak" concludes this portion of the book with a talk on angling. The description of Chubb's manufactory is instructive as a setting forth of how a small business can rapidly grow into a big one, if the product be only something that the public wants, and it appears to have taken a shine to Chubb's rods.

Fisheulture.

BLACK BASS IN GERMANY.

COUNT MAX VON DEM BORNE, Berneuchen, has issued a little illustrated pamphlet on the two species of American black bass, introduced by him into Germany.*

He has not designated them as the small-mouth and big-mouth, but has followed the obsolete nomenclature of "black" bass, for the first named, and has translated the specific name of the last (salmoides) into "trout-perch," fortunately he did not adopt the absurd name of "Oswego," for this fish.

He calls them "royal" fish, and says that in Michigan and Ohio they are, next to the whitefish, the most important food fish of fresh water. Quotations from Dr. Henshall and Dr. Sterling are frequent, and from these two authors alone the German readers get much valuable information concerning the life, history and habits of these fishes. In Germany the adult fish spawn in May and June, as in New York, but our author says that young fish sometimes spawn in the south (in America) from August to November, a statement which is new to us. A careful study of the literature of these fishes has enabled the author to condense a great deal of valuable information in a small compass, and yet he is careful to credit the authorities from which he draws, a most commendable thing in a compiler.

The two men in Germany who have been the most enterprising in exchanging the fishes of their country for those of America, are Count von Behr, President of the German Fishery Association, and Count von dem Borne, a private fishculturist. The former confines himself to the introduction of American salmonidæ, while the latter inclines to the percoids, of which European waters have but two good native specimens. In return they have sent many valuable lots of eggs of the different European salmonidæ to this country, and their energy and enterprise will be remembered while the literature of fishes remains.

*Der Schwarzbarsch und der Forellenbarsch, Black Bass; zwei Amerikanische Fische in Deutschland. Von Max von dem Borne, Berneuchen, Neudamm. Verlag von T. Neumann, 1888.

CANADIAN LOBSTERS.—Ottawa, Jan. 23.—The Dominion Government has adopted a few of the recommendations contained in the report of the Lobster Commission appointed in May last. The last *Canada Gazette* contains an order in Council setting forth that hereafter it will be unlawful to catch or have in possession anywhere on the Atlantic coasts, any lobsters between the 1st of July and the 31st of December, and on the coasts of the Gulf of St. Lawrence the close season is to extend from the 15th of July to the 31st of December. It is further provided, that "It shall be unlawful at any time to fish for, catch, kill, buy, sell, expose for sale, or have in possession any berried or soft-shell lobsters, or any lobster under 9in. in length, measuring from head to tail, exclusive of claws or feelers, and when caught in fishing apparatus in legal use, they shall be liberated alive by the proprietor, owner, agent, tenant, occupier, partner, or person actually in charge, either as occupant or servant, on each of whom shall devolve the proof of such actual liberations."

THE NEW FISH COMMISSIONER.

ON Monday last, President Cleveland appointed Col. Marshall McDonald to be the Fish Commissioner of the United States, in place of Prof. G. Brown Goode, who declined to leave his position as the head of the National Museum in order to retain the commissionership to which he was appointed without his seeking, or even desiring it. The appointment of Col. McDonald is a most excellent one, and was requested by most of the employees of the Commission, the National Fishery Association, the Fulton Market Fishmongers' Association, and many U. S. Senators, all of whom petitioned for his appointment. He is a practical fishculturist of long experience, and is a man of the requisite breadth of view to take charge of the vast interests, both scientific and practical, which have grown with the annual expansion of the work since the Commission was organized by Prof. Baird, in 1872.

Col. McDonald was born in Romney, Va., in 1835. In 1854 and 1855 he was a student of natural history under Professor Baird at the Smithsonian Institution. He was graduated at the Virginia Military Institution in 1861. He served from 1861 to 1865 in the Confederate Army as an officer of engineers and ordnance, and at the close of the war was Chief Engineer of the Army of North Carolina, under Braxton Bragg, with the rank of Colonel. His commission as Brigadier-General had been made out, but it failed to reach him until the surrender. From 1865 to 1879 he was a Professor in the Virginia Military Institute. In 1877 he was a commissioner of State to make a survey of the mineral resources of the James River Basin and reported to the Legislature.

In 1875 he became interested in fishculture and assisted Mr. Fred Mather when the latter was sent by Prof. Baird to establish a hatchery for California salmon at Lexington, Va., and was shortly afterward appointed to be the sole Fish Commissioner of the State. The following year he invented the famous fishway which bears his name, and which differed in principle from any then in use.

In 1879 he became attached to the United States Fish Commission. For some years he has been in charge of the entire work of the distribution of young fishes, and more recently has been chief of the division of fishculture in the United States Fish Commission. He has received gold medals for improvements in fishculture from the international fishery exhibitions at Berlin and London, a silver medal from the Société d'Acclimation of France, and a special medal from the same society for a fishway devised for the River Vienne, in France. In 1881 he devised the automatic hatching jars now in general use by the United States Fish Commission, the several State commissions, and in Europe and Japan. This apparatus first made possible the vast extension on the work of shad propagation accomplished of late years and rendered the work of the United States Commissioners practicable from the commercial standpoint. In the winter of 1882 he developed at Wood's Holl the tidal apparatus now in use for hatching the floating eggs of cod, halibut and other marine species. The vast work of distribution now carried on by the United States Fish Commission has been developed by using this, its methods perfected, and the cost of the work cheapened, so that vastly greater results are now obtained without any increase of cost.

His papers, published from time to time, cover the whole range of fishcultural work in its scientific as well as economic aspects and are to be found in his State reports as Commissioner of Fisheries for Virginia, the report of the Commissioners in FOREST AND STREAM, in *Science*, in the annual report of the Fisheries Society and in the quarto fisheries report. He is accounted by competent judges as the most accomplished fishculturist in the country, if not in the world. He is known wherever the shad and carp propagated by the Government commission has been distributed. He is zealous in his work, a good organizer, and an officer who knows how to get along with the economical allowance of Congress.

Within the past few years there has been some dissatisfaction expressed by the Interior States because, in their opinion, too much of the appropriations were expended in deep sea explorations, in which they were not interested, and they demanded that more should be done in fishculture, especially in the region of the Great Lakes. We believe that Col. McDonald will be able to harmonize all these discordant elements without sacrificing the scientific inquiries and investigations, for which the Fish Commission was originally created.

REPORT OF THE U. S. FISH COMMISSION.

WE have the last report of the Fish Commission, for 1885, being Part XIII. of the series. It is a bulky octavo of 1,100 pages, with over 200 full page plates, in addition to numerous illustrations printed in the text. As usual, the volume consists of the reports of the Commissioner (112 pages), and appendices containing special reports of vessels, stations, etc., with other interesting matter. Year by year a rapid expansion of the work of the Commission is noticeable, and Congress has shown an appreciation of the work by increasing the appropriations necessary to carry it on. The different State Commissioners have acted in harmony with the U. S. Commissioner, who has also had the hearty cooperation of many men of science in the work of investigation.

The stations at which work of various kinds was done in 1885 were: Investigation and research: Gloucester, Mass.; Wood's Holl, Mass., and St. Jerome, Md. Propagation of the Salmonidæ: Grand Lake Stream, Me.; Bucksport, Me.; Northville, Mich.; Alpena, Mich.; Baird, Cal.; trout ponds near Baird, Cal.; Wytheville, Va., and Cold Spring Harbor, N. Y. Propagation of shad: Battery Station, Md.; Central Station, Washington, D. C.; Fort Washington, Md.; Gloucester city, N. J., and Lambertville, N. J. Propagation of carp: Monument Reservation, Washington, D. C., and Arsenal grounds, Washington, D. C. A new station for hatching the Rocky Mountain trout, *Salmo purpuratus*, is proposed in Colorado, or elsewhere in that region, it being thought by ichthyologists that this species will prove more valuable than the rainbow trout, being of greater size and more active.

The vessels of the Commission are: The Albatross, a seagoing steamer, fitted for deep-sea dredging and investigation, a description of which has appeared in our columns. The Fish Hawk, a flat-bottomed, twin-screw steamer, fitted to ascend rivers and hatch shad and to assist the hatching of sea fishes at Wood's Holl. The Lookout, a vessel originally designed for a pleasure yacht, but capable of making ocean voyages, having gone on a trip of investigation to the west coast of Florida in March, and then to No Man's Land, and in August it was loaned to Mr. E. G. Blackford, of the N. Y. Commission, to inspect the oyster beds of New York waters. The schooner Grampus, a well-smack, designed by Capt. J. W. Collins, whose work will be to dredge, trawl, etc., as required, and to bring in live fishes for propagation. In addition to these vessels there are the following small auxiliary craft: Albatross cutter, 26½ft. long, 7ft. beam, and 3ft. 10in. deep; Albatross gig, 25ft. long, 5ft. 2in. beam, and 3ft. 3in. deep; Fish Hawk launch, 24ft. 10in. long, 5ft. 8in. beam, and 3ft. 9in. deep; Cygnet (No. 82), 33ft. long, 8½ft. beam, and 4ft. deep, and two launches 30 and 37ft. long attached to the Havre de Grace station. Two other launches have been loaned to the Commission by the Bureau of Equipment and Recruiting. All the larger vessels are officered and manned by the U. S. Navy.

The railroad cars of the Commission are three in number and are in active service about six months in each year. Many railroads have taken the cars over their rails gratuitously, while others have hauled them at the nominal sum of 20 cents per mile and have also given permission to transport both fish and eggs in the baggage cars of passenger trains. The foreign steamship companies have given free transportation for fish and eggs both ways, thus showing their appreciation of the work done by the fishculturists on both sides of the Atlantic.

The species of fish and invertebrates receiving the attention of the Commission during the year were: Codfish, white perch, whitefish, moranke (*Coregonus albula*), grayling, brook trout, lake trout, rainbow trout, salmon (Atlantic), landlocked salmon, brown trout (European), Loch Leven trout (Scotch), salmon (California), shad, river herring, smelt, tomcod, carp, goldfish, golden ide, tench, catfish, round clams, oysters and lobsters. In addition to this list the red-eye perch (rock bass) and black bass have received favorable consideration, and may be added to the list of species cultivated at an early day. There are detailed reports on the culture of all these fishes, and, under the head of "The Increase of Food Fishes," fishways are given an important place. The McDonald fishway over the Great Falls of the Potomac has been planned and the contract given out by the Secretary of War, the terms requiring its completion on Oct. 31.

The work of the steamer Albatross is reported by Lieut.-Commander Z. L. Tanner, U. S. N., commanding. The logs of the voyages are given in full; much interesting material was obtained by dredging and trawling in the Gulf of Mexico and in other waters. The work of the Fish Hawk is reported by Lieut. L. W. Piepmeyer, U. S. N., commanding. The vessel engaged in shad hatching on the Delaware and in hatching Spanish mackerel in Virginia, and then went to Wood's Holl. The Lookout did some work on the Gulf coast of Florida, which is reported by Mate James A. Smith, U. S. N., commanding, and then assisted in the shad hatching in Chesapeake Bay, Elk River, and on the Delaware River. The breadth of the work of the Commission is partly outlined in the foregoing remarks, and is far beyond the most sanguine dreams of the fishculturist of a dozen years previous.

[TO BE CONTINUED.]

THE JAPANESE FISHERIES.—We have the 27th report of the Northern Fisheries Society of Japan, dated October, 1887. By favor of President K. Ito, we have a translation of its contents, which are: Association Records—Monthly meetings, new members and donations. Contributions—Life of the late Prof. Spencer F. Baird, with portrait. Correspondence—Salmon Fisheries of Kitanii; Kombu Market; Hakodate Exports and Imports of Marine Products. News—Voracity of the Shark; Results of the Etrof Salmon Fisheries; New Method of Tai Fishery; The Howietown Hatchery; Mr. Akokabe in China; Narrow Escape of a Nova Scotia Fishing Schooner; Deterioration of the French Sardine Fisheries; Death of the United States Fish Commissioner; Review of the Herring Fisheries of Hokkaido; Coffee House for Gloucester Fishermen, and the President's Return from America.

HATCHING CODFISH.—At the new hatchery at Jen Pond Island, near Cape Ann, the U. S. Fish Commission has at present seven millions of codfish eggs in process of hatching.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Jan. 24. to 29.—Augusta, Ga., Richmond County Poultry and Pet Stock.

Feb. 13 to 17.—First show Fort Schuyler Kennel Club, Utica, N. Y. E. J. Spencer, Sec.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

Feb. 28 to March 2.—Show of Philadelphia Kennel Club. W. H. Child, Sec.

March 27 to 30.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5708.**

OPPOSED TO RULE 2.

Editor Forest and Stream:

I note that Mr. Peshall accuses me, in common with other opponents of Rule 2, of writing "bosh;" but it strikes me very forcibly that when he continues the paragraph by saying that the entry fees charged at shows and the compulsory registration fees are on a par he writes utter rot himself. The entry fees to shows are payment for possible benefits to be accrued (in the shape of prizes), and board and attendance during the continuance of the show. Will Mr. Peshall inform me what benefit will accrue to owners registering in his book when they are already entered in the *A. K. R.*? to the owners of the worthless curs to be seen at every show? or to the man who enters his pet for the satisfaction of seeing him at a show? and never heard and doesn't want to hear of the American Kennel Club Stud Book or any other stud book or register, for that matter. Will he also state what his grounds are for saying that had Rule 2 been in force when Kino was first exhibited, his breeding would have been discovered? Kino was registered in the *A. K. R.* as "pedigree unknown; imported," and it was well known that his breeding was obscure. Had he been entered in the A. K. C. S. B. would he not have been entered in the same manner? Rule 2 requires all dogs entered at shows to be registered in the A. K. C. S. B., and in consequence dogs of the "Sire—Unknown. Dam—Fan" breeding and "Sire—Bulldog. Dam—Newfoundland" type would be altogether too common in its pages. Would it tend to advance the interests of dogs to have such brutes as these registered? I think not.

At the Ottawa show held in '83 there were 319 entries, out of these over fifty were without pedigrees. What a benefit it would be had they been put on record, immortalized, in the A.K.C.S.B.! It must not be thought that the Ottawa show was a paltry little "side show" affair. The D. of C. K. C. exhibited its dogs and Messrs. Harrison, Davey, O'Shea, Callender, Jarvis, Leavitt, Niven, Campbell, Wilms, Rothera, Rutherford, and the Hillside and Howell kennels were entered there. I mention Ottawa as the catalogue happened to be on my table.

The one or two dogs I propose showing this spring were entered in the first issue of the A.K.C.S.B., therefore I will have no compunction in showing them at all shows; but I meant to exhibit from four to six this fall in the West, most of whom are not registered. I will not register one dog under compulsion, and therefore will not exhibit them at shows held under Rule 2. My opinions may be "bosh" but I will act up to them. I have to submit to coercion in business matters; but will not be coerced in my recreations of which I count my dogs, their work in the field and exhibition on the bench the chief. If other dog lovers will follow the same course Rule No. 2 will soon have to be rescinded.

I trust Mr. Peshall will not fall into the too common error of lapsing into personalities, as he has made statements which I would in all courtesy be obliged if he would explain.

F. H. F. MERCER.

Editor Forest and Stream:

I have no hesitation in saying that I am strongly opposed to Rule 2 as being hurtful to kennel interests. As a breeder of fine dogs, I am opposed to allowing or making it possible for any one who is willing to pay 50 cents apiece for the registration of his dogs to offer these dogs and their progeny for sale under the title of being registered in the A. K. C. S. B., which would be considered by the novice as being all that was necessary to prove the superior breeding of the animals in question. In the registration of horses, cattle, and other animals, the owner has to show that the animal he desires to register is eligible for registration, either through its individual merit or from the fact that it is descended from animals of known merit or that have been registered. If Rule 2 is enforced, any man can take the worst mongrel off the street, fill out a registration blank, and forward 50 cents with the same to the secretary of the A. K. C., attach a number to his dog, and then dispose of him to the first purchaser for several times the amount he is worth, from the fact of his being registered. Any breeder will recognize the force of this statement. My opinion has always been, that if a man did not think enough of his dog to register him that it was his own loss. Hundreds of dogs are exhibited annually that are no more eligible for registration in any stud book, in the eyes of competent judges, than would be a cross between a hound and a spaniel. I hope to see Rule 2 struck out.

ANDREW LAIDLAW.

WOODSTOCK, Ontario.

The American Spaniel Club has voted on the question: "Shall the club funds be distributed at shows where compulsory registration is enforced?" There were 44 votes received, 35 of which were opposed to giving the prizes where Rule 2 is enforced and 9 in favor of doing so; 7 of the latter were in favor of supporting Rule 2 and 2 were non-committal, but thought it best to offer prizes at the large shows. As the members of the American Spaniel Club are representative breeders, the result of the vote is significant as showing the attitude of the spaniel men toward the clique of schemers who have set out to run the dog interests of this country to suit their own ends.

Editor Forest and Stream:

Let me congratulate you upon your manly stand in regard to Rule 2, secretly passed by the American Kennel Club. I indorse your views and those of several very sensible men whose letters adorned your columns on the same subject.

At a recent meeting of the Pacific Kennel Club, of which I have the honor to be president, and which is a member of the A. K. C., the rule was generally condemned as being too arbitrary, narrow, and not at all in accordance with good taste or judgment. It is un-American. If obeyed literally here, we would have few entries. If obeyed literally throughout the country at large, it would seriously embarrass and cripple the very object for which bench shows were created, viz.: the improvement of all breeds of our canine friends. In time it may be beneficial to establish such a rule, but not now. We are too young; let us wait.

It occurs to me that there must be something behind this action of the A. K. C. Is there an Ethiopean in the fence? Where and what is he?

I am in favor of registration, but the conditions are so widely different here from the conditions in England, that we cannot avail ourselves of local registration to the same extent. England is bound in a small volume, close knit. We cover almost limitless space. Our club is only a baby, but we joined the A. K. C. on broad grounds, inspired by the best motives.

If I, for one, as an officer of the club, had ever thought the central organization would try to enact a law or rule which is so obviously unfair, or which had something behind it all, my vote would never have assisted the application for membership therein. Accept my best wishes, Mr. Editor, for a happy New Year. And that good dogs may continue to increase, and fill the land, and their owners be crowned with pride, is the hearty desire of your friend,

STUART TAYLOR.

SAN FRANCISCO, Cal.

Editor Forest and Stream:

I own the bitch Nutmeg and intended to have shown her with several others at New York, but that odious Rule 2 is too big a pill for me to swallow.

The *A. K. R.* has always been satisfactory, and I have had no inclination to change or to patronize more than one, and I am of the opinion that while I remain in my right mind I shall not be driven into it. Although afraid that wins will not count at Utica, owing to their decision against Rule 2, yet I shall show there.

H. R. T. COFFIN.

GLENS FALLS, New York.

It appears that the editor of the *A. K. R.* some four years ago expressed an opinion that compulsory registration would remedy certain existing evils, if it could be brought about; but we have yet to learn that he or any one else ever seriously proposed to compel owners to pay registry fees, until the idea was taken up by Secretary Vredenburgh and his friends who wanted to provide a berth for him. What the precise views of the editor of the *A. K. R.* on compulsory registration may now be we are not advised, but if any one is ignorant of what the dog owners of this country think about it he can readily learn by reading their views as expressed in this journal.

At a meeting of the executive committee of the American Mastiff Club it was resolved that the prizes offered for competition at the show of the New England Kennel Club by the American Mastiff Club are hereby withdrawn. This action was taken on the ground that the withdrawal of the New England Kennel Club from the American Kennel Club makes a radical change in the conditions under which the prizes were offered.

THE BEAGLE CLUB.—We have received the report of the treasurer and secretary of the American English Beagle Club for the six months ending Dec. 31, 1887. The report shows a small balance to the credit of the club. The list of members numbers 49. The club has done good work in the past and it is to be hoped that every lover of the breed will come forward and by joining the club assist to increase its usefulness in the future.

POINTER BITCH LOST.—A liver and white pointer bitch, 4yrs. old and weighing about 42lbs., has strayed or been stolen. She had on a black, round leather collar. A liberal reward will be paid for her return to her owner, W. T. Payne, 31 West Thirty-eighth street, New York.

NEW YORK DOG SHOW.

Editor Forest and Stream:

The managers of the coming Westminster Kennel Club show have decided to make a class for wire-haired fox-terrier bitches; to divide the class for field and cocker spaniel puppies, making one class for puppies, liver or black, and the other for those of any other color. A champion class has been made for toy spaniels to include King Charles, Blenheim, tri-color and ruby spaniels, and a puppy class for same breeds (if five are entered). They will also divide any class by sex where not less than five of either sex are entered. This will apply to bloodhounds, Newfoundlands, Great Danes and all the smaller breeds, for which but one class is provided in the premium list. In consequence of the disastrous results of the fire at the late Columbus show they have decided to take out a policy of $100,000 on the dogs while on exhibition, although from the extra precautionary measures observed a fire attended by loss of property at Madison Square Garden is reduced to almost an impossibility.

There appears to be a growing impression among exhibitors that dogs having no known pedigree cannot be shown, on account of the new registration rule. This is an error, as dogs without a pedigree can be registered as well as those with them.

The Philadelphia & Reading Railway Co., Chicago & Grand Trunk, New York, Lake Erie & Western, Baltimore & Ohio, New York, New Haven & Hartford, Delaware, Lackawana & Western, Central Railroad of New Jersey, Long Island, New York Central & Hudson River railroads, will carry dogs free when accompanied by their owners on presentation of our identification papers. The Adams, American, National, Baltimore & Ohio and Long Island express companies will return dogs free of charge that have been carried prepaid to our show.

If the number of entries received up to date is any indication of what the total number is to be, the forthcoming will be the largest show ever held in New York.

JAS. MORTIMER, Supt.

NEW YORK, Jan. 21.

THE WORCESTER FUR COMPANY.

WORCESTER, Mass., Jan. 18.—The Fur Company held their annual meeting at No. 442 Main street, Monday evening, Jan. 16, with a large attendance. The meeting was called to order by the secretary, after which the veteran president, Uncle Nathan Harrington, in a brief speech declined being a candidate for re-election, giving as the principal reason that the office should be filled by a younger man. The meeting, however, thought differently, and proceeded to re-elect him unanimously, but the old gentleman was firm in his decision, and Mr. A. B. F. Kinney was then chosen president, and E. S. Knowles, secretary. After the choice of officers there was a general discussion regarding the date and other arrangements of the annual grand fox hunt, which resulted in fixing upon Wednesday, Feb. 1. The meet will be at Heywood Farm, the same grounds selected last year, and a general invitation is extended to fox hunters everywhere to bring their dogs and join in the hunt. The sportsmen will meet in the evening at the Bay State House to enjoy a good supper and talk over the events of the day.

Last year's fox hunt was the first the Fur Company has ever held, and was pronounced by all who participated an immense success, and was hardly over when the members began to talk about what they would do another year. The brief account of the affair which appeared in FOREST AND STREAM awakened an interest which extended even beyond New England, and many sportsmen, some of whom reside at a great distance, have expressed a desire to come and see us when the next grand hunt should occur. All such should understand that they will be cordially welcomed, and with a favorable day the company expect grand sport. Of course every fox hunter understands that in an undertaking of this kind everything depends on the weather. Foxes are plentiful, and with a large number of dogs and sportsmen some of the party will be likely to be favored with shots unless the day should be exceptionally bad.

The fox hunters here have had fairly good success thus far the present season, and about thirty foxes are the score to date.

E. SPRAGUE KNOWLES.

THE A. K. C. TREASURER'S REPORT.

NEW YORK, Jan. 23.—*Editor Forest and Stream:* Inclosed please find statement of the Stud Book account, which I trust you will publish in your next issue, as an answer to the many misstatements and misleading articles that have appeared from time to time in your paper.

Your insinuation in this week's issue, that I have had added to my salary money from a guarantee fund is a romance of your own creation, and in reply to it I can only say that there has been no money paid to me, directly nor indirectly, other than the amounts named in the inclosed statement. If I see fit to charge for my services $8 or $800 per week it is simply a matter to be settled between the A. K. C. and myself, and I fail to see what right the FOREST AND STREAM has to question or refer to the amount paid me or my motive in accepting it.

A. P. VREDENBURGH.

STATEMENT OF RECEIPTS AND EXPENSES OF THE A. K. C. S. B. FOR THE YEAR ENDING DEC. 31, 1887.

Receipts.

Received dues from A. K. C. members (not used for stud book purposes)		$236.25
"	Entries for Vol. IV	1,089.50
"	Advertisements, Vol. IV., Parts I., II., III. (Part IV. not yet due)	496.25
"	Subscribers, Vol. IV	221.00
"	Cash sales, Vol. IV., Parts I., II., and III., (Part IV. not yet published)	213.50
"	Cash sales, Vols. I., II. and III.	76.00
"	Tabulated pedigrees	110.00
"	Donation for a bookcase	10.00
"	Fees, charged for collections	.65
		$2,453.15
Balance on hand Jan. 1, 1888		$650.04

Expenses.

Paid for Club expenses from A. K. C. dues	$58.27
Librarian of Congress, Copyright	4.00
Fees charged by bank for collections	6.50
Petty expenses (telegrams, express, etc.)	8.63
Gas bills	11.19
Postage stamps	67.75
Office furniture	67.95
Paid for Vols. I., II. and III.	59.50
Office rent	164.58
Printing stud book, Parts I., II. and III. (including a new issue of Vol. II. and 5,000 copies of the bench show edition, distributed at the spring shows for the benefit of advertisers)	954.74
Salary of Secretary	400.00
Balance on hand	650.04
	$2,453.15

[From the above it appears that Mr. Peshall's statement of Jan. 7, printed last week, "the club has paid all bills and now has $800 and over to its credit in the bank," was misleading. The club has not paid all its bills with a balance of $800 and over in the bank. The balance here shown is only $650, and when the bills are paid there will be actually less than one-half of that sum to the stud book's credit. The receipts given include the entry fees and advertising of Part IV.; the bill for printing that part is a liability that must be met from these receipts, and that bill will not be less than say $250. Deducting this from the $650.04 leaves $400.04. The dues of the A. K. C. members do not belong in this account at all; the balance of the receipts, $236.25, less the expenditures $58.27 leaves $177.98 on hand. Deduct this from the $400.04, we have left $222.06, which is approximately the actual balance on hand after the ostensible expenses of the stud book for a year have been paid. There is quite a difference between $222.06 and "$800 and over." By charging the book with only $400 for the secretary's salary it can be made to appear that the publication has paid for itself, and has a balance to its credit. But that leaves the rest of the salary to be accounted for. Despite Mr. Vredenburgh's unwillingness to have this point discussed, it is one that ought to be cleared up. Nobody believes that the secretary is giving his time and talents to this work for $8 a week. He is getting more pay from those who put up for the book, or he has been working in the hope of getting more by this compulsory taxation. This is plain enough. It is equally plain that, as the stud book bonanza has not panned out rich, the Rule 2 expedient has been adopted to bring in the funds. Two men claim credit for the idea. Cugle of Hartford, who moved it, says he thought of it first, and he frankly acknowledges that the design of the rule is to get money to pay the club's expenses. Mr. Peshall claims that he is the originator of the rule, and he says he wants to elevate the dog. The fact is, he wants to raise the wind for the benefit of his friend and employee, Vredenburgh. The rule, if breeders and owners should submit to it, would put hundreds of dollars into the club's treasury; then the club could pay an adequate salary for a secretary. If breeders and owners are disposed to pay this tax, well and good; the little scheme would work excellently. But the hitch is just here, that the breeders and owners do not propose to do any such thing.]

TEXAS FIELD TRIALS.

Editor Forest and Stream:

The second annual meeting of the Texas Field Trials Club was held near Marshall, Texas, on Jan. 13 and 14, 1888. In the Derby there were eight starters, five pointers and three setters. The latter formed a triumvirate and divided all the honors among themselves.

Crofton, winner of first, is a handsome, stylish dog, well trained and with plenty of bird sense. Lightning, winner of second, is much like Crofton, but a shade below him in speed and style. He has had more experience than the other winners, to which his success may be largely attributed. Lotta, winner of third, is a beautiful little bitch of remarkable style and speed. She was, however, lacking in experience, and failed to retrieve. For natural qualities she was the best animal that appeared in either stake.

The running was begun on Jan. 13, and finished the morning of the 14th:

THE DERBY.

First Series.

John L. Phillips's black, white and tan English setter dog Crofton (Gath's Pride—Lady M.), whelped May 29, 1886, *beat*

Mrs. J. K. Renaud's white, black and tan English setter bitch Lotta (Roderigo—Lena R.), whelped April 26, 1886.

W. P. Poland's black pointer bitch Onyx (Wat—Poland's Flash), whelped April 9, 1887, *beat*

R. M. Hutching's lemon and white pointer bitch Pride of M. (Bang Bang—Zanetta), whelped April 10, 1886, withdrawn on account of lameness.

C. E. Bringhurst's black, white and tan English setter dog Lightning (Count Noble—Belle Gladstone, whelped May 22, 1886, *beat*

W. J. Rosborough's liver and white pointer dog Bang (Cloud—Fantine), whelped July, 1886.

W. J. Wolz's liver and white pointer dog Wat's Prize (Meteor Fred—Beta), whelped Aug. 3, 1886, *beat*

A. J. Graham's liver and white pointer dog Harry (Bruno—Poland's Flash), whelped Aug. 3, 1886.

Second Series.

Lightning beat Onyx.
Crofton beat Wat's Prize.

Third Series.

Crofton beat Lightning and won first.

Tie for Second Place.

Lightning beat Lotta and won second.
Lotta beat Bang and won third.

PREVIOUS WINNERS.—1887—First, Captain Craig, English setter; second, Ress, pointer; third, Mike, Irish setter.

ALL-AGED STAKE.

The first series of the All-Aged Stake and one heat of the second series was run on the 14th, when the bad weather prevented further running and the judges placed the dogs, the running and handling and awards were as follows;

First Series.

W. M. Robertson's cross bred black setter dog Jet (Gordon—the Harvey bitch), *beat*
John Drees's imported black pointer dog Joe Pape (Sambo the Devil—Spot).

W. J. Wolz's liver and white pointer dog Wat's Prize (Meteor Fred—Beta), *beat*
C. E. Bringhurst's white, black and tan English setter dog Randolph (Cyrus—Belle Gladstone).

J. L. Phillips's black, white and tan English setter dog Crofton (Gath's Pride—Lady M.), *beat*
W. J. Wolz's liver and white pointer dog John Saunders (Meteor—Flirt).

Walter Cock's liver and white pointer bitch Ress (Bruce Ranger—Lady M.), *beat*
W. J. Rosborough, Jr.'s liver and white pointer dog Bang (Bruno—Poland's Flash).

Mrs. J. K. Renaud's white, black and tan English setter bitch Lotta (Roderigo—Lena R.), *beat*
W. P. Poland's black pointer dog Cloud (Orco—Poland's Flash).

Second Series.

Ress beat Jet. Further running, on account of bad weather, was impracticable, and as provided for by the rules, the handlers readily agreeing thereto, the judges placed the winning dogs as follows: First, Ress; second, Crofton; and third Lotta.

PREVIOUS WINNERS.—1887—First, Wat, pointer; second, Meteor Fred, pointer; third, Juno, pointer.

The judges of the Derby were Hon. John Clegg, of Lafayette, La.; Mr. L. B. Baynard, of Alexandria, La., and Mr. C. D. Kretz, of Marshall, Tex.

In the All-Aged Stake the dogs were divided and ran in different fields; some of the heats being judged by Messrs. Baynard and Kretz, the remainder by Judge Clegg, assisted by Mr. A. R. Starr, of Marshall, Tex.

Ress, the winner of first in the All-Aged, is a native bitch, quite handsome in appearance, of medium size. She has fine nose, speed and style, very obedient and well trained. Her performance in the last heat was one which would have done credit to any field trial winner.

The setters as a general rule were much superior in merit to their short-haired antagonists.

EXCELSIOR.

AMERICAN SPANIEL CLUB.

FOLLOWING are the dog show calssifications adopted by the American Kennel Club:

Classification No. 1.

Field Spaniels—Over 28lbs.—Champion class, any color dogs and bitches. Open class, black dogs, also bitches. Open class, liver dogs, also bitches. Open class—any other color—dogs, also bitches.

Clumbers.—Champion class, dogs and bitches. Open class, dogs and bitches.

Cockers—Not over 28lbs.—Champion class—any color—dogs, also bitches. Open class—any other color—dogs, also bitches.

Irish Water Spaniels.—Open class, dogs and bitches.

Puppy Class—Any variety.—Dogs and bitches.

Classification No. 2.

Spaniels—All breeds over 28lbs.—Champion class, dogs and bitches.

Field Spaniels—Over 28lbs.—Black, open class, dogs, also bitches. Any other color, open class, dogs, also bitches.

Clumbers.—Open class, dogs and bitches.

Irish Water Spaniels.—Open class, dogs and bitches.

Cockers—Not over 28lbs.—Champion class, dogs and bitches. Black, open class, dogs, also bitches. Any other color, open class, dogs and bitches.

Puppy Class.—Dogs and bitches.

Classification No. 3.

Spaniels—All breeds over 28lbs.—Champion class, dogs and bitches.

Field Spaniels over 28lbs.—Open class, dogs and bitches.

Clumbers—Open class, dogs and bitches.

Cockers—Not over 28lbs.—Champion class—any color—dogs and bitches. Black—Open class, dogs and bitches. Any other color—Open class, dogs and bitches.

Puppy Class—Dogs and bitches.

At shows designated by the club a subscription of $25 will be made where Classification No. 1 is adopted; if Classification No. 2, $15; Classification No. 3, $10, to be used as the bench show committee may determine.

The following conditions must be complied with or the amount subscribed will be withheld: At least two money prizes must be given in each class, with the exception of champion classes. The words "American Spaniel Club, Classification No. —" must be inserted above the spaniel classes in both premium list and catalogue. A judge from the list approved by the Club must be appointed to adjudicate upon the spaniel classes. No classes can be cancelled, but sub-divisions of classes may be made if deemed desirable.

Following is the list of judges: S. R. Hemingway, New Haven, Conn.; J. F. Kirk, Toronto, Can.; Chas. H. Mason, New York; Dr. J. S. Niven, London, Ont.; E. S. Porter, New Haven, Conn.; James Watson, Philadelphia, Pa.; J. P. Willey, Salmon Falls, N. H.; A. C. Wilmerding, New York.

INDIANAPOLIS DOG SHOW.

INDIANAPOLIS, Ind., Jan. 21.—*Editor Forest and Stream:* The bench show of dogs in connection with the State Poultry Association's show is now being held in Tomlinson Hall and is attracting a great many people. There are over one hundred entries, and you find them of all kinds and sizes, from the three-pound terrier to the massive St. Bernard in all his majestic glory. The sporting class has some fine specimens. Mr. Harry S. New shows a very beautiful pointer dog Beauvier, who had a walkover for first. P. T. Madison's English setter Rush Gladstone, Gordon setter Don's Boy and Irish water spaniel Tipperary are the most admired of any in the show, as each one has won first in his class, and Rush has captured the Governor's prize for the best setter in the show. Maurice Donnelly shows a fine imported Irish setter dog Grouse, that he takes great pleasure in having his friends examine. P. H. Jacobs, of Philadelphia, Pa., and J. E. Isgrigg, of this city, judged all classes. Following is a list of the

AWARDS.

COLLIES.—1st, J. E. Dougherty's Boss. *Puppies:* 1st and 2d, J. Dougherty's Mattie and Ruby.

NEWFOUNDLANDS.—1st, H. Springfield's Leo; 2d, G. B. Walton's Romeo.

ST. BERNARDS.—1st, J. N. Huston's Nero.—SMOOTH—1st, J. C. New's Bruce.

MASTIFFS.—CHAMPION—*Dog:* E. M. Bronson's Ashmont Victor. *Bitch:* E. M. Bonson's Delph Viva.—OPEN—*Dogs:* 1st, H. Bates, Jr.'s Liber; 2d, G. Jackson's Punch; 3d, Gist & West's Gerald. *Bitches:* 1st, H. Bates, Jr.'s Victoria; 2d, G. Jackson's Judy. *Puppies:* 1st, L. Fisher's Fritz.

POINTERS.—OPEN—*Dogs:* 1st, H. S. New's Beauvoir. *Bitches:* 1st, N. Leanty's Queen; 2d, C. W. Meeker's Frankie. *Puppies:* 1st, N. Leanty's unnamed.

ENGLISH SETTERS.—*Dogs:* 1st, P. T. Madison's Rush Gladstone; 2d, G. Bruce's Shep. *Bitches:* 1st, H. S. New's Quail; 2d, R. C. Spencer's Fannie.

GORDON SETTERS.—*Dogs:* 1st, P. T. Madison's Don's Boy; 2d, J. D. Luce's Jim Blaine. *Bitches:* 1st, J. Routier's Bird; 2d, S. Biddy's Nell.

IRISH SETTERS.—*Dogs:* 1st, M. Donnelley's Grouse; 2d, J. Will's Rip. *Bitches:* 1st, A. A. Anderson's Frankie; 2d, G. J. Marott's Glennis.

TOY TERRIERS.—1st and 2d, N. W. Baylos's Grover and Frankie.

SKYE TERRIERS.—1st, J. Chadwick's unnamed.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, J. Board's Dixie. *Bitches:* 1st, D. O. Porter's Gipsy; 2d, L. Fisher's Maria.

FIELD SPANIELS.—1st. A. H. Hanneman's unnamed.

COCKER SPANIELS.—1st, R. B. Walcott's Guard.

IRISH WATER SPANIELS.—1st, P. T. Madison's Tipperary.

BULL-TERRIERS.—*Bitches:* 1st, Miss Mary Beal's unnamed; 2d, R. Merrifield's unnamed.

PUGS.—1st, D. O. Porter's Pink.

ITALIAN GREYHOUNDS.—*Bitches:* 1st, C. W. Wilson's Silver; 2d, C. Jelleff's Nellie.

SPECIAL PRIZES.

Governor's prize for best setter, P. T. Madison's Rush Gladstone; largest dog, J. N. Huston's Nero.

RICHMOND.

SPANIEL STOLEN.—Brantford, Ont., Jan. 18.—Some time ago I had stolen from my kennels the dark red cocker spaniel Rufus, winner of first, St. Louis, and second, Milwaukee, last fall. He is a dark Irish-setter-red in color, with white blaze on face, rather short in back, and tail docked very short. I will pay a large reward for information that will lead to his recovery, or apprehension of the thief. If any of your numerous readers should see a dog answering to this description at any of the coming shows they will be well paid for same and greatly oblige CHAS. M. NELLES (Brant Cocker Kennels).

GIPSY GIRL.—Can any reader give us information of the pedigree of an English setter bitch Gipsy Girl, owned by the late Horace Smith.

WHY DOES THE A. K. C. EXIST?

Editor Forest and Stream:

The answer of the toad-eating brigade to the above will be, "For the encouragement of doggy interests, protection of dog shows, etc." But, most noble and mighty A. K. C., do you really imagine the public thinks so? Truly you have slept with lies, dwelt with humbug, and eaten and drunken with schemers until you may really believe it yourself; and many and constant are the high-sounding professions in which you have enunciated this stupid platitude. But don't you know that by your works you are judged? Now, in your whole career can you point to one instance where you have interfered to protect a single exhibitor from injustice perpetrated on him by one of your members?

You have disqualified two exhibitors for offenses against clubs; yet Dr. Cryer was swindled out of his right to claim the pug Joe at Pittsburgh; the competitors in the "mastiff puppy" class were defrauded of their rights; Mr. Fellows was beaten out of his money in the "Chicago special" business; the "pointer judging" at New York was the most disgraceful piece of business that was ever a part of a show; the bogus medals twice swindled dozens of exhibitors; "Beaufort—Patti M." was a most flagrant outrage; "construction" was a palpable and corrupt attempt to evade the plain requirements of your own rules, and one of your members openly carried out the nefarious scheme.

Club after club has failed to pay its prizes; and did you ever even censure one of your members for their plain transgression of common honesty or justice? Did you not have most careful reports made you in the bogus medals and Chicago special cases, clearly establishing the cases of the prosecution, and did you not table both of them? Some of these indictments against you have lapsed by time, in some you have reversed your first wrong action; but have you ever put yourself on record that you were ever willing to do justice to a private individual against one of your members?

These are pertinent questions, and flapdoodle never answered a question yet; so don't depend on the lackey division shutting our mouths with rot about "gentlemen;" you know that there are no greater knaves in Christendon than some "gentlemen."

I have given you plain facts, deny them if you can prove your denial. Until you do so, how can you expect the average exhibitor to look on you as anything but a clique of rings? Do you not know that the exhibitor generally has a grudge at clubs? Has he not been the victim of some of the knaveries or wrongs I have recited? Is it not natural that he should think a club of clubs only a concentration of the evils and tyrannies he has suffered under? And to induce him to believe that you are actuated by the most knightly desire to befriend him, you require him to duff up 50 cents for something he knows no more about than he does of Druidical language!

If the A. K. C. is to really live, it must show the exhibitor that it has a little grace for him, that occasionally it remembers that he has some part in the success of dog shows. I dare you to show that you have ever, by word or deed, openly or in private, showed the slightest interest in the exhibitor, further than to get his money for his entries. W. WADE.

HULTON, Pa., Jan. 21.

COLUMBUS DOG SHOW.

WE give as a matter of record a list of the awards at the Columbus dog show. The list of the dogs saved is as follows:

MASTIFFS.—A. E. Pitts's Winning Card, Miss Marion Neil's Ace, C. L. Harrington's Gruff and C. E. Prior's Nero.

NEWFOUNDLANDS.—T. M. Carsey's Jumbo.

ENGLISH SETTERS.—Mt. Washington Kennels' Paul Gladstone and Miami Kennels' Winfield Noble.

GORDON SETTERS.—W. L. Hammett's Royal Duke and P. Collin's Hector.

IRISH SETTERS.—S. S. Siebert's Muggs and G. C. Urlin's Don G. U.

POINTERS.—G. C. Urlin's Count D. U. and G. V. Neal's Diablesse.

IRISH WATER SPANIEL.—J. Cumming's Dan O'Rourke.

PUGS.—A. E. Pitts's Kash and W. Hogue's Peggy.

The remainder were burned as were the following not mentioned in the prize list:

HARD-HAIRED TERRIERS.—1st, C. T. Thompson's Geesela; 2d, J. A. Stovell's Geesela II. Com., J. Bartholomew's Tina and Jack.

YORKSHIRE TERRIERS.—1st, Miss Mary Neil's Duke.

SKYE TERRIERS.—1st, C. Stevenson's Donald; 2d, Mrs. N. C. Needle's Nigger. High com., C. Kirk's Dude. Com., Mrs. Eva Stone's Minnie.

PUGS.—CHAMPION—*Dog:* J. Trondle's Kelpie. *Bitch:* George Gillivan's Peggy.—OPEN.—1st, C. Schwein's Punch; 2d, George Gillivan's Bradford Curtis. Very high com., F. D. Gadsby's Wanda. *Puppies:* 1st, George Gillivan's Bradford Curtis.

MISCELLANEOUS.—1st, W. W. Silvey's Bedlington terrier Rocks; 2d, J. S. Stone's poodle Joci. Reserve, C. M. Henly's English water spaniel Sport.

There were a large number of special prizes, that in most cases followed the awards in the regular classes. The prize for the best sporting dog was awarded to the English setter dog Paul Gladstone; non-sporting, the St. Bernard dog Moutrose.

UTICA DOG SHOW.—Brantford, Ont., Jan. 18.—*Editor Forest and Stream:* I wish, through your columns, to ask the management of the coming Utica show to alter the conditions under which their kennel prizes are given, viz., requiring each kennel to consist of "one dog and three bitches." This practically shuts out all but the very large breeders, for even those who may have a number of good bitches at home it is next to impossible to have three in fit condition, as at least half would be out of condition at any one time of year, either from raising a litter, being in heat or heavy in pup—in which latter case one does not care to risk a long journey. I would ask them to leave the sex optional with exhibitors, or at least not require more than two bitches to each kennel.—CHAS. M. NELLES (Brant Cocker Kennels).

HEMPSTEAD COURSING CLUB.—*Editor Forest and Stream:* With the kind permission of the Meadow Brook Club, the coursing meeting on Saturday, the 25th inst., will take place on the club polo grounds instead of the Hempstead polo grounds as announced. The club can be reached via Hempstead or Westbury. Conveyances are better at Hempstead. The sport will commence promptly at 11 o'clock, as the entries are large.—AUGUST BELMONT, JR., Sec.

UTICA DOG SHOW.—Utica, N. Y., Jan. 22.—*Editor Forest and Stream:* Will you kindly announce that our club will give in addition to kennel prizes in premium list $10 for best kennel of beagles, cocker spaniels and greyhounds.—E. J. SPENCER, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Sarsfield II. By Alfred B. Forsyth, Morristown, N. J., for red Irish setter dog, whelped Sept. 21, 1887, by Sarsfield (Garryowen—Currer Bell II.) out of Nora (A.K.R. 3870).

IMPORTATIONS.

Baron. Bulldog, whelped 1880 (Dutch—Lucy), by F. F. Dole, Philadelphia, Pa., from England.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co

RANGE AND GALLERY.

THE BULLARD DETACHABLE MAGAZINE.

THE enterprise of the Bullard Arms Company has brought out a new device by which several objections most persistently urged against the repeating rifle seem to be done away with. A military Bullard rifle is so altered that the magazine no longer receives the cartridge, but the manner of loading is not changed, and a cartridge being slipped into the loading orifice may be thrown into the barrel in the usual way; then a second cartridge being slipped in, the shooter has two charges ready. The opponents of repeaters complain of the danger of an explosion of a cartridge in the magazine, and of the change of balance which takes place by the gradual using of the contents of the chamber. With this gun used as a double loader these objections lose their force. In addition to this change a detachable magazine has been devised which, when attached, gives the effect of a magazine gun, but one where the balance is not altered and the point of one cartridge does not press on the butt of another. The slide which covers the loading hole in the frame may be drawn back and a small metal case holding six or eight cartridges slipped into two slots. At the base of this magazine, which is only about an inch wide, is an opening large enough to admit of the passage of a single cartridge. As the chamber is emptied by the raising of the cartridge in it to the barrel another one slips into the chamber, and when this is lifted another, their weight carrying them down. There is nothing unsightly about this adjustable magazine. It does not interfere with the line of sight and is not large enough to be in the way. The invention, intended primarily as an important improvement for military rifles, may perhaps serve for hunting arms as well.

BOSTON, Jan. 21.—A few riflemen braved the cold and tried for bullseyes at the Massachusetts Rifle Range to-day, but the high wind and zero weather proved too much for good scores:

Rest Match, 200 Yds.

B G Barker	10	11	8	11	8	9	8	8	11	11—95

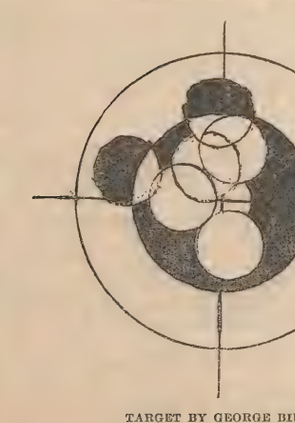
GALLERY PISTOL SHOOTING.

NEW YORK, Jan. 20.—*Editor Forest and Stream:* The inclosed targets are the same style as those used in the celebrated gallery of Gastinne Renette in Paris, France, for which a grand gold medal of honor is awarded. Mr. Conlin, of 1255 Broadway, this city, is also giving a handsome gold medal to the shooter beating the record on this target at his gallery. A score of 39 out of a possible 42 was the highest made up to the time that Mr. Conlin offered a medal to the man breaking the record. He also offers a diamond badge to the shooter breaking the following records: 71 out of a possible 72 on the Massachusetts, 58 out of a possible 60 on the standard decimal, and 40 out of a possible 42 on the French, with revolver at 12yds. The inclosed are the three best made up to the present day, Mr. Geo. Bird winning the first medal on a score of 40, possible 42, Mr. J. T. B. Collins coming next with a score of 39; Capt. T. H. Swift 37, C. H. Eagle 39, F. H. Lord 38, A. M. Hamilton 37, J. B. Miller 37, D. A. Davis 37, S. T. Crosby 37, W. C. Southwick 37, W. B. Young 36, Pierre Lorillard 36, A. P. Kelly 36, H. W. Wickham 35; at the word, Chas. F. Jones 35, Maynard Bixby 33. The portions of the targets given are exact size.



C.

TARGET BY J. T. B. COLLINS.

TARGET BY CAPT. T. H. SWIFT.

TARGET BY GEORGE BIRD.

OWENSVILLE, Ind., Jan. 9.—Owensville Ballard Rifle Team, standard target, 200yds. There was a full attendance on the range to-day, but weather conditions bad, strong, cold, 3 o'clock wind:

Jas Daugherty	4	6	4	5	5	7	6	10	5	3	—55
W Gentry	4	7	5	5	7	6	8	9	5	5	—61
W Roberts	8	4	6	8	9	4	3	5	8	7	—62
G Witler	7	8	7	6	6	5	6	6	2	5	—58
J Stone	6	9	7	4	10	6	4	6	6	7	—65
J Montgomery	9	3	6	6	4	5	9	5	7	5	—59
C Summers	0	10	5	8	5	3	4	6	7	6	—60
McGrade Daugherty	6	4	8	5	10	4	6	9	5	8	—65
R Speck	4	6	6	8	8	9	4	5	6	7	—63
John Daugherty	2	5	6	5	6	4	2	7	6	4	—47

In shoot off McGrade Daugherty won gold medal. Jan. 16:

W Gentry	9	10	8	5	6	9	4	6	5	9	—66
McGrade Daugherty	6	7	6	7	8	6	4	8	5	8	—65
W Roberts	9	4	5	6	4	10	6	1	10	9	—64
C Summers	5	6	9	9	6	4	3	7	7	7	—63
G Witler	6	4	7	6	6	6	5	7	9	6	—62
J Montgomery	8	7	6	3	4	9	5	6	4	7	—60
John Daugherty	6	5	6	5	5	6	3	3	10	10	—59
R Speck	1	7	3	5	5	9	10	8	5	6	—57
Jas Daugherty	7	2	4	4	5	4	10	8	6	4	—54

Average 61 1-9, W. Gentry won gold medal.

ST. LOUIS, Jan. 14.—At the regular weekly shoot of the Pistol Club, Perret and Neuhaus tied for the medal, but in the shoot-off the former won. Following are the scores out of a possible 120:

L V D Perret	116	G T Dunn	109
O Neuhaus	116	W E Field	108
W J Lard	115	A E Bengel	108
W C Billmeyer	114	G W Alexander	106
E C Mohrstadt	113	J G Schaaf	102
M H Bounell	111	W Bauer	102
W T Larned	110	J Sieminskie	96
F D Gildersleeve	109	W C Mackwitz	94

SAN FRANCISCO, Jan. 8.—It was a cold day at Shell Mound to-day, but, nevertheless, there was a large turnout of marksmen to take part in the first shoot of the year. The San Francisco Schuetzen Verein held their regular monthly medal contest. K. Wertheimer won the champion medal for the third time, with 414 rings, and it is now his property for "keeps." The first, second and third class medals were not won, not enough rings being scored in the classes. H. E. Doscher won the fourth class medal with 305 rings. As this is the third time Mr. Doscher has won the trophy, it now becomes his personal property and he goes up one grade. The Nationals made a double event of it—shooting both club and company scores—so as to wind up the shooting year. They are going to make a fresh and a stronger start next month. Annexed are the records of the winners:

Club Shoot—Champion Class.

	200Yds.	500Yds.
A Johnson	4554545545445544444—88	5545555553455345555—91—179
First Class.		
A H Brod	4444555445445544444—86	4535253544455535444—84—160
Third Class.		
Paul Vandor	2435343344—35	

The second and fourth classes were not represented in the club shoot.

Company Shoot—Champion Class.

	200Yds.	500Yds.
A Johnson	4445544444—42	5545555534—46—88
P Robertson	4545455454—45	4545444444—42—87
Capt J Klein	5444444435—41	5444555435—44—85
First Class.		
A H Brod	4444555445—44	4535253544—40—84
Second Class.		
O Peterson	3344354434—37	
Third Class.		
Gus Hult	3534443343—	
Fourth Class, 50.		
Harper	4322444542—34	

THOSE PISTOL SCORES.—Editor Gould of the *Rifle* has been making an investigation of the 914 score of Mr. W. W. Bennett, and writes as follows: On Jan. 15 there appeared in the *Boston Herald* a letter from Mr. Ira Paine casting doubts on the score of 914 points on the Standard American target made by Mr. W. W. Bennett at Walnut Hill, on Dec. 23, 1887, which score was 10 points higher than any previous record. As this letter reflected on the characters of several gentlemen identified with one of the largest and most honorable rifle clubs in America, they desired to make an affidavit to the correctness of the score, and on Jan. 17 appeared before a justice of the peace at Woburn, Mass., where they deposited the following: "There having appeared in various newspapers a statement from Mr. Ira Paine, intimating that the score of 914 points on the Standard American target was never made by Mr. W. W. Bennett, the undersigned, being under oath, do hereby state, that it is said W. W. Bennett visited the range of the Massachusetts Rifle Association, at Walnut Hill, Mass., on the 23d day of December, A.D. 1887, and in our presence fired 100 consecutive shots on the Standard American 50yd. pistol target, at a distance of 50 measured yards, with a Smith & Wesson .40cal. Russian model army revolver, and scored an aggregate of 914 points, using regular factory ammunition of the U. M. C. Co. manufacture.—WILLIAM T. KENDALL, Police Officer, Range Keeper; AUSTIN MCCARTHY, Official Scorer; BARNABAS RICHARDSON. Commonwealth of Massachusetts, Middlesex, ss., Jan. 17, 1888. There personally appeared the above named Williams T. Kendall, Austin McCarthy, and Barnabas Richardson, and made oath that the statements contained in the foregoing affidavit by them subscribed are true. Before me, JOHN G. MAGUIRE, Justice of the Peace." The editor of *The Rifle* has interviewed the several parties who witnessed Mr. Bennett's shooting, and more thoroughly investigated the facts connected with this score than any previous record made in America either in rifle or pistol-shooting, and has accepted it without a doubt.

NEWARK.—The second match of the Essex Association series was shot on Friday, Jan. 19, between the Rutgers and Our Own clubs, at the range of the latter club. The result was as follows:

Our Own.		Rutgers.	
F A Freiensehner	107	Snyder	107
Ferd Freiensehener	108	Hillenbrand	105
Chas C Weeks	104	Shafer	97
Wm Drexler	91	Clark	103
E Willms	91	Dalton	93
A O Kiefer	96	Dietz	107
Ph Biebel	84	Allen	66
Otto Krauss	101	McArdle	97
Ed Bertram	87	McGraith	106
F Laute	98—967	Farrell	110—991

The Essex Association is a sort of trust into which each of the Newark clubs puts its best work. The clubs shoot at a 75ft. range at a target with an inner bullseye marked with a white ring. It is three-quarters of an inch in diameter and counts 12; the black bullseye is an inch and one-eighth, and counts 11. The rifles used are of .22-cal. and of any make, while the sights are peep and globe.

PITTSBURGH RIFLE CLUB.—The annual meeting was held the 18th inst., and the following officers were elected for 1888: President, Geo. Hodgdon; Vice-President, E. H. Stower; Secretary, J. B. Jonas; Treasurer, J. A. Huggins; Directors, Messrs. Weible, Ramsey, Jacobs, Brehm, Winslow and Patterson. The first prize, a S. & W. revolver, was awarded to L. Brehm for best shooting for the two months. The second prize, a standard revolver, was awarded to G. Weible for second best shooting, 200yds. range. The club is prospering and many go out every Thursday to High Bridge range to batter the bullseye, drive away care and cure dyspepsia.—W.

BUFFALO.—The annual meeting of the Bay View Rifle Association was held Monday at military headquarters, with the president, Brig.-Gen. P. C. Doyle, in the chair. The treasurer has on hand a balance of $120. The rent for the range has been paid up to May 1 and the lease has been extended for another year. The attendance at matches has not been as large as desirable. It was decided not to add yearly to the directors' badges a gold bar with the name of the winner engraved thereon unless the winner wished to bear that extra expense. The annual election resulted as follows: President, Brig.-Gen. P. C. Doyle; Vice-President, Col. P. P. Beals; Secretary, Dr. E. L. Gager; Treasurer, Col. E. A. Rockwood; Directors, Col. W. M. Bloomer, Col. P. P. Beals, Col. E. A. Rockwood, Lieut.-Col. John E. Robie, Maj. E. S. Warren, Capt. H. A. Menker, Capt. C. R. Wilson, Maj. N. Rochester, Col. S. M. Welch, Jr., Lieut. H. R. Clarke, Dr. E. L. Gager, Sergt. J. M. Garrett, Corp. R. E. Embledge.

MORRISANIA, Jan. 19.—A shooting match was held at the Morrisania Schuetzen Park, Morrisania, to-day, between Michael J. Breidenbach and W. H. Zeltner. A hundred shots were had, and the former made 1,734 points, while the latter made 1,725 and won the set-out prize, which was $100. Another match of the same kind will take place at the park next Wednesday, between Peter Geeks, of Melrose, and M. J. Breidenbach. The range of the shooting house is 200yds.

SAN FRANCISCO, Jan. 15.—The German Fusileer Guard held its monthly medal shoot to-day at Shell Mound. The day was not pleasant for rifle practice, but, withal, some very good shooting was done. In the first class Chas. Jansen scored 44, J. Petersen 41, H. Tiedgen 36. In the second class W. Eicher made a score of 35, H. Stein 35, H. Weitz 29. In the honorary member class, A. Sharpenberg took first honors, with a score of 36. The shooting was off-hand, at 200yds. targets, 10 shots per man.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

HOPEWELL, N. J., Jan. 17.—A shooting match was shot off to-day between a local team and a team from Philadelphia for a supper, the Hopewell team losing; this is the second time they lost this season. Rhode Island rules, 21yds. rise. Jacob Goettler, of Trenton, N. J., acted as judge, and Chas. Wagner, of Trenton, acted as referee:

Hopewell Team.		Philadelphia Team.	
Jos Bailey	1011111—6	Wm Specht	0110111—5
Paul Arnold	0101111—5	Harry Lowden	1111110—6
Samuel Hunt	0000001—1	Don Wallings	1010111—5
Chas Chatten	0000000—0—12	John Rothacker	0101111—5—21

OAKLEY—GRAHAM.—At Merchantville Driving Park, Phil., on Monday, Jan. 16, the famous lady champion, Miss Annie Oakley, shot a live pigeon match against William Graham, the English champion. The conditions were 50 birds each, Hurlingham rules, for a purse of $200; Miss Oakley to stand at 24yds. The birds were a fairly good lot, and the excellent shooting of both contestants was thoroughly enjoyed; Miss Oakley made the best straight—7 kills; the English champion won by 2 birds:

Graham.....0111011101102102111011110211011001011020120101110—35
Oakley.....2020210210020210002111101021101011020102110111222—33

Graham had one bird that fell dead just outside the boundary line; Miss Oakley had three.

JONES VS. MURPHY.—Admirers of pigeon shooting present at the Carteret grounds, Bergen Point, N. J., on the 19th, were treated to one of the best trap-shooting matches ever shot in this country. The contestants were C. Floyd Jones and Edgar G. Murphy, and the conditions to shoot at 100 birds, 30yds. rise and 21yds. boundary. The last was the feature of the match, it being about the same boundary as at Monaco. Ever since the match was made there has been much talk and considerable betting, nearly all of which was at even money. Among the old-timers of the Long Branch and New York gun clubs Murphy was the favorite. But the younger element, belonging to the Kennel and Tuxedo clubs, were strong for Floyd Jones, and he, with a good share of luck and the best of handling, won by a score of 78 killed to Murphy's 77. The day was clear and cold with a fresh wind blowing across the grounds from left to right, which materially helped the birds—they as a whole being one of the best lots ever trapped, and required to be shot dead or the wind would carry them over the 21yd. boundary. As to the individual shooting, there was so little difference that the winning was entirely one of luck, for of the 23 birds scored as missed by Mr. Murphy 2 were gathered dead at 33yds. and 1 each at 50 and 80yds., the remaining 19 going over the fence to be shot down by the pot-hunters. Of Mr. Floyd Jones's 22 missed 19 went over the fence and 3 fell dead at 80yds. The recapitulation below will also show that Mr. Murphy had somewhat the worst of luck in traps, he having a total of 10 birds more out of traps 4 and 5 than Mr. Floyd Jones, and of the 23 scored as missed 7 were from trap 4 and 4 from trap 5; while of 20 birds from trap 4 that Mr. Floyd Jones had he only missed 1, and of the 18 from trap 5 he missed 4. Mr. Murphy had the worst break, 4, and the best run, 10, as against Mr. Floyd Jones's run of 9. The score by birds is as follows:

Floyd Jones...1 1 0 0 1 1 1 0 1 1 1 1 0 1 1 1 1 1 1 1 0 0
1 1 0 1 1 0 1 1 1 1 0 1 1 1 1 1 1 1 0 1 1 1
1 0 1 1 1 1 1 1 1 0 1 0 1 1 1 1 1 1 1 1 0 0
1 1 1 0 1 1 1 1 1 1 1 0 1 0 1 0 1 1 1 1 1 1
0 0 1 1 1—78

Murphy.....0 1 1 1 1 1 1 0 0 0 1 1 1 1 1 1 1 1 1 0 1 1 1 0
0 1 1 1 1 1 0 1 0 0 1 1 1 1 1 1 0 0 0 1 1 1 1 1
1 1 0 1 1 1 1 1 1 1 1 0 0 0 0 1 0 1 1 1 1 1 0 1
1 1 1 1 1 1 1 1 1 0 1 1 0 1 1 1 1 1 1 0 1 1—77

From the above it will be seen that the score was a tie at 10 and 20 birds, Murphy led by 1 at 30, it was a tie at 40, Floyd Jones led by 1 at 50, it was a tie at 60, Floyd Jones led by 3 at 70, it was a tie at 80 and Floyd Jones led by 1 at 90.

Floyd Jones—Quarters to the right, 44; to the left, 5; divers, 37; incomers, 8; towerers, 6; total, 100. Used second barrel 68 times.

Murphy—Quarters to the right, 45; to the left, 7; drivers, 33; incomers, 4; towerers, 11; total, 100. Used second barrel 100 times.

Traps—Floyd Jones 18 from No. 1 trap, 23 from No. 2, 21 from No. 3, 20 from No. 4 and 18 from No. 5. Murphy, 13 from No. 1 trap, 21 from No. 2, 18 from No. 3, 26 from No. 4 and 22 from No. 5. Mr. Floyd Jones was looked after by Dr. G. L. Knapp, the famous pigeon shot. Mr. Floyd Jones used a Scott hammerless premier gun, bored for the Kynoch thin brass shells, weighing 7¼lbs. The shells were loaded with 3½drs. Schultze powder and 1¼oz. No. 7 chilled shot. Mr. Murphy had his brother Walter to look after him. He used a Greener hammerless gun weighing 7lbs. 5oz., with Kynoch paper shells charged with 3¼drs. of Schultze powder with 1¼oz. No. 7 shot in the right barrel and the same of No. 6 in the left. Mr. James B. Metcalf was referee, the birds were gathered by the dogs Ralph and Phil, and the time was 2h. 32m.

SPRINGFIELD, N. J., Jan. 9.—Union Gun Club's first regular monthly shoot, Lockport bats, 3 traps, 18yds. rise, National Gun Association rules, 7 prizes:

Miller	1111111111111111111111111—25
Roll	0111111011111111101111111—22

J Bryant	1111000101100111000011111—14

E. D. Miller took diamond badge. Ties on 23 for second at 10: Lightipe 8, Johnson 10. Ties on 22 for third at 10: Roll 9, Conover w., W. Sopher w., M. R. Brentnall 10. Ties on 21 for fourth at 5: Parker 5, Williams 4, E. Sickley 4. Ties on 20 for fifth at 5; James Pudney 2, Haines 5. R. Morrison took sixth. Ties on 18 for seventh at 10: Al Snow 8, Al Sickley 7. Next match, first Monday in February.—C. H. JOHNSON, Jr.

CLEVELAND, Jan. 13.—The Cleveland Gun Club team wiped out its defeat of a fortnight ago in its shoot with the East End Gun Club to-day. It was anything but a model one for trap-shooting. The wind blew a veritable hurricane over the East End grounds. At the same time the score shows a great deal of very fine shooting, and the wonder is that any of the birds could be killed in the midst of such a violent wind storm. The Cleveland team was out to win, and they did it to the tune of 24 birds, which is eight times the number by which they were beaten Jan. 2. The return match was shot under the same conditions as the first match, namely, 15 men a side, 21 birds, from 3 traps, at 18yds. rise, for the cost of the shoot. The State champions averaged 15½ to a man, while the East End average was 13 11-15. The judges of the match were J. Phare and L. Shauf, the latter being a member of the Massillon Gun Club. J. D. Keller refereed. The score:

The Cleveland Team.		The East End Team.	
C A Calhoon	12	D Auld, Jr.	14
W A Bassett	11	L Sherman	13
J C Hendershot	16	A B Jones	16
H L Cross	16	E H Gault	18
L O Jones	17	C C Hogan	12
W Stoneman	18	W Sweetman	11
R E Sheldon	17	Capt Byrns	13
J E Jones	15	H J Martin	14
F Chamberlain	12	Paul North	18
D C Powers	19	F A Hogan	12
A Cogswell	18	C McCracken	12
Smithnight	12	C H Kilby	14
W "Roberts"	15	T B Haycox	13
C F Wheal	17	H Phare	16
F H "Wall"	15—230	J J Sayles	10—206

Sweepstake shooting followed the match shoot. There were 21 entries to the first sweep at $1. Each entry shot at 9 blue rocks at 18yds. rise, from 3 traps. The score of the shoot was as follows: Chamberlain 5, Calhoon 8, "Basset" 5, Martin 8, A. B. Jones 6, H. Phare 7, I. Sherman 7, W. "Roberts" 8, Andrews 6, Roach 7, H. L. Cross 8, J. J. Sayle 6, Brockway 5, J. E. Jones 8, Conger 5, North 8, Haycox 7, L. O. Jones 5, R. E. Sheldon 8. Paul North and R. E. Sheldon divided first money, Roach, Haycox, Sherman and Phare divided second money, Sayle, "Andrews" and Jones divided third, Fred Chamberlain won fourth money.

The conditions of the second sweep were the same as in the first, 17 gentlemen entered and their shooting resulted in the following score: Wheal 8, "Bassett" 7, Sheldon 8, "Roberts" 7, Martin 6, "Andrews" 5, North 8, Haycox 9, Phare 8, A. B. Jones 5, H. L. Cross 7, C. A. Calhoon 8, C. Elford 6, Conger 7, Roach 7. Haycox took first money. In the shoot off for second Sheldon and Calhoon divided, "Roberts" won third.

NORTH SIDE GUN CLUB, of Long Island, 10th average match for one year, held at club grounds, Train's Meadows, Woodside, L. I., at 7 live pigeons, King's patent ground trap, handicap rise, no back bound, 80yds. boundary, club rules, club badge and three money prizes:

Barlow	1101011—5	Siems	1001011—
Winholz	1111111—7	Lyon	1011110—
Wahlen	1011100—4	Grau	1001100—
Dr Franz	1111011—6	Terrett	0110111—5
Bohmcke	1010100—3	Thomson	0111100—4
Eberhardt	1111100—5	Meyer	0101111—4
Manning	1101011—5	Duryea	01010w.

The annual meeting and election of officers took place at the headquarters, Dengler's Hotel, near the shooting grounds. The officers for the year are: T. Lyon, President; M. C. Manning, Vice-President; A. H. Eberhardt, Secretary; G. Siems, Treasurer; Trustees, L. Chevallier, Dr. H. Franz, G. Seims, M. C. Manning, H. Whalen. The club is in a flourishing condition and counts thirty-five members.—A. H. EBERHARDT.

NEW DORP, S. I., Jan. 16.—Over 700 shooters were at Burbank's Sea View Park this afternoon to witness the pigeon-shooting match between H. Kuhnast and C. Seefens, the colt members of the Jeannette Gun Club. The conditions were 50 birds each, 25yds. and 30yds. boundary, barring weight of gun and Hurlingham rules. The birds were a lively lot, and the high winds that swept across the fields made shooting difficult. Mr. Kuhnast was declared the winner, having killed 40 birds, while his opponent killed but 37.

CARTERET GUN CLUB.—The Governors of the Carteret Gun Club have given a silver cup valued at $150, to be shot for under the club's double handicap system, which not only increases the "rise" acording to the shooter's ability, but the boundary (distance in which the bird must be gathered) is reduced. The first shoot took place Wednesday, Jan. 18, on the club's grounds at Bergen Point, N. J. The attendance was small, but under the conditions that duplicate entries could be made, there were 13 entries by 7 contestants. The conditions were to shoot at 10 birds each, entrance $5 each, two misses out, ties to be shot "miss and out," and the cup to be won twice before it can become the personal property of any one. Judged by this shooting the contest will not be a long one, for with a clean score of 10 birds and 29yds. rise and 21yds. boundary, Mr. W. C. Floyd-Jones has already one winning claim out of the two. The birds were a good lot, and aided by half a gale of wind that blew across the grounds from left to right, it required good work to stop any of the birds from traps 4 and 5 within the boundary of 21 and 35yds. The best scores are as follows:

	Yds. Rise.	Yds. Boundary.	Killed.
W C Floyd-Jones	29	21	10
W H Sands	27	50	8
H Brown	30	35	8
Mr Gladwin	29	50	8
N S Simpkins	26	35	7
Mr James	28	80	5
R E Flint	29	21	1

Time of shoot, 1h. 15m. The birds were well gathered by the dogs Ralph and Phil, the latter a son of the famous Dell, who now enjoys pigeon shooting by looking through the club house windows.

NEWARK, Jan. 20.—Oswald von Lengerke and Charles Heath shot a lively 50-bird match at Erb's to-day, under Hurlingham rules, 5 traps and 30yds. rise. The birds were good, and made difficult shooting over the snow-covered field. Mr. Heath shot unusually well, and killed 43 birds. Mr. von Lengerke killed 39 and had four fall dead out of bounds. An old pigeon shooter who was present said that every bird that flew was hit. After the match a dozen well-known trap-shooters indulged in sweeps. Before they left the grounds Messrs. Von Lengerke and Heath made another match under the same conditions for $200. It will take place within a fortnight....The Essex Gun Club will go to Easton, Pa., on the 25th, to shoot a friendly match with the Easton Gun Club. A few friends will accompany them.

TORONTO GUN CLUB.—The annual meeting of the West Toronto Junction Gun Club was held on Friday evening, Jan. 20, when the following were elected officers for the ensuing year: D. Blea, President (re-elected); H. Power, Vice-President; P. Wakefield, Secretary; A. Lascelles, Treasurer (re-elected); H. Newman and C. Hinton, Executive Committee.

Canoeing.

AN ASSOCIATION MEET.

Editor Forest and Stream:

The discussion initiated in the columns of the FOREST AND STREAM by Mr. Will MacKendrick (more power to his paddle arm, his tiller hand, and the fingers which hold his pen) bears upon a subject of so much importance to canoeists, and may result in changes having such a lasting influence upon the development of the canoe, that it should at least be carried on in a suitable manner. Anything more out of place in such a controversy than aspersions regarding motives it is impossible to conceive of, that is unless canoeists are willing to admit that the old rule "no case, blackguard the opposite attorney" should apply to their wordy warfares. That it does, I would be very sorry to believe, for the men who have felt the influence of the sweet sincerity of the canoe, should have passed far beyond the realms of that species of argument. As I understand it, the question at issue is not the object of the Association, nor whether Pecowsic and her brood are cruising canoes, but whether the means adopted by the Association are those best fitted to bring about the highest good to canoeing and the canoe.

Canoeing is not racing either under sail or paddle; it is not cruising, nor is it monkeying, it is the art and science of using the canoe. The official definition of a canoe is that it is a boat sharp at both ends and capable of being efficiently propelled by one man with a paddle, but she is far more than these words apply; a canoe is, or should be, the boat which most perfectly unites the qualities of speed under either arm or wind power, strength, seaworthiness, comfort, handiness, safety and beauty, in such small compass that she can be managed with pleasure in rough water or smooth, in the rapid or on the beach, and at the portage by one man. It was because the original types of the canoe possessed these qualities to a higher degree than any other small craft, that canoeing became second only to yachting as an aquatic sport, and if in the process of development any of these qualities are lost or unduly subordinated the one to the other, the craft has deteriorated instead of improved. So long as the craft was being developed under natural conditions, such as those under which the Canadian canoe was evolved, there was no great danger that it would lose its great charm of universality. When, however, its future destines passed into the keeping of an Association, not unaffected by the racing mania, the danger that it would be ruined by being specialized arose. Of course the Association was organized to develop canoeing, not racing, and it at once proceeded to guard against this danger by framing rules and to increase it by encouraging races. The net result of this system may have been satisfactory to the men who have won races or were sure they would have done so if it had not been—that they did not get in first, but it certainly has not been so to the very large number of canoeists who want a good deal more out of their canoes than speed under either sail or paddle.

I do not wish to deny that substantial progress has been made, that the canoe of '87 is not a faster sailer, and a more finished and ingenious craft than the canoe of '80; but I do not believe that, leaving speed aside, the canoe of '87 was as much superior to the canoe of '80, as she should have been. To such a point has the specialization of the modern canoe been carried, that two classes have been created and are generally recognized, the cruiser and the racer, whereas there should be but one class, the canoe. Worse than all, the racer is the popular craft, the spoiled child of the Association, for whom there are prizes, honors and fame, and the cruisers are "disgruntled racers," forsooth, if they are not content to keep silence.

As an instance of the way this peculiar condition of affairs affects canoes and through them canoeing, the history of the development of the centerboard during the last few years is invaluable. The centerboard is the greatest difficulty with which the designer of an all-round canoe has to deal. Not only must it be simple, strong and give a good weather grip, but unless the boat is to be spoiled, it must take up as little of her midship space as possible.

A few years ago several folding boards, which interfered but little with the internal arrangments of a canoe, were invented, and very generally adopted. They proved to be slow, however, the racers introduced the solid board, stuck well in the center of the canoe, and now a canoe with a folding board has not a shadow of a chance with a plate board in a race.

How any one, by even the most tremendous stretch of the imagination, can claim that a canoe with a big centerboard box stuck just forward of her center, can be a cruiser, is more than I can conceive of. You certainly cannot sleep in such a canoe, nor take a passenger with any comfort, or even stow any decent quantity of duffle forward. A short time ago the double board system, which was perhaps the best, was very popular, but it is now decidedly out of fashion. The men who, disregarding every rule that canoeists had once been bound by, stuck a big single plate board into the middle of a canoe, surely did not think they were doing anything new, ingenious or wonderful. They were simply spoiling the canoe for everything else but racing, something which, five years ago, no person would have thought of. The whole centerboard question having been settled in this effective manner, we may expect no further improvements. The cruiser must be content with his slow-going board, and the racer is no doubt quite willing to curl himself around a centerboard box so long as he can win races. In the same way the development of reefing gear, of canoe jewelry, and of true canoe lines has been checked. Who is going to fool round trying to design a sail that will be flat as a board and at the same time can be reefed to a third of its full area by a jerk at the downhaul, when he can win races with a standing rig?

There can be no question that the reason why the racers now stand first instead of second as they should do, as specialists, is because the meets have encouraged racing, and very little else. There can be no question also that the meets have been an unbroken series of successes, and that it would be extremely difficult if not impossible to devise anything else which would take their place. If anything is to be done therefore to prevent the specializing of the canoe, and to give the all-round boat a chance, it must be done in connection with the meets, and no canoeist wants it to be done by any other organization than the A. C. A. It has been pretty conclusively proved that nothing can be done by racing rules to give the all-round canoe a chance, but something might, I think, be done by changing the condition under which races take place. Why should the Association not recognize the fact that the craft that cannot carry her owner and the necessary duffle for a three days' cruise is not a canoe? The scheme I would suggest is to organize a committee to take charge of all arrangements for an Association cruise, to last say three days, and to wind up at the meet. Let a certain number of the meet races be sailed or paddled on the cruise, the commodore thereof having the power to decide, when, where and how these races are to come off.

Strike the ridiculous limited sail area race off the programme and substitute therefor a cruising prize, to be awarded by the vote of the cruisers to the best cruising canoe outfit and cruiser taking part in the cruise; if they all cast their ballots for themselves disfranchise them, and make this one of the record events. The cruise committee and the meet committee should be distinct and yet a part of the general Executive Committee, and the commodore of the cruise should be an absolute autocrat as long as the cruise lasts and then cease from troubling. I do not know much about Lake George, but I think that such a cruise could be arranged for on its waters; and in future the location of the meet could be chosen with a view to providing pleasant and interesting cruising routes. I am quite sure that the men who went into camp and waited for the cruisers to arrive would feel like breaking up a ballasted canoe to drown themselves in when they heard of the good time the cruisers had been having, and that the only men who would not have a royal time on such a cruise would be those who had specialized either themselves or their crafts.

Such a cruise would make it entirely unnecessary to provide all manner of rules to prevent men from going in for either too big or too little craft, and the canoe that came out ahead in the cruise or the cruise races would be entitled to all the honors she could gain thereby. RETAW.

CLUBS IN THE A. C. A.

Editor Forest and Stream:

Attention has been drawn lately to the desirability of inducing all the canoe clubs in North America to join the A. C. A. No one, I think, can question the desirability; the only thing to be discussed is the means by which that end can be attained. It is, and I think always will be, an impossibility to get every member of a club to contribute even $1 per annum, and I will even go so far as to say that I think it is unreasonable to expect this. Take my own club, for instance, The Ottawa C. C. has some fifty odd members. Now, the adoption of the above rule would mean that in round numbers the O. C. C. is to be taxed $50 per annum. In other words, $50 would be diverted from the club treasury. The main reason why my club has had so few representatives at the A. C. A. meets is, that most of our members prefer cruising to racing. Few can spare more than a couple of weeks' holiday in summer, and this is spent in exploring new waters. What is true of my club is, I have no doubt, true of many others. To assist the A. C. A. is to assist canoeing, and I am quite sure the cruisers fully recognize this fact; most of them, too, will, I think, agree that it is very difficult, if not impossible, for the A. C. A. to give much direct assistance to the cruisers. A prize could be offered for the best cruising outfit, a certain number of points on the record could be given to those members who would cruise a certain distance on their way or before coming to the meet. An Association cruise might also be held at each of the meets, and a prize might be given to the member sending the best practical account of a cruise to the A. C. A. secretary (in this way a valuable canoeing literature might become the property of the Association, the prize essays being printed and sold for the benefit of the Association).

But still the cruisers must rely upon themselves and the fascination of their branch of the sport for its promotion. I think, however, that most, if not all the cruisers would be willing to give the A. C. A. what assistance they could, but they would not be prepared to do this to the extent of intrenching upon the resources of their own local clubs. I think we might look to the many benevolent and other societies that exist in America and see how they manage their affairs. One society that I belong to has its local lodges. These lodges are governed by the grand lodge of the district, and these grand lodges in turn by a supreme grand lodge. The grand lodges are supported by a per capita tax of 25 cents per annum. Now, this amount, it seems to me, is the maximum amount that should be demanded from the local clubs. Anything that the A. C. A. requires beyond this should be collected from the members who reap the main profit from the meet, viz., those who attend them. That amount should be ample to meet all ordinary expenses of the Association, viz., those apart from the meets.

I have no doubt, too, that the amount derivable under a per capita tax of 25 cents would soon largely exceed the revenue derived from the present system of charging a dollar. Taking the list of canoe clubs in the *Canoeist*, and estimating those clubs whose members are not given at eight each, we have over two thousand canoeists, which at 25 cents a head would give the A. C. A. a revenue of $500 per annum. By furnishing the club secretaries with printed forms for making their returns upon, and by sending each club a certain number of the lists of membership and any other circulars that might be issued, instead of sending them to each member, the clerical labor of the A. C. A. officers would be reduced to a very small amount, and the cost of the printing and postage need not be largely increased. If any member or club wished to have extra copies of lists, etc., let them be supplied to them at cost price, or even at a small advance. Let each division defray the expenses of its own meet, allowing, if necessary, an additional amount from the central treasury to the division where the main meet takes place. If any change is to be made in the present system it should only be done after the most careful consideration and the fullest discussion, and I only offer the above remarks as a suggestion to those who have been thinking over this important matter. ASTICOU.

OTTAWA, Jan. 14.

THE 75FT. LIMIT RACE.

Editor Forest and Stream:

If it were announced now that at the next A. C. A. meet one of the important events should be a 35ft. limit race, and that only those canoes which should come in well to the front in this race would be entitled to compete in, say, the international contest or the cup race, what style of a canoe would you look for at Lake George next summer as a result of such an announcement? What sort of a canoe would you advise one to build to have a fair chance of winnig this race? A Boreas or a Pecowsic? Suppose some good sailor were to build a well-modeled, perfectly smooth canoe, so long in proportion to her beam that for her 35sq. ft. of canvas would be a maximum sail area for ordinary light winds, a canoe perfectly fitted with the most approved styles of centerboard, rudder, sails, etc., what do you think her chances would be against a Pearl or Nautilus in the 35ft. limit race? Or in charge of Commodore Gibson, how far in the proposed race would she come in behind Pecowsic? Now tell me what, in your opinion, would be the particular style of canoe encouraged by such a limit race? Having considered these questions, you will probably be able to arrive at some conclusion as to what style of canoe is especially encouraged by the 75ft. limit race. Granting that this latter canoe is not a "racing machine," ought it to be singled out for special encouragement when all the other good canoes are left to derive what encouragement they can from the unlimited sailing race? I hold, Mr. Editor, that it ought not; and, unconvinced even by such strong arguments as "growler," "kicker," "disgruntled racer," "anti-racing man," "cruiser in big pot-bellied boat," etc., I take my stand with those who ask that the 75ft. limit race be struck off the list at future A. C. A. regattas.

The controversy in your columns over the "cruising canoe" and the "racing machine" has been to me so far very interesting. Not the least interesting portion of it was the contribution from the self-appointed champion of the Pecowsic, that Puritanical hater of pot-bellied cruisers, for, although some may think his ill-natured insinuations unjust, reminding one of the oft-quoted brief, "No case; abuse the plaintiff's attorney," yet the facts brought out by "Paddle" were very strong. How grateful the Messrs. Barney must be for such defense.

The valuable suggestion brought out early in the controversy, that embodied in the phrase, "One man, one canoe, one rig," has not, it seems to me, attracted the attention due to it. To me it appears to be the natural complement of the old "one man, one canoe" rule. I hope the regatta committee will consider it carefully and recommend its adoption if no valid objections can be urged against it. COLIN FRASER.

TORONTO, Jan. 12.

[We had intended to end this discussion last week, but Mr. Fraser's letter arrived too late for insertion. The hypothetical case he presents is an impossible one and proves nothing. There is no special weight attached to the 75ft. limit race, as there is to the unlimited; it is only one of a series and there is not sufficient at stake to induce a man to build a useless machine for one race per year. It is not possible to conceive such a reduction as 35ft.; a boat that would be able to carry only this amount of sail would either be too small in all ways to compete at all, or she would be spun out to such a length, say 20ft. with under 2ft. beam, that even within the limits of size she could never sail over the windward leg of the course in reasonable time. For running or reaching such a boat might be built, if the rules permitted it, but all A. C. A. courses are triangular. We should advise any moderate canoe, of good model, not necessarily a Pecowsic, to beat Boreas, Pearl or Nautilus.]

SPRINGFIELD C. C.—The annual meeting of the Springfield C. C. was held on Jan. 17, and the following officers for 1888 were elected: Captain, C. M. Shedd; Lieutenant, Dr. H. E. Rice; Purser, Nathan D. Bill; Secretary, H. D. Marsh. Executive Committee—C. M. Shedd, N. D. Bill, H. E. Rice, H. H. Marsh, Frank O. Foot. Regatta Committee—Geo. M. Barney, F. A. Nickerson, C. M. Shedd. The club voted to have their annual dinner some time in February, and F. D. Foot, C. M. Shedd and H. D. Marsh were appointed to make arrangements for the dinner. It was voted to hold regattas once each week to sail and paddle for club badges, races to begin in May and end Nov. 1. The membership is the largest since the club was organized—sixty-three members now and more coming. The season of 1887 was a very prosperous one for the club, some thirty-five new members were elected and three new club canoes purchased, making five club canoes in all the club now own, besides their floating canoe house, four houses down at Calla Shasta, with a prospect of one more being built in the spring. The present floating house, 65ft. long by 30ft. wide, not being large enough for the club, a new one will be built on shore early in the spring, 20ft. wide by 40ft. long, with a piazza on the river side 7ft. wide, 20ft. long. The new house will consist of three rooms, one for holding meetings, another for dressing room and lockers, and another for shower bath and closet. The lockers in floating house to be torn out to make room for new canoes now being built by Ruggles, Spencer and Rushton. The season of 1888 promises to be very prosperous for us, and we hope to have in camp next August at Lake George some twenty-five men.—GIROFLE.

SOUTH BOSTON C. C.—The third annual election of officers of the South Boston C. C. was held Dec. 31, 1887, and the following officers elected: Com., Charles W. Hird; Vice-Com., James Craddock; Sec'y, John J. Martin; Treas., Joseph A. Frizzell; a house committee was appointed, consisting of J. A. Frizzell, John J. Martin and Allan Hird; James Craddock, Melvin Atherton and J. Connor were chosen as regatta committee. The club now numbers twenty members and is about to enter on the third year of its existence, having been organized January, 1886, with six members. Its location, at the foot of K street, offers excellent facilities for canoeing, being removed from the yachting portion of City Point, while the broad reach of Dorchester Bay allows a clear triangular course of three miles, which greatly favors racing. The club held two series of races in the past season, which developed a keen interest in that branch of the sport, and the coming season promises to be the most active one of all, as the regatta committee propose to make ample preparations for a number of club races, including several challenge trophies, while there will be open races for outside canoeists, for which suitable prizes will be given. The cruising element is quite strong, and proposed cruises for the coming summer are already being discussed with the enthusiasm which is peculiar to the true canoeist. The club's present quarters are insufficient for the increasing membership, and steps will be taken to erect a new club house with ample accommodations for all. The club is fast gaining popularity among the canoeists of the East.

HARTFORD C. C.—The annual meeting was held on Jan. 17, the officers elected being Dr. Geo. L. Parmele, Pres.; W. B. Davidson, Treas.; John D. Parker, Sec'y; L. Q. Jones, Com.; and Wm. G. Abbott, member of executive committee. Some plans for the further improvement of the club house, and better facilities for handling boats and canoes, were discussed and referred to the executive committee. A number of new canoes have been handled by the club, Pres. Parmele having purchased a new Rushton Princess with all the latest wrinkles. She is a beauty in form and finish, and has already made one of the longest cruises undertaken during the summer by any canoeist. Mr. Abbott has a choice paddling canoe which is an ornament to the fleet, while Com. Jones has secured a fine Joyner, which he has parted with only to fill its place with a naphtha launch, which has been a source of pleasure to all the club. The outlook for the year promises every chance for pleasure and recreation to the present members.

A REAL HELP TO AMATEURS.—A subscriber in Maine writes as follows concerning "Canoe and Boat Building for Amateurs": "I built last year a row boat, having "Canoe and Boat Building" for a guide, and I was an amateur in the fullest sense of the word, for I had never seen a craft of the kind in my life. However, I did quite a creditable job. I have been thinking that I should like to have you see what it was like and have the model and plan of it. It is not an elaborate one of course, but still you might tell something by it. Pardon me for taking so much of your time by writing so much, but I feel as though I was writing to an old friend."

BAYONNE C. C.—At the annual meeting on Jan. 5, the following officers were elected: Com., Robert H. Peebles; Vice-Com., Albert Fleming; Sec'y, Robert T. Vroom; Treas., Fred B. Collins; Trustees, Edwin R. Smith, Theo. F. Taylor, Fred B. Collins, Louis F. Burke. Articles of incorporation were signed by the newly elected officers and the club became incorporated under the New Jersey State law. The club is now contemplating the purchase of property fronting on Newark Bay, on which to erect a large and commodious club house for the use of its members and their friends.

PURITAN C. C.—A canoe club by this name was lately organized in Boston with headquarters at City Point. The officers are: Com., F. J. Baxter; Vice-Com., C. F. Dodge; Rear-Com., Lathrop Hedge; Sec'y, A. C. Chamberlain; Treas., F. B. Wheaton; Meas., J. R. Robertson; Board of Directors, S. A. Brown and J. F. Hill.

A. C. A. MEMBERSHIP.—The following gentlemen have applied for membership in the A. C. A., Central Division: H. Lansing Quick, Yonkers, N. Y.; F. W. Kitchel, R. H. Barnes, Louis Farront, W. R. Tobias, Perth Amboy, N. J.; Henry C. Morse, Peoria, Ill. Eastern Division: R. B. Potter, Cambridge, Mass.

"THE MODEL YACHTSMAN AND CANOEIST."—This bright little monthly comes to us in an enlarged form, with twenty pages. It is doing a good work for canoeing in Great Britain, and we hope that with its added canvas it may sail still more speedily toward prosperity.

IANTHE C. C.—A concert by the Columbia College Glee Club was lately given by the Ianthe C. C. for the building fund.

SHATTEMUC C. C.—Officers, 1888: Com., Frank Brandreth; Capt., F. M. Fisher; Purser, H. M. Carpenter.

Yachting.

TEN MONTHS OR SIX MONTHS NOTICE.

THE plea that is put forward in defense of the lengthening of the notice of challenge from six to ten months is that the latter is little enough time in which to build a yacht to meet the challenger, and the hurry with which Volunteer was put together is given as an instance. This excuse has served to mislead many into the idea that the change was a fair and just one, but when the original deed of gift is examined and a little ancient history is brought in, the fallacy of the plea is made plain. The first and only deed of gift made by the five gentlemen who owned and gave the Cup, and without the aid or suggestion of any committee, reads as follows: "The parties desiring to sail for the Cup may make any match with the yacht club in possession of the same that may be determined upon by mutual consent; but in case of disagreement as to terms the match shall be sailed over the usual course for the annual regatta of the yacht club in possession of the Cup, and subject to its rules and regulations, the challenging party being bound to give six months' notice in writing, fixing the day they wish to start." By this provision such a letter as that of the Royal Clyde Y. C. of Sept. 21, 1885, would have been perfectly proper, the first step toward such a friendly arrangement of the terms of the match as the original deed evidently contemplated. Had the negociations failed, the challenger could then claim as a right a race under certain conditions, one of them being that six months' notice at least should be given.

It was obviously to the advantage of both parties to make the agreement as early as possible, the challenger, in order that he might secure better terms through an agreement than he could demand under the latter part of the clause quoted; the defender, in order that he might know in good season what he had to meet, and could prepare accordingly. There was so little chance for the challenger should he claim a race, that he was certain to agree to almost any restrictions of the holder rather than take his one race over the New York course, perhaps against the fleet. A

glance backward over the history of the various races for the Cup shows that in nearly every case the challengers sought to commence negotiations nearly a year in advance, giving full notice of the yacht they would bring across. Both of the Canadian challenges, from the Countess of Dufferin in 1876, and Atalanta in 1881, were sent in the spring, and the six months limit was waived by the New York Y. C., a concession, which, however, was perfectly safe, the yachts being centerboard craft of the usual American type, and there being plenty of fast yachts of their respective sizes in the fleet with which to meet them without building.

As far back as the first race, Mr. Ashbury wrote on Oct. 3, 1868, proposing a race in the following October, which, however, was not sailed, and in November, 1869, he wrote again in regard to the match which was finally sailed in the following August. The second challenge from Mr. Ashbury, on behalf of Livonia, was sent after the yacht had been built and tried in the spring of 1871, and the six months' notice was waived by the club, as in the two following races of '74 and '81, before mentioned.

Coming down to modern times, the joint challenge from Genesta and Galatea came in the form of a letter from Mr. Beavor Webb, written on Dec. 6, 1884. Genesta had already raced for a season, and well was known here, so that when the letter from Mr. Webb was received in New York on Dec. 20, 1884, the New York Y. C. knew at once what they would have to meet in the following September, though it was some time still before the formal challenge was definitely accepted by the club, and all the terms settled. The club had the same notice of Galatea as of Genesta, and agreed to let the two run together, instead of demanding six month's notice after the termination of Genesta's races, which would postpone Galatea's races until the following year, a concession in this case which it was not compelled to make. As the race with Galatea did not come off, in the first week of October, 1885, Mr. Beaver Webb sent a challenge in her name for a race as late as possible in 1886, thus giving a full year's notice. The first challenge from the Royal Clyde Y. C. was sent on Sept. 21, 1885, for a race in the following September or October, still a full year's notice. Again this year, the challenge from Mr. Sweet was sent on Sept. 30, and being written in New York was received by the club at once. In these four cases it will be seen that the challengers, long in advance, opened negociations with the New York Y. C. looking to an amicable agreement in good time, in fact in three out of four cases the challengers have given twelve instead of ten or six months' notice.

Now we will go back a little and see what the New York Y. C. has done in the matter. When in 1881 the original deed was first meddled with the following section was inserted in place of the one we have before quoted: "The challenging party shall give six months' notice in writing, naming the day for the proposed race, which day shall not be later than seven months from the date of the notice." The change here made is a very important one. The first "six months" clause was a part of the second section of the original deed of gift relating to mutual agreement as to terms, and simply applied in case no such agreement was made. The new limitation, however, was in the form of a separate section preceding the one relating to an agreement, and its immediate effect was to prevent a challenger from giving more than seven months' notice in any case. How a provision so clearly against the interests of the New York Y. C. could have been passed is a strange matter, especially as the first revision was not railroaded through in the hurried and secret manner that characterized the passage of the last one. Its practical operation has been to prevent the sending of a challenge or anything more than a letter, which was necessarily informal, until March of each year, thus keeping from the club until the last moment the very information which it was most important it should have as early as possible; while at the same time it has afforded a technical pretext for discouraging challenges, as in the case of Thistle.

As it was the action of the New York Y. C. in this matter that led to the secrecy on the part of the designer and owner, we give the following letter from the Royal Clyde Y. C., and the resolution passed by the club in regard to it:

ROYAL CLYDE Y. C., SECRETARY'S OFFICE,
GLASGOW, Sept. 21, 1886.

John H. Bird, Secretary New York Y. C. New York:

SIR—In confirmation of my cable of to-day I now, as secretary, and as authorized by the Royal Clyde Y. C., formally challenge your club for the possession of the America's Cup in the name of Mr. James Bell, a member and lately rear-commodore of this club.

The challenger intends building a yacht for the race, and I am unable at present to give length or tonnage. Should your club decide to race Mayflower the challenger is prepared to build a yacht of about her size. If, however, you determine to build a new vessel it might be as satisfactory and less costly were smaller vessels built—say from 65 to 75ft. long. In any case it would be well the competing yachts be about the same length, so as to make the trial as much as possible a test of model.

The only other suggestion the challenger desires to make at present is, that in order to eliminate as far as may be the elements of chance, the contest should be decided by the best of five trials.

I do not, in the meantime, name any day or days for the proposed race, as Mr. Geo. L. Schuyler's letter of Jan. 4, 1882, provides that the day named shall not be later than seven months from the date of the notice; but it is proposed that the race should take place next September, and due notice of not less than six months and not more than seven months will be sent in conformity with the conditions in Mr. Schuyler's letter.

Awaiting the favor of an early reply, I have the honor to remain sir, yours faithfully, WILLIAM YORK, Secretary.

On Oct. 15, Mr. York wrote again:

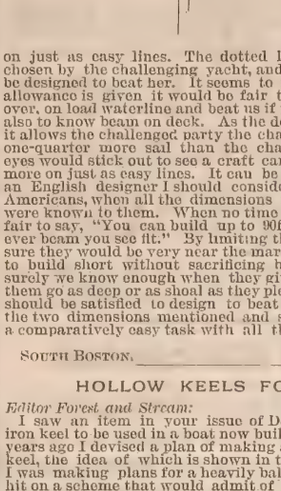
"In view of this meeting and of removing any possible informality in the challenge, I would ask you to be good enough to send me an authentic copy of the whole conditions regulating the challenge, with any further explanations that may be necessary to enable me to put the challenge (if not so already) in such a form as your club can accept *simpliciter*."

The resolution of the New York Y. C. was as follows:

"*Resolved*, That the secretary forward the Royal Clyde Y. C. the documents asked for and the full terms regarding the challenge for the America's Cup, at the same time stating that the communications already received from the said Royal Clyde Y. C., cannot, under the deed of gift, be considered as a sufficient challenge. When said challenge comes in proper form it will receive due consideration."

It will be seen that while technically not in accordance with the club's version of the deed of gift, it was fully in accord with the spirit, expressed and implied, of the donors' original deed; and the first step toward the agreement mentioned therein. Further, it was clearly to the advantage of the New York Y. C., offering the choice of size and full information. The answer of the club, as given above, is ample justification for the secrecy as to dimensions observed by the challengers after such a rebuff.

Thus far there is no evidence in nearly twenty years of racing to show that the challengers have attempted to take the holders unawares by outmatching them with only six months' notice; and while in some cases the club has been asked to waive this notice, in none, even the much disputed race of 1871, has an attempt been made to force a race under the clause. On the contrary, the notice of challenge has in most cases been given in good season, nearly a year in advance, while the New York Y. C. has itself, in the first revision of the deed, placed a barrier in the way of challengers who wish to make terms in good season.



Certainly in the face of these facts the excuse that ten months was required instead of six must fall to the ground. All that was needed was for the club to revert to the real deed of gift, discarding the clause interpolated in the revised one, and the self-interest of each challenger would impel him to make terms as long in advance as possible, not only to make sure of not being forestalled, but in order to have full time for either building or making all plans for the coming season. It is true that it would have been possible for a challenger to have given but six months notice, perhaps not giving time to build, but if he did this all he could demand would be one race under the most unfavorable conditions, and almost any arrangement that the holder could force him into would be better than these. Had nothing more been wanted by the holders than what they are honestly entitled to ten or twelve months notice of a challenge with a general knowledge of the boat) all that was requisite was to restore the original clause, and to permit, not compel, challenges. This was not enough, however, and now the committee have so provided by the two clauses relating to time of notice and dimensions, that the challenger and his designer are hampered to an unfair degree, the time in which a challenge may be sent is so shortened as to discourage future challenges, and the essential features of the challenger's yacht must be in the hands of the holder in ample season to outbuild him.

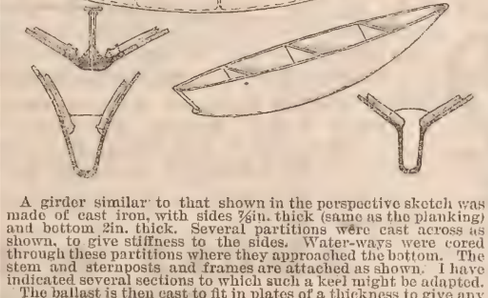
SEAWANHAKA C. Y. C. LECTURE.—The next lecture of the Seawanhaka C. Y. C. will be given at No. 7 East Thirty-second street, on Saturday at 8:30 P. M. Lieut. Wm. H. Schuetze, U. S. Navy, now at the head of the Compass Bureau at Washington, an officer well known through his connection with Arctic exploration, will lecture on the mariner's compass.

THE FOUR DIMENSIONS.

Editor Forest and Stream:

I have watched with great interest the discussion in the papers about the new deed of gift, and it seems to me that one vital point is overlooked and that the New York Y. C., while seeking to make all other provisions most fair and equitable, have overlooked the fact that they have asked for more than any designer would be willing to give, knowing that in so doing he would probably give his opponent the chance to outbuild him. By reference to cut it will be seen how easily this can be done. When greatest beam, beam at loadline, draft and length on load waterline are given, which shall not be exceeded, it is comparatively easy for the skillful designer to outbuild by giving more power, while he can ease away the diagonals and underwater lines a little, thereby producing a yacht capable of carrying more sail

on just as easy lines. The dotted line is that supposed to be chosen by the challenging yacht, and the full line is what might be designed to beat her. It seems to me that so long as no time allowance is given it would be fair to say "Build up to 90ft., not over, on load waterline and beat us if you can!" It might be well also to know beam on deck. As the deed gives no time allowance it allows the challenged party the chance to outbuild and carry one-quarter more sail than the challenger. How John Bull's eyes would stick out to see a craft carrying that amount of sail more on just as easy lines. It can be very easily done. If I were an English designer I should consider it a hopeless task to beat Americans, when all the dimensions required in the deed of gift were known to them. When no time allowance is given it seems fair to say, "You can build up to 90ft., not over, and take whatever beam you see fit." By limiting them to 90ft. loadline we are sure they would be very near the mark, as they could not afford to build short without sacrificing both power and speed, and surely we know enough when they give us their beam also. Let them go as deep or as shoal as they please; we can do the same. I should be satisfied to design to beat the challenging party with the two dimensions mentioned and should consider that I had a comparatively easy task with all the other dimensions.



E. L. WILLIAMS.

SOUTH BOSTON.

HOLLOW KEELS FOR CUTTERS.

Editor Forest and Stream:

I saw an item in your issue of Dec. 29, 1887, describing a cast iron keel to be used in a boat now building in Boston. About four years ago I devised a plan of making a cast iron girder to act as a keel, the idea of which is shown in the accompanying sketches. I was making plans for a heavily ballasted yacht, and wished to hit on a scheme that would admit of removing the ballast before hauling her out, and at the same time keep all the ballast low down.

A girder similar to that shown in the perspective sketch was made of cast iron, with sides 3/8in. thick (same as the planking) and bottom 2in. thick. Several partitions were cast across as shown, to give stiffness to the sides. Water-ways were cored through these partitions where they approached the bottom. The stem and sternposts and frames are attached as shown. I have indicated several sections to which such a keel might be adapted.

The ballast is then cast to fit in plates of a thickness to give any desired weight. The device is in use in two cutters here, and has proved very satisfactory. It possesses the following advantages: The ballast, while all removable, is as good as all outside; it is readily shifted for change of trim or for hauling out. It is very strong, without any wrought iron work. It does not cost as much as a wooden keel and an outside casting. Hoping that some one may use and benefit by the idea, I send you this description.

CHARLES W. KELLY.

CLEVELAND, O., Jan. 9.

THE SEAWANHAKA CORINTHIAN Y. C.

THE experiment which the Seawanhaka Corinthian Y. C. of New York has made within the past year has been watched intently, not only by the immediate friends of the club, but by yachtsmen in all places who know and admire the club for what it has done in the cause of Corinthian sailing in America. The success or failure of the experiment was far more than a club, or even a local matter, for the influence of the principles first advanced and since so well upheld by the club has been far-reaching, and all friends of Corinthian sailing and of our national yachting will rejoice at the success the club has met thus far in its new course. The annual meeting just held terminated the first year of the new scheme described in full in the report of the committee on location, published last winter, and the reports of the various officers and committees read at the meeting testify to its complete success.

The experiment of building up a club and awakening a fresh interest in its members by a house in town instead of a station on the water was a doubtful one; but the results thus far have fully justified the recommendation of the committee on location.

The reports give the present standing of the club, financially and in other ways, in full, but are too lengthy to publish. The following from the secretary's report shows in a measure the result of the year's work: "At the beginning of the present club year, 1887, there were 209 qualified members of the club on the roll, divided as follows: Honorary, 1; life, 4; active 204. During the year the board of trustees elected 113 new members, and elected to honorary membership Gen. Chas. J. Paine, of Boston. Under the new constitution of the club, six ex-officio honorary members were added to the list, making the total accessions to the roll of members for 1888 123. During the year ten old members resigned. The secretary announces with regret the death on April 25 of Mr. F. M. Shepherd, a member since June 27, 1881. One member has been dropped for non-payment of dues, and one member elect did not qualify, making the total as follows: Members at beginning of 1888, 209; added during year, 123; deaths, resignations, etc., 13; leaving a membership of 319, or a gain of 110 members during the year. Of these 307 are active members. "Your secretary submits the following figures, giving the membership of the club at the beginning of each year for the past six years, making no other comment than that an association which does not advance is in reality rapidly retrograding:

"Beginning of 1883, 230 members; 1884, 219 members, loss 1; 1885, 212 members, loss 7; 1886, 198 members, loss 14. With the beginning of 1887 came the dawn of new plans, and the membership was: 1887, 209 members, gain 11; 1888, 332 members, gain 123. Concerning the club fleet, the club book for 1886 showed a fleet of 14 steamers, 18 schooners, 22 cutters and keel sloops, 22 cabin centerboard sloops and 23 open boats; total, 59 vessels. The book for 1887 showed 14 steamers, 21 schooners, 24 cutters and keel sloops, 25 cabin centerboard sloops and 22 open boats; total, 106, or an increase of 7 yachts. Since the book was published other additions bring the fleet up to 120." This report speaks for itself as to the progress of the club in point of membership, and the other reports show corresponding advances in other directions.

The club has now a spacious and well-appointed town house, with a large and increasing attendance of members throughout the season. A collection of accurate and reliable models in uniform style has been commenced, the lines in many cases being taken especially for this purpose by the club measurer. The list includes Mischief, Fanny, Cinderella, Clara, Shadow, Rival, Intrepid, Bedouin, Montauk, Grayling, Miranda, Julianar, Fortuna, Yampa, and a full-rigged model of a large schooner yacht, the latter presented by Vice-Com. Center. The club library and reading room is well supplied, and the collection of charts promises to be a most valuable feature. A collection of materials and apparatus connected with yachting has been started and is growing constantly, some very handsome models having been made specially for the club. The collection in itself is of the greatest practical value to the yachtsman who desires to compare canvas, cordage, etc.

The navigation class of the club, under Captain Howard Patterson, has proved a most attractive feature, and forty members are enrolled in it, meeting twice a week in two divisions.

Among the important work done during the year is the establishment of a course of lectures on nautical subjects, the three thus far given being well attended by yachtsmen outside the club as well as members. The club has also revised its sailing rules and given to American yacht clubs the most complete set of rules yet devised.

The efforts of the club in behalf of a Naval Reserve have resulted in the awakening of a wide interest in a subject of the greatest importance, and the trustees recommend a continuance of the committee whose labors have done so much for the cause.

Following in the course which has made the name of Seawanhaka synonymous with that of Corinthian, the board of trustees recommend in their report that a Register of Corinthian Sailors be compiled, in which the names of all about New York who are willing and eligible to serve in Corinthian crews shall be enrolled, and further that a permanent committee be appointed to take charge of the Register and to consider the interests of Corinthian sailing and racing.

The great cause of the success of the club thus far may be found in the *esprit du corps*, which has brought out the efforts of every member, it has been a long pull and a strong pull by all hands, but no small factor has been the leadership and personal exertions of Commodore Canfield, who has been first in every project for the club's advancement, and under whose command it may confidently expect still more rapid progress in the coming season. The officers for the year are: Com., A. Cass Canfield; Vice-Com., Robert Center; Rear-Com., Ralph N. Ellis; Secty., Leon F. d'Oremieulx; Trustees, J. F. Tams, Wm. Foulke, Jr., W. W. Tompkins, W. B. Simonds, Robert L. Belknap; House Com., Wm. Foulke, Jr., Robert F. Bixby, Ashmont Lemoine, Herbert L. Satterlee, George Milvern Eddy; Lecture Com., A. Cass Canfield, J. F. Tams, Leonard Chenery; Com. on Lines and Models, John Hyslop, A. Cary Smith, Wm. P. Stephens; Treas., Wm. B. Simonds; Meas., John Hyslop; Fleet Surgeon, Dr. J. W. Roosevelt; Fleet Chaplain, Rev. Dr. Geo. R. Vandewater; Race Com., Louis P. Baynard, Francis O. De Luze, Jules A. Montant, Leon F. d'Oremieulx, M. Morris Rowland; Library Com., Theodore C. Zerega, Wm. Gardner, H. W. Tyler; Com. on Exhibits, John F. Lovejoy, Robert Center, J. Beavor-Webb; Law Com., Chas. W. Wetmore, Henry P. Rogers, Sidney Chubb.

A GENEROUS CONCESSION.

ONE of the chief points in dispute for years between the challenger and the defender in the international races has been the course of the New York Y. C., over which these, and in some cases the sole, race under each challenge has been sailed. The faulty character of the course, as far as a test between two boats is concerned, has long been recognized; the unfairness of asking a deep draft boat to sail the course as it formerly was before the short cuts over shoal spots were barred out, as well as the advantage it gave to local sailors familiar with its tides, currents and winds, has never been denied; while the danger from attendant steamers and other craft has seriously impeded the competitors. In spite of all this, in the face of protests from the challengers and the opinions of many American yachtsmen, the New York Y. C. has tenaciously held on to the old course. Now that it has at last decided that the challenger may claim as a last resort three races on the open sea, the abandonment of the old course is hailed by the friends of the new deed of gift as an evidence of the generous and liberal spirit which is supposed to pervade that lengthy document.

When it is remembered how obstinately the club has held to the course for years, one is apt to look for some more powerful motive than a desire to give fair play to the challengers, and in this case it is not hard to find. The popular estimate of British yachts has always been that they were seagoing craft, at their best to windward in rough water, while it has also been commonly believed that their races were sailed on open and exposed courses. Of late years, however, American yachtsmen have learned that the strength of the new Boston compromises was to windward rather than free or reaching, while the cutters were relatively at their worst on a windward course. This information has been further supplemented during the past season through the ill-grounded complaints of some of the Scotch contingent as to windward courses, which have brought out the fact more prominently than ever before, that many British courses were more land-locked and hampered by shoals than the New York course. The Mayflower—Arrow controversy called attention to the Isle of Wight course, and American yachtsmen learned for the first time that many British courses were four-sided, short, and many rounds were required to make a race.

In the last race Volunteer proved her ability to windward over the best yacht now afloat that could be brought to beat her, and this fact it was, with the fear that if the Cup ever went abroad it might be sailed for over a course that would favor the home boat that led the committee to make the change, and to call for outside races. So far from anything approaching generosity, the New York Y. C. held on to the inside course, unfair as it was, until it was evident that more could be gained by giving it up than by holding to it.

We will not quarrel with any provision that calls for windward work in open water, and experience proves that in order to be sure of one leg to windward out of two or three it is safest to sail to windward first, in case of a shift of wind. At the same time the provision that the first leg must be to windward places a great advantage in the hands of the regatta committee, and also imposes a heavy responsibility on them. It very frequently happens that the weather is so unfavorable as to make it a serious question whether or no the race shall be started, and this the regatta committee must decide. Although their decision be made in perfect fairness, any great change in the weather after it has been announced is apt to subject them to severe criticism from the party which loses by the change. As far as the selection of the weather is concerned, the odds are strongly in favor of the holders, with whom it rests to decide whether a start or postponement is desirable. It is evident that in this clause at least the New York Y. C. loses nothing by the change it has made.

ELECTIONS OF OFFICERS.

Hull Y. C.—Com., H. E. Converse; Vice-Com., John J. Henry; Rear-Com., R. S. Whitney; Secty., W. A. Cary; Treas., Chas. C. Hutchinson; Asst. Secty., Frank C. Brewer; Meas., Ambrose A. Martin; Ex. Com., Wm. B. Lambert, James R. Hooper, James B. Forsyth, Chas. A. Perkins; Membership Com., J. R. Chadwick, J. J. Souther, E. H. Tarbell, Franklin Adams.

Brooklyn Y. C.—Com., Percy G. Williams; Vice-Com., F. P. Rogers; Rear-Com., E. H. Chandler; Meas., R. C. Hopkins; Pres., Daniel O'Reilly; Treas., W. H. Burk; Sec'ty, George H. Brown; Trustees, Willard Graham, A. G. Walden, Samuel McIlroy, George W. Hanold, H. R. M. Cook, M. J. Hanley, O. E. Tredwell, Alexander Lockhead and C. H. Oliver; Membership Com., W. M. Morehouse, E. B. Ecker and Harry Reilly; Regatta Com., William Cagger, C. J. Merwin and J. C. Egerton.

Bijou Y. C.—Com., J. B. Timmins; Vice-Com., J. E. O'Brien; Rear-Com., J. F. Hartnett; Treas., John Walsh; Sec'ty, L. A. Shortell; Directors, Cornelius McCarthy, John J. Ryan, Joseph Leverone.

AMERICAN Y. C.—The annual meeting of this club was held on Jan. 17, the officers elected being: Com., W. H. Starbuck; Vice-Com., R. Andrews; Rear-Com., H. Osgood; Sec., Henry A. Taylor; Treas., W. B. Dowd; Meas., C. H. Haswell; Trustees, J. A. Bostwick, J. P. Kennedy, H. A. Taylor, F. R. Lawrence, J. Stickney, W. B. Dowd, W. E. Connor; Regatta Committee, G. W. Hall, T. L. Scovill, E. S. Innet, E. S. Connor, W. Weeber. The new club house at Milton Point is now completed, while the club has a balance of $8,000. A letter was read from Mr. Watson to Mr. W. E. Connor, asking for the conditions governing the new challenge cup. The Gould cup, for the club yachts over the club course, was on exhibition during the meeting. A letter from Mr. Gould, inclosing Atalanta's log across the Atlantic, was also read.

CORINTHIAN Y. C., OF MARBLEHEAD.—The annual meeting of the Corinthian Y. C. was held in Boston on Jan. 18, the first business being the dissolution of the club and the election of its members to the newly incorporated club, the name being retained. The following officers were then elected: Com., B. W. Crowninshield; Vice-Com., I. S. Palmer; Sec'y, Everett Paine; Treas., J. B. Rhodes; Meas., Wm. Eddy; Regatta Com., George A. Stewart, E. H. Tarbell, C. S. Eaton, F. W. Chandler, J. S. Poyen; Membership Com., Wm. P. Fowle, R. C. Poor, W. W. Keith, C. S. Dennison, W. H. Mills; House Com., F. A. Seamans, E. W. Hodgkins, H. F. P. Wilkins; Executive Com., the commodore, vice-commodore, treasurer, Messrs. Wm. E. Eaton, Jr., and Frank E. Peabody. The annual dues of the club were raised to $10. The house committee were allowed the sum of $4,000, with which to build and furnish a house. Mr. J. B. Rhodes was elected a delegate to the N. E. Y. R. A. and was also voted the thanks of the club for his efforts in securing its incorporation. Lieut. Henn and Mr. Burgess were both elected honorary members. The club has paid off $500 of the land debt and has a balance on hand as well.

CUTTERS IN BOSTON.—After the taunt from Boston that the FOREST AND STREAM was a cutter paper, it is amusing to look over the list of yachts now building there. The largest of these is a schooner, a centerboard boat, but it is true, nevertheless, that she will draw 11ft. on 80, or double the draft of American centerboard craft of her class. The latest announcement is of a new cutter for Mr. Chas. A. Longfellow, 45ft. l.w.l., 14ft. beam and 8ft. 9in. draft, with clipper stem. The name will be Alga, the same as Mr. Longfellow's old cutter. Mr. C. F. Adams's new cutter, the Baboon, will succeed Pappoose, also a cutter; Mr. Fowle will have a 29ft. 6in. cutter, Mr. Eaton another of the same length, Dr. Jameson another small cutter, Mr. C. H. Taylor another, and Mr. C. L. Welch another. Looking along the list the patriotic reader finds at last one centerboard sloop, but there is a little comfort even in this when he finds that she has a lead keel of twelve tons, and all the draft that Larchmont Harbor will easily admit. Truly the FOREST AND STREAM is a cutter paper, and Boston, in spite of the centerboard, is and always will be a cutter city, however much some of her yachtsmen may deny the fact.

A DINNER TO COM. GERRY.—On Saturday evening a dinner was given to Com. Gerry by the officers of the New York Y. C., Secretary John H. Bird, Treasurer F. W. J. Hurst, Fleet Surgeon Morris J. Asch, M.D., and Fleet Captain Gouverneur Kortright, Messrs. Stephen Peabody and Alex. Taylor, Jr., of the Regatta Committee. There were present besides, Messrs. George L. Schuyler, Vice-Commodore C. C. Haight, W. A. W. Stewart, of the Cythera; E. M. Brown, of the Fedalma; E. C. Benedict, of the Oneida; James W. Hayward, of the Burgess Fund Committee; Frank T. Robinson and George L. Ingraham.

NEW YORK Y. C.—The first regular meeting for 1888 will be held on Feb. 2. The following nominations for officers have been made: Com., Elbridge T. Gerry; Vic-Com., Latham A. Fish; Rear-Com., Henry Marquand; Sec't'y, John H. Bird; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch, M.D.; Regatta Committee, Gouverneur Kortright, Stephen Peabody and Charles H. Stebbins; House Committee, Edward E. Chase, B. C. Cleemann, E. A. Houghton and Robert S. Bowne; Committee on Admission, Chester Griswold, Joseph P. Earle, George L. Ingraham, Frederic Gallatin and Edward M. Brown.

WORK ABOUT BOSTON.—Lawley & Son have the new Burden schooner nearly in frame, and are pushing the work on Mr. Eaton's cutter. Mr. C. R. Flint's 89ft. boat is partly in frame, her 12-ton keel being bolted fast. Mr. Fowles's 29ft. cutter also has her keel down. The Burgess cutter for Dr. Wm. M. Jameson will be built by McPhail, in East Boston. Story has completed the planking of the Frisbie steamer and will launch her on Feb. 22. She will be towed to Philadelphia to receive her machinery.

THE FIRST ICEYACHT RACE.—The first race of the winter was sailed at Red Bank on Jan. 20 in a fresh W. wind, course 15 miles, for the Commodore's pennant. Dreadnaught, Messrs. Sanger & Pierpoint, won in first class, with Kitty in second.

ANOTHER STEAM YACHT FOR BOSTON.—Mr. G. F. Fabyan, of Bliss, Fabyan & Co., has ordered a new steam yacht to replace the Fidget, his former boat, and Wm. McKie will build her, also furnishing the design. She will be of wood, about 115ft. l.w.l., 19ft. beam, and 9ft. draft, with 15 and 30×18 engine and a horizontal boiler, both to be built by Webb & Watson, of East Boston, where the hull will also be built. The contract calls for a speed of 14 knots for six consecutive hours.

THE SCHOONER CLASS.—Priscilla will be altered this winter into a schooner, while Com. Canfield will build for the same class a 90ft. yacht of his own design. She will be a deep draft centerboard boat, with lead keel, and will be built of steel by Harlan & Hollingsworth. The new Burden schooner, to be named Marguerite, will also be rigged for racing, and with 11ft. of draft in addition to the board she will prove a formidable antagonist though but 80ft. long.

CORINTHIAN Y. C. FIXTURES.—The races off Marblehead for the season 1888 are announced as follows: June 16, pennant race; June 30, first championship; July 7, club race for cash prizes; July 21, second championship; July 28, Ladies' race; Aug. 11, open regatta; Aug. 18, cup race; Sept. 3, third championship; Sept. 8, sail-off and sweepstakes.

THE ALARM.—The schooner Alarm, built in 1864 for A. C. Kingsland, has been sold to Messrs. Handren & Robins, late owners of the schooner Rena. The Alarm has been out of commission for some years, so that she is almost unknown to many yachtsmen, but she is a keel boat, 112ft. l.w.l., 24ft. beam, and 11ft. 3in. draft.

AN INTERNATIONAL RACE ON THE LAKES.—The yachtsmen of Cleveland are now busy with a plan for a series of races between the American and Canadian yachts on the great lakes, to take place next summer. A handsome cup will be offered, but the conditions have not yet been determined.

TILLIE.—This steam yacht, better known as the Polynia, was sold at auction on Jan 18, under a mortgage held by her former owner, W. H. Starbuck, who sold her last summer to H. S. Ives for $87,000. The yacht was purchased by Vernon H. Brown for $26,000.

PURITAN'S BUILDERS.—Mr. Henry Bryant writes to correct the statement lately made in our columns as to his connection with the Puritan syndicate, as neither he nor his brother were financially interested in her.

CREEDMOOR.—This steam yacht has been sold to the North End Athletic Club, of Boston, which will refit her, giving her a new engine and boiler. The name will be changed to North End.

A CUP FOR MR. BURGESS.—The cup presented to Mr. Burgess by the St. Augustine Y. C. is of silver, 18in. high and about 8in. in diameter. It was made by Tiffany at a cost of about $700.

YAMPA.—On Jan. 17 the new schooner Yampa left New York for Fernandina with her owner on board. She will cruise about the Windward Islands this winter.

CYPRUS.—This 5-ton cutter has been sold to J. F. Monck, of Toronto, for $1,100. She was imported from Scotland last year.

GITANA, schr., Mr. Wm. F. Weld, sailed from Charleston for Nassau on Jan. 20.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. E. L., Fort Worth, Tex.—We are not familiar with the arm you name.

J. A. S.—Either one of the arms you name would do excellently for deer.

F. H. T.—Tho last edition of Coues's "Key" is the best thing for your purpose.

G. R. I., New York.—Read Bogardus's "Wing, Cover and Trap-Shooting" and Van Dyke's "Still Hunter."

H. G.—1. Use chilled shot for the purpose. 2. The crimping machines will give better results than crimping by hand.

S. W. M., Brooklyn, N. Y.—A single-shot .32cal. rifle, of any make whose mechanism you prefer. See answer to G. L. B., Jr.

F. C. W., Philadelphia.—We believe the law went into operation last season for the first time. It will be given in an early number.

G. A. S. Beaver, Pa.—1. Sighting shots in target shooting are preliminary shots to get the range. We should be glad to have the account.

M. H. B.—The rules are given in Von Lengerke & Detmold's catalogue, which you can obtain on application. We can supply the Hurlingham rules, price 25 cents.

T. D., Lisbon, Dak.—Will you give the address of parties who are breeding buffalo? Ans. Charles Goodnight, Paloduro, Texas; Mr. Bedson, Stony Mountain, Manitoba.

M. E. W., Grafton, Dak.—You can find sale in New York for the heads, by writing to some of the dealers in sportsmen's goods whose addresses are given in our advertising columns.

S. H. B., Saratoga.—Are there any martens, fishers or otters in the Adirondacks, and in what part are they most abundant? Ans. There are a few, but not many in any locality we know of.

L. H. J., Rockland, Me.—Can you give me the name of some book on the rifle that will give a tenderfoot some points on shooting? Will shells carefully reloaded by hand give as good results as factory ammunition? Ans. 1. Read Van Dyke's "Still Hunter." 2. It depends upon how "carefully" they are loaded.

R. O'S., St. John, N. B.—1. What is the best book on fly-dressing and dying feathers? 2. Will the Chinese pheasants (Oregon) do for fly dressing? Ans. 1. "Fishing Tackle, its Materials and Manufacture," by J. H. Keene, price $1.50. We can furnish it. 2. If the birds are either the silver or golden pheasants their feathers are valuable for some flies.

S. A., New York.—Will you please inform me if the liver of our Virginia deer is good to eat? The Adirondack guides never eat it and say that it is injurious to one's health. Ans. Old hunters as a rule do not eat it. The deer's liver is very apt to contain nematoid worms, like those which cause liver rot in sheep; this no doubt partly accounts for the prejudice.

H. C. H., Leavenworth, Kan.—1. What effect has lengthening the barrel of a rifle on its shooting? 2. Will a 26in. barrel shoot any better than a 24in.? 3. What is the twist of the rifling in the Winchester .22 long repeater? Ans. 1. It puts the sights further apart and in that way makes the shooting more accurate. 2. It should if it can be held as steady. 3. Uniform twist, one turn in 20in.

W. H. G., Chicago.—I have an English setter dog of the very best strain, less than a year old, who has been pronounced gunshy by an experienced trainer, to whom I had sent him for an education. Will you kindly advise me whether there is any cure for gun fright in a dog and the best method for effecting it. Ans. The method described in Hammond's "Training vs. Breaking" has been successful in numerous instances coming under our own notice and it would probably prove effective in the present case.

J. N. W., Barton, Vt.—The *Buffalo Courier* reports Capt. Jack Crawford as saying of rifle shooting at flying objects, that the shots who give exhibitions of this sort have cartridges filled with shot and having a papier-mache protuberance at the end to look like a bullet. Is it true that all experts use this cheat, or do some of them use real bullets? Ans. Such cartridges as described are made and may be used in some exhibitions. Not a few of the snap-shooting tests are made with single bullets, and the use of these imitation shot-bullets is not at all universal.

GRAND
National Handicap Pigeon Shooting Contest.
OPEN TO THE WORLD.

Purse of $1,500.

FIRST PRIZE, $1,000.

SECOND PRIZE, $300.

THIRD PRIZE, $200.

HURLINGHAM RULES,

Except that the caliber of gun used must not be larger than No. 10 bore, and the weight of gun must not exceed 10 pounds. No restrictions as to amount of powder used.

Entrance fee five per cent. and cost of birds; half forfeit. Fifty birds to each contestant. Handicap, 25 to 31 yards. Entries to close on Monday, February 13, at noon.

Shoot to commence on TUESDAY, FEBRUARY 14, at LONG BRANCH, N. J.

WEIGHT AND BORE OF GUN TO BE USED IN THE CONTEST MUST ACCOMPANY EACH ENTRY, ALSO ENTRANCE FEE OF FIVE PER CENT.

HANDICAPPERS:

FREDERICK QUIMBY, of New York. FRANK HEYER, Colts Neck, N. J.
HENRY WHITE, Red Bank, N. J. JAPHIA VAN DYKE, Long Branch, N. J.

The birds and paraphernalia will be furnished by and be under the personal supervision of the veteran MILES JOHNSON, of Robbinsville, New Jersey.

The Purse is given by Mr. PHILIP DALY, Proprietor of the Pennsylvania Club at Long Branch, to whom all communications should be addressed, or to Philip Daly & Co., Box 103, Long Branch, N. J.

AMPLE ACCOMMODATIONS, AT REASONABLE RATES AT ALL THE WINTER HOTELS.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

BY CHARLES HALLOCK

CONTENTS:—Itinerary of the Trip. As Excursionists see it. Economically Considered. An Interior View. Home of the Siwash. Good Indians. Medicine and Mythology. Alaska's Mineral Wealth. Commercial Fisheries. Rambles Along Shore. The Glacier Fields. Russia in America. Seals of the Pribylofs.

The several chapters are devoted to accounts of travel and adventure, descriptions of the country and its inhabitants, a consideration of its resources, and its history and present condition.

210 pp., Illustrated. Price $1.50.

Forest and Stream Publishing Co.,
39 PARK ROW, NEW YORK.
LONDON: Davies & Co., 1 Finch Lane.

The Forest Waters the Farm;

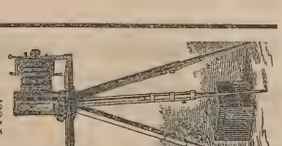
OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by



REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

"SHOOTING."

The only English journal devoted exclusively to sport with gun and rifle is *Shooting*, edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.

The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

Few Americans ever heard the names of ur best English gunmakers.

Price of *Shooting*, postpaid, $3.25 per annum. end post office order to the Publisher, 182, Strand, London, England.

THAT LATEST BOOK

On the Great Maine Wilderness, entitled, **From Lake to Lake; A Trip Across Country.** A splendid story of the Androscoggin Lakes region. Don't fail to buy it at once. 224 pages, 30 illustrations. Price $1.00 by mail.

JAMAICA PUBLISHING COMPANY,
Jamaica Plain, Mass.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1887 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representa tive of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1888 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1888 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportsmen, anglers and naturalists, make up these pages.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in he legal close season, and in restricting the taking of game both as to season and methods, o that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., New York.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Antelope and Deer of America.

By HON J. D. CATON, LL D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In his book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 525 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3 50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1 50.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND. By ROWLAND E. ROBINSON. See advertisement elsewhere.

Artotypes of Paintings.

By JOHN M. TRACY. Mr. Tracy has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. We have for sale a series of admirable artotypes of these paintings, which preserve with admirable fidelity the spirit of the originals. The artotypes are 15x20 inches. Price $1 each.

Book of the Black Bass.

By JAMES A. HENSHALL, M. D. Comprising its complete scientific and life history, with a practical treatise on angling and fly-fishing, and full descriptions of tools, tackle and implements. Illustrated. Cloth, 470 pages, Price $3 00.

The Still-Hunter.

By THEO. S. VAN DYKE. A practical treatise on deer-stalking. Extra cloth, beveled, 390 pages. Price $2 00.

Southern California.

By T. S. VAN DYKE. Its valleys, hills and streams; its animals, birds and fishes; its gardens, farms and climate; its insects and reptiles, with hints on going to California. Extra cloth, bevel edge, 235 pp. Price $1.50.

Cruises in Small Yachts and Big Canoes;

Or, Notes from the Log of the "Watersnake" in Holland and on the South Coast, the Logs of the "Water Rat" and "Viper" on the Thames and South Coast; with remarks on anchorages for small craft. By H. FIENNES SPEED. Cloth, 280 pp. Price $2 50.

Yachts, Boats and Canoes.

By C. STANSFIELD-HICKS. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Camping and Cruising in Florida.

By JAS. A. HENSHALL. With a list of fishes and birds, 84 illustrations and maps. Cloth, 250 pages. Price $1.50.

Forest and Stream Publishing Co., 39 Park Row, N.Y.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actua canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. Th upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channe outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scen is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an edition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Flight.
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Aududon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

LIST OF BIRDS REPRESENTED:

ANSWERS TO CORRESPONDENTS.

PROFESSOR ASA GRAY.

PROFESSOR ASA GRAY died at his home in Cambridge, Mass., on Monday evening last. By his death America has lost her citizen most eminent in that branch of science which he had chosen to pursue, and the world a scientific man who had but few peers in any branch of investigation.

Professor Gray was born in Paris, Oneida county, New York, Nov. 18, 1810. He studied medicine at the Fairfield Medical College, from which he graduated in 1830. He never practiced his profession, however, but at once devoted himself to the study of botany, under Dr. John Torrey. In 1834 he was appointed Botanist to the United States Exploring Expedition, but three years later resigned. In 1842 he was elected Fisher Professor of Natural History at Harvard, and held this position for more than thirty years. In 1873 he retired from the active work of instruction, and since then has devoted himself wholly to investigation and to the care of the herbarium at Harvard. In 1874 he was chosen one of the Regents of the Smithsonian Institution.

Professor Gray's public writings were very numerous. His "Elements of Botany" appeared in 1836, and was followed by numerous other works, among which may be mentioned "How Plants Grow," "How Plants Behave," "Lessons in Botany," "Structural and Systematic Botany," and "Manual of Botany of the Northern United States." Besides these he undertook with Dr. Torrey "The Flora of North America," and wrote "The Genera of Plants of the United States." In 1854 he began the first volume of the "Botany of the United States Pacific Exploring Expedition under Capt. Wilkes." Other papers of great interest and importance are scattered through Government reports, "Smithsonian Contributions" and scientific journals. Dr. Gray was for many years an associate editor of the *American Journal of Sciences and Arts*, and also one of the associate editors of Johnson's Encyclopedia.

Long and closely associated with Darwin, Dr. Gray was a thorough evolutionist, his own studies furnishing him with independent facts by which the conclusions of the author of the "Origin of Species" were confirmed. In fact a large part of botanical evidence used by Darwin in this great work was furnished by Dr. Gray. The latter, however, was unwilling to accept the theory of accidental variation, but insisted on a guiding mind which should direct the operations of nature. To his mind there was no irreconcilability between the evolution theory and religion.

The death of Professor Gray at the ripe age of 77 removes not only one of the best trained and most acute of the world's scientific men, but also one whose happy style of conveying information made his science delightful to all who were acquainted with his writings. He was one of the few naturalists still living, to whom the younger generation of workers in science always looked up with reverence for their attainments and with love for their sweetness.

JUSTICE IN KENNEL AFFAIRS.

EVERY intelligent person interested in canine affairs recognizes the need of a central governing body to protect the interests of the thousands of dog breeders, owners and exhibitors, who, as individuals, and without organization, cannot secure all that they desire. This need has long been apparent. The demand for such a central body is to-day more urgent than ever. Nothing of the sort exists now which has full public confidence.

An association which sets out to control the kennel interests of the country may be founded on one of two platforms.

In one case it may be largely guided by the personal prejudices of those who happen to be in control, do what will gratify their petty spites, and work for the advancement of their selfish interests, taking small account of that general welfare which should be its first concern.

On the other hand, putting away unworthy motives, forgetting private animosities, working for the greatest good to the greatest number, and not scheming to push any one man's dogs nor to fill any one man's pocket, it may have an eye single to the true interests of dog owners in general, and mete out equal justice to all.

On which of these two platforms must an association be established if it is to have the respect, the confidence and the suppost of the public? One way to answer this question decisively is to try both methods, test them, and see which is the true one. One has been tried. The American Kennel Club was established to be just such a central controlling power as the times demanded. It has failed because those who have been in power have not comprehended that dog matters must be conducted on the same principles of justice as obtain in other affairs. With every opportunity to win respect, right wrongs, watch over and care for the welfare of individuals, the club has perversely thrown away its possibilities, proved untrue to its duty, forfeited public respect, and disappointed those who have tried to keep their faith in it. Repeatedly it has shown its inability to rise above mean and selfish motives. It has demonstrated time and again that considerations of simple justice to all have less weight in its councils than the piques and schemes of individuals. The natural consequence has followed. Clubs like Boston and New Haven, whose members believe in the sound principle of justice to all, have been forced to leave the A. K. C. The patience of owners, breeders and exhibitors has become exhausted; and a general feeling prevails that it is useless to hope for anything in the American Kennel Club.

The experiment of conducting a club founded on the first platform has failed; but there still remains the urgent need of a central governing body in kennel affairs. Would it not be well to try what might be done with an association whose one aim should be the greatest good of kennel interests at large, and equal justice to all men—rich or poor, prominent or obscure, members of "our set" or outsiders; and to all clubs, big or little; and to all dogs, irrespective of the affiliations of their owners?

THE Albany game law mill is grinding. There are good, bad and indifferent amendments, to suit all tastes and serve all interests. Mr. R. B. Roosevelt has invited game clubs to discuss his bill and communicate to him their views on it. The Utica Fish and Game Protective Association has prepared and published a long criticism of the several provisions of the bill, and the paper winds up with a request that the measure be altered or withdrawn.

SNAP SHOTS.

FLORIDA'S sunshine and Florida's balmy air are so enticing that the inexperienced stranger, going there from a colder climate, forgets his customary caution and thoughtlessly exposes himself amid disease-breeding surroundings. Camp is pitched in malarial coves, or on the border of a swamp or a hamak; and precautions against night air are thrown to the winds. The malaria thus contracted is a curse so persistent that its effects are suffered long after. We happen to know of several individuals who are troubled with fever, a legacy of their Florida camp life.

The annual dinner of the Massachusetts Association for the Protection of Fish and Game, in Boston last week, was a most enjoyable affair. The number of those present and the character of the assembly spoke volumes for the standing of fish and game interests in that city. The topic of special discussion was the law which permits the snaring of grouse. This law was passed by the influence of the game dealers, and of demagogues in league with them, who harped on the rights of the farmer's boy. As a matter of fact the farmer's boy does not benefit by the law nearly so much as does the vagabond who snares as a business; and it ought to be practicable to make this truth clear to the Legislature.

The example of the National Government in setting apart certain territories of wild land as public parks for the people, is one which may well be followed by the several States. New York is by its forestry legislation practically converting portions of the Adirondack and Catskill regions into such parks; and none too early it has rescued Niagara Falls with a similar design. The Michigan Sportsmen's Association has undertaken the praiseworthy task of inducing the Legislature of that State to dedicate certain wild lands for the public benefit, as a forestry preserve, a pleasure park for the people, and a refuge for wild game.

Chicago game dealers have expressed their intention of observing the close season for sale of game. This is an encouraging advance over the old style of doings in that city when the dealers maintained an attitude of hostility to the law and persistently violated it. The express companies and the game dealers cannot be expected to take the lead in reforms of this kind, but they may be relied on for the most efficient service in effecting game protection just as soon as they see that it is for their own interests to take such a stand. Western game still finds its way to Eastern markets, and tons of it are shipped to Europe.

The Michigan Sportsmen's Association had a business convention at Detroit last week, and among the subjects discussed was the destruction of song birds by milliner agents. The delegates decided to petition the women of Michigan for their aid in suppressing this evil. In such a good work the Michigan Association deserves all success. The AUDUBON SOCIETY, with its membership of 43,000, is doing efficient service in this special field, and if all State sportsmen's associations would do their part the reform would be accomplished.

Commissioner E. B. Hodge is greatly pleased now that the ichthyologists are inclined to accept his theory that the much discussed trout of Sunapee Lake are to be classed as a distinct species. At the Boston dinner of the Massachusetts Association the other night Mr. Hodge asserted that not only did New Hampshire stand well in the enforcement of the game and fish laws, but she had now come to the front with an entirely new game fish to add to the angling resources of the land.

The Columbus dog show fire makes this an opportune time for some smart genius to start a wildcat dog life insurance company. The only obstacle in the way of a legitimate business enterprise of this nature is the extreme difficulty of agreeing on the fair value of an animal. A dog not worth a thousand cents is valued by his owner at a thousand dollars; and bench show catalogues with their prohibitory prices put fabulous values on very ordinary pieces of dog flesh.

If the stones of the ceiling in the Senate Chamber, at Albany, must drop, it is to be hoped that they will drop on some one who has a game law amendment in his pocket.

THE ROCK CLIMBERS.

VI.—CLIFF DWELLERS.

HARD is the task to hobble the light muse,
Or tie her with the picket rope of truth
Fast to the stake of fact; and hence the use
Of license called "poetic" by those bards
Who sometimes have no other sense besides
To pass them current. Yet keep well in mind
That truth is various. What to me may seem
Common, for others' eyes may catch the glint
Of stars unseen or moon by cloud-bank dimmed.
And if my tale show lurid tints or else
Too grayly pale, it but portrays too well
A nature that reflects more passing shades
Of changing sky and sun. Now to begin.

Four men we were. Part native to the land,
Part meeting here from either ocean come,
To lose in wilderness of lake and wood,
In lifting sweeps of endless billowy slopes,
The weariness that grows so heavy 'mid
The throb and rattle of consuming life.
The month's October, and the chosen spot
St. Mary's Lake. Wordsworth's melodious lines
Tell of a still St. Mary's Lake, whereon
The shadowed swan floats double. Not so here;
For in the gorges of the frowning range
That walls these waters, Indian legends say
The god of storms begets his mutinous brood,
And sends them forth, whitening the blue with foam,
Bending the stubborn trees and on the slopes
Whirling the piled-up stones like grains of sand.
Mythology apart, the legend's true.

The snow was falling when we pitched our tent
Where the rough river leaves its basined home
For the far north. We had, upon our way,
Spent days of travel over rolling hills—
Covered with grass, and dotted here and there
With sedgy ponds—once populous with herds
Of buffalo; now lifeless as the sea.
And then we passed through groves of tangled shrubs,
Willows and aspens, haunts beloved of moose,
Whose bleaching antlers were remembrancers
Of winter sojourn. We had pitched our tent,
I said, in driving snow, and the next day
Was cold and lowering, but, as night wore on,
There came the blessed wind they call "chinook,"
For when this northern land lies locked in ice
Till winter seems forever settled here,
And warmest blood grows thick, with sudden change
The snow goes off; the frost-bound streams dissolve
At the mild breath of airs from the warm sounds
That fringe the broad Pacific, or perchance
From orange groves and vineyards planted 'round
Cities well named from angels and from saints
By the sun-loving Spaniards in the south.
Far eastward fly, in dark, disordered ranks,
The scattered squadrons of the broken storm,
And the fair day laughs at our vanished fears.

Now for the fish! Here in the rushing stream
The brook trout grows larger than I dare tell.
Yonder, on shoals above the outlet's head,
Swarm lakers huge and fierce as numerous.
So from its hiding place we drag a boat,
Mule, horse and men together straining hard
For the good end. And, when the brave scow floats,
With simplest tackle I essayed to catch
The river dwellers, but essayed in vain;
For no trout came or only came to mock.
Then, with the strong line noosed about my neck,
We trolled the shallows. As the old boat sped
Berserker fervor warmed my aging veins.
Again the panting crimson led the blue
By half a length on smooth Quinsigamond,
And the stout captain called his straining men
For one more spurt to the hot finish. "Whoa!
Go easy there! The fish won't bite a bait
Humming like that," cried out my wiser friend
Whose arms, pulling for supper, did not feel
The warm impulse that racing memories bring.

But fast or slow, the victims still forebore
To tug my hook, though one who knew the spot
Assured me that they swarmed along our track.
But, gorged with plenty, scorned my tempting pork.
Well, we came not for trout; although in truth
As a side issue, fish were thought of, too,
To serve as whetstone for the appetite
When mountain goat and bighorn, moose and bear,
Formed the substantial dishes of our meal.

Again we moved our vagrant camp to where,
In aspen thickets hidden close, a plain
Spread grassy from the foothills to the lake
Whose whispering waves lapping the shingly beach
Murmur continuous, as upon that shore
Still further north, called by its native sons
Manitoba, "The ever speaking God."
Around us now loomed crowds of clustering peaks,
Flat-top and Singleshot and Kootenai,
And all the host unnamed. Far up were seen
Ice banks and glaciers green with borrowed light,
Or what seemed glaciers, though the white man's foot
Had never gone so far; and we but saw
The ice above, the turbid stream below
That issued thence. Here was the home of goats,
Sole tenants of the inaccessible.

Around their haunts impenetrable woods,
Then piles of talus heaped on broken walls,
Rising, step after step, in giant stairs
With sliding slopes between, and, at the last
One mighty precipice without a break
To the bare summit. Many a blustering day
We spent in looking for the fleeces white
Amid the rock piles. Oftentimes deceived
By spots of snow, or glistening rocks, or trunks
Bleached by the storm, till the correcting glass
Proclaimed the error. Yet somehow I think
A hunter can tell game as miners gold—
For, when a miner sees some yellow glint
He surely takes for gold yet hesitates,
The metal's base. The honest ore when found
Never leaves room for doubt. At last one day
When my companion stopped to cheer my toil
With stories of the wit of grizzly bears—
How one Mike Kelly fired his breechloader,
A weapon then scarce known, at bruin's side,
But, at the brute's approach, dropped his new gun
And climbed a tree. Perched safe and airily,
He saw the shrewd bear pick the rifle up,
Open the lever, squint the barrel through,
And, disappointed at its emptiness,
Wave at his enemy a beckoning paw
To throw a cartridge down and have fair play.
Thus resting then, my comrade's piercing eye,
Even while he spoke, had caught a glimpse far off
Of moving specks which scarcely could be snow;
For snow, when moving, rarely clambers up
Or stops to graze; and so at last assured
Of the goat's presence, we went back to camp
To rest us and prepare the next day's war.

Early we started. Long and hard we rode.
Then spied a goat couched in a lofty niche
Of the high wall. To capture him was now
Our heavy task. Two separate squads set out
And struggled, stumbling, sliding, panting on.
O'er loosened shale that glided off beneath
The footstep's pressure and on slippery grass.
Round bold escarpments, wet with melting ice.
Twisting and straining up the dizzying slant
Of the long glacis. Once a hanging mass,
Long frozen to the tall cliff's beetling edge,
But softened by the sun, let go its hold
And down came roaring in its echoing fall;
Swelling and doubling like the batteried crash
Of raging armies; each opposing crag
Alive with thunder.

But the day sped on,
The stolid goat, weary of solitude,
Climbed higher yet, to my companion's grief.
"Sad were his musings, and expressed in song."
Or was it he? I seem, on taking thought,
To recollect 'twas I who failed to reach
The aspiring hermit, and forthwith composed
The faint despairing ode I here subjoin.

TO APLOCERAS.

Aloft he stood, collected and serene.
I watched him, three miles distant, with a glass,
'Tis three miles vertical, of course, I mean.
For no intelligence could be so crass
To think upon the rugged lower mass
An Aploceras ever could be seen,
But on bare pinnacles where all the green
Could not half feed one label-loving ass.
"Oh! goat," I cried, "to keep my body warm,
Lend me the coat nature on thee bestowed,
Thou need'st it not, for from thy high abode
Far, far below thee thou canst watch the storm."
The goat smiled softly, shrugged his awkward form,
Shifted his cud, and answered, "You be blowed."

But other fortune waited on my friend.
Low fell the westering sun, and long the road
To sheltering camp; but, ere I started back,
My soul was cheered. The gloomy spirit fled,
And the lament changed to a triumphant song.

Hark! The report. The mountains ring,
There speeds the ball that spoils the spell,
Far Kootenai is answering,
And Singleshot rolls back the swell.
Good news, good news the echoes bring
When cracks the rifle of Grinnell!

The goat was won—a prey of noble size,
Not seven feet 'round, though such, of ampler girth,
May climb the Selkirk Mountain's glacial heights,
But the soft fleece spread out a generous robe
And the long, narrow head and sabre horns
Made a rare trophy for the hunter's wall.
Labor and danger and enduring hope
Repaid, fulfilled by hard-earned victory.

H. G. DULOG.

The Sportsman Tourist.

SAM LOVEL'S CAMPS.—VII.

THE young day was not out of it swaddling clothes of mist, when Antoine began repairing the damages that the scow had suffered last night, and the spiteful whacks wherewith he drove home the nails were not more downright and emphatic than the French and English curses which he bestowed on heavy boots and slippery eels. When the started plank was in place again, he drew the boat into its daytime rushy seclusion and set about getting breakfast.

He had privately made the eel ready for the pan and so divided it that its snakelike form was not easily recognizable. It was served up smoking hot and relished and praised by all the hungry campers.

"You put in your best licks a-cookin' this ere fish, Antwine," said Joseph; "it's turrible sweet an' rich, an' it seems 's 'ough you'd picked aout half the bones or mebby more'n half, for I haint ben bothered scacely any sortin' on 'em aout. I've hearn tell o' some ol' fishin' critter 'at c'ld put his hunks o' fish int' one corner o' his maouth an' let the bones run aout o' tother corner, an' keep right on fillin' up comf'able, but I haint no sech knack, an' git hungrier eatin' ri' deown bony fish—do' know 's I raly git hungrier, but it takes me a turrible spell tu git satified."

"That ol' feller's maouth must ha' ben built arter the fashion o' Sile Blakely's," Sam said. "They uster say the top of his head 'ould ha' ben an islan' if 't hedn't ben for his ears. One June trainin' tu Hamner's, that big John Dart sot nex' tu him tu dinner, an' arter dinner, when they was all settin' raound smokin' an' gabbin', Dart says he, 'I thought Sile was crazy the way I seen him eatin'.' 'What made ye think so, John?' says Sile. 'Why,' says Dart, 'I thought 't you was pokin' your victuals int' your ear, till I'd watched you a spell 'n see 't you was on'y stickin' 'em int' the corner o' your maouth.' But this is mighty good fish. What ye done tu them little parch tu make 'em so good?"

"Bah gosh! you'll spose Ah'll goin' tol' evreebody all haow Ah'll cook ma feesh? 'Wal, Ah guess no, me. Prob'ly 'f you an' Zhozeff an' Solem fan aout all haow Ah'll make it ma cook, you'll ant want me some more 't all! Den you'll said, 'Antoine, Ah guess dey wan' seen you up to Danvit pooty bad; goo'-bye.' No, seh! Ah'll ant so fool lak dat for spile em up ma trades!"

"I du b'lieve, Antwine," said Joseph, casting a longing glance at the last savory morsel in the pan, "'at if you'd ha' tackled that 'ere bowfin you'd ha' made it cock r'yal, e'namost fit for President Van Buren t' eat."

"It was a dumn'd sight tu good for the ol' Locofoco cuss as you cooked it," said Sam, who was a staunch Whig, "I wish t' he hadn't nothin' better er raw bowfin t' eat!"

"No, seh! Ah'll can' mek dat kan feesh fit for be good, Ah'll hown it up dat! But you'll all gat done for heat 'ant it? Den Ah'll goin' tol' you somet'ings mek you feel good of it in you stomach," and Antoine regarded his friends with a bland smile, while he ground between his palms a grist of tobacco. "You'll rembler haow you'll bruse me for heat mud-turkey, ant it?"

"Antwine!" said Sam in a voice expressive of deep disgust, "you don't pretend to say 'at you've ben a feedin' us on mud turkle?"

"Ant you'll rembler," said Antoine, waving away the question with the hand unencumbered with tobacco, "ant you'll rembler haow you'll mek me fooled Peltiet wid mash rrrabit, hein?" Sam nodded a reluctant assent.

"Wal seh, was dat any more wus for me fid you mud turkey?" And Sam shook as slow and reluctant a negative and added with a sigh of resignation, "Wall, it was good if 'twas mud turkle."

"Bah gosh!" said Antoine, getting to the other side of the fire-place as he filled his pipe and scooped a coal from the ashes with the bowl, "it was a grea' deal more wusser as dat. It was snakes!"

"Antwine!" said Sam, rising to his feet, while Joseph and Solon sat apart growing pale with qualms of their revolting interiors, "if I ever b'lieved a word t' you say, the' 'ld be a Canuck fun'al."

"What for ant Peltiet mek Yankee fumeral? You'll long 'nough Sam for mek it good one, probly two of it. Cut you off, you'll mek fun for two day. Sermon so long you was evreebodee go sleep an' have it good tam, hein? Wal, seh, Sam, you'll ant goin' keel me for teached you snake was good for heat ant it? You wait Ah'll tol' you what kan snakes he was be. He'll ant striked snakes, no seh. He'll ant be addler snakes, no seh. He'll ant be common kan watry snakes, but he kan watery snakes, what you call snakes. He was be heels! Dah, Sam, you'll ant wan' keel me naow for do you so good. Probly you'll wan' kees me, but Ah'll ant let it, cause Ursule be mad 'f Ah'll have somebodee kees me cep him."

"I'd ort tu kill you, Antwine, but the dum'd eel was good, an' I knowed 't you was lyin', I allus know that whenever you speak, I haint no more dependence on ye 'n ol' Amos Jones hed on his two boys when they was helpin' on him tend mill. 'Joab,' says he, 'hev yo tolled this grist?' 'Yes, sir,' says Joab. 'Jethro,' says he, 'hev ye tolled this grist?' 'Yes, sir,' says Jethro. 'You both lie so like thunder I can't b'lieve a word ye say, 'n' t' make sure on 't I'll toll it myself,' an' the ol' critter 'ld scoop aout another thirteenth."

"Lookin' at it phillysophicably," said Solon, "it haint sartin 'at we haint beholden tu Antwine for overcomin' our nat'ral antiquity tu eels, which they hes long been a populous food of human mankind. Aour bein' prejudicial tu 'em haint exclusive proof at they haint good. Haint that so, Jozeff?"

"I haint quite settled on that pint," said Joseph. Not knowin' 'at I was eatin' eel, I liked it—wal, I could eat it. Naow 'at I know it is eel, I b'lieve I'll try that last lunsome piece in the pan, an' see 'f my stomach goes agin it," and so saying he began upon the remaining morsel, picking the few and easy bones with critical deliberation. Then wiping his lips with the backs of alternate hands, and his hands on the legs of his trousers, while he regarded Antoine benignantly, "I do' know exactly whether it's in the eel or the cookin', but it is sartinly good, an' 'f you'll du the ketchin' an' the cookin', I'm willin' t' du what eatin' I can in my feeble way. The ketchin', mind ye, Antwine. Sam Hill! Haow the 'tarnal critter went scootin' mongst aour laigs. Ugh! I'd liveser handle a snake!"

"What dat nowse?" Antoine asked, turning an attentive ear toward the creek.

The regular squeak and splash of approaching oars was presently heard by all, and they went down to the landing with the hope of getting some news of the upstream world, or with a curiosity to know who was passing. In those days the sluggish current of Little Otter slept day in and day out among its rushes, undisturbed by oar or paddle of fisherman, and the infrequent boat that awoke it to a ripple was worth looking at. Our friends had seen no craft but their own since Uncle Tyler's departure till now.

The dumpy figure now approaching in a scow propelled by slow, laborious strokes, often withheld while the rower turned his head to mark his course, had a familiar look to Sam and Antoine, and when abreast of the landing he became aware of them, and his gaping face was lighted up with a grin of pleased recognition, they perceived it was their last spring's adversary of the trapping grounds.

"Hello! Danvis, who'd ever ha' thought o' seein' you here; 'n here's Peasoup, tu! Hello Peasoup!"

Antoine silently congratulated himself on his discretion in not having disclosed to Solon and Joseph that this was the antagonist whom he had vanquished in the great fight, which he had more than once told them of, for the man carried himself most unseemly for a conquered foe, and Antoine was quite ashamed of him.

"Wal, I'm glad t' see ye," the newcomer said, heading his boat for the landing and bringing her into it with a swash, "but I never thought o' seein' you this time o' year, though I was a thinkin' on ye when I come past the East Slang."

"Yes, we hed consid'able fun up there last spring," Sam said, "one way 'n' 'nother, a spearin' an' a—" he was at a loss to name another sport without referring to possibly unpleasant topics.

"A trappin' an' chawin' gum, an' bathin'," said the newcomer, helping Sam out and shutting the eye nearest him in a long tight wink that comically distorted that side of his face.

"Wal, yes, so we did, come tu think on't," and then, as if to think of it long might not be pleasant, and with a desire to change the subject, Sam asked, "Fishin' much nowadays?"

Fishin'! Wal, I guess not much. Don't git no time." Sam remembering that this man's nickname was Time, thought he might find it difficult to induce himself to make so great an effort as to go a fishing, for he looked the very personification of laziness.

"I haint fishin'," he exclaimed, lifting his feet ashore while he sat on the broad bow of his boat. "I kinder thought I'd go daown t' the San'bar an' git me some sand tu make some mortar. Ben goin' t' patch my suller wall these ten years but can't never git no time, an' I kinder thought I'd look along some for my scaow boat 'at went off in the high water last spring. Somebody er 'nother tol' a seein' it daown this way in the ma'sh, but I p'sume likely some cuss has stole it 'fore naow. Haint seen nothin' on 't? Painted red oncte an' fixed for a jack an' burnt some here for'ad where sparks fell on't. Not quite so big 's this one t' I borried, but a darned sight better. Haint seen no such boat?" His slow, inquiring look rested last and longest on Antoine, whose mind was now greatly perplexed, for he doubted not that the boat he had found was the one now desired and sought for by this man, and it lay within 20ft. of them, where if its owner arose to his feet he must see it, so evidently placed with intention of concealment that they would all be disgraced. Making the best of disagreeable necessity, he hastened to speak before one of his friends could:

"Bah gosh!" he cried, grinning a well-simulated expression of pleased surprise. "Ah'll b'lieved Ah'll fan' dat boat; pruppus for you seh! an' Ah'll rippair it all up so he was mos' better as he was new. 'F Ah'll had some paint Ah was paint it for you, but he was look pooty good, Ah tol' you. Jes' looked here!" leading the way to it and beating aside the rushes with both hands. "Ant dat heem?"

"Her, Antwine," cried Solon, correcting him, "her is the properest sect to speak of a boat in."

"O, go to dev'! Dis boats ant dat man's waf, ant it? He'll gat no diffence what you'll call it heems or she, prob'bly."

"Wal, I'll be darned if that haint my ol' scaow," said Father Time after critically examining the craft and then sitting down on its cinder-scarred bow, with a satisfied and restful air, "I'm almighty obleeged tu ye, Mr. Peasoup, for takin' so much trouble to save it for me an' fix it up tu."

"Bah gosh! Ah was glad of it, seh, an' de honly ting Ah'll was sorry for Zhozeff an' Solem. Dey can' bose of it sit up on ma can-noe! Dey can' git on Sam 't all! Ah do' know haow dey'll goin' ti' fishin's naow, 'less Ah'll buil' raf' for it."

"I p'sume likely you was cal'latin' tu fetch my scaow up tu me jest as soon's you faound aout who owned it, wa'n't ye?" Time asked, casting a comical leer on Antoine.

"Dat was so!" Antoine said, emphasizing each word with a gesture. "Ah'll ask it prob'ly t'ree, prob'ly four mans 'f he'll b'long to it. Ant it t'ree, four, Sam?" winking at his friend and beginning to count imaginary persons on his fingers. "Le' me see, yas, Ah b'lieve four, he'n?"

"You might 'f you happened tu see 'em," Sam said aloud, adding in an undertone to himself, "Dum'd 'f a Cannuck hed n't druther lie 'n t' tell the truth any time, an 'f he o'ld make the hull toot on us lie for 'im he'd be happy."

"Haint these fellers water faowl 'nough tu keep right side up in your cannews, Danvis?" Trime asked, indicating Joseph and Solon by a sidewise jerk of his head.

"Wal, they haint much aster 'boatin' in anything but stun boats an' lumber waggins," Sam admitted.

"Wal, 'f 't 'll be any 'commodation tu ye, I'll leave that 'ere scaow for ye an' go hum in mine. It rows easier 'n that, an' I guess Gage won't want his'n for a spell. It won't tip over no easier 'n it rows an' it'll du tol'able well for still-fishin'."

"Me an' Solon's a thaousan' times 'bleeged tu ye," said Joseph, "we don't want to du no' tippin' over ner not much oarin', an' it'll du us fust rate 'f the bottom haint made tu come aout when you ketch eels, I'd a leetle druther hev' it 'n yourn." And in reply to Time's inquiring look he related the mishap of last evening to the great amusement of that worthy. When he had had his long, lazy laugh out he arose, and looking awhile at the sandy point not far below, said, with a yawn, "Wal, I b'lieve I won't go daown t' the San'bar tiday, I'll git rowin' 'nough by the time 't I git hum. I can't stan' it t' row much, it makes me sweat. I c'n fix that suller wall arter hayin'. If you've got some good worms dug, le's g' wup t' the maouth o' the Slang an' ketch a mess o' pike. They'd orter bite to-day. We'll go in the two scaows. What d' ye say? Me and Peasoup in mine an' the rest on ye in t'other."

His proposal being accepted they brought bait and tackle from camp and embarked. Antoine took the oars at the bidding of Time and pulled the smaller scow in the lead. The other followed, paddled by Sam with the awkward aid of Joseph and Solon. It required all Sam's strength and skill to keep her at all on her course, and even so they had ample opportunity to view the landscape on every side. When at last they reached the stakes at the South Slang and moored their boats there, they had no great luck in fishing, as Time and Antoine prophesied they would not when they remarked several villainous-looking gar pike swimming about just beneath the surface. Yet now and then a pike-perch was tempted to venture underneath and past these visible terrors and seize the greater danger hidden in the loops of fat worms, when if by the awkwardness of his captors he was not swung overboard to freedom, purchased with a torn lip or jaw, he presently found himself floundering in the bottom of the scow. Once Antoine hauled up an ugly ling which Sam told Joseph was "one o' his bowfins 'at had forgot his scales," but Antoine oracularly informed them that this "was de mudder of de heel," for thus he had long since settled to his own satisfaction the vexed question of the eel.

"You're sartin 'at eels come f'm lings, be ye?" Time asked in a tone that plainly indicated his unbelief in this theory.

"Yes, sah! Ah'll seen it!" said Antoine.

"Wal, they don't! Du ye want I sh'ld tell ye where eels come from?"

"Ah'll ant want you. Ah'll know all of it," Antoine said, but the others signified their willingness to be informed.

"Wal then," said Time, "eels comes f'm clams, them fresh water clams 'at you c'n see thaousan's on any day daown yunder in the shaller water to the San'bar. I know it, 'cause I've seen hunderds o' little eels in 'em, not bigger 'n pin points."

"Haow you'll know he was heel 'f he ant more big'ger as pint pins?" Antoine roared in the big voice the Canuck assumes when he would make himself terrible.

"Where du eels come from, then?" Time loudly demanded.

"Selleeng, and Ah'll tol' you!" Antoine roared again, lifting himself from his seat with a grip of both hands on the seat of his trousers.

"Clams! clams! clams!" Time bellowed in a crescendo so vociferous that it frightened the skimming swallows from their pretty sport in the neighborhood of the boats.

"Say," Sam said in a lull of the storm of words, "'f you fellows don't stop hollerin' so you'll hev ol' Uncle Tyler comin' daown here tu see what the rumpus is, not to say nothin' o' scarin' all the fish aouten the crik."

Indeed, the day was too pleasant to be disturbed by even the discussions of science.

Across the sunny blue sky drifted only silver shreds of clouds, too thin to cast a shadow on the sunlit marshes and shores and quiet waters; throughout the rushy level the marsh wrens discordantly rejoiced over the building of their cunning nests; in the woods the wood and hermit thrushes rang silver bells and breathed celestial flute notes, and the jangle of a thousand bobolinks came from the meadows.

The peaceful spirit of the scene presently took possession of our anglers again, and they plied the gentle art in such serenity of mind as its father might desire, till the conch shells of half a dozen farmhouses reminded them of dinner time.

Then Antoine transferred himself to the larger craft, and Time declining an invitation to return to camp and dine with them, took to his oars, though with much less stomach for rowing than for dinner.

"O, say!" Sam called to him as the lazy wake of his departure began to stir the rushes, "'f you hev a chance tu send word tu a young feller o' the name o' Peltier Gove 'at's a workin' for Mr. Bartlett up on the stage rhud, tell 'im 't we're here, an' tu come daown 't he can."

"All right," Time answered when his ears had thoroughly digested the message.

Long after he had passed out of sight, they could hear the splash of his oars, and his voice unmelodiously cheering his labors with the song of "Old King Cole."

The shadow of the bluff was creeping toward the northeast when they reached camp, and when the fish were dressed, cooked and eaten, the day was too far spent for the undertaking of any further great affair, so they paddled the scow out of the creek on to the shallows of the bay, and there passed the remaining hours of the daylight in the comfort of perfect laziness. When the mountains loomed black against the afterglow of the sky and the star of Split Rock light began to shed its crinkled ray across the darkening waters, they paddled into the gloom of the landing.

Presently the camp-fire lit up the tent front, the tree trunks, the canopy of leafy branches and the little circle of mossy ground, frayed into the surrounding darkness, all of the world that they then cared to have illumined for them.

ROWLAND E. ROBINSON.

A RAINY DAY.

ALL day the rain had been falling, not like the usual Florida rains, sharp, fitful showers with glimpses of bright sun between, but with a monotonous drip, drip, drip that was appalling. All nature was in sympathy; the sky, usually so clear and beautiful, closed in a sombre arch just above the treetops; the trees with their branches limp and dripping, the sodden streamers of Spanish moss, the wet tangled grass, all had a damp discouraged look. Few birds were to be seen, they were huddled under whatever shelter they could find, too down-hearted even to chirp.

We were camped on Captiner Island, Charlotte Harbor, Florida. We had been having a glorious time fishing and shooting, and the rainy day was just enough to temper the uniform good luck we had had. But though we welcomed the rain gladly at first, it soon became intolerable, and various expedients were resorted to for pastime.

Guns were cleaned, fishing tackle overhauled, camp tins scoured, and everything put in apple-pie order—and then what to do? The Cook votes sleep, but the Scribe will have none of it and decides on a tramp instead. Oil-skins and boots are donned, and we are soon picking our way through the wet bushes toward the interior of the island. The fringe of trees and bushes bordering the beach are soon passed, and we are in the open savanna. Here is quite a turf, and it has a very decided home-like appearance. With the addition of cows or sheep and a little imagination it would pass for a New England pasture. The few flowers in sight are glittering with rain drops, while the long grass is bent down in graceful curves; the heavy drops of water hanging to the under side make each little arch look like a string of pearls.

There is a small dense hammock near the center of the savanna, and we will see if there are any birds there. We pick our way toward the thick bush, now stopping to remove a vine which crosses our path, and now trying to dodge a shower bath from some bush we have disturbed. Soon after entering the hammock the ground descends abruptly, and we find ourselves on the shores of a small slough or pond, perhaps a dozen yards across. Several trees are standing in the dark water, around their base a little hillock of water plants and moss, the trunks a mass of climbing vines.

On one side and near the water is a huge palmetto, its trunk for the first six feet nearly horizontal and just clear of the ground, then it makes an abrupt bend and assumes an upright position. In the narrowest part of the curve there is another tree across the first, the two forming an admirable seat, which the Scribe appropriates, and there settles himself to take in the situation. The rain has nearly ceased and the sun has been trying for some time to look through the leaden clouds that lie between him and his children. I do not wonder that there are people who worship the sun, it is so necessary to our comfort, to our existence even. We can well forgive the Parsee's answer to the missionary, "My God I can see, yours I cannot."

In silence, with eye and ear alert, the Scribe awaits developments. Not for long does he wait; callers are at hand; first a cardinal peeps, smirking and bowing, from his shelter in the palmettos; next a jackdaw hops in sight on a half-submerged log and begins a vigilant search for frogs. A flock of egrets, winging their way overhead, spy the pond, and making a short turn alight around it. A great night heron sits stately and solemn on a dead branch, while a jay calls loudly from a tall pine on the ridge. Truly here is life enough if one only has eyes to see and ears to hear.

But now the clouds open, the sun bursts forth in full glory. The cardinal's dull red is changed to a blaze of light, and every move of the jackdaw shows a gleam of green and purple. The egrets are pluming themselves in the sun, the jay sends out a more jubiliant cry, while the night heron blinking at the bright light draws further into the shade.

But it is late and we are a mile from camp, and with a half regretful look around the Scribe gathers himself together and starts for home. What a change an hour has wrought. When we entered the swamp all was wet, chill and gloomy. Now the face of nature sparkles with new beauty. The clinging raindrops that were so disagreeable without the sun, are, by its magic influence, changed to jewels bright that tremble on every leaf. The birds, erstwhile cowering under shelter, are now out in force and sending up thanks to the god of day for showing his face once more before he retires for the night.

But here we are at camp, and— "What did you kill?" asks one. "Nothing," says the Scribe. "Well, I told you so," says another, "better had a nap, as I did." "May be so," slowly answers the Scribe, but all the same he is satisfied with his afternoon's sport, even if he did not kill anything.

But the cook shouts "supper," the sun sinks behind the western waters, and the rainy day is done. S. D. K.

TARPON SPRINGS, Florida.

Natural History.

CHAT ABOUT SNAKES.

FROM my earliest childhood I never had the common horror of snakes, and on no occasion let an opportunity slip of studying the habits of this much abused and very useful order of reptiles. Though my experiences have mainly been with the larger species, particularly the pythons, I warn my readers not to expect any stories of like size in the following unconnected paragraphs, as all such romances belong in the department of the fish editor of FOREST AND STREAM, and I have no wish to encroach on his special domain.

I.

One of my first pets was a summer snake (*C. vernalis*), captured at the cost of scratched face and hands while picking gooseberries for my mother. No doubt her praises would have been turned into chidings, while wiping my bloody face with a damp towel, had she known the contents of a knotted handkerchief, the corner of which I had inadvertently left sticking out of my pocket. After having been promised an extra share of the intended pie, I stole off and appropriated the use of an unoccupied room, where a fresh branch nailed against the wall served as a resting place for my newly captured plaything. It was my usual custom to pay secret visits several times a day, always carrying some insect for its gratification; but one morning the door was found ajar, and as I pushed it open our tomcat bolted out between my legs and successfully dodged a vindictive kick aimed at it. My snake was gone and the spoiler also, and for months afterward I was the burden of that cat's life.

II.

In confinement all of the boa family are subject to a disease commonly known among showmen as "canker." Their jaws become much inflamed and swollen, and are filled with sores of a cheesy appearance, much resembling tubercles; and as the attack usually occurs after the animal has been chilled, I am disposed to think that the complaint is one of the forms of that malady. Before purchasing, showmen invariably catch the snakes by the neck, and with their fingers gently open their lips to search for any indications of inflammation, and my experience has been that boas are far more subject to the disease than pythons.

III.

Judging from the colors of most of the specimens exhibited in unnatural conditions, one uninitiated would be apt to say that all the large snakes were of dull and dingy tints; but I know of no more potent appeal to the color sense than the rich purple bloom, mixed with a shimmering iridescence, of a thoroughly healthy Natal python (*Python natalensis*) just after casting its *exuviæ*. How few persons have ever seen a snake cast its shed. The animal becomes slothful, scarcely moving, all the lustre of its coat disappears, the film over its eyes turns a milky white and then gradually becomes clear again. This change is a sure indication that it is ready to assume a new dress. It commences rubbing its jaws and nose against the sides of the cage, and finally succeeds in starting the old skin at the lips. Then by further friction it is gradually loosened from about the head and pressed back on the neck. After that, if the snake is in good health, the process is easier, as by a series of muscular contractions and expansions the old epidermis is thoroughly loosened and slowly moving along. Thus it is gradually rolled back in a mass until the animal literally crawls out of its skin. While once watching this curious process I resolved to assist a large python. Joining the tips of my thumbs and forefingers, they were slipped over the animal's head, thus forming a soft, fleshy loop through which it could pass. As it crawled along the successive dilations and contractions could be felt, accompanied by a crackling sound as the old skin parted from the new. At the completion of the operation I held in my hands a mass, feeling very much like moist tissue paper, which, on being carefully drawn out and dried, beautifully showed every scale with the surplus skin which folds underneath them, to serve for enlargement when something has been swallowed of greater size than the usual girth of the animal.

While rolling it up for preservation the idea occurred to me of introducing a new style of puggary to the dudish element of Durban. A few days after I appeared in the streets puffing a corncob pipe, and with the snake shed twisted around my straw hat I was soon surrounded by a curious crowd and questioned as to where I had obtained my handsome puggary and odd-looking pipe. "Both Natal products," I replied, "and it seems strange to me that you will persist in wearing cheap Birming-

ham headgear and tire your jaws carrying imitation briarwoods when your colony produces better articles." In a short time I noticed that corncob pipes were the "proper thing," but python puggarys were not common, because the owner of the only factory used its entire product for his own adornment.

IV.

While in Natal I frequently visited the wattle and daub structure, called a house, of a friend who, like myself, was somewhat daft on natural history. We were sitting one night smoking in the dark, as the mosquitoes were pressing and the lamp had been extinguished, when his cat sprang on the table alongside of me and began to spit. The lamp was relighted and puss was discovered with her back arched and every hair standing on end. Thinking that something outside had frightened her we went out and searched unsuccessfully. Coming back inside and finding her still in the same attitude our search was continued indoors, and on looking behind the open door a large python was found, which had evidently ventured in the house in order to make a meal of pussy. A blanket was thrown over him and a hand passed along its surface until his head was felt, when he was clasped around the neck, lifted up and dropped into a sack.

V.

One rather cold disagreeable day, while crossing a corner of the parade ground, Cape Town, I noticed a small tent, in front of which was displayed a roughly painted sign, "Big Snake an young Uns." As this was something in my line I concluded to investigate, and paying 3d. to a frowsy woman at the door, stepped inside, where I found on exhibition a large female Natal python, badly cankered, and three or four young ones, confined in a second-hand counter case. A man, clad in a well-frayed fustian suit, immediately commenced, in Cockney dialect, a description of the wonderful curiosity to the audience, which consisted solely of myself. After he had finished, I mildly suggested the propriety of the substitution of live rabbits or chickens in the place of some chunks of beef which had been evidently placed in the case for food. "You're 'nuther of them blarsted knowin' blokes. Where'd yer git yer snake larnin' anyhow?" he blunted out. Taken aback at his show of temper I got out as soon as possible, and looking over my shoulder while turning a convenient corner saw the indignant showman glowering at me from the door of his tent. On inquiry I found out that he was a Whitechapel scissors grinder, who had purchased the snake from a trading vessel, and had been terrible badgered by a lot of practical jokers. The next day, while passing, he accosted me and roughly asked my pardon, remarking "the missus" said that I was a stranger and did not belong to his gang of tormentors. At his solicitation I went into the tent, and after showing him how badly the snake was diseased, sorrowfully predicted its death in a short time. He seemed much concerned, and told me that he intended to visit Stellenbosh, the Paarl and Wellington, three small towns on the railroad leading out of Cape Town. I counseled an immediate departure, warning him to hurry and make short stays, or the snake would not survive until the end of the proposed trip.

A few days subsequently business called me to "The Paarl" (The Pearl), and on going from the railway station to the hotel, I passed the snake show, the proprietor of which told me that "business wos 'elthy." The next morning, when leaving the hotel, I was informed that "the blarsted thing 'ad croaked and I'm done out Vellington, my best pitch." I answered, "Pack up and get to Wellington as soon as possible. The weather is cool and you can show the dead snake for a living one for a day or two, until the smell will betray you. Coil it in the case, and no one will suspect the trick, much less attempt to stir it up." With a quizzical leer he replied, "Mum, I'm fly," and off he started.

Some years elapsed, and once, after a hard day's work delving for gems on the Diamond Fields, I was standing in front of Cobb & Co.'s American coach office, awaiting the arrival of the stage, and the receipt of the late Fort Elizabeth papers, brought in the driver's pocket, when I noticed a donkey cart, accompanied by a man and woman coming up road. Getting opposite, I recognized the scissors grinder and hailed him. Stopping the donkey, he crossed the road, peered into my dust-begrimed face, turned around and yelled out, "Missus, come here! I'm beggared if it arn't the bloomin' Yankee cove, as wot put us up to the snake dodge," adding *sotto voce*, "Let's have a tot, I kin stand it, as I faked a clear three pun ten out the job." We adjourned to a neighboring canteen and had some "bitter," in which "the Missus" joined, and during the remainder of my stay on the Fields, all my little sharpening jobs were done free of cost.

VI.

One of my sources of getting pythons was from the boys in my neighborhood, who breed rabbits. Their breeding hutches were usually empty ale cases. In nailing on the slats in front, the lads would thoughtlessly leave sufficient space for pythons to squeeze in and swallow the rabbit, but when it attempted to get out, its increased bulk would not allow its so doing. At one time it was a common occurrence for them to bring me the hutch containing the python, and the undigested rabbits also, but eventually they substituted wire netting for the slats and my python trade dropped off accordingly. I was once requested by a policeman to hurry with him to his house and catch a python, which had nearly frightened his wife out of her senses. She had gone into the yard, lifted the lid off the water cask and found it nearly filled with snake, instead of water. Almost all the water in Durban obtained from wells is brackish, consequently iron tanks and brick cisterns are largely used for rainwater. Those whose means will not allow such expensive apparatus use empty ale casks, stood on end, the interior of which has been well charred, and one can easily imagine the terror of an unsuspecting woman, bent on getting water and finding snake as a substitute.

VII.

Having related how easily pythons are sometimes trapped without any intention of so doing, I would ask if any one would suppose that a trap could be constructed that would be successful in catching snakes? I must confess that I never gave the matter a thought until I actually saw a verification of the fact. While wandering about in Java I told the Malays in my party that I wished to procure some live pythons, and one day I was informed by one of them that he had discovered the home of one and the next day he would attempt to catch it. On going with him, he pointed out a hole in a bank, at the mouth of which he had previously sprinkled some sand, the marks in which evidently proved that the snake had passed out and returned during the night. With his large knife, carried sword fashion at his side, he cut down several bamboos, which were split into laths, and with some rattan he soon constructed a long basket-like trap, in one end of which was placed the door. This was hinged at the bottom, and when the trap was set lay along on the floor, but when the trigger, which was at the other end, was sprung, flew up, and being longer than the height of the trap, made an angle of 45°; so that any pressure from the inside served to keep it firmly in place. I stood by, an interested spectator, until he had finished his preparations, which were completed by lashing the trap down to some pegs, bending down a bamboo to serve as a sweep and loosely covering the whole arrangement with some palm leaves. As the trap was placed some three feet from the hole, I wished to know why he did not place it directly at the mouth, so that the snake would be forced to go into it in trying to get out. He replied, "Snakes are very timid and at the same time very prying things. If the trap were placed as you suggest it would never attempt to pass out; but being a short distance off, his suspicions will not be excited and he will go into it, thinking, perhaps, it is the hiding place of a rat or something else that will serve for his supper. When he gets to the further end and finds nothing he will turn back, and in so doing will catch the trigger, the door will fly up and pinch his tail against the roof, and he will draw it in, when I'll have him." His answer showed such a complete knowledge of the nature and habits of the animal that it surprised me, and we returned to camp without any more foolish questions on my part. He was right, for the next morning "he had him," and the trap with the door lashed fast served to convey "him" until I reached my depot some weeks afterward.

VIII.

There is certainly a marked difference in the dispositions of pythons. Some soon become tame, while others will always bite on the slightest provocation. By carefully studying the bias of each one, as it fell under my care, I was generally able to open the case, in which they were confined, and attend to them without getting a bite, although at times an ill-natured one would give me a nip. Whenever I was working about them, there was sure to be a knot of interested Kaffirs as spectators, and their universal verdict would be that witchcraft had something to do with it. There is one singular peculiarity about all the large snakes. Of all the heavy dead weights I ever attempted to lift, they certainly exceed anything else. There is something so unexpected about it, that one is apt to conclude, like the Kaffirs, that some *diableric* is mixed with it.

The knowledge of this singular fact once tempted me, to my sorrow, into playing a trick on my native help. My pythons were kept in a long case, with glazed sides and a wire-netting top, over which fitted a wooden lid. During bright weather the case was usually placed out of doors and the lid removed, in order that the snakes could enjoy a sun bath. So soon as the sun got low and the temperature lowered, the pythons would all coil together in one end of the box; and one afternoon instead of getting the assistance of my keepers in removing it into the house, I called a couple of Kaffirs to help me. The lid being on, they could not see that they were placed at the end occupied by the snakes. "Wau!" they grunted, "N'kos is as strong as an ox. He walks along as if he were carrying a pot of native beer, and our backs are almost broken." Down dropped their end, and the glass crashed, and instantly the heads of the pythons shot out, causing a sudden flight of the Kaffirs, and but for the timely assistance of my keepers, some of them would have escaped. Frank J. Thompson.

[TO BE CONTINUED.]

THE HOWL OF THE WOLF.

Editor Forest and Stream:

The long howl of the wolf has been a great marvel to your correspondent since he first heard it. The marvel is, what is the meaning of it, or what feeling it expresses? In other words, what makes the wolf howl?

When heard at any distance save very near, say a few feet or a few yards, one can detect in its sounds nothing but the profoundest spirit of melancholy. There is no other sound in nature which can compare with it in the expression of abject and hopeless misery. I have likened it to the wail of a lost spirit as it crosses the portals of the infernal regions, seeing behind it green fields from which it has forever departed, and before it a hopeless and eternal hell. It also seems to convey a deep sense of loneliness, as if the wolf had lost his last friend on earth and felt himself to be the solitary wanderer of the globe; all other creatures being dead. I have listened to this peculiar phase of the long howl till a sense of my own loneliness became most painfully oppresive.

Some say that the wolf howls so dolefully because he is hungry; others, because he is indeed very lonesome, and uses this melancholy voice to draw his friends around him. Both these, therefore, hold that it is really an unhappy feeling that inspires the long howl. But I have observed enough to convince me that it is by no means hunger that always or even generally calls forth this howl, if indeed it ever does; for I have heard the wolf howl never so piteously or with his soul so much in the work, when the region around was strewn with the bleeding carcasses of slaughtered bison, from which he had no doubt stuffed his belly. Also, I have frequently heard them howl in concert, and sometimes in packs; though it is true that the wolf when alone most frequently projects the long howl. But whether in company or alone, the sound thereof is of equal melancholy and loneliness. Some say his howl is inspired by love of his female mate, and that his sole motive is to charm her ear with a sound that is very sweet to her; in other words, that he is singing to her a melody to cheer her heart and fill her with love and admiration of himself. There may be something in this; but the marvel is that any creature should be inspired to love by such music. However, it does indeed appear that the wonderful bray of the ass is put forth with no other motive but to please his females; and it also appears that they are quite charmed therewith. So, as to what constitutes good music, ears may differ as greatly as tastes differ in appetite.

But may it not be that it is indeed a true and deep sense of melancholy and loneliness that inspires this howl? May not the wolf have a strange, unsatisfied desire, like that of the moth for the star; and that he is melancholy because the object of his desire remains distant and unfriendly? He sees it and longs for it, but dares not approach it. He waits for the gulf that separates him from his desire to diminish and fade away; but he sees years and ages pass, and the gulf is still there, profound, dangerous, impassable. What wonder that his heart grows sick as he contemplates this cruel gulf, and that he breaks forth in howls that cannot be equalled in melancholy by any other sound ever heard on earth; perhaps matched only in hell!

Verily I believe that this is all so, and that man and his friendship is the star for which this poor moth pines. And why not? The wolf is but a dog and has a dog's heart. He is the fountain from which the dog came, with all those qualities which made him the companion and friend of man. That fountain is still rich in those qualities, as we shall see later on; and they well up in it whether the fountain will or no. The dog must have man to love and to be loved by him; and if he has not he is the most lost and wretched of all beings. Who has not seen a dog lost from his master? He howls piteously, becomes wild with grief, will fawningly seek the friendship of any one who will speak to him a kind word, and he will soon lie down and die with grief if he finds not his lost master or a new one in his place. And this dog is but a wolf, with the wolf's heart.

I have often noted the peculiar manner and expression of the wolf when he and man happen to come upon one another in their travels. The wolf will not run straight from you; indeed, he will not run at all unless you force him to do so; but he will cross your path a little distance in front of you, and go circling around you in a dog trot, having his eyes all the time intently fixed upon you. Seeing them thus, I have sometimes cast my glass upon them, so as to catch the expression of their eyes and countenance; and they seemed to me as if they were saying in their hearts—"Oh, glorious man, would that you would take me to you and let me love you; but you will not!" Poor wolf! to love a star that is forever unapproachable is indeed a hard fate.

I have said that when the wolf's long howl is heard within a few feet or yards, another sound besides that of melancholy and loneliness is sometimes readily distinguishable. When a boy it befel me to pass three nights alone in a lonely cabin, in a dark mountain valley, many miles away from any human residence; for that country was then a wilderness given up to wild beasts and savage Indians. My cabin was greatly beset by wolves, and as sleep was hardly possible, I had little to do but to study this strange melody. They would often howl so near my ear that I could distinctly feel the tremulations in the atmosphere caused by their voices. Then I observed that in many of the howls there was a very deep-mouthed and wide-mouthed ferocity, as if the creature would tear something to pieces and revel in innocent blood. It was a sound as of terrible strength combined with an utterly savage and remorseless nature.

In the next chapter, should there be another, I will speak of the wolf in his social and domestic relations, and as tamed by man. N. A. T.

Abilene, Texas, Jan. 7.

THE HARDY SNIPE.

We are permitted by Major H. W. Merrill to print from a private letter a few extracts bearing on the power of the English snipe to resist cold. The letter is from Colonel W. D. Pickett, who is perhaps best known to our readers as the most successful of American bear hunters. His record, we believe, is about eighty bears, almost all of them grizzlies, and all killed in fair fight. Colonel Pickett does not trap bears. In his letter, which is dated Mee-Tee-Tse, Wyoming, Jan. 7, he says:

We are just passing through an almost unprecedentedly cold snap. In three days past the minimum temperature each 24 hours has been 38½°, 38°, and this morning 36½° below zero. At this present writing it is 30° below at 7½ o'clock P. M. To-day was beautiful and sunshiny and I hope the temperature will considerably moderate in a day or two.

I had a quiet Christmas and was old-fashioned enough to have the bowl of egg-nog, and you were remembered among other friends.

You doubtless recollect my writing about the few jack-snipe wintering in my meadow last winter. I had supposed they had been caught by the early closing down of winter. To my surprise, however, after winter had set in, in November, a pair of them were again seen in the same locality, and they are still here. I saw them to-day. We have had a severer winter than last winter with more sunshine and less snow. The springs where they feed are more open and flusher, and consequently the snipe have had a better chance. In October, November and December, there have been cold snaps with minima of from 20° to 29½° below zero, and thus far in January a cold snap, such as is above mentioned, from 36½° to 38½° below zero. Each day of this cold snap I have gone out to visit them and inquire after their welfare. They do not, however, appreciate my solicitude, for they flush usually before I get within fifty yards of them.

That they winter once in this "bracing" atmosphere might be in consequence of being caught by the early grip of the ice king; but that they should elect to spend a second winter here is most extraordinary. Why I believe they are the same snipe, is that they appear to have the "run" of the premises. They know exactly where to alight, when flushed. They have the discretion not to stay too long in flight. As one rose from the spring branch to-day I placed a thermometer in the water, and found its temperature 44°. The spring itself had a temperature of 47°. Another spring near had a temperature of 49°, pretty warm springs for the season.

The spring from which I use, nearer the ranche, was 41½°. I notice these snipe very wisely use mostly in the two first-mentioned springs.

To-day I hear of a half-dozen specimens of the genus *homo* having their noses or hands or ears or toes badly frozen within a few days past. I will guarantee these specimens of *Scolopax wilsonii* are sound in every particular. They know when they are well off. They know where the warm water is to be found and they stay just around that spot. No idiotic tomfooleries for them.

W. D. Pickett.

WINTER BIRD NOTES.

SALEM, Mass., Jan. 27.—*Editor Forest and Stream:* During the past ten days the talk about "a remarkably open winter" has not been heard. Zero weather has prevailed, snow covers the fields, and some of our winter feathered friends have appeared, among them the butcher birds (*C. borealis*). I call these birds friends because they prey upon the house sparrows. These latter birds are getting altogether too numerous, and render buildings positively filthy, particularly in cold weather, when the frost makes it impossible to clean premises. I saw a flock of an hundred or more snow buntings (*P. nivalis*), day before yesterday. By the way, speaking of house sparrows, reminds me that I have seen several instances of partial albinism among those about here. This albinism seems to be mostly in the wing and tail feathers. I saw one thus marked this morning. Our sea birds find little chance to feed in either Salem or Beverly harbors at present, as these places are solid with ice.—X. Y. Z.

PERTH AMBOY, N. J., Jan. 26.—I have seen bluebirds daily for the past three weeks and saw a male robin today; also a small woodpecker. A little brown creeper visited my willow and apple trees last week and snowbirds are common. English sparrows give my place a wide berth—which is wise, as my Remington .22 is handy. —J. L. K.

BELLEVILLE, Ont., Jan. 20.—A few days ago a large gray owl appeared in the city, and after perching on several prominent buildings and escaping a number of bullets from .22cal. rifles was at last slain by a stone thrown by a boy.—R. S. B.

YONKERS, N. Y., Jan. 20.—This afternoon I flushed a crow blackbird on Broadway, close to the southern boundary line of the new Van Cortlandt Park. A biting northwest wind was blowing over the lowland; the bird was very slow of flight, and alighted but a few steps off the road, on top of a fence post, whence it seemed to regard passing sleighs with the utmost indifference.—C. L. S.

NOTE ON THE BUTCHER BIRD.—*Editor Forest and Stream:* The great northern shrike, or butcher bird, as it is commonly called, from its habit of impaling grasshoppers, insects, etc., on thorns and leaving them to die, is not a common resident of eastern Pennsylvania, but is more numerous in the northern parts of the State. It is one of the most interesting of our birds, from the fact of its being at the same time quite a singer in its own way, and its imitating the notes of other birds so perfectly as to deceive even the birds themselves, and cause them to fall a prey to its appetite. For fiendish cruelty it surpasses any of the birds that subsist on food of their own capture, as they invariable kill their prey as soon as they capture it. But the butcher bird certainly kills more than it needs at the time, or it would not need to store them away on thorns. No ones seems to be positive that it makes use afterward of the creatures thus stored away. The shrike is too good a provider for us to think it would not have plenty of opportunity to get birds to eat whenever it wanted them without having to resort to such a cruel method to get supplies. A short time ago a gentleman brought me a bird and asked me to name it for him. I examined it and told him it was a butcher bird. He replied, "You are altogether wrong. That is a whippoorwill, as I heard it call *whippoorwill* as plain as I ever heard anything, and not only once but a good many times, and I am convinced that is what it is." I told him I did not doubt he heard it say *whippoorwill*, but it was a butcher bird for all that. I then showed him a whippoorwill, and he at once exclaimed, "That is a nighthawk." I showed him a nighthawk and the difference between them, which he could not but acknowledge, but he would not believe that butcher bird was anything but a whippoorwill. I explained to him their power of mimicry, but said that that did not make them at any time the bird they choose to imitate, and finally, much puzzled, he departed, no wiser than when he came. In the winter the shrike's principal food is the song sparrow, tree sparrow, snowbirds and even the large fox sparrow, which it rarely fails to capture. It is about nine inches long and thirteen inches in extent, and of a dull slate color in general appearance.—C. S. BRUNNER (Doylestown, Pa.).

FOOD OF THE EUROPEAN SPARROW.—*Editor Forest and Stream:* The leakage from grain cars and the close proximity of several elevators has made the railway yards west of this city a favorite feeding ground for English sparrows, which also breed in that vicinity in large numbers. On one occasion, in the summer of 1877, I saw several flocks of them in an adjoining old field, and upon investigation discovered them to be feeding on grasshoppers. I witnessed the same thing on subsequent days, and saw it repeated each year up to 1881, when I moved from that locality, and have not observed it elsewhere. I thought of writing you when I first made the note, but concluded it might not be unusual, and but for the Canadian observations published in your issue of Jan. 19, the circumstances would have been forgotten. I have never seen them attack the buds of trees, and think that grain and the pickings of streets and back yards form their principal food supply in this locality.—HOOSIER (Indianapolis, Ind., Jan. 20).

STOP THIEF!—*Editor Forest and Stream:* I wish to caution the scientific public against a very plausible rascal who has been victimizing scientific individuals and institutions for several years. His latest exploit occurred in this city a few days ago, when he presented a fraudulent letter of introduction to Prof. C. H. Gilbert, of the University of Cincinnati, claiming to be a nephew of Prof. Syrski, of Europe (the discoverer of the male eel), and calling again the next day during Prof. Gilbert's absence, he slipped into the laboratory of the University and decamped with two microscopes and a half-dozen valuable objectives. He is very bright, well up in several branches of natural science, and knows what to appropriate. If Prof. Syrski or any one else can discover this "slippery cuss" who is a "good 'eel" of a scoundrel, he will be doing a good service to science and the public generally.—J. A. HENSHALL (Cincinnati, O., Jan. 27).

UNUSUAL NESTING PLACE.—*Editor Forest and Stream:* Talking about unusual nesting places, a few years ago a pair of English sparrows built their nest in a large delivery wagon that was in daily use, and followed it on its trips between the city and suburbs. Unfortunately the nest was destroyed when completed and before the eggs were deposited.—HOOSIER (Indianapolis, Jan. 20).

Game Bag and Gun.

THE CALL OF THE MOOSE.—I.

THE province of Nova Scotia was at one time probably the best moose ground in the world, and more of these monarchs have been killed there than in any other territory of equal area. The counties of Queens, Shelbourne, Cumberland and Guysboro were formerly rich in this noble game, but, alas! incessant snaring and crust-hunting, to say nothing of the numbers killed by legitimate means, have sadly diminished the number. Of late the game laws have been more strictly enforced, although there is still more room for improvement. Yet it is a noted fact that the moose are on the increase, and, though they can never be as numerous as formerly, by rigid enforcement of the law in close time they may be yet preserved for a number of years to come.

At the present time the counties of Cumberland and Guysboro are probably the best ground for moose hunting. They form a tract of land one hundred miles by seventy in extent, extending from Sheet Harbor on the southern shore to the Bay of Fundy, and studded with innumerable bogs, barrens and lakes. It affords ample cover for what moose remain. This tract of country is almost a perfect wilderness, with only here and there a small village or lumber station, at which the lumbermen get supplies, and a few clearings where the hardy pioneer manages to eke out a scanty living by hunting, trapping, lumbering and a little farming. Some of the best trout lakes and streams probably to be found in the world are hid within the depths of the forest in this tract, easy of access to those who know how to get there, but rarely visited by the city sportsmen (although within thirty-six hours by rail of Boston). Here the angler can enjoy himself until he literally tires of fishing. Sea trout, brook trout and lakers he can take till the most insatiable trout hog would be satisfied, and of all sizes, from the tiny brookling to the great laker. Lovely lakes are there, and beautiful streams, with white sand beach and little rocky headlands, and studded here and there with picturesque islands, timbered with hard and soft wood, such as would gladden the heart of a woodsman and make the tired camper think it was a very paradise when returning to his camp on one of these islands after a hard day by forest and stream.

If the great cat owl, as he sat on the limb of an old pine at the outlet of Hunting Lake, had cast an eye toward the outlet of the lake, he would have seen two men as the shades of evening were falling slowly, emerge from the darkening forest carrying a trim bark canoe. Having gently deposited their burden on the shore they seated themselves on a log of driftwood, evidently some old waif from some former drive, wiped the perspiration from their foreheads (for it was a warm night in September and the carry had been a rough one, though short, rendered more difficult in the gathering darkness). Then they leisurely proceeded to fill and light their pipes; this done, they sat and puffed great clouds of smoke which ascended curling slowly on the still night air till lost among the treetops. One of the smokers was a full-blooded Indian of the Mic Mac race, whose high cheek bones, deep copper color and long straight hair showed that there was no cross of white blood in his veins. From his quick movements and catlike tread one would have taken him for a young man in the prime of life. In reality Matteo had seen the snows of sixty winters, but time had dealt kindly with him; he was as strong and erect as ever, and perfect freedom from rum, the "red man's curse," made him look much younger than he really was. The other was a white man in the prime of life, dressed in a hunting suit of gray homespun, with moose-shank moccasins and belt with cartridge pouch, hatchet and knife. The Indian addressed him as Mr. Williams in the settlements, and when in the woods Billy for short.

The two smoked for some time in silence. Presently the Indian spoke. "Make long journey to-day, Billy, meby you tired little—suppose hungry, too—big smoke taste pretty good, eh?"

To which the white man replied, "Well, Matteo, considering we have been on the road since daylight and it is the first day out and we have covered fifty miles by road and canoe I feel as if I could rest a little, but I am not half as tired as I am hungry and I mean to kindle a fire right here and make supper. After that I am ready for anything you may have to propose."

"Believe that best plan; boil kettle here; eat little bite; no chance after this. Good night for call; moon out byme-by; suppose call to-night; meby get answer. You kindle little fire, little way in woods, not on shore. Me go getum rest luggage."

Saying which Matteo knocked the ashes from his pipe and moved silently into the dark shadow of the woods, while Billy, taking the little axe from his belt, proceeded to cut some dry limbs from a fallen pine and soon had a bright fire burning at a little distance from the edge of the water, and out of sight from the lake. In half an hour the Indian reappeared, carrying a large pack on his shoulders, consisting of a pair of blankets, a small shanty tent, a camp kit of frying pan, plates and tin mugs; in one hand a short heavy rifle, on the barrel of which was slung a birch bark horn; in the other hand a light sharp axe. The pack having been deposited near the canoe, Billy proceeded to open the provision sack, which was water proof; and taking out several small bags containing tea, sugar, coffee, hard-tack and bacon, he cut a number of goodly rashers, which he placed in the pan; then he filled the coffee pot with water from the brook and set it on to boil, and going to the canoe took a couple of grouse, which he handed to the Indian with the remark, "You fix 'em, Matteo. The Indian took the bird in one hand and by a quick turn of the other completely divested it of skin and feathers; having served the other in like manner he cut off the heads and legs, and the wings close up to the body, and going to the lake cleaned and washed them; then peeling a suitable piece of bark from a green hemlock, he fixed the birds on it with skewers, under which he fastened pieces of pork, and setting it up at a proper angle in front of the hot coals he refilled his pipe and watched the roast as it slowly sizzled before the fire. The coffee pot now began to sing, and Billy having dropped in a couple of handful of "fine-ground" set it back on the coals, and taking the fry pan soon had the bacon hissing and spluttering; the sound was music to the hungry men, who had not broken their fast since early in the day.

"Now, Matte, all ready," and the Indian, having carefully inspected his bark oven, and being satisfied that the birds were done to a turn, removed them into the pan with the bacon, and with two plates on top it was set on the coals for a few minutes to give the finishing touches and to heat the tin plates. The cups were filled with the steaming coffee, and the two hunters proceeded to make a meal which they considered fit for a king. The meal finished, Matteo slowly rose, and going to the lake, washed his tin plate and cup, held the plate over the fire for a few seconds to melt any fat on it which might still adhere, wiped it and his sheath knife carefully with the dish towel, remarking as he did so, "You pretty good cook, Billy; think meby some day you hire in big hotel down in settlement," to which he laughingly replied, "Not bad cook in the woods, Matteo, but I am afraid I would not pass down at the big hotel at the settlement."

Having carefully repacked their kit, they loaded up the canoe, depositing everything so that all would be in trim, and taking their long paddles, stepped lightly in, the Indian in the bow and Billy in the stern, and pushed slowly into the still water. The moon was just rising over the treetops, showing full and clear, with not a cloud in the sky, the big owl which up to this time had kept silent watch on the old ram-pike, now made a swoop into the bushes, and the little scuffle, followed by a tiny squeak, told that the poor rabbit had "lost the number of his mess." Whether the owl had been waiting for the moon to rise to make sure of his prey or whether his appetite had been whetted by the savory odor of the hunter's evening meal is not known, but having secured poor bunny, with a triumphant *to-ho* he sailed off to the shade of the wood, where he could enjoy his supper without fear of interruption.

Dipping the paddles deep in the water and settling themselves for their five-mile stretch, they moved silently up the "still." Nothing could exceed the silent beauty of the night. A dead stillness had settled over everything; all nature seemed to sleep, the calm broken only at intervals by the heavy plunge of a fat otter, or the splash of a big trout as he rose to snatch some belated fly which had settled on the smooth surface of the water. For a long time the two men paddled in silence, taking little notice of the sights or sounds which from time to time reached them. Each appeared buried in deep thought as the canoe moved through the water; the paddles seemed to make no sound in their passage through the element. Evidently it was not the first trip these two had made together. Each seemed to understand the other by some common impulse which rendered words unnecessary, and when by a powerful stroke of the paddle Billy turned the bow of the canoe at right angles across the stream and headed apparently for a thicket on the shore, the Indian said never a word, but rising from his seat as soon as he got near enough, parted the long grass and alders with his paddle, disclosing a narrow opening or creek hardly wide enough for the canoe to pass; and peering into the darkness he said, "Plenty water, all right, come head," and forthwith Billy, having laid down the paddle, took the long setting pole and with a vigorous shove shot the canoe out of sight among the bushes. "We are in luck this time, Matte; we can go right through without a carry, and will be out on the lake early; if we had to go round the bend it would take us an hour longer. "That so," said Matte, "meby have to make carry at Hard Scrabble Rapids though; meby not water putty high, we berry lucky indeed."

The creek gradually widened till the bushes no longer overhung the canoe, and in ten minutes the low rumble of the Hard Scrabble rapids was heard in the distance; ten minutes more and they came in sight, and beyond in the clear moonlight was a broad expanse of open water, extending as far as the eye could reach, and dotted here and there with wooded islands. Having taken a careful look ahead, it was deemed safe to go on, and guiding the frail shell between the sunken rocks and the two large boulders which seemed to guard the entrance of the lake, the canoe shot out on to the calm bosom of the lake, and turned quickly to the left till the bow grated gently on the soft sand and pebbles which formed the beach. And here we will leave our two friends enjoying a quiet smoke, while we explain how they came to be on the bank of that quiet lake at that hour. GLOBE SIGHT.

TO PROTECT THE LAW.—*Editor Forest and Stream:* At the annual meeting of the Southampton Sportsman's Club, Mr. E. H. Moeran and I were appointed a committee to look after all bills that may be introduced at Albany during this session of the Legislature relating to the game laws of this State. We would like to have the coöperation of all the other game clubs of the State, and I will be much obliged if the secretaries of the clubs will communicate with me, in order that we may be of mutual benefit to each other and see that our interests are properly looked after. We think that the game laws we now have are sufficient for our part of the State and do not favor any further tampering with them. I trust that all the other clubs will join with us.—LAWRENCE W. CLARK, Secretary Southampton Sportsmen's Club, 319 Broadway, New York.

DEER IN ONTARIO.—Belleville, Ont., Jan. 20.—A reliable correspondent sends the following list of deer killed during the past season in the townships of Dungannon and Faraday, in the northern part of this county: Deer killed by hounding, Judge Fraleck and party, 6; Messrs. Rand and J. Tait (ten and one still-hunting), 11; Brown and Dixon, 11; W. Byers and party, 5; T. Stanger, 5. Total 38. Deer killed by still-hunting: J. Sararas, Jr., 13; R. Hewton, 12; M. Swartfager, 9; W. Regan, 8; F. Bradshaw, 6; J. Doyle, 6; D. Kelly, 6; J. Spurr, 5; J. Sweet, 5; M. Gaffney, 3; M. Kelley, 3; D. Kelly, 2; G. Wadsworth, 2. Total 80, or 118 all told. D. Kelly and J. Wood also killed a bear each.—R. S. B.

A TALK ON THE GAME LAWS.

THE law for the preservation and protection of singing and insectivorous birds is thus soon producing gratifying and palpable results. These birds are largely on the increase, to the great benefit of the agriculturist, and comfort and delight of all the people who desire to see our woods and fields populous with birds. The investment of the commission with the authority to issue permits for the killing of these birds has resulted in the restriction of the permits to a minimum, only fourteen having been issued in the commonwealth the present year, and those only to people entirely trustworthy, and who do not abuse the privilege. If the farmer, whom the living birds benefit, and the women of the State will coöperate with us—the one in observing and protecting the birds, and the other in refraining from making bird plumage an article of ornament and apparel—our birds will in a few years appear in their oldtime numbers and usefulness. The English sparrow is a nuisance. It is a destroyer of the young and the eggs of our native birds, and a grain-eater more than an insect destroyer. Until it is banished our native birds will be driven from many of their haunts. We recommend the killing of this bird at all seasons. It is good for the table and for that alone.

The matter of the preservation of game birds and animals, the times, seasons and methods of killing, has become, in a degree, an embarrassing question for the Legislature. The necessity for positive and effective protection is not fully appreciated by the majority of the people. The notion that the right to kill at all seasons and places is inherent in each individual because of our democratic institutions, and under the claim that this is a free country, is altogether too prevalent. With this assumption runs another equally untenable—that the game and the fish belong to the owner of the land upon which either game or fish chance to be. The preservation of our game involves two considerations, the healthful recreation of its pursuit by many of our people and its value as an article of food and merchandise. So few people comparatively—by reason of indifference and of imperfect knowledge of our game resources, and its great importance to a large class of people—understand this subject, that an intelligent and dispassionate hearing by a Legislature is very difficult to obtain. Excellent, well-meaning men will perhaps thoughtlessly pass the subject of game and fish protection by, as a matter unworthy serious consideration, when matters of much less practical but more familiar import receive proper attention.

When it is considered that large portions of the land of the commonwealth and of all New England are being relegated to renewed forests, abandoned by the farmer for obvious reasons, it should be remembered that these lands may be made populous and productive with hundreds of thousands of the best game birds in the world, the ruffed grouse, the woodcock and the quail, by a proper and symmetrical system of protective law, and with little or no expense to the commonwealth. The game birds of New England, even with our rigorous climate, will survive and populate our covers in spite of our dense population; will flourish and increase even in the contest with improved firearms, and the multiplying army of men who seek at proper times the fields and woods for health and recreation; will thrive against all climatic contingencies and all appliances, except the insidious and silent snare and trap.

The American people are wasteful of wild life. The buffalo, antelope and elk of the great Western plains and mountains are nearly exterminated by a remorseless hunt for hides, and by wanton sport; so great has been the decrease of these great herds of noble game that national attention has been arrested by the facts, and now Congress has established by law a great territorial asylum of refuge and protection for the remnants of the once great droves and herds of the finest and best game of the world. Even the enormous productiveness of the sea is already so impaired by the depredations of man in search of the food fishes that artificial means of propagation are resorted to to make good the alarming deficiency. The horned and hoofed game is nearly gone from Massachusetts. A few mild-eyed and apprehensive deer haunt the pine woods of the Cape, but are barred from roaming beyond their little limit by an inclosing wall of populous towns and villages. The commonwealth has thrown about these few remaining cervidæ the protection of its statute. Why? Because it is desirable and wise that there should be saved from slaughter these few remaining individuals of a once prolific family.

Why not now protect the game birds whose habitat is broader than that of the deer, whose numbers may be made to multiply simply by the moral and the legal power of a protecting statute, until the by-places of the commonwealth shall be made preserves of pleasure and profit to many of our people? It is desirable that the land-owner should be interested in this laudable direction. There is no reason why a person not a land-owner, yet desiring the advantages of the pursuit of game, should be at issue with the land-owner. Their interests are the same. It is natural that the land-owner should desire the original use and pursuit of the game upon his land, and that he should protect himself and his property from the depredations of irresponsible persons, who would devastate his land of the game to make merchandise of it without his consent. Let the land-owner and the true sportsman consult and act together, first for the preservation of the game, then there will naturally follow mutual methods for its protection. There is no natural antagonism between the farmer or the land-owner, and the decent man who desires to hunt for game in a legitimate and proper way. Mischievous persons have for years, with more or less success, sought to imbue the land-owners with the idea that all efforts within and without the Legislature to save the game by the abolition of snares and traps, and by the imposition of close seasons, are trespasses upon their exclusive and original rights—that the city sportsman desires to rob the farmer and farmer's boy for his own selfish emolument and pleasure. This is untrue. The man who desires a close season for breeding and growing game, is analogous to the farmer who would refrain from butchering his cow heavy with calf, or his mother hen while brooding her chicks. He is in line and in sympathy with nature and natural laws. Nature maintains her close time by depriving the fawn and the feathered ground game of scent in their breeding season; she protects the hare crouching in her fragile form in the same way. We must follow nature in this line if we would preserve her bounty.

It is true that the snare and the trap bring more game to market and with less effort than does legitimate and manly pursuit. Like usurious interest, the snare and the trap work night and day, constantly and industriously eating away the principal, destroying the stock. If our game is to be treated purely as a matter of present commodity without thought for the future or care for the preservation of a natural product that once exhausted cannot be restored, then let the snaring and trapping of game go on, ground game once exhausted cannot be replaced by artificial propagation as the fishes can. Its breeding is slow and in small numbers. The only hope is in present preservation. To the man who clamors for the right to snare and trap on his own land, the reply is that the prevention thereof is for the good of the whole. The holder of the land does not own the game, but he has the right while it remains on his lands to its first pursuit, or to permit or debar the public from its pursuit if he desires. He should be content with this. Sunday shooting and fishing, in the country especially, is an annoyance to the farmer and land-holder whose lands are trespassed upon, and to all law-abiding people. If the local officials would properly enforce the Sunday law in this particular, much undeserved censure upon citizens who desire and do hunt and fish at proper times would be removed, as well as much criticism of the restrictive game and fish laws.

Nearly every State and Territory is awake to the necessity of the proper protection of its game and fish. Many of them have established statutes forbidding the transportation of killed game beyond their own jurisdiction, statutes known as non-exportation laws. Massachusetts lags. First in intelligence and quick in the recognition and adoption of methods of advancement in all desirable things, the old commonwealth is the least efficient of all the States in this matter we have discussed. We believe the Legislature has only to learn the facts, and appreciate even in a degree what we urge, when it will devise a symmetrical and effective law for the protection of our game.—*Com. E. H. Lathrop, in Massachusetts Report.*

THE CHICAGO GAME DEALERS.

CHICAGO, Jan. 28.—*Editor Forest and Stream:* I inclose you letter from game dealers here addressed to our game warden, in which they promise to obey the laws from Feb. 1, when the close season begins. This is a hopeful sign of reform on the part of this class of merchants. I am not aware that they have ever before made a public statement of such honorable intentions.

"CHICAGO, Jan. 27.—*Mr. W. C. Minier, Game Warden, Chicago.*—DEAR SIR: We, the undersigned game receivers and dealers of the city of Chicago, recognizing that our Legislature has given us a just, fair and generous law, corresponding with that in force in the main markets of the country, and desiring to show our appreciation of this treatment, hereby announce that we, and all others that we can in any manner influence, will strictly obey the letter and spirit of the game law, and will do all that we possibly can in every respect to uphold it, and will aid you in every possible manner in the performance of your duty in seeing the lay obeyed. Barnett Bros., Ed. Goodale & Son, Ballon & Shirley, D. W. Pearch & Co., H. L. Brown & Son, T. D. Randall & Co., Fred M. Smith, Lynch Bros., H. A. Sloan, G. S. Sloan, J. B. Brosseau, Addison Miller & Co., Bond & Whitcomb, Hults & Fagen, J. N. Adams."

The complaint has been made in the West for years, that the Boston, New York and other Eastern markets have been kept open nearly the year round for our prairie chickens, grouse and quail. The effect has been to make our Western game dealers very restless when they see the Iowa, Nebraska, Kansas, Dakota and Minnesota trappers sending their birds through to Eastern markets in January, February, March and April; and this has been one of their excuses heretofore for not obeying the laws. Cannot the dealers and sportsmen in the East come to some understanding and cease handling game after, say, Feb. 1 of each year? M. R. BORTREE.

SHOOTING NOTES.

WHEN the great area of snow which now covers the country begins to melt away, people will begin to sum up the great destruction of game that it has occasioned. I have had several letters from sections where I shoot, and there is but one opinion expressed, that the quail have had a most terrible set back. In the exposed prairie lands of southern Illinois, the birds have perished in great numbers. One friend writes me: "I took my hound dog down to the edge of the woods which run alongside the Wabash River, expecting to start a fox that has been bothering my chickens. On my way I found seven bevies of quail in the main ditch. They were squatting on the crust snow and only several of the birds could fly, and those not over 6ft. I caught half a dozen, and found that balls of ice as large as a hickory nut completely covered their feet. The birds could not run, were very weak and were dying. I went back to the house and got a basket and picked up 57 birds, there were some twenty odd birds dead. I put the birds in a warm garret room with some water and feed, first dipping the ice-covered feet in warm water to thaw them out. I could think of no other way of getting the ice off without injuring the feet. All but eleven of the birds have died; and only three of these are able to run about in a frisky way. No more quail shooting here for some years."

It is acknowledged that it takes pretty cold weather to bother the partridges (ruffed grouse), but up in the Catskill Mountain region Jack Frost and his brother the Blizzard have been knocking them. In Ulster county one farmer picked up three birds in his apple orchard, where they had flown to bud. He says his attention was first called to them by seeing a partridge fall dead out of a tree. He plowed through the sandy snow to where it was, and in looking around found two others. All the birds had their feet badly frozen.

The hunting in western Texas, Mexico and Arizona has been fine this winter. The market at El Paso is full of elk, antelope and white-tail and mule-deer. There are no bear around. They smelt the cold weather coming and dug for their holes to suck their paws. It is strange, but nevertheless a fact, that none of the old hunters have seen any bears this winter.

Col. J. Fisher Satterthwaite, with Col. Head and party went out from Deming on a big hunt. They had besides their horses a four-mule wagon filled with grub and bait. There was to be no roughing it on this trip, so they took along a French cook and assistant. They froze the French cook the third day after striking snow. Their route was through the Animos Valley, on the line of Arizona and New Mexico, southwest into the Sierras in Old Mexico. The shooting in the Sierras was very fine. The antelope were very tame. The party killed all the big game it could use, besides turkeys, ducks and fool quail. The latter were knocked over with sticks. The weather was terribly cold, and no end of ice and snow in the mountains.

Jack Bridges, one of the best known big game hunters and long range shots in the West, and who was one of Custer's scouts at one time, has gone to trap and shoot around Fort Davis, Texas. There is plenty of water there, and game is said to be abundant.

An act has been introduced into the New Jersey Legislature prohibiting the killing of deer in New Jersey for two years. Senator Gardner, of Atlantic county, says, "There are not over fifteen deer left in South Jersey, and if the law is not passed the deer will be exterminated." This season hundreds of hunters flocked to South Jersey during the deer season, and the deer got thinned out. Since the law closed some hunters have kept right on.

NEW YORK, Jan. 29. THE WISE ACRE.

AN AFTERNOON WITH THE QUAIL.

ONE afternoon in the early part of November, '87, I had just finished my dinner when my friend C. proposed that we should spend an afternoon with the quail. I readily agreed, and after getting a few shells ready, I brought my gun and my favorite setters, a bitch puppy, Berry, that I was handling for a Boston gentleman, and my own pet bitch, Beauty. Some people who have never used blue bloods, may think a blue blood cannot hold out for a day's hunt—I should like to have such doubters come and spend a week with me, and I will show them one that can hold out for ten days and never flag. I have hunted her for several seasons since I bought her and have never seen one to excel her in all my shooting, though I have used Irish, Gordon and native setters, and all kinds of pointers, but she is good enough for me, and she is blue blood and not for sale. We had not gone far from the house when we came to a nice field that had lain out, and was covered with weeds and stubble. We next crossed a cornfield into an old oat patch, when, while the dogs were running at full speed, Berry dropped to a point; I called to Beauty and she came around, and as we walked up to Berry I flushed the birds. I brought one down with my right barrel, and one with my left, making a nice double. My friend C. scored a clean miss, as usual, as he is no shot at all, but enjoys the sport of seeing the dogs work. We tried to mark the birds, but they went into such a thick piece of wood that we gave them up, and went on to look for another covey.

We crossed an old straw field into another lay out that joined an oat patch. As Beauty was coming down wind beside a ditch, she ran into a nice covey. We marked them down beside the ditch about a hundred yards away. After giving them time to settle, so that they would throw off their scent freely, we started for them. When we got near them Beauty and Berry both pointed at the same moment. I walked up and two birds rose, I downed them both. I sent the dogs in to find the dead birds, when they flushed another one, and I downed it. I bagged those three, and on looking around I saw Berry was on another bird, making a beautiful point. I flushed it and it came to my bag also, and I went only a few steps when Beauty made another point, Berry backing her nicely. I flushed; it swung under a limb and I scored a clean miss. After getting in some more beautiful points, and bagging a few more birds I left that covey, as I had just about finished it, having got ten birds. I then went on to another covey that I had been into before, and there I got a few more. I had the covey broke down in a straw field that had a few scattering pines in it. The birds got up tolerably well, and I accounted for seven of them to the delight of a farmer who came to see the "bird dogs" hunt, as he called them, he never having seen one point before.

After getting up all of the covey we could, we started for home. Going back to the covey we left on the ditch, I bagged two more. After a brisk walk af twenty minutes we arrived at home, and counting up our bag I found I had killed nineteen birds out of twenty-three shots; my friend C. one. A nice afternoon's sport, and a good bag of birds for my friends. TYRONE.

RICH SQUARE, N. C.

MY KIT.

WHILE much has been written on guns, "holding on vs. holding ahead," etc., which has been of interest and profit to your many readers, I have often wondered at the apparent lack of attention given to the shooter's kit. We all know what an important matter is included in this small word, and it is to induce other sportsmen of wider experience than mine to give their contributions to the kit that these lines are written.

In our bird shooting one may strike any kind of weather or range of temperature, and it is necessary to be prepared for comfortable work under all circumstances. I find a corduroy vest, pants and jacket with a canvas skeleton coat and pantaloons make the best all-round combination for my purpose. I wear the canvas pants with skeleton coat over a drill shirt in very warm weather, introducing corduroy piece-meal as the cold increases. In extreme exposure I use a very heavy woolen guernsey under my vest and outside my pants, sailor fashion. This, with heavy underwear, makes an almost impenetrable barrier to Jack Frost.

I use the corduroy jacket with a skeleton coat over it for a shell and game carrier in preference to the regular corduroy coat, because when riding in a narrow buggy or sitting down to lunch at a farmhouse, I have, for comfort, often taken off my coat, at the expense of a severe cold. Now I take off my skeleton coat with shells and birds in it when I come to the wagon or go into a farmhouse, and the relief from its weight, even for the few moments given to lunch and a smoke, is quite an item in a hard day's tramp. Then again, a corduroy coat soon becomes foul, but by the use of the jacket and skeleton coat you can renew the latter as often as becomes necessary at small expense, while the jacket used alone is just the thing for trap shooting. I use Upthe-

grove & McLellan's goods throughout and do not see how they can be improved upon, either in quality or workmanship.

For foot covering, my choice is medium weight rubber boots. Of course, for dry, upland work, shoes and leggins are better, but even then if you occasionally get into a slough, the trouble of cleaning and softening them counterbalances, to my mind, the disadvantages of rubber. Rubber boots are not easily cut out by briers, and while using them you can step anywhere and do not slip on sidehills or when walking on wet logs. When you come in at night you can pull them off, set them by the fire to dry, knowing they will be dry and soft as ever next morning. Now you can put on your slippers, clean your gun, and enjoy a cigar by the open fire. A light-colored Stetson soft felt hat is my head gear. The brim protects the face, neck and ears from briers. They are seldom crushed from the head in thick cover, and practically wear forever. For rainy weather in boating or use in the wind, a "slicker" is the best thing I know of, and if you can obtain Tower's "Fish Brand" in the black, light weight quality, I feel sure you will agree with me in saying that for all round hard use, it "lays over" all rubber goods.

All this "duffle," with change of underwear, socks, fifty bag, etc., together with two to five hundred shells and cleaning utensils are all packed in a canvas "carry all." This "carry all" is a large bag made of extra heavy sail canvas and locked with a strap as in our mail bags. Any harness maker can make one of these bags of size to suit customer for $5 to $8. I always put my shells in shot bags rather than throw them in loose. It has the advantage of keeping them perfect and you can pack the bags in your rubber boots. With outfit in the bag described, you can check it anywhere, strap it on a pack horse, or throw it in a wagon with certainty that it will keep its contents safe till wanted. TIM BERDOODLE.

WASHINGTON, D. C.

THE MASSACHUSETTS ASSOCIATION.

THE annual dinner of the Massachusetts Fish and Game Protection Association was the pleasant occasion which brought together a goodly number of members and guests, last Thursday evening, at Young's Hotel, Boston.

Those present, guests of the Association, were: Hon. J. Q. A. Brackett, Hon. Asa French, Hon. Benj. F. Cook, Hon. Joshua Crowell, Hon. P. D. Dwyer; Commissioners J. H. Kimball and E. B. Hodge, of New Hampshire; Herbert Brainerd, of Vermont; E. A. Brackett and E. H. Lathrop, of Massachusetts; Mr. C. B. Reynolds, of FOREST AND STREAM. The members of the Association were: Pres. Edward A. Samuels, Hon. Chas. Levi Woodbury, Messrs. Walter M. Brackett, J. T. Stetson, Henry J. Thayer, John Fottler, Jr., W. A. Garbett, J. N. Roberts, Henry L. Roberts, Wm. S. Hills, John P. Woodbury, Edward E. Small, Wm. Everett, Sidney P. Brown, E. L. Barry, C. J. McKenzie, W. M. Merrill, Geo. W. Wiggin, W. C. Taft, Wm. J. Fegan, A. M. Davenport, B. H. Gilbreth, Luther Little, H. B. Thayer, D. T. Curtis, H. M. Daggett, Jr., Chas. G. Gibson, E. R. Hunnewell, H. G. Nutter, F. W. Andrews, J. W. Seavey, J. Warren, H. T. Rockwell, E. E. Small, F. R. Shattuck, H. W. Tenney, W. Thayer, W. B. Smart, Edward T. Barker, Thomas J. Holmes, Wm. Everett, W. H. Parmenter, J. B. Thomas, Jr., K. B. Forbes, Jr., R. H. Jenness, E. S. Tobey, Jr., J. Russell Reed, B. F. Nichols, Geo. Loring, John A. Loring, H. C. Litchfield, Westley Jones, Rollin Jones, Jas. H. Jenkins, Sam'l Hanson, Jos. Guild, J. R. Glover, Francis Fitz, Chas. Darrow, A. B. Bradstreet, Waldron Bates, H. R. Beal, W. M. Bunting, Benj. C. Clark, L. S. Brown, C. E. Lauriat.

Mr. E. A. Samuels presided with his customary grace, and after the *menu* had been discussed, delivered the following address:

THE PRESIDENT'S ADDRESS.

Again it devolves upon me as your representative to cordially welcome our friends and guests this evening and to express the wish that their visit to us may be a pleasant one in every respect. To meet with congenial spirits, to clasp hands with men who are interested in pursuits which for us have an almost absorbing fascination, is indeed a great privilege, and to me, and, I have no doubt, to most of our members, the annual dinner of this association has become one of the most enjoyable events of the year, one to look forward to with high anticipations, and one to remember with intense satisfaction and pleasure.

Among my acquaintances on the humbler walks of life is an old colored man who for many years has given my boots an occasional polish. A few days since, while he was at his customary work, I said: "Uncle John, you and I are getting along in life; I think, however, that you do not grow old as rapidly as I do, you have not changed for years, while I must say I have." "Yes," replied the old man, continuing busy at his work, "yes, yes, you are ripening fast." Yes, gentlemen, I am ripening fast, and we are all of us ripening fast, and the time will soon arrive when we must put aside the greater portion of our labors and also relinquish the greater share of the enjoyment which we now take by forest and stream. It takes vigorous manhood to perform the work in which most of us are engaged, and it requires a vigorous man to enjoy those recreations which bring us the greatest pleasure; to wield the heavy rod and deftly cast the fly, sometimes for hours at a stretch; to follow the we mighty salmon through the rush of boiling rapids and conquer him only after a struggle and fight of the fiercest kind; to climb the steepest mountains and tread the mazes of the deepest forests in pursuit of the antlered game, and then to hold the rifle steadily and glance through the sights with accuracy, all these require vigorous manhood; and a ripened age with its weakened muscles and unsteady nerves will not suffice; it follows, then, that we should do our work while we may do it best, and that we should enjoy our recreations when we may obtain the greatest pleasure and benefit from them.

As members of this association we have in addition to our other work sometimes pretty severe labor to perform in its interests, and it is fit and proper that we should occasionally meet around the festive board as we have done to-night and enjoy the pleasant hour in social companionship.

Our association has work to do, and as long as it is alive it will find enough to keep it employed, but that it may do its best work it behooves it to do it when it has the best strength and opportunity.

Among the objects for which it was created and for which it now has its existence, are the procuring of the enactment of wise and judicious laws for the better protection of our song and insectivorous and game birds, and the more valuable food fishes and crustaceans, and the endeavoring to have them honestly and rigidly enforced. In addition to this work we consider it our duty to make every effort to prevent the enactment of unwise laws, laws which will have a disastrous effect upon those animals which we seek to protect. A large part of the legislation which has in years past been made in this State in the better direction has been done largely through the influence and counsel of this association, and such legislation as has been detrimental to our game and fishes has been enacted in spite of our most earnest remonstrances.

Fortunately we have but little to regret and much to congratulate ourselves upon. Most of the laws in relation to the objects in which we are interested are judicious and good, and our work, as it has become wider and better known, now commands the sympathy and respect of the best portion of the citizens of this commonwealth, and we feel that we can go to our Legislature and ask each year for new legislation with better and greater confidence that our objects may be obtained.

The law enacted last winter which legalized the snaring of our ruffed grouse or partridges, one of the two game birds which are not migratory, but which are residents with us through the entire year, was placed upon our statute books despite our most earnest remonstrance. That law we must endeavor to have repealed.

That our State with all its education and scientific attainments should legalize something which so many enlightened commonwealths have declared detrimental to the public interest and refused to legalize is passing strange; but the mischief has been done and we must endeavor to remedy it. We all know the influences that were brought to bear upon the Legislature, the pleas specious and on their face to the average legislator plausible, which secured the passage of that act. The members were told that the farmers' boys ought to have the privilege of snaring partridges, they needed the little money they could obtain from the sale of the snared birds to buy "new boots and mittens and comforters for the winter." I quote one of the arguments verbatim.

They were also told that "the farmer legally owned the birds in his woods and the fish in the brooks and streams which passed through his land, and rightfully should be allowed to take them when and how he pleased, just as much as he owned the nuts and wild fruits which grow upon his farm." Now while that is an open question and plainly debatable one, I will not argue it to any great length here.

That the wild birds and animals in our woods and fields, the *feræ naturæ* so called, and the fishes in our brooks and streams, are the property of the whole people, and not of any one individual or class of individuals, is and has been from time almost immemorial so well recognized in every commonwealth, that the various legislative bodies have never been questioned in their right and duty to pass regulative and restrictive measures for their preservation.

If the game and other birds on a man's land and the fishes in the streams which pass through his land belong to him exclusively, and he may capture them when and in what manner he pleases, by what right does any Legislature make laws that he shall not kill them except in certain months of the year, any more than it makes other laws which shall compel him to pick his cranberries on certain days of the week and his nuts and other wild fruits on certain days of the week. If it is right and proper that he shall snare the grouse in his woods, it is as right and proper that he should drag a sweep-net through the streams and brooks which pass through his land and capture and destroy every trout and other valuable food fish found in his territory. One would be as bad as the other, one would be as absurd as the other, yet each would be as right and proper as the other.

Suppose two men with lands contiguous and a fine trout brook passing through both farms. One of these men, a man with none but the most sordid instincts, daily sweeps the brook with a fine-meshed net, taking out every trout which passes within his boundaries. The trout, although it has its favorite pool and stopping place, travels up and down the brook according to the condition of the water; so that in time every fish in the stream might pass into the possession of the man who uses his fatal nets. His neighbor, who possesses a sportsman's instincts and is unwilling to resort to any method of capturing the fish except with a sportsman's rod and line, is, by the baser methods of his neighbor, unjustly and meanly deprived of a fair share of the fish to which he considers he is entitled; or, instead of being a fisherman himself he has a friend who is willing to pay him a good price for the fishing privileges in that stream on his farm. It is not an uncommon thing for owners of land in this and other States to preserve their fishing privileges and sell them, sometimes at a good, a very good price, and we all know that any fair increase of income to the ordinary farmer means a great many comforts for his family, a great and good help to his scanty means, a larger and valuable sum to assist him in meeting his tax bill and other expenses. What sense, what justice would there be in enacting a law which would legalize the acts of this greedy neighbor; what kind of a reception would any Legislature give to a petition or an advocate for the law which would legalize the netting of trout in brooks and streams? Yet there would be vastly more sense in it than there is in a law which legalizes the snaring of our grouse. Your trout streams may be artificially stocked, stocked bountifully, year after year, but you cannot artificially re-stock the forests with partridges after the coveys have been exterminated. Now there is an exact parallel between the examples I have given; the partridge is on one man's land to-day and on his neighbor's the next, exactly as the trout is in one man's portion of the stream one day and in his neighbor's the next. One farmer may possibly wish for a legal right to kill the birds with net and snare; his neighbor farmer being a sportsman is unwilling to kill except with the sportsman's methods, and there are, I am glad to say, many farmers in old Massachusetts who are sportsmen in the true sense, yet the man who kills the birds with nets and snares has an incomparable advantage over him who uses the gun only, a corden of snares are working all the time, once set, the man who places them can leave them while he goes about other pursuits; they are, I repeat, working all the time, but no farmer, no sportsman, can take his gun and pursue these birds all day and every day, so that in this way the law is also an unfair one.

Mr. Lathrop in this year's report of the Fish and Game Commissioners well says of this:

"It is true that the snare and the trap bring more game to market and with less effort than does legitimate and manly pursuit. Like usurious interest, the snare and trap work night and day, constantly and industriously eating away the principal, destroying the stock. If our game is to be treated purely as a matter of present commodity without thought of the future or care for the preservation of the natural product that, once exhausted, cannot be restored, then let the snaring and trapping of game go on."

Now, like the owners of fishing privileges who do not care to fish, there are many owners of wild land in this and other States who do not care to hunt and shoot, yet who find the shooting of game in their forests a valuable privilege, one that they can easily dispose of for a valuable consideration, and as I have said, every source of income to the average farmer is important in a high degree; it is hard enough at the best to get a living upon our rocky and sterile farms, and he who can in the proper season sell the right to hunt the game in his woods for fifty or one hundred dollars, when that game if netted or snared and marketed, would not bring so much as five dollars, is greatly injured if he is deprived of that privilege. Yet the existing law works that injury exactly. No sportsman would pay for the privilege on one farm, when the owner of the next farm is in the habit of netting and snaring the very game which is desired; for as the birds wander from one man's land to another's they quickly and surely become the property of him who stretches his snares out in every direction, and their wholesale destruction renders valueless to the farmer who does not snare that which was formerly of great value and benefit to him. The law as it exists is a breed of unfair advantage to the farmer, is bringing pecuniary disadvantage to him; and not only this, but it is also endangering the small stock of birds now left to us to an alarming degree.

In the working of this remarkable law other mischievous features appear. The act provides for and legalizes the snaring of grouse by the owner of the land or members of his family authorized by him to snare. Now, it would be a pretty nice legal point to determine who constitute the members of the family or how far and remote a relationship may be considered—it would be a very difficult thing to decide, for there is a wide and large circle to be pronounced upon.

But what an unjust advantage such a law gives to the man who, either himself or by some undetermined member of his family, wishes to kill with the snare! Such a man or his authorized agent might cover every square rod of his land and exterminate every bird in the entire region, while his neighbors, with farms on every side, who, not wishing to snare, not wishing to shoot, or even not willing to have the birds destroyed in any way, are powerless to prevent it. There are many land owners all over the State who, from sentiment alone, are unwilling to have any birds that frequent their farms killed, yet with such a law they cannot stop the slaughter. I have shown how the law has proved detrimental to many of our land owners in different ways; there are other features in its workings which also render it obnoxious. The average farmer and the average farmer's boys have but little time to spend in setting cordons of snares in their woods. In the autumn there is usually enough harvest work on the farm to keep them busy, and the barn often days always have to be done; I doubt even if many of them go through their woodlands once a week on the average through the entire season; they are most of them too busy to set the snares; yet, as I have shown, they are wronged by a neighbor less busy; they are also too fully employed to range through the woods every day in searching for the snares set by unauthorized parties, men or boys who are not members of their family, and what is the result? Simply this, every poacher and idle loafer in the neighborhood has his line of snares, ranging sometimes for miles, and visits them very late or very early in the day, at a time when the owner of the land is most unlikely to be in the woods, and bags and markets his prey with almost absolute impunity, for how can our agents in passing through the tracts of woodland, how can the village officer or the game warden or deputy commissioner or any one who can act, when he finds a line of snares, decide whether or not they belong to the owner of the land or to his agents, or to the veriest village poacher that exists. If they belong to the former, the officer is liable for trespass and damages if he destroys them, and if he spares them and they belong to the poacher he is unwittingly countenancing a wrong-doing. With these facts before us I do not see how any one who cares to give the matter a thought can fail to be convinced, as I am, that the law as it now stands, instead of benefiting the farmer, benefits chiefly the poacher and thief and thus actually offers a bounty on crime. Ought such an act to remain upon the statutes of such a State as Massachusetts? Ought we as an association suffer it to exist without publicly placing upon it the seal of our condemnation? Certainly not, and we must lose no time and spare no effort to have it repealed.

You will remember that in my address in 1885 I used these words: "Unless our lobster laws are modified so as to secure a close season we are likely, in the not distant future, to suffer from a scarcity, if not failure, of our supply. It seems to me, and I am by no means alone in the opinion, that the New England States should have not far from a two months' close season, and our society should, with as little delay as possible, endeavor to secure co-operation to procure legislation in these States to this effect. It is a practicable measure and should be attended to. Unless something is done to this end I sincerely believe we shall, in a great measure, lose one of the most important and delicious articles of food that we take from the water. We often speak of exhausting the soil; exhaustion of the ocean crops can be as surely accomplished. Granted that it takes more time, but unless it is prevented it can be done. It is a matter of common observation among us, that the average size and catch of our lobsters grow less and less every year, and the history of the lobster fisheries in Europe bears me out in the views I have expressed."

I also showed how the law providing for a close season had been enacted by the Norwegian Parliament, and gave you the results, namely, that the lobster fisheries, which had been almost completely destroyed, were brought back to a productiveness almost unheard of, the exportation increasing in a few years from a barren 600,000 to about 2,000,000 lobsters, all this solely and absolutely from the enactment and enforcement of the protective law. Now, gentlemen, if I were then forcibly impressed with the desirability of an absolute close season at the most critical breeding time of the lobster, I am now, with the possession of "more light," convinced of the absolute necessity for one, and I tell you candidly that I am certain that unless we soon have the protection of a close season of some weeks length for our breeding lobsters, our own supply will be exterminated, and we will be absolutely dependent upon a supply from outside our limits. Close and persistent fishing has brought our own supply to such a condition that it is almost of no account, while if the lobsters were allowed a brief period free from molestation at the height of the breeding time, it would soon be as valuable as it ever was. This is not the wild statement of an alarmist, but is the honest opinion of one who has given the matter much study and observation both on our own coast and that of the provinces. It is a singular thing that while we were among the first to advocate an absolute close season for the lobsters and endeavor to secure the co-operation of the Legislatures of other New England States to adopt uniform laws, they have seen proper to follow our advice while our own State is still without such a close time.

Almost every one who has given the subject any thought sees the necessity for some action, yet it seems next to impossible to make our Legislature take prompt and decisive measures.

I have said that we largely depend upon outside sources of supply, and it is the case. First we looked to Maine for it and then we turned to the Provinces, and now what is the result? Maine is straining every nerve to prevent the extinction of its own crop, and the authorities of Canada are even now advocating a close season during a portion of the breeding time at least. It has got to come; a lobster crop is one of the easiest crops to exhaust that there is either in or beneath the water or upon the land. I have known of canning factories which started with a working force of from eighty to one hundred hands, which within three or four years could not obtain enough lobsters to keep them running even with a very small force, and I know of one or two that have been compelled to close. Take all the lobsters great and small from the ocean bottom in a given area and it will be a long time before this supply is replenished; the lobster, unlike some of our most valuable food-fishers, is not a great traveler, it does not wander far from its regular habitat and is what might be called local in its habits.

I have said we now look to the Canadian Provinces for our supply, and that that is even now growing precarious; the only hope is that the Dominion Government will enact a wise and proper law enforcing a close season. It will have to be done and the sooner it is done the better. To show what the Provincial feeling is, and to emphasize what I have already said, I will make a few quotations from recent reports by Government officers.

Hon. John Tilton, Deputy Minister of Fisheries, says: "The lobster fishery shows unmistakable evidence of being over-fished. Energetic action cannot longer be deferred for the protection of this industry, either the catch must be prohibited for a few years, a limit placed thereon, or the fishery regulated by means of license."

W. H. Rodgers, Esq., Inspector of Fisheries of Nova Scotia, an acute observer, says: "Lobsters have been plentiful on most of our coasts, but show unmistakable evidence of exhaustion in many places from over-fishing. More stringent regulations are much needed to preserve this fishery from sharing the same fate that has overtaken it in other countries. I would recommend a close time extending from July 20 to Sept. 10, and to be made uniform all around the coast and that none be taken less than 10½in. This will agree with the laws of this fishery adopted in most other countries, and if vigorously enforced will preserve it and in the end will be an advantage to all concerned."

W. H. Venning, Esq., Inspector of Fisheries, of New Brunswick, and he is also a very careful and accurate observer, says: "The returns will show an enormous catch of this shellfish, the average size of which continues to diminish. To fill a pound can now requires rather more than the average of six lobsters—about 2½oz. of meat per fish. The returns show 4,661,812 cans preserved and 4,200 tons of fresh lobster. In order to fill these cans 28,000,000 lobsters were killed. If to these we add the number exported fresh, allowing 1½lbs. to each, which is a large average, the number killed during the season will be 33,720,000. How much longer an increased catch can be made out of a diminishing supply is a problem of some interest to those who have watched the rise, progress and decay of this industry. I can only urge on the department the great importance of saving it from impending destruction."

J. Hunter Duvar, Inspector of Fisheries of Prince Edward Island, says, "The lobster fishery has taken another year's step toward its early extinction. More factories have been in operation, many more traps have been set, and greater exertions made with a result of 772,400 fewer cans. There is now a total absence of large fish while the great bulk of those canned barely reached a standard of 9in., thereby placing the fishery officers in the unpleasant dilemma either of being powerless or having to shut down every factory in the Province with, it may be, one or two exceptions. In previous reports I fully discussed the various points of the industry as they arose; among these were in last year the shortening of the fishing season, making the legal standard by weight instead of measure and bringing the fishing season under the operation of the Fishery Act.

"As these points have been so fully commented on they need not again be gone into. The circumstances of the fisheries are changing year by year. It is now no longer a question of regulating a legitimate occupation but of dealing with a ruined industry. * * To such a pass is the fishery now reduced, the question almost narrows itself to the consideration whether the Government will close the fishery for a term or whether reckless destruction will close it forever."

With this and such other weight of testimony as can be laid before our Legislature it seems to me that it cannot much longer postpone the enactment of a judicious law, and our mission is and should be to use every effort to secure it.

A gentleman once said to me that he did not believe in protecting our Massachusetts game birds; that such action is a mere waste of energy and that it is only a question of time, and near time at that, when, owing to our increase of population and the destruction of our forests they are surely doomed to extermination. That was twenty odd years ago, yet our game birds are yet not entirely extinct. We have still enough left to pay well for protection, and although our population has increased, our area of wild lands, lands growing up to forests, is larger than it was then. Others have asked me, and not long ago either, if I believed that protection really does protect, to us such a question seems ridiculous, but it is not so absurd to every one. In reply I made answer as follows: "Twenty-five or thirty years ago I began visiting the Maine woods, and the Rangeley Lakes and Schoodic Lakes then possessed great charms for me; trout were then plentiful in the former and Schoodic salmon, those most gamy of all the Salmonidæ, were abundant in the latter, but deer, particularly in the Schoodic region, were far from common. I remember of once ascending the stream to a little pond or lake which flowed into the Grand Lake and there on the shore was the track of a deer. My Indian guide called my attention to it with something of animation and replied, when I asked if deer were plentiful there, that "deer were scarce; now and then one only."

Early last November I visited the fish hatchery at the Grand Lake Stream, and ten miles from the very spot that I refer to,

and spent several days there, and I found that deer were so abundant in that neighborhood that it was not an uncommon thing for one of the boys or young men to kill one in the adjacent woods, and venison was common meat in the settlement and upon the table of the hotel where I stopped; in addition to this I found also that some of the hunters were dissatisfied with and complaining of the existing law and trying to evade it, which provided that no one hunter shall kill more than three deer in one season. Just think of it! there, where a deer was formerly a *rara cervus*, it is now so common that every one who wishes, be he a native of the State or only a visitor, may have three for his share. The Commissioners say: "There are enough deer for all, and the law has made a fair apportionment of three for each. This is enough; no one man should be allowed to make a business of killing and selling that which equally belongs to all. One moose, two caribou and three deer is the apportionment made by our Legislature for each." This miracle of an astonishing increased supply has been brought about solely and only by the enactment of wise and salutary protective laws and splendid and strict enforcement of them. Yes, gentlemen, protection will protect, as we will show the people of this Commonwealth if they will give us the laws that will aid us in the work we have undertaken to perform.

Lieut.-Gov. J. Q. A. Brackett, in a witty speech, expressed his sympathy with the work of the Association; Commissioner E. H. Lathrop urged the importance of harmony between sportsmen and land owners; Mr. C. B. Reynolds asked the co-operation of the Association in influencing needed legislation for the National Park; Hon. Asa French urged that the Association should not be discouraged, even if it were not always successful in the State House; Hon. Levi Woodbury spoke with spirit of the fisheries troubles, and urged retaliation as the most effective mode of hastening an adjustment of present complications. Messrs. Dwyer, Lodge, Commissioner Hodge and others followed with remarks which were well received.

THE MICHIGAN ASSOCIATION.

AT the Detroit meeting last week, the different sections of the State were well represented, and the following club members of the association had delegates present: Kent County Sportsmen's Club, of Grand Rapids; Pottawatomie Club, of Grand Rapids; Kalamazoo Gun Club; Battle Creek and Bay City Sportsmen's Clubs, and the North Channel Fishing and Shooting Club, of Detroit.

The sessions were held in the Elks' parlors, in the Cowie block. After the members had gone into ecstacies over the magnificent antlers that surmount the presiding officer's chair, President Holmes, of Grand Rapids, called the convention to order. Dr. Joel C. Parker, of Grand Rapids, of the Committee on Enforcement, in his report, called upon the members to put forth their best efforts in aiding the game warden to exact observance of the game laws adopted by the last Legislature. William B. Mershon, of the same committee, sent in a communication from East Saginaw, in which he said that to insure universal obedience of the game laws the deputy game wardens should receive a stated salary, making them independent of the county supervisors. He also suggested that vigorous measures be taken in enforcing the non-exportation law against the pot-hunters who use nets and spear indiscriminately in gathering a supply for markets outside of the State.

T. F. Shepherd said that the association should turn its attention to the protection of song birds, which are nearly exterminated, owing to the demands of fashion. Dr. Parker thought that the State ought to recognize the fact that the choice members of the finny, furred and feathered families were being slaughtered in unreasonable numbers. A resolution which he presented recited that a State Park would prove a great public benefit in the preservation of game, fish and birds and which called on the State Commission of Forestry to take active measures with a view of establishing an asylum of refuge in that shape. The resolution was adopted and President Holmes was deputized to present it to the Cammission. Judge Speed thought the deputy wardens ought to have a salary, and read a letter from the deputy at St. Ignace, in which that official said he was powerless to act where much could be done, all because he couldn't get paid for his time.

President Holmes, in his annual address, said that the object of the association could be classified under two heads. The first aim is to procure laws for the proper protection of game and means to enforce them. The second is to study the natural history of the game. "The association," he said, "after thirteen years of life has succeeded in securing needed legislation and in having a game warden appointed to enforce the measures. We should endeavor now to add to his efficiency and to the efficiency of the laws."

The Committee on Laws had the most important report of the day. After reviewing the work of the Legislature in passing needed laws last winter they said that measures should be enacted placing black bass in quarantine, so to speak, from April to July inclusive. Fish shutes are now so constructed as to be of little use, and to remedy this the committee suggests that the game warden be made supervisor of all the shutes. There are thirty-eight counties in the State for which there are twenty-one special local provisions, and the committee favors embodying these into a general State law. Another measure favored was one to prevent the spearing of black bass in June, July and August.

The report received the hearty approval of the Association and was further added to by ex-Judge Speed and Edgar Weeks. Both thought that stringent restrictions should be placed upon the use of the seine. During the winter months it is used along the lakes in scooping out tons of fish from under the ice. Fry are thrown away on the ice and spawning fish wasted. A fishery at the mouth of the Clinton River was held accountable by Mr. Weeks for the comparative scarcity of black bass along the shore there and at the Flats, because of its wanton waste with the seine.

The Association also resolved to endeavor to procure a statutory provision prohibiting the spearing and shooting of fish in all inland waters at all seasons.

The president and secretary were also instructed to issue an appeal to the ladies of Michigan, in behalf of the Association, asking them to refrain from the embalmed dickie birds as headgear.

Treasurer Osgood, of Battle Creek, reported cash on hand $139.92. The next meeting will be held in Lansing on the second Tuesday and Wednesday of next January.

The final business was the election of officers. Dr. Holmes was chosen president for the thirteenth consecutive time, much against his wishes, Secretary Norris declined re-election, and A. L. Lakey, of Kalamazoo, was chosen secretary. Edgar Weeks was elected treasurer, and F. S. Cobb, of Kalamazoo, director for four years.

THE FORESTRY BILL.

BE it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

DESIGNATION OF FOREST LANDS.

SECTION 1. All lands now owned or controlled or which may be hereafter owned or controlled by the United States, and which are now, or shall hereafter be, devoted to forest uses, are for the purposes of this act declared to be public forest lands.

WITHDRAWAL OF FOREST LANDS FROM SALE.

SEC. 2. The unsurveyed public lands of the United States embracing natural forests, or which are less valuable for agricultural than for forest purposes, and all public lands returned by the public surveys as timber lands, shall be, and the same are hereby withdrawn from survey, sale, entry, or disposal under existing laws, and shall be disposed of only as provided in this act and as Congress may hereafter prescribe.

PREVENTING ENTRIES UPON FOREST LANDS.

SEC. 3. Every person applying to make an entry or filing of public lands under any law of the United States before the classification and survey of the forest lands as provided in this act shall be made, shall file with his application an affidavit under oath, corroborated by witnesses, stating that the land applied for is not exclusively forest land and not situated near the headwaters of any stream, and is more valuable for agricultural or mining purposes than for the timber growing thereon, and each such applicant shall state particularly his means of information and his personal knowledge of the facts to which he testifies, and upon a certificate from the Commissioner of Forestry the lands so entered may be disposed of under existing laws; and every person swearing falsely to any such affidavit shall be deemed guilty of perjury and liable to the penalties thereof; and all illegal entries of timber lands shall be absolutely void, and upon satisfactory proof shall be subject to summary cancellation by the Commissioner of the General Land Office.

INSTITUTING THE OFFICE OF COMMISSIONER OF FORESTS.

SEC. 4. There shall be in the Department of the Interior a Commissioner of Forests, who shall be appointed by the President, by and with the advice and consent of the Senate, and he shall have the care, management and control of all the forest lands owned or controlled by the United States. He shall be a suitable person, versed in matters of forestry, and shall be entitled to a salary of $5,000 a year, with such allowances for assistants and expenses as will insure a proper execution of the provisions of this act and as Congress may from year to year provide. He shall hold office during good behavior, and may be removed by the President for cause, and before entering upon his duties he shall give bonds with sureties to the Treasurer of the United States in the sum of $50,000, conditional, to render a true and faithful account to the Treasurer quarterly of all moneys which shall be by him received by virtue of the said office.

APPOINTMENT OF FOUR ASSISTANT COMMISSIONERS.

SEC. 5. The Commissioner of Forests shall appoint to himself four assistant commissioners, one of whom shall be a resident of the State of California, or any of the Territories on the Pacific slope and well acquainted with the forest conditions of the Pacific slope; another shall be from the State of Colorado or any of the Territories bordering the Rocky Mountains, and well acquainted with the forest conditions of the Rocky Mountains, and the third shall be from one of the States east of the 100th meridan, and well acquainted with the forest conditions there prevailing. The fourth shall be an expert in the knowledge of scientific forestry. The four assistant commissioners are to act as a council to the Commissioner of Forests in all matters pertaining to the administration of Government forest lands as constituted by this act, and each shall have special charge of one division of the public forest reserves, which he shall personally inspect at least once every year. Each of the assistant commissioners shall receive a salary of $3,000.

CLASSIFICATION OF FOREST LANDS.

SEC. 6. The forest lands on the public domain shall be arranged in three general classes, namely:

First. Lands distant from the headwaters of important streams, covered by timber of commercial value, more valuable for forest purposes than for cultivation.

Second. Lands partially or wholly covered by timber, but suitable for homesteads, and more valuable for agricultural purposes than for timber.

Third. Mountainous and other woodlands, which for climatic or economic or public reasons should be held permanently as forest reserves.

ESTABLISHMENT OF FOREST RESERVES.

SEC. 7. It shall be the duty of the Commissioner of Forests to examine and classify the forests and public timber lands of the United States, and to determine, subject to the approval of the Secretary of the Interior, what portions of such forests and timber lands should be permanently retained in reservation for climatic or other economic or public reasons, and what portions may be disposed of without disadvantages to the public interests. He shall cause to be prepared connected maps or diagrams showing the approximate situation and areas of public timber lands in each State and Territory, and the President shall, by proclamation, designate the permanent forest reserves as the same shall be selected and approved as herein provided; and it shall be the duty of the Secretary of the Interior to cause exterior boundary lines thereof to be run and marked by durable monuments; and no further survey of any timber lands of the United States shall be made until the permanent reservations herein provided for are established.

APPRAISEMENT OF TIMBER.

SEC. 8. The lands of the first and second class shall from time to time be appraised, under the direction of the Secretary of the Interior, and lists and plats thereof made; and the value of the timber shall be appraised separately from and in addition to the Government price of land.

DISPOSITION OF TIMBER.

SEC. 9. The President may, from time to time, in his discretion, by proclamation, authorize the sale of such appraised timber on lands of the first class, on the stump, in aggregate quantities not exceeding twenty-five thousand acres at any one sale.

MANNER OF SALE OF TIMBER.

SEC. 10. Such sales shall be made under the supervision of the Commissioner of Forests and in accordance with such regulations as the Secretary of the Interior may prescribe, and under the condition that the purchaser will comply with the regulations as to the cutting and removal of the timber prescribed and made known by the Commissioner of Forests; but no such timber shall be disposed of except to the highest bidder, upon sealed bids, by legal subdivisions of sections, at not less than the appraised price, and after due public notice as now provided by law.

RESTORING FOREST LANDS TO ENTRY.

SEC. 11. Lands of the second class, when reported to the Secretary of the Interior by the Commissioner of Forests, with the approval of the President, shall be restored to homestead entry or sale; but a special price for the timber thereon, as appraised, shall be paid by the applicant in addition to the usual price and fees for the land.

CO-OPERATION OF OTHER OFFICERS.

SEC. 12. The Commissioner of the General Land Office, surveyors general, registers and receivers, and other federal officers connected with the public lands, are directed to co-operate with and assist to the extent of their power the Commissioner of Forests in the selection and classification of the public forest lands.

FURTHER DUTIES OF FOREST COMMISSIONER.

SEC. 13. The Commissioner of Forests shall properly subdivide and arrange into divisions and districts of proper size such forest lands as shall constitute the forest reserves and forest lands remaining under his control, and shall organize a service of and appoint inspectors and rangers for their protection and proper administration and provide a practical system of forestry. He shall make reasonable rules and regulations for the prevention of trespass upon said lands and for their protection and the conservation of forest growth, and he shall be empowered to sell timber from the said reservations as the local demands require and a proper forestry permits. He shall designate every year the acres which may be cut over and prescribe the conditions, manner, method and time for the cutting of the same, and fix the Government rate for the stumpage on such areas, and upon the application of any resident citizen desirous to obtain his supply of wood from the Government forest reserves, suitable locations shall be designated to him. The Commissioner of Forests shall have the power to regulate pasturage and any occupancy whatever upon the forest lands. And all moneys received from the sale of timber or any other privileges he shall cover into the United States treasury.

CO-OPERATION WITH STATE BOARDS.

SEC. 14. Whenever any of the States in which public forest lands are situated shall have instituted and provided for a forest commission or other forest management of the forest lands belonging to the State, it shall be in the discretion of the Commissioner of Forestry, with the approval of the Secretary of the Interior, to co-operate with such forest commission and to allow the same to act as agents for the United States under his direction for the purposes of this act.

PENALTIES FOR ILLEGAL CUTTING ON FOREST RESERVES.

SEC. 15. If any person shall illegally cut, remove or destroy, or cause or procure to be cut, removed or destroyed, or aid, counsel or assist in cutting, removing or destroying any trees or timber upon any forest reserve of the United States, every such person shall be liable to a fine of not less than $100 and not more than $1,000 for each such offense, to imprisonment at hard labor not exceeding one year and to civil prosecution to recover the value of the property so unlawfully taken or destroyed.

PENALTIES FOR CUTTING TIMBER ON ANY FOREST LAND.

SEC. 16. It shall be unlawful to cut or remove without proper authority, or to cause or procure to be cut or removed, or to wantonly burn, injure, tap, girdle or destroy any timber on or from lands of the United States, or to export, transport, purchase or dispose of the same, or of any lumber, charcoal, pitch, turpentine or other product manufactured therefrom; and every person violating the provisions of this section shall be guilty of a misdemeanor, and shall be fined in a sum not exceeding $1,000, and imprisoned not longer than one year; and every person engaged in any such depredation upon timber or timber lands of the United States, whether as principal, agent, employee, carrier, mill owner, manufacturer, vendor or vendee, shall moreover be liable in an action of trespass for the full value of the timber or timber product at the place of delivery; but nothing contained in this section shall prevent any agriculturist or miner from taking from his claim the timber necessary for domestic purposes or the support of his improvements.

Whenever there exists a right previously established by law, to cut timber on the public lands, every person or corporation exercising such right must comply with the rules and regulations prescribed by the Commissioner of Forests and approved by the Secretary of the Interior.

And a failure to comply with all the rules and regulations so prescribed and approved in regard to the manner of using and occupying the public forest lands shall constitute a misdemeanor punishable as provided in this section.

PENALTIES FOR OCCUPANCY OF PUBLIC LANDS.

SEC. 17. That it shall be unlawful for any person, firm, or corporation to knowingly erect, establish or maintain upon public lands of the United States without proper authority, any sawmill or manufactory of lumber or other timber products, or to engage or be employed in the manufacture or lumber, charcoal, pitch, or turpentine upon public lands, or to use at any such mill, manufactory or works, any timber cut or removed from public lands; and any person violating this section shall be liable to a fine of not less than $500 and not more than $5,000, in addition to the penalties hereinbefore prescribed; and all mills, manufactories, and works so erected or maintained upon public lands shall be absolutely forfeited to the United States.

PENALTIES FOR TRANSPORTING AND HANDLING ILLEGALLY CUT TIMBER.

SEC. 18. That if any master, owner or consignee of any vessel, or any officer or agent of any railroad company, shall knowingly receive for shipment any timber, lumber, or timber product taken without authority from timber lands of the United States, with intent to transport the same to any port or place within the United States, or to export the same to any foreign country, every such master, owner, consignee, officer, agent and railroad company shall be liable to the penalties prescribed in the eleventh section of this act, and the vessel on board which any such timber, lumber, or timber product shall be taken, transported or seized, shall be wholly forfeited to the United States.

PROTECTION BY MILITARY FORCE.

SEC. 19. The President is authorized to employ so much of the land and naval forces of the United States as may be necessary effectually to prevent the cutting down, removal, or other destruction of trees or timber on public forest lands, and to prevent the transportation of any such timber, and to take such other measures as may be deemed advisable for the protection of the forest lands of the United States.

RESTRICTING QUALITY OF FOREST OFFICERS.

SEC. 20. No person who is directly or indirectly engaged in the manufacture of lumber, or timber products, or conducting any business which requires a large consumption of timber or wood, shall be qualified to serve as commissioners of forests under this act, or to serve in any official capacity in connection with public woodlands.

REPEALING CLAUSE.

SEC. 21. That the acts of June 3, 1878, chapters 150 and 151, and the first and second sections of the act of June 15, 1880, entitled, "An act relating to the public lands of the United States," and all acts and parts of acts inconsistent with this act, be, and the same are hereby, repealed.

ENACTING CLAUSE.

SEC. 22. This act will take effect on the 1st day of July next, but the President may appoint the Commissioner of Forests prior to that date, with his duties and salary to commence at that date.

APPROPRIATION CLAUSE.

SEC. 23. For the purpose of carrying out the provisions of this act, for the payment of salaries, traveling and other expenses the sum of $500,000 is hereby appropriated.

THE ALBANY GAME LAW MILL.

ALBANY, Feb. 1.—It is likely that the game committees of the two Houses will meet this week and take some action on the numerous bills already before them.

Senator Coggeshall has introduced the bill already introduced in the Assembly by Mr. McAdam, making the close season for duck, geese and brant from Jan. 1 to Sept. 1.

Assemblyman Knapp's bill makes Delaware county governed by the general law for the shooting of woodcock, which makes the close season from January to August.

Mr. Thompson, of Jefferson, presented a petition to the Assembly to-day from his constituents, praying for the putting of a "premium on the scalps of English sparrows."

The report of the Forestry Commission, sent to the Legislature to-day, recommends an increase in the number of forest wardens to prevent the frequent infraction of the game laws. The Commission also asks for the power to lease small tracts of lands to private parties. More power is also asked for to enable the forest officials to more readily suppress fires.

Assemblyman White's bill repeals the act of 1887, allowing the fishing with fyke and other nets in Keuka Lake.

Assemblyman McAdam's bill prohibits the shooting of ducks, geese and brant in the State throughout the spring. The close season is made from Jan. 1 to Sept. 1.

Assemblyman Hadley's bill amends the Forestry Commission act of 1885 so that there may be sold from the forest preserve such small parcels not exceeding five acres in area as may be leased to individuals or clubs, for pleasure resorts or camping purposes only, by the comptroller upon the recommendation of the Forest Commission or a majority thereof in accordance with such rules and regulations as the Commission shall from time to time establish; no lease to be for more than five years. But nothing in the act shall be so constituted as to prohibit the comptroller upon the recommendation of a majority of the Commission from selling any mature timber liable to decay situate on the State lands and granting to the purchaser the right to enter upon the land and remove the timber subject to such rules as the Commission shall establish.

THE NEW YORK AND CHICAGO LIMITED.

THE expedient or inclosing, or, as it has been termed, the vestibuling of car platforms, for the comfort and convenience of passengers having occasion to pass from car to car while a train is in motion, has been adopted from time to time, and the device has been in daily use on the celebrated fast mail trains over the New York Central and Lake Shore roads for many years. From ordinary vestibules constructed with board partitions and without ornamentation—such as are found on the fast mail trains—to the glass-paneled, tight-fitting and handsomely decorated vestibules designed for magnificently appointed passenger trains, was an easy and natural transition. The wonder is that the application of the vestibule arrangement to passenger trains was so long delayed. When so introduced the device could hardly be called a new invention.

Recognizing the merits and advantages of such an arrangement on a train scheduled to run at a high rate of speed, with few stoppages and without detention at dining stations, the Wagner Palace Car Company has constructed for daily service between New York and Chicago, over the New York Central and Lake Shore roads, the requisite number of cars provided with vestibules, and so perfect in all their appointments, so replete with comforts,

luxuries and novelties, that it seems almost impossible to do more than has been accomplished.

The vestibuled limited trains are superbly finished, elegantly furnished and steam heated. Each train is composed of a buffet smoking and library car, two parlor cars, two sleeping cars and a dining car, all of which are united into one continuous covered train by the construction of handsomely finished connecting vestibules upon the car platforms. The chief advantage of this arrangement is in the fact that passengers are thus enabled to safely and comfortably pass through the entire train in going to and from the buffet smoking car, or to and from the dining car, while trains are running at high speed, without the slightest exposure or danger in crossing the car platforms.

A new and improved system of ventilation has been adopted, with the result of securing an unceasing supply of fresh air.

The vestibuled limited trains on the New York Central and Lake Shore route are made up of the most substantial and the handsomest railway carriages ever constructed. The interior decorations and carvings are not obtrusive, but so elegant as to satisfy the most fastidious tastes. In the buffet smoking and library car are a unique buffet, movable chairs and couches in the most luxurious upholstery; a secretary suppliedwith stationery and writing material, and an inclosed reading room with a well-stocked library, in which is represented the best literature of the day, including the current newspapers and magazines. The new features of this car are the barber shop and bath room; and in connection with these novel adjuncts, it may be asserted that if useful on any road in promoting the comfort or pleasure of long-distance travelers, their success on the New York Central and Lake Shore route is assured from the fact that these lines occupy the only low-grade thoroughfare between New York or Boston and the principal commercial cities of the West, and approach more nearly than any other to the engineer's ideal of a perfect roadway—a dead level.

Old travelers know that the New York Central, for a distance of over three hundred miles, is possessed of four distinct tracks, two of which are exclusively devoted to the movement of passenger trains. It is not so well known that the Lake Shore road, with which the New York Central connects in the Union Station at Buffalo, is the only double-track connection that any of the seaboard trunk lines possess west of their termini. The regular and safe movement of fast trains under such favorable conditions can be generally depended upon.

There is a feeling of great fatigue upon the completion of a journey in the most luxurious cars over the very best constructed railway, if that railway does not possess easy curves and light grades.

The New York Central and Hudson River Railroad, in connection with the Lake Shore road, occupies, as stated above, the natural easy-grade highway between the shores of the Atlantic and the entire West, skirting along the world-famed Hudson River and passing through the lovely valley of the Mohawk.

The New York Central's four distinct and complete tracks upon this natural highway is a noble compensation for the tardiness of inventive genius in providing the improved system of transport by steam and rail that now spreads like the meshes of one vast net over every civilized country on the face of the globe.

Polite attention from disciplined train and station employees is now assured to all patrons of the New York Central and Lake Shore roads.

Direct connections are made at Chicago, St. Louis and Cincinnati with the Great Through lines to and from all points west, northwest and southwest.—*Adv.*

IDEAL MFG. CO. (John H. Barlow, Manager), Manufacturers of Reloading Tools for Rifles, Pistols and Shotguns, Dealers in Arms and Ammunition. New Haven, Conn., Jan. 28, 1888. Forest and Stream, N. Y. Dear Sirs: We are entirely satisfied with our ad. in the FOREST AND STREAM, and as long as our relations are as pleasant and the paper continues to pay as well as it has, we will be with you as long as there is any Ideal Co. Thanking you for favors, I am, yours truly, J. H. BARLOW. Our Western inquiries are increasing. FOREST AND STREAM beats any other journal we have advertised in the last six months.

Sea and River Fishing.

HABITS OF EELS.

THE attention of the Fish Commission has recently been called by Lieut. E. T. C. Richmond, of the Second Artillery, to a very singular method adopted by a species of eel, apparently for defending itself against the attacks of its enemies. Lieut. Richmond's letter is here given in full:

ST. AUGUSTINE, Fla., Nov. 10, 1887.—Sir: In August, 1870, while stationed at San Diego, Cal., I went fishing to the Island of San Clemente, about sixty miles off the coast of California. While passing from rock to rock (falling tide) I observed the heads of eels protruding between the rocks. Several of these I succeeded in securing in the following manner: Standing upon a rock, I would lower a baited hook a foot, or possibly two, in the water right against the mouth of the eel. When taken I would endeavor to draw the eel out. It would withdraw its head between the rocks, and several times I lost my hook by the breaking of the line. I was surprised at the difficulty of drawing them out until explained by what followed.

Upon finally securing one and placing it upon the beach, the hook still secured in its mouth, I observed that it would make a knot by passing its tail through a loop and running this loop up to its head. I then saw why it had been so difficult to withdraw the others from between the rocks, assuming, of course, that they had made similar knots. All those which I landed (and I landed several) displayed this peculiarity. The knot would run from tail to head, and when the head was drawn through it would result in a simple knot or loop in the line. Several of these knots would be made in the line in quick succession, one hardly passing off the head before another would be started at the tail. When I grasped the eel with my thumb and forefinger, pressed with all my strength in its gills, the knot would approach rapidly and I was wholly unable to retain my grip. My hand would be pushed off, the head withdrawn, and the eel would be free except for the hook and line.

This is not to be confused with the promiscuous knotting of eels when placed in a basket, with which I am familiar. I believe this is a device for escape when taken "head on" by some enemy. I find this peculiarity of the eel mentioned by no writer, and believe this to be its first mention.

If I am correct in this I would respectfully request this paper be referred to the Commission soon to visit the waters of our western coast, which, I am sure, if it will take the trouble to investigate the subject, will find the facts substantially as I have stated.

These eels were from 12 to 20in. long, thick for their length as compared with our Maryland fresh-water eels, and of a dark copper, mottled color.

Please acknowledge receipt of this with your action thereon, and oblige, yours respectfully,

E. T. C. RICHMOND,
First Lieutenant Second U. S. Artillery.

Professor Goode has requested the naturalists connected with the expedition of the Albatross to the Pacific Ocean to look into this matter, to visit this island if possible, and to endeavor to furnish for the Institution specimens of the eel alluded to. It is hardly necessary to say that the result of this investigation is looked for with much interest.

THE ANGLER AND THE BLACK BASS;
OR,
PRIDE GOETH BEFORE DESTRUCTION,
AND A HAUGHTY SPIRIT BEFORE A FALL.

'TWAS morn;
The shining orb with fiery glare
Had roused him from his eastern lair,
And darting forth his piercing ray
Proclaimed to sons of earth the day.

The Angler, all unconscious of the hour,
Still wore the bonds of Morpheus' power,
When, startled from his peaceful dream
By entrance of the daylight beam,
Which fell upon his sunburnt nose,
He gave a snort, awoke, and rose.

His garments donned, refreshments done,
He loaded his mosquito gun,
Shouldered his tackle, sought the shore.
And bared his muscle for the oar.
Still mindful of the olden time
He 'gan the old camp song to chime,
And o'er the lake the zephyr bore
"The Hat me Fäther used to wore;"
And as the hills the echo caught
The stillness seemed with portents fraught.

Now to the crystal depths at last
He gives the minnow with a cast,
Then in an instant with a lurch
He strikes, and hooks a golden perch.
Then many a more, till in the boat
Lie two score victims of the sport.
So goes the play, until the sun
Has to his mid-day station run;
The wary fish the bait refuse,
And so the Angler takes a snooze.

Now wakened from his sleep refreshed,
The Angler starts on some new quest;
But cast he ne'er so artfully
'Tis all in vain, no luck has he;
Success his every effort spurns,
So toward the camp his way he turns.
But as his boat glides on, perchance
An object meets his watchful glance;
"Ah!" cries the Angler, "there's a snag;"
At once his movements cease to lag,
And stoutly bending to the oar
He swiftly skims the waves once more.

"Perchance beneath that log may lie
Some bass or pickerel so sly;
I'll lure him with a tempting bait
And try what fortune may await."
Alas, a disappointed wish,
He only takes a small sunfish.

"Once more I'll try and then I'll go;
Whoop! Look at that! Ha ha! Ho ho
Whiz goes the line, the light rod bends,
The reel its clicking music sends,
The fight is on, now comes the fray,
The glorious climax of the day!

Full forty feet the line runs out;
The Angler scarce refrains a shout.
Stung by the hook and wild with rage
The victim seeks the pain to assuage,
While in the struggle mad he springs
And in the air his body flings.
Oh, what a prize! A clear five pounds!
A very beauty, oh my zounds!
See how he struggles, wild and hard,
To tear away the cruel barb;
See! how the supple rod he draws;
Mark! how he shakes his slimy jaws.
Now to the depths again he flies,
And in his madness vainly tries
By quickened strength and crafty art
Or cunning trick the line to part.
Now leaping wildly in the air,
Now rushing till the reel strikes fire,
Then whirling round some twisted snag,
Then underneath some hidden log.

In vain! The Angler by his skill
Frustrates each wily effort still.
The trusty tackle holds him fast,
And wears away his strength at last,
Till, stripped of all his furious might,
He gives away, and yields the fight.

The Angler draws him near the boat;
Then stops, upon the prize to gloat.
"Ah, tamed at last and brought to bay;
No empty hand returns to-day;
Proudly my way to camp I take
And see my friends with envy shake.
A few turns more upon the reel
And thou art safe within my creel.
Soon shalt thou lie upon the shore,
Thy grand but fruitless struggles o'er.
Defeat, entire defeat is thine,
The Angler's joyous triumph mine!"

"What savage look is in thine eye?
Dost thou defy me ere thou die?"
A jerk—a whirl—a splash—a groan!
All's lost! My glorious prize is gone!
* * * * *
'Tis even;
Far in the golden tinted west
The god of day retires to rest,
And as the shadows gently skim
Across the quivering water's brim,
A weary Angler takes his way
And ponders on the passing day.

"Well, gallant warrior, thou art gone;
Thou hast in open contest won;
Thou hast a noble battle fought,
Thy freedom earned I grudge thee not.
Yet boast not, for I never yield,
I'll meet thee on another field!
Thought of defeat, away, away!
Now tune again the cheerful lay."

Then hills and woodland echo round,
And shore to shore gives back the sound,
As o'er the lake the zephyrs bore
"The Hat me Fäther used to wore."

WALLOON.
CINCINNATI, O.

WINTER TALK OF ANGLING.

IT is early to write of trout and fly rods, but the pickerel fisherman—through the ice—is abroad in the land. Those who indulge claim that it is sport, and indeed there is something to it when carried on with horse and sleigh and holes ready cut the day before. The modern invention of "drop flags" to show when the fish is on rather beats the limber brush stick of our boyhood days and a good deal of enthusiasm is the result of the pickerel biting briskly. The ponds in southern Massachusetts are in order this winter, and some of the early visitors have been wonderfully successful. Mr. Foster, of the Boston firm of Foster & Weeks, took a few days off on one of the ponds in Falmouth last week, and though the weather was zero a part of the time, he comes back full of the fun. It was so cold that they did not fish at all one day, and the rest of the time it was too cold to stand on the ice. But this did not matter, as good teams were at hand and it only took a few minutes of "spinning" to make a round of the hooks. The result of one day's fishing was ninety pickerel, and the largest fish caught weighed 4lbs. 6oz. This, Mr. Foster thinks, was not bad for a winter's days. Reports from Maine indicate that pickerel are being taken freely on the numerous ponds in that State. It is claimed that in some of these ponds the pickerel are increasing in size and in numbers, while in others the reverse is said to be true. Some of these same ponds have been stocked with black bass, with the idea that the bass might thin out the pickerel, but such has not been the result to any considerable extent. In the upper Sebago Lake, or Long Lake, as it is better known, the pickerel fishing is about as good in winter time as it was before black bass were put in, while the bass have also become abundant. In the ponds in the same section the result has been about the same. Perhaps Warden Mead, or "Black Sput," will give the FOREST AND STREAM some ideas on this question.

The readers of FOREST AND STREAM will pardon another allusion to trout, though it is midwinter and hardly time to look over the hooks and the flies. But I went into a wholesale drug store on Washington street yesterday and found one of the clerks handling some queer-looking little bags—pillows he called them, though they were rather small. These little bags emitted a familiar odor, that reminded me of something. What was it? An errand—a letter that must be posted? No, that was not it. It was firstly the odor of fir boughs, and green at that. I found that the Maine Fir Bough Co.—curious name—was forwarding these little pillows, and that the drug store had sold 50 to 100 gross of them since the winter begun. Well, the physicians hit upon the camping idea, and they are recommending these little pillows for nervousness, and even rheumatism and diseases of the lungs. How long will it be before they will recommend the fly rod and the open air and the trout—the enthusiasm of the real outing?

One or two letters from the region of the Androscoggin lakes say that the ice is not half so thick as it was a year ago at this time. Mrs. Sessions, who has staid so many years at the South Arm, Richardson Lake, thinks that the ice may go out early. She says that an enormous woodpile is being got in readiness for the little steamers that are to ply up the lakes as soon as the ice is out. She has not forgotten the big trout, taken by Mr. C. D. Chase, of Northumberland, N. H., of which he gave the FOREST AND STREAM that very readable account last summer. Mr. Chase was then a novice in big trout fishing, and when he felt the thrills of the fellow that weighed over nine pounds, he declared to Frank Dunn, his guide, that he was snagged, and he knew it. But Frank was cool as is the air on a windy day on the same lake, just after the ice has departed. The big fish was captured. Mr. Chase drew an outline of it, and from this outline an oil painting has been made—life size—by Mrs. W. K. Moody. Again the painting has been photographed, and the photo has this notable feature, that one would be led into the belief that it was really taken from a small trout, life size. Perhaps other photographers may have noted the same feature—that is, that the photographs of large trout present the true proportions of small trout. If so, what becomes of the theory that the great trout of the Androscoggin lakes are out of proportion—too deep for their length?

A letter is on my table, from perfectly reliable sources, which says that Henry Stanley—not the much-respected Maine Commissioner, but a relative of his—shot a deer, during the open season, in a swamp within two miles of Dixfield village; the home of the Commissioner, by the way. Mr. Stanley also states that he saw thirteen in one herd in the same swamp. How is this for deer near a village of some prominence? Would those deer have been there if the local gunners had been permitted to hound them during any part of the summer? Tell this to those fellows who argued before the New York Legislature last year that the hounding of deer does no harm. It is perfectly safe to state that under the reign of the skin and crust hunters in Maine twenty years ago no such thing as a deer was ever heard of in the vicinity of Dixfield. Had a stray one happened to have been there, he would have met his end in less than a couple of days at the most. So much for protection. SPECIAL.

AN IMPROVED BUTT PIECE FOR RODS.—An improvement in reversible butt pieces recently devised by Mr. E. Hurtzig deserves the attention of anglers. Usually the aperture for the first joint in the end of the butt piece which was not in use, has been stopped by a plug, which was very likely to get lost. Mr. Hurtzig conceived the idea of fitting screw caps to either end of the piece, which cover the sockets and keep dirt out. On the same butt piece a longer reel-seat than usual has been made, and at either end of the seat is a cap for one end of the reel plate, the ring working between them. It is thus possible to fix the reel either at the very extremity of the butt or 3 or 4in. above it—a convenience when one wishes to shift the reel from below to above the hand.

AN INDIANAPOLIS FISHING CLUB.—*Editor Forest and Stream:* The fly-fishermen of Indianapolis have organized a club with the usual officers and a poet. The principal object seems to be to facilitate the swapping of yarns, and to accomplish this they have comfortable rooms, a library, etc. Incidentally they will undertake a missionary work among the brethren who still use minnows and the deadly "soft craw." A casting tournament next summer is among the possibilities.—HOOSIER (Indianapolis, Ind., Jan. 20).

OXFORD ROD AND GUN CLUB.—At the annual meeting of the Oxford Rod and Gun Club, of Brooklyn, held Jan. 10, the following members were elected to serve as board of directors for the ensuing year: Dr. Henry G. Preston, President; Charles A. Gilberg, Vice-President; Theodore Baldwin, Treasurer; Spencer S. Baldwin, Secretary; George F. Barlow, Edward A. Gilley, John D. Adams, Charles R. Porterfield, O. Carlton Sundies, Percy Pyne Lewis, Reginald G. Barclay.

Fishculture.

REPORT OF THE U. S. FISH COMMISSION.

[Continued from page 10.]

THE reports of fishcultural work, made by persons in charge of stations, is interesting although not voluminous. Col. M. McDonald reports on operations at the trout-breeding station at Wytheville, Va., from its occupation in January, 1882, to the close of 1884. The grounds, ponds, buildings, and other permanent improvements at this station are the property of the State of Virginia. It is rented to the U. S. Fish Commission, which defrays the cost of maintenance. The Wytheville station is centrally situated in the Appalachian Mountains, which abound in trout streams, and the hatching is in the geographical center of the region to be stocked, and is in easy communication by rail with all parts of it. The supply of water is very great, and the facilities for breeding the Salmonidæ so exceptional that this station was selected for the prolonged, extensive and systematic work necessary to re-establish the trout fishing in the Piedmont and mountain regions of Pennsylvania, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Tennessee, and the northern parts of Alabama and Georgia. Colonel McDonald says experience has shown that it is not well, in general, to attempt the stocking of streams with fish less than one year old, and that the assurance of success afforded by planting fish of such size and vigor of movement as will give immunity from capture by the small native predaceous fish will more than counterbalance the cost of the work of rearing them until a year old. A notable feature of the work of 1884 was the stocking of a number of streams in Georgia, Tennessee and northern Alabama with two-year-old rainbow trout.

Mr. Fred Mather reports the operations at Cold Spring Harbor, N. Y., during the season of 1885. Whitefish were planted in the deep lakes of Long Island, and brook, brown and ordinary trout were hatched and distributed. Accounts of salmon taken in the Hudson are given and are mainly credited to the columns of FOREST AND STREAM, the plantings having been made from the Cold Spring Harbor station. Tables of the distribution of fresh and salt-water fishes are given. In the next paper Mr. Mather gives a report of eggs shipped to and received from foreign countries during the season of 1885–86, and the distribution in the spring of 1886. To Germany he sent, in his capacity of general assistant to the Commission, lake trout, brook trout, rainbow trout, landlocked salmon and whitefish eggs. To England, lake trout, brook trout, landlocked salmon and whitefish eggs. To Switzerland, lake trout, brook trout and whitefish eggs. To France, the eggs of rainbow trout. The total number of eggs of all kinds sent abroad was 3,260,000. Eggs of the following species were received and distributed to different stations: Maræna (a small *Coregonus*), from Germany, were sent to Bucksport, Me., and to Northville, Mich. Brown trout were received from Germany and sent to Northville, Mich., Wytheville, Va., Lake Brandon, N. Y., Clendon Brook, Warren county, N. Y., Madison, Wis., and kept at the station. In all 279,000 eggs of the different species were received from Germany.

Mr. Frank N. Clark reports on the operations at the Northville and Alpena, Mich., stations for the season of 1885–86. There was, on the whole, a satisfactory increase in the results over the preceding year, although there was a slight falling off in the brook and rainbow trout branches. The receipts of whitefish eggs at both stations amounted to 168,000,000, an increase of 13,000,000 over last year. Most of this supply was drawn from the usual sources, the island region of Lake Erie, the penning station at Monroe, and the west shore of Lake Huron. There was an increase of 4,000,000 whitefish planted in the Great Lakes, the total being 92,000,000. The whitefish eggs were carried forward in creek water, which was several degrees colder than spring water, until about six weeks prior to hatching, from that time forward nearly one-half the eggs were transferred, at intervals, to spring water, thus preventing, to a certain extent, a precipitation of the entire hatch, which would over-tax the storage and shipping facilities of the stations. The work with lake trout was three times greater than in any former season, the eggs received numbering 1,475,000, some of which were shipped to other stations, some were hatched and distributed, and the remainder was retained.

Mr. Livingston Stone makes a report of operations at the U. S. salmon and trout stations on the McCloud River California, for the year 1885. There was a small run of salmon this year, probably caused by the illegal small-mesh fishing of the Chinese and Portugese in the Sacramento River, partly by the great number of sealions at the mouth of that river, and partly by the draft upon the supply made by the numerous canneries on the Sacramento. Records of the temperatures of air and water are given.

Mr. Charles G. Atkins reports upon the propagation of Penobscot salmon in 1885-86. There was no change of importance in either methods or apparatus, but a new spawn-house was built at Dead Brook and the stream and banks were improved. The purchase of breeding salmon was made between June 1 and 20, during which time 691 fish were bought, 81 of them died in transit because of the heat of the river water, and the remainder were placed in the inclosure at Dead Brook, where 93 more died during the summer. The size of Penobscot salmon that year was small, the estimated average of those purchased was 12.95lbs. At the spawning season 283 females and 196 males were weighed and measured. The females averaged 12.75lbs. before spawning and 31.06in. in length. The males averaged 10lbs. in weight and 31.2in. in length. The females yielded an average of 3.19lbs. of eggs; equal to 8,667 in number. The spawning season covered the period between Oct. 27 and Nov. 5, and the fish were liberated in the river after spawning, 2,454,058 eggs are computed to have been taken, of these 113,371 failed to impregnate, being 4.6 per cent. of the original number. The eggs were divided among the contributors to the fund for obtaining them as follows: The U. S. Commission, 1,251,500; Maine, 663,500; Massachusetts, 400,000. Mr. Atkins also reports on the propagation of Schoodic salmon in 1885-86. This is the fish more commonly (but erroneously, according to Mr. Atkins) called "landlocked salmon." In the middle of September 190 bushels of moss were gathered, of which 175 bushels were dried in the sun, the green moss being reserved to place next the eggs in packing for shipment. The salmon began making nests in the gravel as early as Oct. 22, and from that date forward in increased numbers. On Oct. 24 the fishing ponds were completed, and for the first five nights the catch was small, the aggregate being 121 fish. On the night of the 29th there were 56 salmon taken and the next night 107, the highest number for the season. In all 811 fish were taken, of which 611 were females, the average number of eggs from each gravid fish being 1,720. The salmon were quite free from external sores, but, out of 578 females there were 97 afflicted with the ordinary ovarian disease, which displays itself in the presence of white, or otherwise discolored and plainly defective eggs. The total number of eggs taken was 994,355, of which 90 per cent. were impregnated. This is an unusually low ratio, even for Schoodic salmon, and may be attributed to the scarcity of males, which led, on several occasions, to an insufficient milting of the eggs. The record shows, for instance, that the eggs taken Nov. 9, numbering 110,967, on which there was a loss of 22 per cent., through lack of impregnation, were milted by using the milt repeatedly, straining it off from one lot of eggs, much diluted with mucus and water, and applying it in that condition to the next lot. Experimentally, Mr. Atkins has sometimes obtained excellent results in this way, but great care must be exercised, and it should only be done when the live fish fail. The eggs were divided as follows: The United States, 222,000; Maine, 189,000; Massachusetts, 115,000; New Hampshire, 115,000.

[TO BE CONTINUED.]

THE PRESERVATION OF FISHES.

FISH is an important item in the food of man, and whatever increases or diminshes the supply concerns the public. We have written about the great decrease of food fishes on the coast of New Jersey and what we have said upon the subject will apply elsewhere. In 1878 Mr. Haywood gathered statistics of the food fish marketed in the town of West Creek, 700 inhabitants, and the sales amounted to $20,000! What was sold in the other towns about here we have no information, but there must have been many pounds, but now a very small amount of fish is sold there because they are not to be had.

What is the cause of this decrease? We know of no physical change in the formation of the coast that has materially lessened the sustenance of fish, nor has there been an eruption to destroy them, as is the case sometimes on the west coast of Florida. We know that the coast is continually changing, but not so rapidly as to cause the great decrease of food fishes. To our mind there appears to be but one cause and that is the indiscriminate net fishing outside the beach and in the bays. When the fish come to spawn the great portion of them are netted before they have spawned, consequently there are few young reproduced. This is not only the case along the coast of New Jersey but on most parts of our coast, and in fact all over the world where indiscriminate netting is done. This netting is certainly destroying whole races of fish for temporary gain and is killing the goose that lays the golden egg. As well might a farmer kill his hens before they lay and expect to raise a brood; but fortunately he takes care that sufficient stock is left for reproduction. So it should be with our fishes, if the race is worth preserving, not alone for the sportsmen but for the public where fish forms an important item of food. In some waters where fish have been exterminated, artificial means are being used to replenish with new stock, but if the same course of destruction is to continue the new stock will not last long.

When I was in England, some years since, I met a gentleman who said he was one of the fish authorities, and speaking of fish food, he said that many years ago indiscriminate netting had almost destroyed the fish on that coast, but laws were passed regulating all kinds of fishing and were rigidly enforced. Since then there has been a good run of fish, and the last year there had been marketed, of home catch, over sixteen million dollars' worth of fish in England, Ireland and Scotland. I afterward saw his statements confirmed in the English papers.

If we would preserve our races of fish some action like the above will have to be taken by Government, but I do not believe anything will be done until necessity prompts action. Fish in public waters are public property, and men have an equal right to fish in such waters with net or hook, but it is, or should be, the place of the Government to so regulate all such fishing that the races of fish shall not be destroyed. It is very different in killing off the wild game of the wilderness, for that is generally followed by the plough and domestic animals, but when the fishes are killed off there is nothing to take their places for the use of man. Hunting and fishing appear to be the natural proclivity of man, but as such pursuits will not sustain a great population other means will have to be resorted to. There are no more interesting, health-giving, and manly sports than hunting or fishing. One who has energy and skill to do either well and successfully, can do other things well and successfully. There are thousands of men who by close application to business make slaves of themselves to make money, who, if they would take reasonable relaxation in the sports of hunting and fishing or other out-door recreations, would relieve themselves for a time of the cares of business and preserve their health and vivacity of mind, add much to the pleasure of life and save them from premature old age, and perhaps early death.

P.

THE MASSACHUSETTS COMMISSION.

IN the report of the Commissioners of Inland Fisheries and Game, of the State of Massachusetts, for the year ending Dec. 31, 1887, we learn that an investigation of all the fishways on the Merrimac River was made in June, and they were in good working condition. There has been no complaint in regard to any of the fishways in the State, except the one at Middleborough, which is dilapidated and out of repair, and in its present condition is a serious obstacle to the fisheries of the Taunton River. Prompt action will be taken in regard to this next spring. Observations on fish seen in the Lawrence fishway, between May 14 and Sept. 9, show 69 salmon, 2 shad, 4 black bass, suckers, eels, lampreys, etc.

An attempt to hatch shad in the Taunton River failed because they spawn earlier than in the Merrimac, a fact not previously known. At North Andover 1,200,000 shad were hatched. Favorable accounts of previous plantings of trout have been received, showing an increase over former years. From the hatchery at Plymouth, N. H., 387,000 trout eggs were received and hatched. There are no ponds at the Massachusetts hatchery and no fish are kept. The amount of spawn of landlocked salmon was about half that obtained in recent years, and a still further reduction will be made in 1888. It had been expected that there would be an increased run of sea salmon in the Merrimac in 1886. This did not take place, and it was claimed by some that the young fish were killed by passing through the turbine wheels at Manchester, Lowell, and especially at Lawrence. An examination into the construction of the turbine wheel showed that probably not one fish in a thousand would be likely to be destroyed in passing through it. A close watch at several places below the mills did not result in finding any dead or injured fish. As the young salmon in the Merrimac run to the sea on the spring freshets, it is proble that most of them "tail" over the dams. Very few are seen in the canals leading to the mills.

Forty adult salmon were taken at the hatchery at Plymouth, N. H., and kept in the ponds to be stripped of their eggs in the spawning season, and then returned to the water alive. Many more would have been taken had it not been for a heavy rise in the river during the best part of the run, which prevented the use of the net at that time. Those that escaped passed up to their spawning beds at the headwater.

Salmon in the Merrimac spawn in the fall and return to the sea on the spring freshets. As they spawn every other year, the run of this year will not, therefore, return till 1889.

There is no reason to conclude, however, that there will be any decrease next year, as the continuous planting at the headwaters will more than make up for the absence of these fish, while the run for 1889 should be more than double that of this year.

If the run of salmon this year could have been taken from the fishway at Lawrence, and kept in a suitable place till their spawn was ripe, more than a million young salmon would have been obtained for next spring's planting.

The association with the United States Commission for the procuring of salmon spawn for the different States, which was suspended this year, for reasons above stated, should be continued until the supply in the river is sufficient to enable the Commissioners of the two States to take the necesary amount of spawn.

The river is now open for taking salmon with hook and line, and the indications are that it will soon become an attractive resort for anglers.

Col. E. B. Hodge, superintendent of the hatchery at Plymouth, N. H., reports that there has been a larger number of salmon in the river this season than any year since Lawrence dam was built. Forty salmon were taken in the ponds, from which a large number of eggs will be secured. The number would have been largely increased had not the heavy July rains kept the river very high for two weeks during the heaviest part of the run. The largest fish taken was a female, 40in. in length, weight 24lbs. The smallest, a grilse, weight 4½lbs. This was the first grilse taken in the nets since the station was established.

Young shad in the Merrimac have been killed by the thousands in the small-meshed seines at Newburyport, and used for bait in the eel-pots, or left on the shore to decay. In 1884 the mesh was restricted to not less than 2½in., yet a compromise was made by the State with the fishermen, based on the fact that there had been in years past and might be again, schools of menhaden entering the river, which were valuable at certain seasons of the year for bait, and that there was still a considerable run of bluebacks that could be used for that purpose. Otherwise there was no reason why the fishermen at Newburyport should have privileges not asked for nor granted to the fishermen above.

Soon after this act was passed, a consultation was held with the fishermen on the lower part of the river, in which there was a frank and free discussion of both sides of the question, and the assurance given to the fishermen, that the law was for the public good and that there was no disposition to deprive them of any reasonable amount of fishing. The fishermen expressed themselves satisfied and agreed that if further legislation was to be asked for they would consult with the Commissioners before going to the Legislature. In violation of this understanding they appeared before the Legislature last winter, asking for a law, which, had it passed, would have led to the complete destruction of all migratory fish in the river.

Then menhaden have, for years, been driven from the harbor and mouth of the rivers by steamers using purse-nets. The blue-backs have been so scarce that they have become of little or no value. The use of the two and one-quarter inch mesh in the lower part of the river, which was a compromise, to enable the fishermen to take these fish, necessarily destroys a large number of one and two year old shad which are found there during a greater part of the summer.

There can be no reasonable complaint from the fishermen of the lower Merrimac, nor any that should for a moment command the attention of the Legislature, and if they are not willing to abide by the present law, the Commissioners recommend that the laws controlling the fisheries at Newburyport be made uniform with those on the upper part of the river.

RAINBOW TROUT.—We learn from the last report of the U. S. Fish Commission (Rep. for 1885, p. 122) that Mr. Frank N. Clark, superintendent of the U. S. Fish Commission station at Northville, Mich., recommends that "on account of the continued partial failure in the returns from this species, I would recommend that the stock on hand be distributed and their propagation at Northville be discontinued. At present about one-half of the water supply and pond facilities is devoted to rainbow trout, the returns from which are meagre and unsatisfactory. By supplanting them with brook trout and German [brown] trout, or by concentrating the divided forces on one line, the aggregate results would be greatly increased." We learn that the South Side Sportsmen's Club, of Long Island, have discontinued the culture of this fish, and, while spawners are plenty in their ponds, they do not think it worth while to take their eggs. They have about 800,000 eggs of brook trout on their trays, but no eggs of the rainbow trout. The reason for this, our informant says, is the fish do not take the fly well, nor do they take bait as freely as brook trout, and the members of the club do not care for them. All the lakes of the club have screens, which prevent this fish from going to salt water. Mr. Mather pointed out some years ago that the rainbow trout was identical with the "steelhead" salmon of the Pacific coast, and Dr. Bean agreed with him, and that if it could get to sea on the Atlantic coast it would not return, as was the case with the "California" salmon (*Oncorhynchus quinnat*), introduced into Eastern waters some years ago.

THE NEW FISH COMMISSIONER.—Col. McDonald, the newly appointed Commissioner of Fisheries for the United States, is reported as having said to an *Evening Post* correspondent: "As to the future of the Commission, I consider it my duty to bring it back to its moorings, from which it has to a certain extent drifted. I think it is the desire of Congress and the President that the Commission should be an economic rather than a scientific institution. Science should be the handmaid of the Commission, and not the Commission the servant of science. To put the matter in a nutshell, the naturalist cares as much for a sculpin as for a codfish, but the Commission cares more for the codfish. Hereafter the Commission will point out the path for scientific investigation, and science will be subordinate to economic development. As an instance of the practical results of the Commission's work, in 1880 the shad catch from Cape Cod to Cape Fear was 4,800,000, and it was declining. In 1881 we commenced our work of distribution, and in 1885 it began to show its effects. In that year the catch was 5,125,000, in 1886 5,750,000, and in 1887 6,700,000. In round numbers the increase in the value of the catch was $400,000"—and at a cost of less than $20,000 yearly.

MORE SALMON HATCHING FOR THE COLUMBIA.—Under a law passed by Congress, providing an appropriation of ten thousand dollars, to be used by the U. S. Fish Commission, for the establishment of a salmon breeding station on the Columbia River, Prof. Goode has directed Mr. Livington Stone to proceed to the Pacific coast and select a suitable site for a salmon breeding station on the Columbia, and to build one or more stations, as may be thought best in compliance with the provisions of the law.

BOOKS RECEIVED.

TALKS TO YOUNG MEN. (With asides to young women). By Robert Collyer. Boston: Lee & Shepard; 1888. Price, $1.25.

MORALS VERSUS ART. By Anthony Comstock. New York: J. S. Ogilvie & Co.; 1888. Price, 10 cents.

FIRST LESSONS IN ZOOLOGY, adapted for use in schools. By A. S. Packard. New York: Henry Holt & Co.; 1888.

THE STANDARD HOYLE. A complete guide and reliable authority upon all games of chance or skill now played in the United States, whether of native origin or foreign introduction. Full explanations how the various games are to be played, with diagrams and illustrations. New York: Excelsior Publishing House; 1888.

FIXTURES.

DOG SHOWS.

Feb. 13 to 17.—First show Fort Schuyler Kennel Club, Utica, N. Y. E. J. Spencer, Sec.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

Feb. 28 to March 2.—Show of Philadelphia Kennel Club. W. H. Child, Sec.

March 27 to 30.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5853.**

OBJECTIONS TO RULE 2.

Editor Forest and Stream:

I have been informed that the next move of the clique will be to form a sort of "sugar trust" in dog matters that will compel every dog, whether exhibited at a show or not, to ante up fifty cents for the good cause and the improvement of the different breeds. Now this seems to be a move in the right direction, half-way measures are never satisfactory, and there is nothing like going the entire "porker," especially in matters of reform. Long live the A. K. C. SUGAR.

BROOKLYN, N. Y., Jan. 28.

Editor Forest and Stream:

In your issue of yesterday I see in an official notice over the signature of the superintendent of the Westminster Kennel Club, the following paragraph:

"There appears to be a growing impression among exhibitors that dogs having no known pedigree cannot be shown, on account of the new registration rule. This is an error, as dogs without a pedigree can be registered as well as those with them."

It seems to me that this is pretty strong proof of the correctness of my statement in the communication you published last week, that although Rule 2 might not diminish the number of entries very seriously, it would force a large number of registrations into the "official" stud book, which were simply a record of breed, name, age and color, and which would stultify the object for which the stud book was published. MIC MAC.

BOSTON, Mass., Jan. 27.

Editor Forest and Stream:

The past history of the A. K. C. being a series of blunders, we have not the slightest reason to expect that they can properly manage a stud book. This club has always been open to the well-founded charges of favoritism and partiality. The single dog owners have always suspected, and not without cause, that they were not fairly treated; if there is any chance to favor the club man his dog always wins the prize, particularly at shows held by the club of which he is a member. Naturally this is to be expected, as he has had the naming of the judge. I heard a well known judge say that the two dogs being about equal he would always give the prize to the club or the club man over the unknown outsider. I have noticed that this judge is not the only one that distributes prizes in this partial manner.

Now these outside exhibitors, upon whose entries the shows depend, for their withdrawal of support means failure, are to be taxed an additional 50 cents, to please his pompous nibs, Mr. Peshall, who has staked his ducats upon a risky speculation which the clique call the "official" stud book.

Will the much abused exhibitor consent to this levy? The entries to the February shows will inform us, and will also decide whether the "official" stud book proves an immediate failure or manage to get into Vol. V. before a final collapse. VICTOR M. HALDEMAN.

MILFORD, Del.

BOSTON SHOW MASTIFF PRIZES.

BOSTON, Jan. 28.—*Editor Forest and Stream:* Inclosed you will find copies of correspondence which has passed between us and the American Mastiff Club. If you will publish it you will greatly oblige.—BENCH SHOW COMMITTEE.

I.

NEW YORK, Dec. 23, 1887.—J. W. Newman, Esq., Secretary New England Kennel Club, Boston—Dear Sir: On behalf of the executive committee of the American Mastiff Club, I beg leave to offer at the coming New England Kennel Club show, on April 3 to 6, 1888, in Boston, the following prizes for competition:

1. The American Mastiff Club's silver challenge cup, value $150, for the best American bred mastiff, dog or bitch.

2. The club's two challenge cups, value $100 each, one for the best mastiff dog, the other for the best mastiff bitch, the property of a member of the American Mastiff Club.

3. A silver medal to the winner of each of these three cups.

4. The following cash prizes for competition among members of the American Mastiff Club:

a. Twenty-five dollars for the best mastiff stud dog, shown with two or more of his get born in America.

b. Twenty-five dollars for the best mastiff dog.

c. Twenty-five dollars for the best mastiff bitch.

Very respectfully, RICHARD H. DERBY, Secretary.

II.

BOSTON, Dec. 28, 1887.—Richard H. Derby, Esq., Secretary American Mastiff Club—Dear Sir: Please accept our thanks for specials offered by American Mastiff Club, which have been accepted by Yours very respectfully, BENCH SHOW COMMITTEE.

III.

NEW YORK, Jan. 10, 1888.—To the Bench Show Committee of the New England Kennel Club.—Gentlemen: At a meeting of the executive committee of the American Mastiff Club held in this city to-day, the following preambles and resolutions were adopted:

Whereas, the American Mastiff Club by its executive committee on Nov. 23, 1887, authorized the offering of several prizes at the show to be held by the New England Kennel Club, April 3-6, 1888, and at the meeting of Dec. 21, 1887, the secretary was directed to advise the New England Kennel Club thereof, which he did by letter of Dec. 23 to said club; and

Whereas, these prizes were offered with the knowledge that the New England Kennel Club was a member of the American Kennel Club and under the implied condition that the show would be held under the rules of the American Kennel Club; and

Whereas, the New England Kennel Club has withdrawn from its membership in the American Kennel Club, thus putting its show outside of the rules of that club, and such withdrawal was unknown by the members of this committee at the time of holding the meetings above referred to; and

Whereas, in the opinion of this committee the withdrawal of the New England Kennel Club from the American Kennel Club makes a radical change in the conditions under which the prizes were offered, and had the fact of the withdrawal been known at the time of the passage of the resolutions above referred to the offer would not have been made; and

Whereas, as soon as the fact of the withdrawal came to the notice of the officers of this club, the New England Kennel Club were advised of the withdrawal of the prizes until a meeting of this committee could be held, thus giving them the earliest information of the possible withdrawal of the prizes.

Resolved, that the prizes offered for competition at the show of the New England Kennel Club by the American Mastiff Club are hereby withdrawn.

On behalf of the executive committee of the American Mastiff Club, RICHARD H. DERBY, Secretary.

IV.

BOSTON, Jan. 20.—American Mastiff Club, Richard H. Derby, Secretary.—DEAR SIR: We, the bench show committee of the New England Kennel Club, do not agree to your withdrawal of the prizes offered by your club at our show, which were made unconditional by you, and we shall instruct our mastiff judge to award them as offered by the American Mastiff Club.

We shall also publish in the papers and premium list the same, and shall do our utmost to protect our exhibitors and see that they receive all prizes awarded. Yours respectfully, BENCH SHOW COMMITTEE.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the January number of the *American Kennel Register:*

BEAGLES.

5709. Bannerman, Jr., James Gibson.

IRISH SETTER PEDIGREES.

PHILADELPHIA, 1st Mo., 24th, 1888.—*Editor Forest and Stream:* In your last issue Mr. I. Henry Roberts, in a very offensive style, desired information concerning pedigrees of puppies by his Irish setter Bruce and Lady Red or other bitches owned by Mr. Howard Ireland, alias Associated Fanciers, alias Philadelphia Kennels. Possibly the following affidavits may be of considerable aid to his investigations:

City of Philadelphia, ss.:

Personally appeared before me, the subscriber, William H. List, Magistrate of Court No. 7, of the said city, Edmund F. Craig, who being duly sworn according to law, doth depose and say, That I was employed by the Associated Fanciers as manager of their kennels at Berlin, New Jersey, from November, 1886, until January, 1888, and during that time I had under my care an Irish setter dog called by me Bruce, and that said dog was never known to me by any other name, and was bred to several red Irish setter bitches.

Sworn and subscribed to before me, this 21th day of January, A. D. 1888. WM. H. LIST, Magistrate of Court No. 7. } EDMUND F. CRAIG.

City of Philadelphia, ss.:

Personally appeared before me, the subscriber, William H. List, Magistrate of Court No. 7, of the said city, Minnie C. Christie, who being duly sworn according to law, doth depose and say, That I am employed by the Associated Fanciers as corresponding clerk, and a part of my duties is to make copies of pedigrees sent to purchasers of dogs. It was I who made out pedigree of a puppy as by Bruce out of Lady Red. I find on examination of original letter that the name Bruce (Leo) ex Lady Red, whelped May 21, 1887, is written in the handwriting of Mr. Howard Ireland. I was not instructed by any person to use the pedigree of Roberts's Bruce, but simply took it for granted, as that was the only red Irish setter named Bruce of which there is any pedigree in our pedigree book. I now see that I overlooked the name Leo, which was placed in parenthesis and which I am positive was the name intended to be used as the sire of the pup. I have carefully examined the original letters pertaining to Irish setter puppies sold by the Associated Fanciers during the past two years, and can find but two in which the name of Bruce has been used, one out of Lady Red, the other out of Lady Ireland.

Sworn and subscribed to before me this 23d day of January, A.D. 1888. WM. H. LIST, Magistrate of Court No. 7. } MINNIE C. CHRISTIE.

City of Philadelphia, ss.:

Personally appeared before me, the subscriber, William H. List, Magistrate of Court No. 7, of the said city, Elisabeth Garrison, who being duly sworn according to law, doth depose and say, That all correspondence and pedigrees sent by the Associated Fanciers go through my hands for final correction and approval. Mr. H. Ireland, with possibly a half-dozen exceptions, has never seen pedigrees after they were copied. The names of sire and dam with date of birth of puppies bred at Berlin Kennels are written on the letters ordering the dog, and the pedigree compiled from original ones kept in manuscript books. Such pedigrees as bore Mr. Ireland's signature were signed by him in blank and were filled out afterward.

Sworn and subscribed to before me, this 23d day of January, A. D. 1888. WM. H. LIST, Magistrate of Court No. 7. } ELISABETH GARRISON.

Here is the key to the above affidavits. At our kennels there was an Irish setter called by kennel man Bruce (although he is registered under the name of Leo) to distinguish him from another dog named Leo. This dog was used by us to serve several bitches. In order to keep things straight and know what dog was the sire of the pups, I wrote on the original letters ordering pups, the name (Bruce) Leo ex Lady Red. As there was no separate pedigree of Robert's Bruce, I did not dream that the copyist could make a mistake. The dams of the two pups in question are both by Roberts's Bruce, and the young lady copied his pedigree as both sire and grandsire of pups (which in itself shows a probable blunder).

I would almost as lief be considered a rogue as a fool, and for any one to knowingly send out a fraudulent pedigree containing so celebrated a sire as Roberts's Bruce, and then have the sale published in FOREST AND STREAM and other papers (they were sent to the papers by us), shows a lack of good sense.

Many will think I should have personally examined the pedigrees, but at that time I was engaged in getting the Berlin kennels into shape, and could devote but a day or so a week to the business of the city office.

Mr. Roberts until a few days ago was employed as a bookkeeper at a place of business not eight minutes' walk from my office. He has known me well enough for the past five years to drop my last name in conversation. In addition, he has at least three times since he wrote the letter referred to walked and chatted with my brother, who is associated with me in business, and not a word was said by him in regard to the subject. It is true he wrote me the following letter on Jan. 5:

Associated Fanciers:

GENTLEMEN—Some weeks since I noticed a sale by you of an Irish setter pup by Bruce out of Lady Red. As no bitch of that name has visited Bruce, I suppose there is some mistake. Will you please explain the matter at once and oblige respectfully yours. I. HY. ROBERTS.

After consulting the young ladies having the pedigree matters in charge and they not remembering any such sales, I wrote:

We have never sent a sale to any paper of a pup by Bruce ex Lady Red. The last litter of puppies out of Lady Red were by Leo (Chief ex Moth). If you will send us the name of the party to whom sale was made we will look the matter up, and, if a mistake has been made, have it rectified. The kennel name of Leo is Bruce, to distinguish him from another dog of the same name, but the registered name is always given in the pedigree. We have also an English setter dog named Bruce, but he was never bred to Lady Red. Respectfully, ASSOCIATED FANCIERS.

Receiving no reply I thought no more of the matter, and it was not until I saw the published letter that I had a thorough investigation made. Mr. Roberts evidently supposing he had found one of those wonderful "mare's nests," and possibly a little angered by the fact that I had refused to buy a dog or two that he had offered me, sent for publication the letter refered to. One would suppose from his communication that we changed our name frequently in order to do business dishonestly. The name Philadelphia Kennels was dropped because our mail was often mixed up with that of the Kennel Club, of which Mr. Roberts was then president, and that was in 1883 or 1884. Since then we have always done business under our present name. Respectfully, H. I. IRELAND, Manager Associated Fanciers.

DEATH OF GREGORY'S BELLE.—Mr. D. S. Gregory writes us that his well known pointer bitch Belle died Jan. 21. We first saw Belle at the Eastern Field Trial on Robins Island in 1880 where she won first in the nursery stake, and fourth in the puppy stake, and well remember the game race she ran in the latter stake on three legs, one of her feet having been seriously injured. Belle (A.K.R. 203) was whelped Jan. 1, 1880, and was by Sensation (A.K.R. 217) and out of White's Grace (Match-Nell).

BULLDOG IMPORTATION.—Mr. A. Fred Nash has just arrived in this country from England with his celebrated bull bitch champion Dolores, by champion Grabber and out of champion Dona Sol. She has won many prizes in England, and will make her first appearance in this country on Feb. 1 at the bench show at Nashville, Tenn.

MR. W. H. PIERCE is at Savannah, Ga., among the ducks and quail, and will remain there until about April 1.

SOUTH PARIS DOG SHOW.

Editor Forest and Stream:

The Oxford County Poultry and Bench Show Association opened its second annual show in New and G. A. R. halls, at South Paris, Me., Jan. 24. Everything indicated a successful show. The weather fine, the attendance good, the quality of dogs the best ever exhibited here, and there was a harmony of good will and support by both the management and exhibitors, that added much to the attractiveness of the show. The judging was done by Mr. N. Elmore, of Granby, Conn., and gave complete satisfaction, not an exhibitor to find any fault. Mr. Elmore has made many and lasting friends among both officers and exhibitors. The only hindrance to success, both financially and otherwise, was the terrible storm the last day, blockading all, judges, visitors and exhibitors. Following is a list of the

AWARDS.

MASTIFFS.—*Puppies:* 1st, Wm. M. Shaw's unnamed.

ENGLISH SETTERS.—1st, Fred. L. Brown's unnamed; 2d, John Downer's unnamed.

GORDON SETTERS.—1st, Chas. Bailey's Boss.

INTERS.—1st, Geo. C. Cobb's Don.

OCKER SPANIELS.—1st, N. M. Dunham's unnamed. *Puppies:* 1st, Chas. I. Fogg's unnamed.

FOXHOUNDS.—1st, A. M. Gerry's Drive; 2d, J. M. Bumpus's Jeff; 3d, A. M. Gerry's Music. *Puppies:* 1st, J. L. Tubbs's unnamed; 2d, withheld; 3d, W. B. Cummings's Hunter.

BEAGLES.—1st and 2d, South Paris Beagle Club's Snyder and Mystic; 3d, J. H. Linscott's Chubb.

BULL-TERRIERS.—1st, F. S. Clark's Royal Dick.

COLLIES.—1st, E. P. Atwood's unnamed; 2d, withheld; 3d, I. V. McKenney's unnamed. *Puppies:* 1st, Thayer Bro.s' Pedro; 2d and 3d, I. V. McKenny's unnamed.

A. M. G.

THE WORCESTER HUNT.—The Worcester (Mass.) *Spy* of recent date had this about the hunt appointed for yesterday: All the fox hunters in Worcester county, within twenty miles of the Heart of the Commonwealth, are full of enthusiasm over the coming hunt of the Fur Company, next Wednesday. From 75 to 100 men, fully armed and equipped, with half a hundred of the best fox-hounds in the state, will be on hand if the weather conditions are favorable. Of course John E. Slocomb, the king of the local fox hunters, who, if he cannot describe running a fox with the elegance and enthusiam with which Lady Gay Spanker details the hunting scene, can make the story more amusing to those who know the practical methods employed on the New England hills, will be there. With him will be his celebrated hound Rip, small but as full of bark as the biggest of them, and with a nose which keeps him well up on reynard's track. Johnny is an enthusiast and may be seen on favorable days taking an early start for the suburbs of Paxton on the lookout for "Levine's," where a favorable stand can be taken to prevent reynard from going "furder" south. Webster Thayer and his black and tan Dan will be there. Dan has the reputation of being level-headed, possesses a voice said to be as sweet as new-mown hay. His master prizes him highly and has accomplished wonders in training him. He has not, as yet, acquired the trick of "charging to whistle," but lies down promptly at the sight of a club. From Spencer, George T. Bates, the king of fox hunters in his district, will probably enter Grizzly Ben, a noted hound, said to be a steady and reliable runner, full of endurance. Bates has killed seven foxes ahead of him so far this season. A fox hunt hereabout without A. B. F. Kinney and John M. White of Millbury would be like the rink without a walking match. They have a pack of ten extra good hounds, selected for their running qualities, and some of them will be heard on the Boylston hills next Wednesday. Samuel Thayer will enter three good ones, among them, Old Hunter, a crack runner in his day, and one who knows a thing or two about sly reynard's tricks to-day. Uncle Nathan Harrington will bring out the famous Loud, just to make one more, for no circus is complete without a clown, and Uncle Nathan, if a bit rusty physically, is as full of fun and enthusiasm as when Johnny Slocomb dumped moccasin-shod Lon Woodcock into the drink because in playing ferry boat he had got stranded in a quicksand. John R. Thayer's resonant voice will be heard expressing the pleasure he takes in the chase above the din, to which his extra fine hounds, Fleet and Guess, contribute their full share. A fox hunt without Genial John would be shorn of half its pleasures. Leonard Rand's Old Dick will be one of the leaders of the pack, and Charles Crompton will run the dog Hunt's Spot, one of the best track dogs in the county, whose work will be watched with general curiosity. C. H. Howe of Milford, a member of the Worcester Sportsmen's Club, one of the most genial and successful hunters in the State, will enter Bolivar, a hound possessing many good qualities, which will undoubtedly crop out and be harvested. W. R. Dean will be on hand with the white hound Railsplitter, from his tendency to follow on the top rail of a Virginia fence. This dog has a round, full voice, bearing a resemblance to a B flat foghorn. He was imported from Leominster by a prominent member of the Fur Company, and will undoubtedly make a record before the season closes. The local members will welcome many out-of-town friends, for Allie and Robert Perry are coming up from Braintree; Messrs. Mitchell, Mascroft, Brooks, Gifford, Newton, Harrington, with their hounds, from Grafton; Ezra Burton and George Sampson from South Lancaster, with three hounds noted in that section. Rutland will send down the veteran Chas. Pierce, Paul Wheeler and Mr. Healey, and Ashburnham will be represented by H. C. Newell and a pack of four extra good hounds. From Millbury, Byron Stewart with his dog Moses is coming, and the Oxford contingent will include Messrs. Goshlaw, Appleby, Moffitt and Ingraham, with a number of extra good hounds. Dr. Holbrook, of East Douglas, will be the guest of E. S. Knowles, and the back counties are yet to be heard from.

NEW YORK DOG SHOW.—*Editor Forest and Stream:* The managers have decided to divide the champion black and tan setter class, and the class for Irish terriers by sex; also to make a champion class for wire-haired fox-terriers. A special prize of $25 cash is offered for the best dachshund dog; and a suitable collar for the best rough-coated St. Bernard bitch owned by a lady. The usual medals for dogs that have been placed in any of the field trials held in America will be offered. The president of the Collie Club, Mr. Jenkins Van Schaick, offers a silver cup of the value of $200 for the best collie the property of a member of the Collie Club, to be known as the "President's Cup"; to be competed for annually and to remain the property of the club. The first competition for the cup to be at the Westminster Kennel Club's show, Feb. 21 to 24, 1888.—Jas. Mortimer, Supt.

UTICA DOG SHOW.—The inaugural dog show of the Fort Schuyler Kennel Club, to be held at Utica, N. Y., Feb. 13 to 17, promises to be a much larger show than the management anticipated. Entries are coming in rapidly and many prominent kennels will be represented. Mr. J. Otis Fellows will superintend the show, which is assurance that the dogs will be well cared for. In addition to those already announced there will be a large number of valuable special prizes offered. We are informed that in some of the less important classes where dogs and bitches compete, the classes will be divided by sex, should the number of entries warrant the change. We understand that wins at Utica will count at New Haven and Boston. Entries close Feb. 4, and should be made to the secretary, E. J. Spencer, Box 172, Utica, N. Y.

DOGS IN THE FAMILY AND ON THE FARM.—"C. H. M.," writes to the *Times* from Morristown, N. J.: "Having raised, trained, and used seven setter dogs in the past 30 years, and also having observed the characteristics of other species of dogs, my conclusion is that jealousy in the dog nature was the cause of the wrong-doing of these dogs, and that had there been but one dog to be caressed by the child no harm would have occurred. Any person having a dog may take a strange small child on his knee and call up his dog, and, if a pet dog and fond of his master, get him to take any notice of the child if he can, and observe if the dog does not try to have all attention. On general principles there should be but one dog and of good disposition to a family, and that brought up from a pup not over 6 months old, especially if to be in a family with children and trained by one person to obey. Medium to large sizes are preferable. It is bad for many reasons to have two or more dogs to a family. Like boys, it generally takes two or more to do mischief. Cross a farm, the one dog, ever so large, may start toward you and you have but little occasion to fear (by day,) but when you see a second dog rather small start yelping after you you are in danger—especially if a stranger to the large dog. Further, I believe there would not be one-fourth of the present amount of taxes to be paid in New Jersey for sheep killed by dogs if we had a stringent law compelling all owners of dead animals (carrion) to bury them, and also a law to compel those having slaughter houses to bury or in some way destroy or take care of all blood or bloody refuse, keeping such away from dogs. I have known of dogs gathering at night about a dead horse to start out on a marauding expedition to bite and tear fullgrown cattle. Also, a farming neighborhood where a slaughter house was located, and where a great many sheep were killed by dogs. It is a rare case that a single dog kills his first sheep, but two or more dogs, getting together at a slaughter house at night and getting a taste of blood, are ready for mischief and will go for sheep.

PHILADELPHIA DOG SHOW.—We have received a copy of the premium list of the dog show to be held at Philadelphia Feb. 28 to March 2. In the more important classes the champion prize is $20 for dogs, bitches the same, with $20, $10 and silver medal in open classes, and $10 and silver medal for puppies. In other classes the champion prize is a champion medal, with $10 and silver medal in open classes. In the remaining classes the prizes are $10 and silver medal, a silver medal will be given as a second prize in champion classes where there are three or more entries. A member of the American English Beagle Club offers a special prize of a handsome engraving for the best beagle that has been hunted during the past season and has had not less than ten rabbits killed over during the season. Owners desiring to compete must file with the secretary a certificate stating that entries made are eligible. The judges, so far as announced, are Messrs. Ed. Maher, Gordon setters; H. C. Glover, Irish setters; G. L. Wilms, pointers; H. Mueller, Great Danes and Newfoundlands; W. Stewart Diffenderffer, beagles, and Martin Dennis, collies. Entries close Feb. 18. The secretary's address is Wm. H. Child, Philadelphia, Pa.

THE PACIFIC COAST FIELD TRIALS.—The fifth annual field trials of the Pacific Coast Field Trials Club began at Bakersfield, Cal., Jan. 16. Ten of the 33 nominations for the Derby qualified. The judges selected were: Messrs. R. T. Vandevort, Passadena; F. A. Taft, Truckee, Cal., and F. Satterthwaite, Newark, N. J. The latter was unable to be present, and Mr. J. M. Bassford, Vacaville, Cal., was appointed in his stead. The winners were: California Kennels' English setter bitch Sunlit, first; L. J. Rose, Jr.'s pointer dog Point, second, and third was divided between W. Demott's English setter bitch Haroldine and G. W. Bassford's pointer bitch Blossom. We have made arrangements for a full report, and hope to receive it in time for next week.

BOSTON DOG SHOW.—Spratts Patent will bench and feed the dogs at the coming Boston show. From present indications it seems probable that the entries will exceed in number those of last year. A great many requests for blanks have been received from those who have never exhibited before, and, of course, all who were there last year will not fail to come again. The managers will do all in their power to make the show even better, if possible, than the very successful one of last year, and we have no doubt that the benches will be filled with the best representatives of the different breeds that can be produced. The premium lists are nearly ready for distribution; the prizes exceed those of last year.

NEW HAVEN DOG SHOW.—The New Haven Kennel Club have secured the Skating Rink for their dog show to be held next month. The building is more centrally located than the armory, but is not quite so large, and in consequence the club has decided to limit the number of entries to 500, and all above this limit will be returned. It is the intention of the managers to make this the best show that the club has yet held, and they will spare no trouble to accomplish their purpose. The secretary informs us that he has received a vast number of enquiries for entry blanks and he wishes us to announce in answer to them that the premium lists will be ready about the 25th and at once mailed to all applicants.

SPANIEL LOST.—A brown cocker spaniel dog one year old, with a white star on breast and with tail not quite healed from docking, has been missing about ten days. Any information that will lead to his recovery will be thankfully received by the owner, Mr. C. B. Ludekins, Port Richmond, N. Y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Gold Dust. By Lothian Kennels, Stepney, Conn., for sable collie bitch, whelped Aug. 1, 1887, by Lothian Chief (Montrose, A.K.R. 891—Midlothian Lassie, A.K.R. 2124) out of Lothian Lassie (King Macbeth, A.K.R. 2535—Midlothian Lassie, A.K.R. 2124).

Lothian Pearl. By Lothian Kennels, Stepney, Conn., for light sable collie bitch, whelped July 2, 1887, by King Macbeth (A.K.R. 2535) out of imported Midlothian Lassie.

Alfred. By F. F. Dole, West Philadelphia, Pa., for white, with brown ear, bull-terrier dog, whelped Sept. 3, 1887, by Count (A.K.R. 3178) out of Bertha (Dutch, Jr.—Young Venom).

Brigo. By F. F. Dole, West Philadelphia, Pa., for white bull-terrier dog, whelped Nov. 26, 1886, by Count (A.K.R. 3178) out of Miss Norah (Dutch—Norah).

Billy. By F. F. Dole, West Philadelphia, Pa., for white bull-terrier dog, whelped October, 1886, by Candidate (Marquis—Florence) out of ——.

Primreigo. By Prof. J. C. Schuyler, Berryville, Va., for black and white and ticked English setter dog, whelped Sept. 30, 1887, by Prince Roderigo (Roderigo—Lady Bessie) out of Gypsy H. (Pembroke—Vesper).

Fairfax and Forrest. By C. W. Littlejohn, Leesburg, Va., for lemon and white pointer dogs, whelped May 18, 1887, by Fritz (A.K.R. 1351) out of Virginia (A.K.R. 1357).

Benzara, Di Vernon and Cisseta. By Jas. W. Bullock, Cincinnati, O., for one brindle dog and one fawn and one brindle bitch, whelped Nov. 18, 1887, by Ben Adam (A.K.R. 4733) out of Lady Zara (A.K.R. 2627).

Tammany Breeding and Training Kennels. By J. C. Schuyler, Berryville, Va., for his kennels of pointers and setters.

Editor Forest and Stream: The date of Foreman's Ned's birth should read Nov. 5, 1886, instead of Dec. 5, as in your last issue.—A. J. Kolb (Yonkers, N. Y., Jan. 28).

Editor Forest and Stream: In your issue of Jan. 19, under Kennel Notes, I notice two slight errors, owing, no doubt, to the similarity of my 8s and 3s. Under Names Claimed: Ilford Rex was whelped Nov. 18, instead of Nov. 13. Under Sales: Ben Adams's number is 4753, instead of 4738.—Jas. W. Bullock (Cincinnati, O., Jan. 23).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Edgecomb Lassie—Lothian Chief. Lothian Kennels' (Stepney, Conn.) collie bitch Edgecomb Lassie (Montrose, A.K.R. 891—Lady Edgecomb) to their Lothian Chief (Montrose—Midlothian Lassie), Jan. 4.

Midnight II.—Doc. American Cocker Kennels' (William Penn, Pa.) cocker spaniel bitch Midnight II. (A.K.R. 4471) to their Doc (A.K.R. 3795), Jan. 19.

Lucy—Doc. American Cocker Kennels' (William Penn, Pa.) cocker spaniel bitch Lucy (A.K.R. 4470) to their Doc (A.K.R. 3795), Jan. 24.

Queen Obo—Doc. American Cocker Kennels' (William Penn, Pa.) cocker spaniel bitch Queen Obo (A.K.R. 3082) to their Doc (A.K.R. 3795), Jan. 24.

Miss Topsy—Baby Obo. American Cocker Kennels' (William Penn, Pa) cocker spaniel bitch Miss Topsy (Doc—Nellie) to J. P. Willey's Baby Obo (Obo II.—Phonsie), Jan. 24.

——*—Bran.* Dr. J. W. Downey's (New Market, Md.) deerhound bitch —— (Chieftain—Thora) to J. E. Thayer's Bran (Donald—Wyvis), Jan. 22.

Carmen—Robinson Crusoe. J. E. Thayer's (Lancaster, Mass.) bull bitch Carmen (Toreador—Betsey) to his Robinson Crusoe (Monarch—Penzie), Dec. 17.

Ruby Buckellew—Gloster. J. L. Breese's (Tuxedo Park, N. Y.) English setter bitch Ruby Buckellew (Buckellew—Brimstone) to his Gloster (Dashing Rover—Trinket), Jan. 27.

Forest Dora—Prince Foreman. Rosecroft Kennels' (Birmingham, Conn.) English setter bitch Forest Dora (Dick Laverack—Forest Fly) to their Prince Foreman (Foreman—Jolly Nell), Jan. 24.

Editor Forest and Stream: I sent you a notice of the breeding of my Clumber spaniel bitch Joan II. to Johnny II., which was inserted in your issue of Jan. 5. In it I made a mistake in Johnny II.'s pedigree. It should be Johnny—Nell III., instead of Johnny—Jess.—John S. Wallace (Toronto, Ont., Jan. 23).

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Pegg. S. S. Eldred's (Wakefield, R. I.) collie bitch Pegg (A.K.R. 4716), Jan. 29, eight (five dogs), by his Mark Twain (A.K.R. 4713).

Midlothian Lassie. Lothian Kennels' (Stepney, Conn.) collie bitch Midlothian Lassie (A.K.R. 2124), Jan. 2, three dogs, by their Lothian Ned (Montrose, A.K.R. 891—Tibbie).

Edgecomb Beauty. Lothian Kennels' (Stepney, Conn.) collie bitch Edgecomb Beauty (Oscar II.—Lady Edgecomb), Nov. 1, four (two dogs), by their Lothian Chief (Montrose, A.K.R. 891—Midlothian Lassie, A.K.R. 2124).

Edgecomb Maid. Lothian Kennels' (Stepney, Conn.) collie bitch Edgecomb Maid (Oscar II.—Lady Edgecomb), Nov. 14, four (three dogs), by their Lothian Chief (Montrose, A.K.R. 891—Midlothian Lassie).

Raby Susie. J. E. Thayer's (Lancaster, Mass.) fox-terrier bitch Raby Susie (Raby Tyrant—Jaunty), Jan. 25, four (two dogs), by his Reckoner (Regent—Nita).

Lorna II. J. E. Thayer's (Lancaster, Mass.) deerhound bitch Lorna II. (Bruce—Lorna), Jan. 16, six (three dogs), by his Chieftain (Bevis—Heather).

Miss Mixture. J. E. Thayer's (Lancaster, Mass.) fox-terrier bitch Miss Mixture (Mixture—Shame), Jan. 15, four (two dogs), by his Belgrave Primrose (Belgrave Jerry—Wasp).

Countess Zina. J. E. Thayer's (Lancaster, Mass.) deerhound bitch Countess Zina (Ross—Lady), Jan. 13, four (three dogs), by his Bran (Donald—Wyvis).

Di. J. E. Thayer's (Lancaster, Mass.) fox-terrier bitch Di (Raby Tyrant—Richmond Olive), Jan. 25, four (three dogs), by his Reckoner (Legent—Nita).

Lead. J. M. Fronefield, Jr.'s (General Wayne, Pa.) beagle bitch Lead, Dec. 12, seven (five dogs), by C. Lithgow's Blink.

Dame Trot. J. M. Fronefield, Jr.'s (General Wayne, Pa.) imported beagle bitch Dame Trot, Dec. 15, four (two dogs), by Chas. Lithgow's Blink.

Neva B. W. H. Beede's (Lynn, Mass.) English setter bitch Neva B. (Pride of Dixie—Fairy Belle), Jan. 25, eight (five dogs), by A. M. Tucker's Gus Bondhu (Dashing Bondhu—Novel).

Rideau Lou. Rideau Kennel Club's (Ottawa, Ont.) cocker spaniel bitch Rideau Lou (Bob IV.—Ravenese), Jan. 15, seven (four dogs), by their Obo, Jr. (A.K.R. 1481).

Joan II. J. S. Wallace's (Toronto, Ont.) Clumber spaniel bitch Joan II. (Johnny—Jill), Jan. 22, four (two dogs), by C. H. Wallace's Johnny II. (Johnny—Nell III.).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Remus. White bulldog, whelped May, 1884 (A.K.R. 3639), by J. E. Thayer, Lancaster, Mass., to Donald Maclean, Detroit, Mich.

Bellissima Regina. Red brindle bull bitch, whelped June, 1887, by Robinson Crusoe out of Carmen, by J. E. Thayer, Lancaster, Mass., to Trenor Park, New York.

Rowdy. White, black and tan beagle dog, whelped July 21, 1886, by Rattler III. (A.K.R. 2768) out of Myrtle, by W. Deane, Somerset, Mass., to W. F. Rutter, Jr., Lawrence, Mass.

Brigo. White bull-terrier dog, whelped Nov. 26, 1887, by Count out of Miss Norah, by F. F. Dole, West Philadelphia, Pa., to Howland Russell, Milwaukee, Wis.

Alfred. White, with brown ear, bull-terrier dog, whelped Sept. 3, 1887, by Count out of Bertha, by F. F. Dole, West Philadelphia, Pa., to Wm. Maxwell, Rockville, Conn.

Roland. White, with brown ear, bull-terrier dog, whelped June 2, 1887, by Count out of Young Venom, by F. F. Dole, West Philadelphia, Pa., to T. E. Smith, Philadelphia, Pa.

Alice. Fawn mastiff bitch, whelped July 14, 1887, by Victor out of Clytie, by Calhoun Kennels, Springfield, Mass., to L. C. Gulliford & Son, Erie, Pa.

Nell. Fawn, black points, mastiff bitch (A.K.R. 3647), by Victor M. Haldeman, Milford, Del., to Lewis A. Berger, Langhorne, Pa.

Raby Mixer—Jaunty whelps. Fox-terriers, whelped June 15, 1887, by J. E. Thayer, Lancaster, Mass., a tan head and markings on body dog to Mr. Mairs, and a black and tan head, body white, dog to Mr. Ellis, both of New York.

Chieftain—Lorna II. whelp. Brindle deerhound dog, whelped June, 1887, by J. E. Thayer, Lancaster, Mass., to Oliver Ames, 2d Boston, Mass.

Raby Mixture—Wasp II. whelps. Black and tan head, body white, fox-terrier dogs, whelped May 24, 1887, by J. E. Thayer, Lancaster, Mass., one each to Mr. Sturgis, Boston, Mass., and I. L. Banks, New York.

Editor Forest and Stream: Owing to a misunderstanding as to the conditions of the sale of my bulldogs Merry Monarch, Tostig, Sondan and Beatrice, and my bull-terrier Jackson, to C. E. Paul, of Aquascalientes, Mexico, the sale is off, and the dogs remain in my possession.—Chas. D. Cugle (Hartford, Conn., Jan. 27).

IMPORTATIONS.

Bradford Harry. Blue and tan Yorkshire terrier dog, whelped May 15, 1885, pedigree not given, by P. H. Coombs, Bangor, Me. from H. W. Alderson, Leeds, Eng.

DEATHS.

Glen Fairy. English setter bitch, age not given (Glen Rock—Countess Flirt), owned by N. L. Bassa, New Canaan, Conn., Dec 29, from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. L. W., Boston.—Consult "Ashmont" on distemper and follow treatment.

C. S., Aalantic City.—I have a bitch which I had spayed in September last; do you think that it should interfere with her by working her so soon? She has been sick, and they say it was from using her so soon. Ans. No. Look for other cause.

F. C. E., Macon, Ga.—I have a four year old pointer dog that has just come through a severe case of distemper. He has recovered his appetite, and shows some sprightliness, but has a continued sniffling or coughing. There is also a slight discharge of blood from his nostrils. I gave him Glover's imperial distemper cure at first, with one or two doses of castor oil. Have ceased all treatment now except about teaspoonful of sulphur once a day. He seems to strain violently at stool, passing a loose yellowish matter, not at all mucous in character, and no sign of worms. Ans. Dog only wants general treatment. Get Pil. ferri Co. No. 12 and give one three times daily in the food or hidden in a bit of meat.

V. M. V., Neenah, Wis.—My pointer had the distemper and I pulled him through all right, but he does not seem to have the same sense of smell since he got over it that he had before. I would like to know what to do for him. Ans. General treatment is all that can be used. Keep the bowels open and give five drops Fowler's solution of arsenic night and morning.

C. F. S., Atlantic City.—I have a hound dog that has had the distemper, and it has left him with very sore eyes, and he seems to have no ambition to hunt. I take him out; he seems very anxious to hunt, but after a few hours' run he gives up, completely overdone, and wants to lay around the rest of the day. His eyes get very red, and a thick mucus exudes from them. Before he was taken sick, he would hunt from morning until night, and it was a hard matter to get him off the game. Can you give me any information in regard to it, or can some of the readers of the FOREST AND STREAM? Ans. See reply to "F. C. E." in this issue.

E. E. G., Stoughton.—I have a beagle whose age I should judge is about seven years; he is an extra good rabbit dog, but has a running sore on the top of his head and it emits considerable odor, in consequence of which I have been thinking of disposing of him, as it is not pleasant to have him about the house. This sore does not affect his hunting, as he is always ready to go, and after a day's hunting is more fast to go the next day than ever. When he is heated the matter oozes from the sore. One of his tushes has been broken off and perhaps the sore is caused by that, as he chews his food on the opposite side of his mouth. Can you prescribe any mode of effectual treatment; is the dog too old to be cured or is it better to kill him and thus part with a fine dog? Ans. Sore may be due to decayed tooth or bone. If this is so, draw tooth and sore will heal.

MALTESE, Newark, N. J.—We have a Maltese kitten about five or six months old which occasionally takes a strange sickness. The first symptoms are his hiding away and a refusal to eat, also a non-inclination to be petted. Then in an hour or two he will start off on a run as fast as he can go, dashing up the walls and falling back again, only to repeat it; then up stairs to do the same thing, then down again and finally run around and around in a circle until exhausted, when he creeps off somewhere and hides for the balance of the day, when he reappears sore and stiff, seeming to be lame and very sore about his hindquarters. He also seems to have a diarrhœa and his discharges are black and very offensive to the smell. Can you tell me what ails him and what to do for him? Ans. Cat has fits, due to worms or some other digestive disturbances. Purge with full dose of castor oil and give 3grs. of quinine three times daily for a week.

DELAWARE, Philadelphia.—Will you kindly advise me what is the matter with a St. Bernard 8mos. pup I have. He has a slight cough with expectorations, not much of an appetite, and a slight running at the eyes. Breathing short and when in house pants. Temperature does not seem high. Have treated him for a cold. Gave small dose castor oil and nitre followed by 3grs. quinine night and morning. What would you advise? Ans. Distemper probably. Treatment good. Make the quinine 5 instead of 3grs. at a dose. Get the following:

℞ Tr. sanguinar..... ℥ ss
Tr. opii..... ♏ i
Syr. senegæ..... ♏ i
Ammonie muriat..... ♏ ii
Aq. q. s. ad..... ♏ iv
Mix. Sig. Teaspoonful three or four times daily.

M. O. C., Yonkers.—My Irish setter pup, 10½mos. old, is troubled with some disease. It appears to be the mange or itch, and is making its appearance on his forehead and back. It is a large kind of pimple with a flat dark scab on top. This, however, becomes dry with small dry scales like chaff, and the hair falls out. I feed him well cooked meat and meal three times daily. His appetite is good and with the exception of this disease appears all right. At intervals of one week I give him one of Spratts dog cakes. Ans. Keep bowels open with syrup of buckthorn in teaspoonful doses. Give five drops of Fowler's solution of arsenic morning and evening in food, and apply the following ointment to the affected parts morning and evening after washing and drying:

℞ Ung. diachylon..... ℥ ss
Ung. zinc oxid..... ℥ iss
Mix. External.

W. G. W., Detroit.—Can you give me any cause for my dog's illness. He is a pointer pup 4mos. old. Every morning and sometimes in the day he howls and refuses to leave his kennel until I make him. Then he is very lame in right shoulder, with penis hard and about ¾in. red protruding. After I have made him run around for a few moments he stops and starts to make water in enormous quantity for full two minutes. After that the lameness ceases nearly entirely; he has a splendid appetite, and is always lively except when these turns come on. Can you tell me what is wrong and the best treatment to proceed with to cure him? Ans. Give the following:

℞ Spts. etheris nitrosi..... ♏ ss
Tr. nucis vom..... aa ♏ ss
Aq. ad..... ♏ iv
Mix. One teaspoonful three times daily. Look for worms.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CREEDMOOR'S TRANSFER.

THE National Rifle Association, of New York, through a committee composed of John B. Woodward, Geo. W. Wingate and Rodney C. Ward, has made a written tender of the Creedmoor range on Long Island to the New York State Legislature, for the use of the State National Guard. The range has been fitted up at a great expense and is the best equipped in the country for long-range target practice. The Association generously makes the State a gift of the magnificent grounds and all their appurtenances, asking in return only the privilege of using them during their annual shooting matches.

A bill has been introduced at Albany which provides for the purchase by the State of such part of the grounds belonging to the range as are not the property of the National Rifle Association. The land on which the long range is situated was bought by the National Rifle Association in 1872 and fitted up with butts for twenty targets and bullet-proof fences. Subsequently these grounds proved insufficient and fifteen acres additional were leased, with the privilege of purchasing for $6,000. Four more targets were put up and a club house 150×50ft. was erected and fitted up.

The original seventy acres, which is the exclusive property of the Association, purchased by State appropriations, is given back to the State and the fifteen acres leased at a later period the State is asked to purchase for $6,000.

The range has always been used for target practice by the National Guard, and the object of the Rifle Association is to preserve it to the State for that purpose.

Gen. Wingate, explaining the points of the bill introduced by Gen. J. W. Husted, said: "The National Rifle Association considers itself a trustee holding this property for the benefit of the National Guard and for the advancement of rifle practice. The Association finds that the usefulness of the range will be greatly impaired and, perhaps, the shooting by the National Guard upon it will be entirely stopped unless it can purchase that portion of the range which it has hitherto leased from the Poppenhusen estate, and can also acquire the property in the rear, which, it is claimed, is damaged by the shooting of the National Guardsmen. The Association has no money to make these purchases, and cannot obtain the sum by private subscription—in fact, does not think it right, as the land is needed for the troops of the State, to ask private individuals to pay for it.

"The object of the bill is that the Association will give to the State seventy acres of ground which it owns absolutely, with a hotel upon it and all fixtures, which together cost over $65,000. For this the Association only asks that the State shall acquire the land referred to as necessary for the use of the National Guard, and which will permit it to hold its annual meeting on the grounds during ten days in each year.

"Creedmoor is practically finding itself in the same position as Wimbledon is in Great Britain. It is generally understood that the great English range must be closed, probably during the present year, as the property around it has become so settled that rifle practice can no longer be safely indulged in. Throughout Great Britain it is a matter of regret that the government did not acquire that property years ago; it is now probably too late.

"There is no more reason why the National Rifle Association should own the Creedmoor range than that a private individual should own the State camp."

MILITARY SCREW SIGHTS.

MR. C. F. LOWE, well known as one of the most advanced riflemen of Europe, has had an 18 months' campaign of letter writing trying to induce the British National Rifle Association to permit the use on a military breechloader of a rear sight with a screw adjustment. In March, 1886, in response to a query sent to Gen. Wingate, as to the rule of the American Association, Mr. Lowe received response:

As far as the N. R. A. of America is concerned, it has never recognized any difference between the M.B.L. windgauge, moved by a screw and with a slide, and considers the former preferable in many respects. I inclose a copy of the first rules in which it was allowed: "III. Rifles.—The rifles allowed to be used in the competitions are, first, military rifles; second, any rifles; which must comply with the following conditions: (1.) Military rifles. Sights to be *bona fide* military pattern, to be attached to the barrel, the front sight to be immovable. The rear sight may be used as a windgauge by the sliding bar or leaf being moved laterally, either by sliding or by any similar device sufficiently substantial for military purposes."

Col. Blunt, of the American ordnance department, wrote that the new Springfield issued to the infantry and artillery "have a screw motion for wind gauge, and a slide with a screw clamp for elevation."

Mr. Lowe then wrote to Secretary Mildmay, of the British N. R. A., and after a great deal of letter writing the council, made up of Sir Henry Wilmot, Earl of Wemyss, Earl Spencer, Earl Waldegrave, Lord Wantage, Hon. A. Egerton, Sir Henry Fletcher, Sir Henry Halford, Lieut.-Col. Marsden, Lieut.-Col. Walrond, Lieut.-Col. Burt, Lieut.-Col. Wilson, Lieut.-Col. Hollway, Major Knox, Major Page, Capt. Pixley, Mr. Wells and Major Waller, gravely passed the following on Nov. 3, 1886:

Resolved, That the sight proposed by Mr. Lowe is not a practical military sight, inasmuch as being moved by a screw it could not be instantly put into a central position; that it is too complicated for practical use in the field.

Mr. Lowe was persistent, and finally, on Feb. 9, 1887, got a hearing by the council, and again submitted the Springfield rifle fitted with the "Buffington" sight, kindly lent by Capt. Burgess for the purpose, discussed the question with the several members of the council present.

After hearing all that was to be said the council put a final quietus upon Mr. Lowe and closed up the record as follows: "*Resolved*, That the resolution passed at the previous meeting of the council (Nov. 3) be adhered to."

BOSTON, Jan. 28.—The riflemen found another cold and windy day for rifle shooting at the range of the Massachusetts Rifle Association when they arrived there this noon, and low scores were in order.

Rest Match, 200yds.

W. Gentry won gold medal.—JAS. MONTGOMERY, JR., Sec.

NEWARK, N. J., Jan. 30.—Rifle shooting is once more taking its old-time position in public favor, judging from the amount of shooting on the various galleries, the number of new galleries being fitted up and the number of clubs being organized. One range was put up last week, one other started and two contracted for. In addition to the eight or nine clubs now in existence another is to be organized in the Twelfth Ward, one in Springfield avenue, near Belmont avenue, and one in Roseville. It is very likely that another league will be formed this season.

BENNETT VS. PAINE.—Under date of Jan. 25, W. W. Bennett, the pistol shot, publishes a reply to the late Chevalier Paine, anent their pistol shooting scores, in which Bennett says: "I desire to say a few words in relation to Mr. Paine's proposition. He offers $1,000 if I will beat his record of 904 points on Feb. 1, and $500 additional if I will repeat my score of 914 points. It would be folly for me or any other person to undertake to secure this result on a specified day at this season of the year, when weather conditions are uncertain. On the day Mr. Paine scored 904 points he was favored by perfect weather conditions; on the day I scored an aggregate of 914 points it was also favorable; but on Feb. 1, with snow to cause a glaring light if sunshine, as well as the liability of high wind, he, I nor any other person could roll up a high score. In regard to shooting against Mr. Paine's record of 904 points, I have already beaten that record, and given to the public every evidence I can that it was done in a fair manner. If Mr. Paine is so charitably inclined as he would have it appear, I will shoot 100 shots a day for six consecutive days, three days at Providence and three days at Walnut Hill, if permission to use the latter range is granted, an admission fee to be charged and proceeds to be devoted to such charity as the referee may select. I am particularly anxious to correct two of the many errors which Mr. Paine has made in his voluminous writing to the daily press. I am not a member of the Boston Lancers nor of the Massachusetts Rifle Association, and regret that slanderous remarks have been made by Mr. Paine, and trust if he has further spleen to cast he will direct it wholly to me, and not to those who are in no manner connected with this affair.—W. W. BENNETT."

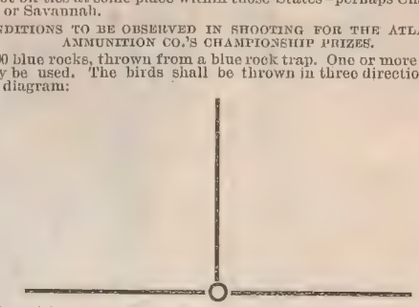
THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE ATLANTIC AMMUNITION TOURNAMENT.

THE Atlantic Ammunition Company announce the sweepstake tournament to determine the amateur championship of 1888. The company's circular says that "to promote and increase the interest in trap shooting and field sports, we have decided to make the following donations to sportsmen in each locality as named below:

New England States, a diamond badge, costing					$200
New York State, diamond watch charm trophy					50
New Jersey State,	"	"	"	"	50
Pa., Md. and Del.,	"	"	"	"	50
Virginia	"	"	"	"	50
N. C. and S. C.	"	"	"	"	50
Ga. and Fla.	"	"	"	"	50



The above trophies and badge are to represent and establish the amateur championship of each locality named. We shall do all within our power to guarantee fairness and satisfaction to all.

Contests will all be sweepstakes. All money paid to us as entry fees will be divided, 20 per cent to the winner of the trophy, 50 per cent. to the second and 30 per cent. to the highest score. Entry fees are required as a guarantee of good faith and will be forfeited in case of withdrawal or upon evidence of crookedness. Should an entry be refused the fee will be returned. It is believed that cash prizes from entries will be considerable and it is our intention to accept from dealers and manufacturers such cash or merchandise as they may feel inclined to offer as supplementary prizes.

In fairness to all, it is necessary that in these contests the conditions shall be alike. We have, therefore, selected the target to be used "The Blue Rock," as the great majority of clubs and individual shooters already have the blue rock trap in use. We require the use of Chamberlin cartridges because the majority use them, and we wish the minority to become acquainted with their merits. Uniformly good shooting can only be done with cartridges uniformly loaded, and the great variety of loads enables you to select such as you may desire. Shooting off ties, which may occur in New England, New York, New Jersey, Pennsylvania, Maryland and Delaware, shall be upon such grounds as we may select within easy reach of New York city, under our supervision and judgment; at which time it is intended to give a grand tournament. Ties made in Virginia will be shot off at some place within the State. North Carolina, South Carolina, Georgia and Florida will shoot off ties at some place within those States—perhaps Charleston or Savannah.

CONDITIONS TO BE OBSERVED IN SHOOTING FOR THE ATLANTIC AMMUNITION CO.'S CHAMPIONSHIP PRIZES.

100 blue rocks, thrown from a blue rock trap. One or more traps may be used. The birds shall be thrown in three directions, as per diagram:

34 straightaway, 33 directly to the left, 33 directly to the right

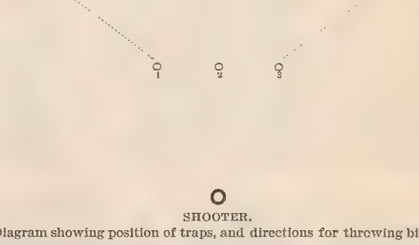
Shooters using 10-gauge guns, to stand 18yds. from the trap, 12 gauge, or smaller, 16yds. Open only to amateurs who have not a public record higher than 90 out of 100. All scores must be kept with ink, or indelible pencil, and mailed to us within 48 hours after they are made. Chamberlin cartridges only can be be used, and must be brought to the score in the original package with the seal unbroken; to be opened and used in the presence of judges and referee. All scores must be in, and entries closed by Sept. 25. The winner of any of our trophies shall hold it open to challenge for one year, but any one challenging him must give the holder choice of ground; one trial being decisive. As these trophies do not become the absolute property of the winner until the expiration of the year, it shall be optional with us to either retain possession of any trophy or require security, that it shall be forthcoming in case of challenge, until it shall have become the property of the winner. Contests shall commence March 1 and close Sept. 25. Scores may be shot at any time between these dates, whenever is most convenient, and each contestant may make as many trials as he may wish. Any one desiring to compete for these prizes, must first notify us of his intentions, accompanied by a remittance of entry fee, when his name will be entered upon the list of contestants and suitable score blanks will be promptly sent him. Any one may compete under a shooting name, provided we have his true name and address. The scores made for these contests may be divided into two scores of 50 each, but every score must be 50 consecutive shots and every shooter must declare to his judges when he commences his score. He may, however, if he finds he is not making a satisfactory score, stop at any time and commence again. All ties must be shot off at same number of birds, under the same rules and regulations, at such time and place as we may designate. Entry fee for New England badge, $5. For all other trophies, $1. Residents only of each locality can compete. We reserve the right to judge any score bearing evidence of fraud, excluding all such. Should any disputes arise, they shall be referred to us and our decision shall be final. Any points not covered by the above, will be governed by the Chamberlin Cartridge Company's rules for trap shooting, as follows:

Rule 1, Decision of Judges.—The judges and a referee shall be appointed to judge all matches. If the judges cannot agree, the referee shall decide, and his decision shall be final.

Rule 2, Special Duties of Referee.—The referee shall see that the traps are properly set at the beginning of a match and that they are kept in order to the finish.

Rule 3, Flags for Judges.—Each judge shall be provided with a red flag and a white flag. They shall raise the red flag to indicate a "broken" bird, and the white flag to indicate "lost" bird; they shall raise both flags to indicate "no bird" or an imperfect bird: they shall also announce the score in a loud voice.

Rule 4, Keeping the Score.—It shall be optional with the judges and referee to keep the score themselves, or appoint some one for that purpose, and the score thus kept shall be the official score, provided, however, that the referee must testify to the correctness of the score or scores made under his supervision if required.



Rule 5, Score with Ink.—All scoring shall be done with ink or indelible pencil; the scoring of a lost bird shall be indicated by an "0," of a dead or broken bird by a "1."

Rule 6, Traps.—All matches shall be shot from three traps set level, in the segment of a circle 5yds. apart. The radius of this circle shall be 18yds. The traps shall be numbered from No. 1 on the left to No. 3 on the right, consecutively. All traps must throw the birds a distance of not less than 40yds. Each trap must be tested for this standard distance before the shooting begins, and if any trap be found too weak to throw the required distance a new trap or spring must be substituted.

Rule 7, Adjusting Traps.—The lever or projecting arm of the trap shall be so adjusted that the elevation of the bird in its flight at a distance of 10yds. from the trap shall not be more than 8ft. nor less than 4ft., and the angles of flight shall be as follows:

No. 1 trap shall be set to throw a left quartering bird.
No. 2 trap shall be set to throw a straightaway bird.
No. 3 trap shall be set to throw a right quartering bird.

After the traps are set for the above angles, if the bird for any reason shall take a different angle, it shall be considered a fair bird, provided the trap has not been changed.

(Diagram showing position of traps, and directions for throwing birds.)

Rule 8, Pulling of Traps.—The trap puller shall stand at least 6ft. behind the shooter, and when the shooter calls "pull," the trap or traps shall be instantly sprung. In single-bird shooting he should pull the traps indiscriminately, and not one, two and three, consecutively. He shall pull equally and regularly for all shooters. If the bird is sprung before or at any noticeable interval after the shooter calls "pull," he can accept the bird or not, but if he shoots the result shall be scored.

Rule 9, Screens.—No screens shall be used. Backstops may be provided for trappers, not to exceed 10yds. from the end traps and not to exceed 3ft. in height.

Rule 10, Distance.—In single-bird shooting the rise shall be 18yds. for 10-bore guns, 16yds. for 12-bore guns. In double-bird shooting the rise shall be 15yds. for 10-bore guns, 11yds. for 12-bore guns. All distances mentioned in these rules must be accurate measurement.

Rule 11, Gun.—No gun of larger caliber than 10-bore shall be used.

Rule 12, Loading Guns.—In single-bird shooting only one barrel shall be loaded at a time, and the cartridge shall not be placed in the barrel until the shooter has taken his position at the score; in double-bird shooting both barrels to be loaded at the score.

Rule 13, Position of Gun.—The butt of the gun shall be held below the armpit until the shooter calls "pull." If this rule is violated and the bird is missed it shall be scored as a "lost bird." If it be broken it shall be declared "no bird" and another shall be shot at.

Rule 14, Broken Birds.—A bird to be scored broken must have a perceptible piece broken from it while in the air. The decision of the judges and referee on this point shall be final. No bird shall be retrieved to be examined for shot marks. If a bird be broken by the trap, the shooter may claim another bird, but if he shoots the result must be scored.

Rule 15, Single-Bird Shooting.—Each contestant shall shoot at three birds before leaving the score. If two birds are sprung at the same time, it shall be declared "no bird."

Rule 16, Double-Bird Shooting.—Both traps must be pulled simultaneously, and each contestant shall shoot at three pairs

consecutively, thrown as follow: First pair from No. 1 and 2 traps. Second pairs from No. 2 and 3 traps, and third pair from No. 1 and 3 traps. If only one bird is thrown it shall be declared "no birds," and if the gun miss fire on either bird it shall be declared "no birds." In each and all such cases another pair of birds must be shot at.

Rule 17, Tie Shooting.—All ties must be shot off at the original distance and at the number of birds agreed on by the contestants. If, however, the contestants cannot agree promptly on this point, the referee shall fix the number, and his decision shall be final. The rules prescribed for single and double bird shooting shall prevail in tie shooting.

Rule 18, Challenge.—No challenge shall be considered unless the parties challenging are contestants.

ESSEX—EASTON MATCH.

Editor Forest and Stream;

Some four weeks ago several of our Newark shots, also the Jersey City Heights Gun Club received a challenge from the Easton Gun Club to shoot them a club match under Harlingham rules for glory, the price of the birds or big money. The challenge was so bold and broad that it caused a great deal of talk among the local clubs and resulted in the old Essex Club accepting the challenge for glory or the price of the birds. On the morning of Jan. 26, a party of about 30 Essex members and friends started in a special car from Newark on the Central Railroad of New Jersey for Easton.

Early in the evening of the previous day it snowed, changing later in the evening to rain, but the morning broke clear and mild, and not a member of the jolly party had any idea that before reaching home again they should experience a veritable blizzard with all its consequences and hardships. It was soon noticed that the snowfall increased the further west we came, and when within some 20 miles of Easton we found the snow about 15in. on the level. The wind in the meantime had increased in force and the thermometer was steadily dropping down closer to zero. At Easton the club was met by a committee of the Easton Club who had sleighs in readiness, and all hands were conveyed to the Fair Grounds Hotel, which was reached after a rather slow ride, owing to the depth of snow.

Upon arrival a bountiful dinner awaited all, served by the Easton club, who exerted themselves to their utmost to make up for what the weather clerk was trying his best to mar the occasion. The weather by this time was simply fearful. The wind had now increased to a howling gale traveling at a rate of 65 miles an hour, driving dense clouds of drifting snow along, so that it was almost impossible to make any headway against the wind. However, the Essex club had come to shoot and postponement was out of the question. After considerable trouble 3 instead of 5 traps were rigged up in such a manner that the birds were give the benefit of the wind. By mutual consent 7 birds were substituted for 10 birds per man, as it was thought impossible to get through the match with 30 men shooting under the present conditions. Old South Paw Heritage, after borrowing a buffalo robe, sealskin cap and an extra pair of high arctics, was unanimously chosen for referee, much against his wish, as he had come prepared to invest a dollar or so on the result and if possible to make himself paid for the six sleepless nights the bold Easton challenge to the Jersey City Heights club had caused him.

The shooting was done under the utmost imaginable difficulties. Several shooters were blown bodily several yards over the score before being able to stop themselves; and the snow was drifting so thick at times that the traps, 27½yds. away, could not be seen. The birds were a good lot, but in many instances were afraid to start, while others would put their head to the wind and give the shooters almost a standing mark. Many, however, went away like ghosts, and while the birds flew best during the last half of the second squad and third squad when the wind had moderated some, the first squad could hardly stand up at the score, and several times shooter and gun were blown yards away from the score and tacir intended aim at the time of firing. The shooting on both sides was very good under the circumstances. A total 80 per cent. for the Essex was something to be proud of. The Easton Club is to be congratulated on the splendid race they made in their maiden effort. Several phenomenally long second barrels were made by members of both teams. The utmost good feeling prevailed throughout the match and not a harsh word was heard anywhere.

The shoot over, all hands returned as best they could to the hotel, under the circumstances not an easy matter, for the road had become impassable for conveyances of any kind, and snow drifts 5 and 6ft. high were numerous. The Easton club had again taken care to prepare a sumptuous supper for the boys, which all did justice to among complimentary speech making by members of both clubs. At 7 o'clock the Essex Club were at the depot and soon were comfortable in their special car. However, real trouble should only then begin. The train was two hours late. After a successful start delays were numerous, and on several occasions the locomotive left the train to "buck" the drifts, and had it not been for friend Stanere's inimitable humor, patience might have had a sore trial; but all ended well and no lives were lost. The Essex party reached home at about 1:30 A.M., while the few Jersey City and Hoboken members came home an hour or two later.

The Essex boys speak in the most flattering terms of the splendid reception given them by the Easton club. Many new friends were made, and the home club shall do its best to reciprocate when the Easton club comes to Newark for the return match, which will come off soon. Guns of all kinds and makes were used. A large percentage of Schultze powder was used, and it is a remarkable fact that all five straight scores were made with Schultze powder. Figure 2 signifies second barrel. The following is the score:

Essex.	First Squad.	Easton.
Ford	1111111—7	William Bercaw 2111022—6
Brientnall	0221012—5	James Smith 1121220—6

SKIPPER.

TORONTO, Jan. 23.—A shooting tournament took place at Guelph to-day between teams of the Toronto and Guelph gun clubs, with the following result:

Toronto Gun Club.		Guelph Gun Club.	
Geo Briggs	1111111— 7	G Sleeman	1111011— 6
Jeff Worden	1011111— 6	W Ferguson	0000101— 2
W Patterson	1101111— 6	E V Thompson	1001111— 5
D Black	1111011— 6	J Edwards	1011011— 5
A Purse	1111110— 6	C Quinn	0011101— 4
J Townsend	1100110— 4	W D Shoddock	1101111— 6
G Pearsall	1011010— 4	J Waypher	0111101— 5
W Felstead	1100001— 3	H L Walker	1110011— 5
W Bugg	0110111— 5	J Holliday	1110111— 6
D Blea	0010101— 3	J Johnston	1111001— 5
	50		49

A sweepstake match at Canada blackbirds took place afterward, 10 birds each, the result being as follows:

Shaddock	1111111111—10	Thompsom	0111111001— 7
Briggs	1011111101— 8	Pearsall	1101100111— 6
Blea	1110011111— 8	Patterson	1100101000— 4
Waypher	1001111111— 8	Bugg	0101101000— 4
Johnston	0101111111— 8	Ferguson	0000101110— 4
Filsted	1101011011— 7	Edwards	0000001000— 1
Townsand	1111100101— 7		

On the shoot off of the ties the result was as follows: Waypher 3, Shaddock 2, Patterson 2, Briggs 2.

Jan. 26,—The annual meeting of the Toronto Gun Club was held this evening. All the reports presented proved to be satisfactory. A number of new members were elected, bringing the roll up to nearly two hundred. It was decided that a team shoot, president versus vice-president, should be held at the Woodbine, and that on Feb. 1 the return match between the club and the Guelph Gun Club should be held, the annual dinner to follow in the evening. The following officers were elected for the ensuing year: President, Mr. Geo. Pearsall, re-elected; Vice-President, H. Nuthall; Secretary, F. Fenson; Treasurer, S. W. Downey; Executive Committee, T. Townsend, J. Worden, W. McDowell, M. E. Snider; Auditors, R. J. Kidd, J. Wright.

THE COUNTRY CLUB.

LONG ISLAND, Jan. 30.—This was an ideal day, the morning broke clear and cold, but the warm sun soon took the edge from the air and made the glistening snow-bound grounds of the club picturesque in the extreme. The final match for the winter cup was shot off, resulting in a tie between Mr. Allen Nichols, of the New York Club, and Mr. ("Lightning") Harry Trevor, of the Hurlingham Club, London, England.

Mr. Winslow was disturbed in his shooting by the dazzling effect of the sun on the snow, and, while this did not extend to the other gentlemen, it put Mr. Winslow "out of it" early in the match. The occasion was of interest to New York club men generally, and in the neighborhood of one hundred persons, including several members of the English nobility, were present.

The rule of the club prohibiting "betting on the premises" was openly broken by those who should have known better, and some heavy wagers were indulged in, Mr. Trevor having the call, as it was well known that both Mr. Nichols and Mr. Winslow were short of practice. Your correspondent has seen Mr. Nichols shoot matches, and in the field, both in and out of practice, and it is his belief that this iron-nerved gentleman can perform as creditably without as with practice. For five years Mr. Nichols has been the "old reliable" cup defender of the New York Club, and seldom has he been beaten. With to-day's match ends his praiseworthy career before the traps in public, and a thoroughbred sharpshooter is lost to American sport.

Nothing need be said of Mr. Harry Trevor, whose name is familiar to all good and true sportsmen. He shot up to his best form to-day and would have won—if it had been written: the fact is Mr. Trevor is not quite up to Mr. Nichols's class, the very first class, as he has now been beaten thrice by that gentleman and has only beaten him once, at which time he had the advantage of Mr. Nichols both as to distance and gun bore. However, he is a good one, and it is to be regretted that he has failed by such narrow chances to take more of our cups across the water to his English collection.

Mr. Henderson was chosen referee, he is a crack shot and member of several English clubs. A much advertised English nobleman was made time keeper, and your correspondent kept the score.

The birds, strong and swift, were furnished by Captain Brown, whose duty retrieved for the contestants. Mr. Nichols used a hammerless Scott, Messrs. Trevor and Winslow hammerless L. & C. Smith guns, all weighing about 7lbs. 12oz. Mr. Winslow was given the benefit of three yards. All used 4drs. powder, 1¼oz. shot, according to custom. The conditions were 50 birds, Hurlingham rules to govern, 28yds. rise, 80yds. boundary, both barrels. Figure 2 indicates second barrel:

H Trevor.....1111111111111012201111222101111222111012121112 2—46
Allan Nichols...1112112211111111101111121112200311101212111121111—46
S T Winslow... 1120112220 0 retired.

Shooting off the tie:
Nichols.....1121111122—9—55 Trevor..... ..111212120—8—54

Mr. Nichols used second barrel 12 times, Mr. Trevor 15 times.

AURORA, Ind., Jan. 26.—*Editor Forest and Stream:* Fully 400 people were in attendance yesterday at the old fair grounds in spite of the disagreeable cold weather, to witness the match between J. L. Winston, of Covington, Ky., recognized as the champion shot of Kentucky, and N. B. Hill, of Aurora, champion of Indiana. The feeling between the two for some time has been great and the match shot to-day was the result. Mr. Winston being virtually a Cincinnatian was accompanied here by "Mason," Geo. Murphy and W. E. Limberg. The ground, an old discarded race track, is a poor excuse for a shooting ground, being situated in a valley and the surrounding back ground difficult to show up the flights. On this occasion especially was that the case, the ground being covered with just enough snow to daze one's eyes and the smoke hanging for several seconds about the score. Then, too, the birds were thrown at an extremely low angle, which made the shooting the more difficult. Mr. Hill chose as his judge Mr. L. Graffe of Aurora, and Winston chose Geo. Murphy, of Cincinnati. The choice of judge being restricted to "Mason," of Cincinnati, and J. C. Small, of Aurora, the latter gentleman's name was drawn by W. E. Limberg and appointed. The match at 100 single American clay birds each man, half to be shot with a 10-gauge and half with a 12-gauge, for $100 a side, opened at 1:30 o'clock with the Kentucky champion, Winston, at the score, with a 10-gauge gun. The first 5 birds he broke straight; Hill followed him up with 4; Winston lost 2 birds in his second 5 and Hill scored straight; both scored straight in the third 5; Hill losing 1 in the fourth round made it a tie; both losing 1 in the next 10 made the score still tie; Winston losing 3 in the next 10 and his opponent breaking straight put the Indiana champion 3 in the lead; Winston breaking straight and Hill losing 2 the score on the first 50 birds resulted; Hill 45; Winston 44. After a slight intermission the last 50 birds were begun with the 12-gauges, the general opinion being that Winston was a crushed champion, Hill's superiority with a 12-gauge over him being general. But he fooled them all and demonstrated on this occasion at least his superiority over his opponent with that caliber, he losing only his 7th and 8th birds and finishing with the remarkable score of 48 to Hill's 45. Mr. Hill lost his 3d, 8th, 32d, 38th and 42d birds and the match by 2 birds; score, Winston 92, Hill 90. Just as Mr. Hill was about to shoot at his first 5 in the last 50 his opponent called the attention of the judges and referee to Mr. Hill's gun, a Winchester repeater, he claiming the gun with the six shells in the magazine weighed over 8lbs., while the rules the match was shot under called for under 8lbs. Though the challenge was technically a good one and the judges differed, the referee decided Hill was shooting it as a single gun and the charges in the magazine, independent of of the gun as loaded; besides if anything he (Hill) was with every shot handicapping himself by lightening the weight of his gun. However, the point brought by the Kentuckian was a good one and opens a question for debate among trap shooters. How would you decide it? In the match, barring one score of 5 birds shot at by Winston, Hill was the lucky man, though it was slight. From the start to the finish it was "any one's race," and the usual betting on the winner was not there. The match was a fair one, and all possible courtesy was shown and extended the characteristic Kentucky champion who, as the boys say here, has a "Charley Horse" in his head to the extent that he can beat any man in the country at either clay or live birds. Both Hill and Winston are shooters of the cold order with plenty of nerve to see them through anything. Mr. Winston is the same gentleman who defeated Capt. A. H. Bogardus at St. Louis, Mo., some five weeks ago at live birds, scoring 92 to Bogardus's 89, and is matched to meet the Captain in the same kind of race at Louisville, Ky., Feb. 22, for $250 a side. He has besides five records of 92 in individual matches and the leading amateur record, 96, at the last Cleveland, O., world's shooting tournament. Personally, he is a neat, snappy, Italian-looking gentleman, slight of build, good-natured, a witty conversationalist and one of the nerviest men that ever faced the score, and like Budd, McMurchy, Stice and Meaders, is a thoroughly temperate man in drink. He acknowledges but one man his superior and that is H. McMurchy, of Syracuse, N. Y. I inclose you scores of the match and sweepstakes shot.

Fifty Birds.

Winston, 10-g'e.1111110110111111111111101111111010011111111111111—44

90

Time of match; 1h. 35m. Largest straight runs: 10-gauge, Winston 14, Hill 13; 12-gauge: Winston 35, Hill 29. Balks: Winston 4, Hill 5. Winston's light gun, 12-gauge, a Westley Richards hammerless, weighed 7lbs. 10oz. and his 10-gauge, an L. C. Smith, 9lbs. 3oz. Hill's light gun, 12-gauge, a Winchester repeater, weighed 8lbs., and his 10-gauge, an L. C. Smith, 10¾lbs. Both used the Bandle shell. Following this was a sweepstake match at 5 single live birds from ground traps, 30yds. rise, 80yds. bounding; use of both barrels. English rules to govern.

Graffe	5	Mason	3
Conway	4	Hill	5
Winston	4	Murphy	5
Wildridge	5	Small	5

Ties on 5: Graffe 5, Hill 5, Murphy 5, Small 1. Graffe, Hill and Murphy divided. Ties on 4 and 3 each divided.

Second sweepstake, 10 single clay birds, National rules:

Winston	10	Kirsch	7
Hill	10	Graffe	9
Small	8	Stall	5
Mason	8	Wildridge	7
Murphy	9	Wick	8
Conway	7		

Ties divided.

Third sweepstake, 7 single clay birds, National rules:

Winston	6	Graffe	5
Murphy	7	Kirsch	3
Mason	6	Small	6
Hill	7	Stall	7

Ties on 7 divided. Ties on 6: Winston 4, Mason 4, Small 5. Small won second, Graffe took third.—C. G. Newsboy.

MURPHY VS. FLOYD-JONES.—The return pigeon-shooting match between Edgar G. Murphy and C. Floyd-Jones at the grounds of the Carteret Gun Club, Bergen county, N. J., on the 28th, attracted a large crowd, especially the brokers. It will be remembered that on the 19th the same two gentlemen shot a match at 100 birds each, 30yds. rise, Monaco boundary (21yds.), which Mr. Floyd-Jones won by one bird, score standing 78 to 77. The result was unsatisfactory to the friends of Mr. Murphy, and they challenged for a return match, with the stakes at $500 each, supplemented with a heavy contingent bet on the outside. The day was anything but comfortable for outdoor sport. It was very cold, with half a gale of wind blowing directly across the grounds from left to right. The surface of the grounds was covered with ice, so that the man who gathered the birds when the dog was not used skated to where the bird was lying, while with the ice and wind coupled, many of the dead birds were only stopped from sliding over the 21yds. boundary by the 8in. high wire fence that marked the boundary, which in several instances proved insufficient, and the birds were blown over into the 30yds. ground, and were scored lost birds. Mr. Murphy won the toss and elected to go to the score first, killing a quick quarterer to the right, and was followed by Floyd-Jones, who killed a driver. The latter gentleman then had one of the worst streaks of luck probably ever witnessed on pigeon-shooting grounds, and at the tenth bird he had only killed three. Eight of the ten had been drivers, two of which fell dead inside of 85yds., while he had been compelled to call no less than four "no birds" out of the ten. Mr. Murphy, to the contrary, killed 8 out of 10, a lead of 5 birds—a tremendous pull for any shooter to make up against a shooter like Mr. Murphy. The luck of birds falling dead in the grounds was about equal, for while Mr. Murphy lost one each at 35 and 50yds. he had 5 at 80yds., to Mr. Floyd-Jones 3 at 35yds. and 1 at 80yds. Mr. Murphy had the best run, 13 straight kills, and his worst break was 4 birds. Mr. Floyd-Jones's worst break was 5 birds in his first 10, and his best run was 14. The score killed and missed was as follows:

Murphy.....11111 11111 10110 11111 11110
10100 00101 10111 11101 11010
11111 01111 10010 11111 00111
11111 10011 10110 11111 11111—77

Floyd-Jones...11111 01001 10100 00010 11101
11101 11111 10111 01101 11110
11101 11101 11111 11100 11111
01010 00010 01111 11111 11001—67

Recapitulation.

Murphy—Quarterers to the right, 50; to the left, 8; drivers, 25; towerers, 11; incomers, 6; total, 100. Used second barrel 97 times.

Floyd-Jones—Quarterers to the right, 53; to the left, 3; drivers, 31; towerers, 6; incomers, 7; total, 100. Used second barrel 73 times.

The number of quarterers to the right is explained by the wind blowing directly from left to right, which made traps 4 and 5 the most difficult to kill from. The sore by traps is as follows:

Murphy—18 from trap No 1, 18 from No. 3, 25 from No. 4 and 17 from No. 5.

Floyd-Jones—14 from trap No. 1, 18 from No. 2, 16 from No. 3, 32 from No. 4 and 20 from No. 5.

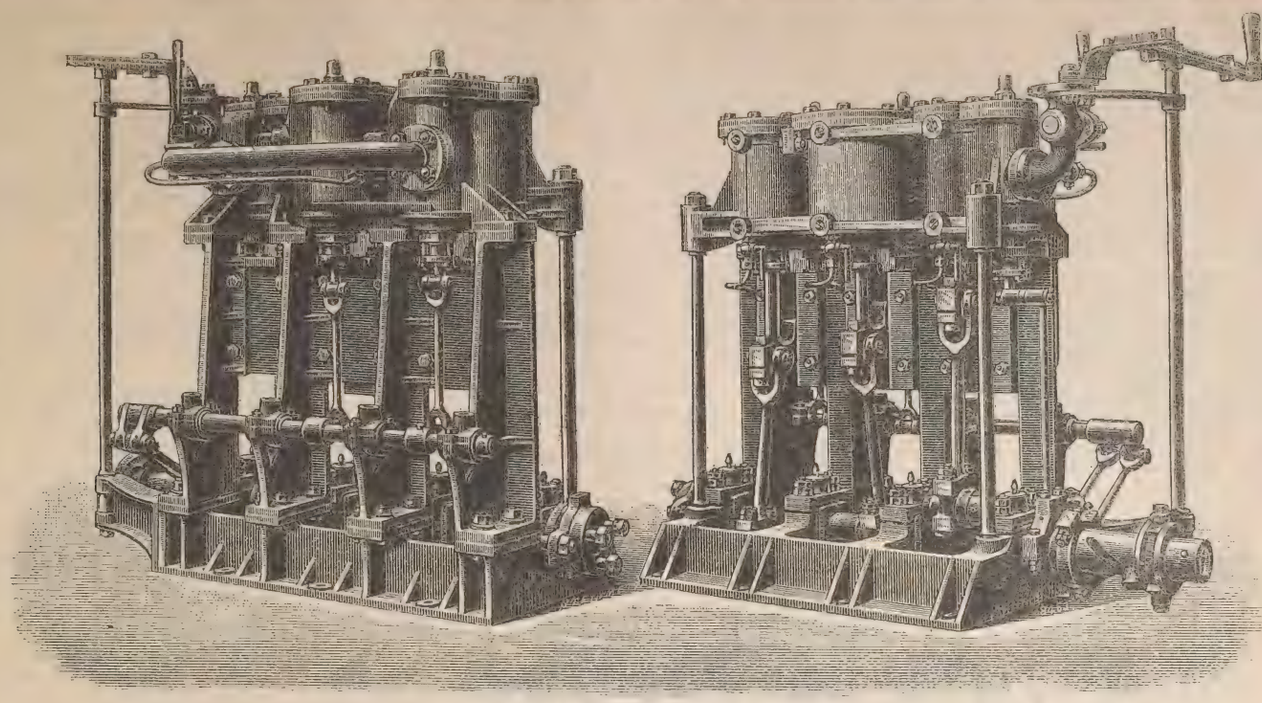
As in the joint match, Mr. Murphy was looked after by his brother Walter, with Dr. Knapp doing the same for Mr. Floyd-Jones. Both used the same guns they did in the first match—Mr. Murphy a Greener hammerless, weighing 7lbs. 5oz., with Kynoch paper shells, charged with 3¼ drams of Schultze powder and an ounce and a quarter of No. 6 shot for both barrels. Mr. Floyd-Jones used a Scott hammerless premier, weighing 7¼lbs., bored for the Kynoch thin brass shells, which were charged with 3½ drams of Schultze powder and an ounce and a quarter of No. 7 chilled shot. Mr. R. B. Lawrence, of the Kenael Club, was referee; the birds were gathered by the dogs Ralph and Phil—the latter doing some very fine work, and the time was 3h. 15m. A third match between the same gentleman will probably take place.

WELLINGTON, Jan. 25.—To-day has been an old-time day at the Wellington Gun Club range, and upward of 4500 birds were sent in midair. The day was a good one for shooting, and all the traps were constantly employed the entire shoot. There were 31 entries in the contest for the Climax diamond badge, which was captured by J. T. Hall. The challenge team badge was won by the Worcester team, with a score of 78, but, owing to having a man in the team who had not been a member the requisite time, it was barred out, and the prize was awarded to the Massachusetts team. The other events were won as follows: Six bluerocks, Snow; 6 pigeons, Eager; 6 bluerocks, Perry; 10 pigeons, Dan; 3 pair pigeons, Smith; 6 pigeons, Hill and Ferry; 10 bluerocks, Perry; 3 pair pigeons, Eager and Hall; 6 pigeons, Dan, Eager and Schaefer; 10 pigeons, Hall; 10 bluerocks, Davis; 6 bluerocks, Barnard and Eager; 3 pair pigeons, Hill, Brown and Mitchell; 6 bluerocks, Perry, Dan and Eager; 20 pigeons, C. B. Sanborn; 6 bluerocks, Schaefer and Perry; miss and out, won by E. Swift; miss and out, won by E. Swift, Wheeler and Perry; Climax badge match, 10 pigeons and 10 bluerocks, J. T. Hall winner, taking the badge.

The scores of 15 and over are appended: J. T. Hall, 10, 8, 18; Law, 9, 8, 17; Dickey, 9, 8, 17; Gilman, 9, 8, 17; Perry, 8, 8, 16; Eager, 8, 7, 15; Hill, 7, 8, 15; Davis, 6, 9, 15; Nichols, 7, 8, 15; Dan, 8, 7, 15. Scores in the challenge team badge match, five men per team, 20 birds per man: Worcester Gun Club team—Smith, 9, 8, 17; Dan, 5, 10, 15; Beaudry, 8, 8, 16; Davis, 8, 9, 17; Gilman, 6, 7, 13; total, 78. Massachusetts Rifle Association team—Eager, 9, 8, 17; Knowles 5, 6, 11; Nichols, 8, 8, 16; Snow, 6, 8, 14; Dickey, 9, 10, 19; total, 77. Wellington Gun Club team No. 2—Bond, 7, 8, 15; Frank, 5, 5, 10; Chase, 6, 6, 12; F. Swift, 9, 7, 16; C. B. Sanborn, 10, 10, 20; total, 77 Wellington Gun Club team No. 1—Schaefer, 7, 6, 13; Perry, 8, 8, 16; Wheeler, 7, 9, 16; Law, 7, 4, 11; H. Swift, 10, 6, 16; total, 75. Wellington Gun Club team No 3—Moore, 5, 6, 11; Warren, 7, 7, 14; Brown, 3, 9, 12; Hart, 6, 5, 11; Adams, 7, 5, 12; total 60.

Jan. 28.—To most people there wouldn't appear to be much fun in standing out on the marsh here, with the mercury 10° below, shooting at clay pigeons and blue rocks; but there are a good many trap shooters in the vicinity of Boston who would attend the regular shoot of the Wellington club even if it was cold enough to freeze the shot as it left the gun. To-day the first contest was held for the following prizes: A silver tea service, donated by a member of the club; half dozen solid silver teaspoons, half dozen solid silver coffee spoons, two solid silver berry spoons, gold-handled walking cane, silk umbrella, and 100 imported cigars. In this shoot the contest is at 20 birds, 10 clay pigeons and 10 blue rocks. Schaefer, Brown and Bill each scored a point in class 1, with 14 each; Snow and Nye in class 2, with 13; Chase and C. B. Sanborn in class 3, with 12; Bond was class with 11; Edwards, Moore and Hammond in class 5, with 10; Phelps and Short in class 6, with 9; McCoy in class 7, with 8; and Bradstreet, Grimes and Baxter in class 8, with 7 each.

OAK POINT, Jan. 24.—Notwithstanding the extreme cold today the pigeon and sparrow shooting tournament at the Oak Point shooting grounds in the afternoon was well attended. The pigeons were strong and fast-flying birds. The sparrow shoot proved very amusing. The pigeon shoot was under Hurlingham rules. Ten birds each were shot at, at 30 and 25yds., from 5 ground traps, using two barrels, with gun below elbow. Appended are the scores:



James Pilkington	1110101111—8	Harry Force	1110011111—8
Andrew Ward	1110001111—8	James Thompson	1001111101—7
William Ward	1010110111—7	T Trott	0111110001—6
John Elliott	1110011100—6	J Jarvis	0110011101—7
Frank Butler	1001111011—7		

Pilkington, Ward and Force shot off for first money, and Pilkington won. Ward, Butler, Thompson and Jarvis shot off for second money, and Ward won. Elliott and Trott divided third money. In the sparrow shooting contest there were six competitors. Five birds each were shot at from one trap, two barrels, with gun below elbow. Following are the scores:

Miss Annie Oakley	11101—4	Harry Force	10001—2
Jack Elliott	11001—3	William Ward	11010—3
James Pilkington	10011—3	Andrew Ward	11000—2

Miss Oakley got first money. Elliott, Pilkington and Ward shot off, miss and out, for second money and Elliott won. Force and Ward divided third money. James Pilkington and Andrew Ward shot a special match, 30yds. rise, at 80 clay-pigeons, using both barrels, with gun below elbow, for a handsome silver pitcher. Fifty pigeons each were shot at, when, darkness coming on, the continuation of the match was postponed to Saturday next.

CARTERET GUN CLUB, Jan. 25.—There was an improved attendance at the Carteret Club's grounds, near Bergen Point, N. J., to-day, to participate in the second shoot for the club's winter cup. It was not a good day for shooting, which, coupled with poor birds, made the occasion anything but exciting. The feature of the afternoon was the shooting of Messrs. Thorne, Sands and "Leighton," and the failure of Mr. Floyd Jones to sustain the excellent record he made at the last shoot, on the 18th inst., when he carried off the honors with a straight score of 10 killed. Yesterday he missed 2 out of his first 3 birds in his first entry and 1 out of 4 in his second entry, after which he retired. The final issue of the shoot for the day was left to Messrs. "Leighton" and Sands, the latter shooting on his second entry. Mr. Leighton had a clean score on his second entry up to the 17th bird, when, getting a fast chocolate-colored driver in a very poor light, he scored a miss, although the bird fell dead inside the fence, which left Mr.

TRIPLE EXPANSION YACHT ENGINES.

Sands to kill and win his first claim to the cup. The conditions and result of the syooting are as follows:

Bergen Point, N. J., Jan. 25.—Second shoot for the Carteret Gun Club's winter cup; entrance, $5 each; duplicate entries allowed; to shoot at 10 birds; handicap rise and boundaries; 2 misses out; ties miss and out; 10 entries required and the cup to be won twice before becoming personal property. After shooting 4 rounds the conditions were amended by consent of all present to shoot miss and out:

	Yards rise.	Yards boundary.	Killed
W H Sands (2d)	27	50	17
Mr Leighton (2d)	29	35	16
W H Sands	27	50	12
T W Thorne	29	21	10
Mr Leighton	29	35	9
Mr Brokaw	27	50	8
Mr Stanwix	29	35	6
T W Thorne (2d)	29	21	6
Mr Lee (2d)	30	21	6
Mr Lee	30	21	5
E E Flint	30	35	4
Mr Stanwix	29	35	4
C F Jones (2d)	30	21	3
E E Flint (2d)	30	35	3
C F Jones	30	21	1
Mr Brokaw (2d)	27	50	1

The birds were gathered by the dogs Dell, Ralph and Phil.

A MAY TOURNAMENT.—The North End Gun Club, of Frankford, Philadelphia, will give a grand tournament during May, and it is intended to make it the most important and biggest event of its kind ever held in Philadelphia. A large number of prizes have been promised. All clubs are invited to communicate at once with Mr. A. L. Lumb, Secretary North End Gun Club, 4,764 Frankford avenue. There will be every variety of shooting, both for teams of 10, 5 and 2, as well as individual and sweepstake shooting.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $5.50. Steam Machinery. By Donaldson. Price $1.50.

YACHT DESIGN ON THE DELAWARE RIVER.

Editor Forest and Stream:

More than three hundred boats, of every imaginable shape from cutter to dish, are wintered at the hospital. "Flat irons," with long wedge-like bow that terminates suddenly in a "stand-up bat" at the other end of the ship, with the bilge under the tuck; "bell bows," with round harpins over a sliced-out under body, suggestive of neuralgia in the jaw; "bung drivers," with the bilge hanging down below the keel and a sheer like a camel's back; "skimming dishes," all beam and top and sail; "cheese knives," with tumble-home stems and convex cants like a Government ram.

The queerest one of all has been recently rebuilt under the critical eye of a home scientist, who is strong in the dogma of the catfish head and mackerel tail. The cheeks protrude beyond the stem on either side, with the bilge seemingly under the forefoot; a long, pointed tail is attached to the other end, the whole resembling a bow kite. Then there is the ideal boat of the oldest inhabitant, with slablike sides longitudinally compressed (least beam in the center), as if troubled with cramp colic, flat floors, getting still flatter on the long journey to the hindermost part, where the whole business is cut short off like a "pocket flap" canal boat. The designer does not seem to have taken any stock in Hogarth's line of beauty—the wave line.

It appears to have bothered our ancestral boat builders to locate the bilge properly. Some have started with it at the stem and chased it all the way back to the sternpost, haphazard as to its being above or below water. The lines are unfair and one must look crooked to catch a perspective.

The Venitzia hauled out near by is in marked contrast with these ungainly forms. She has a clean cut bow, long, easy clearance, fine under body, well-rounded topsides and sightly sheer. Inside ballast will be partly taken out and placed on keel, which will be new and deeper than the old one, new keelson and centerboard trunk. A complete new suit of sails will be bent in the spring. She is decidedly the handsomest and speediest yacht here, and will be greatly improved. She is 59ft. 7in. ove all, load waterline 53ft. 4in., beam 18ft. 4in., depth 5ft. 4in. Collins, who is doing the work, and who lengthened her aft last year, will probably build a first-class sloop this winter for Commodore Mickel and others, of Trenton, N. J. Our up river brethren adopt what is new and best and read the FOREST AND STREAM to find it. A race will be sailed this year from their end of the line by the Quaker City Y. C. Election of officers Feb. 1. R. G. W.

LAKE ONTARIO.—Mr. Ames's old sloop Laura has been sold to a Syracuse yachtsman who will use her on Onondaga Lake. A new sloop of Atalanta's class is talked of in Rochester for the owner of the Ariadne. Oswego will have another single-sticker from Mr. Burgess's designs for the same class as Mr. Ames's Merle. Cricket, owned by Mr. J. T. Mott, will have her afterbody lengthened and will be yawl rigged.

SEAWANHAKA C. Y. C.—The lecture on Saturday night by Lieut. Schutze on the mariner's compass was one of the most interesting and instructive yet delivered. The lecturer, who was thoroughly conversant with his subject, devoted special attention to the magnetism engendered in iron and steel vessels while on the stocks.

TRIPLE EXPANSION YACHT ENGINES.

THE accompanying illustrations, for which we are indebted to *Engineering*, show a new set of engines built by Messrs. S. S. Welch & Co., of Bristol, Eng., for the steamer Iolanthe, 57ft. long, 12ft. beam and 2ft. draft. The cylinders are 3⅛, 4¾ and 6½in. by 5in., with a three-bladed screw of 24in. diameter and 3ft. 9in. pitch, working at 560 turns per minute. The boiler is of steel, the shell being formed from one plate, and is 4ft. diameter, 5ft. long, with 68 steel tubes, 1¾in. diameter. The grate surface is 4.25sq. ft. and the working pressure 163lbs. There are no packing rings to piston or piston valves, and the friction has been so reduced that the engines have been run with 24lbs. of steam. All the valves are worked from two eccentrics only, making a very compact arrangement.

WINTER CRUISING.

THE following extract from the log of the ketch Dauntless, on her late voyage to the Mediterranean, is given in the *Field*. Dauntless is 93ft. l.w.l. by 20ft. 4in. beam, with some 13ft. draft and lead ballasted. She had aboard, besides her owner, Mr. F. W. L. Popham, Miss Popham and a party of friends.

Monday, Dec. 26.—Left Plymouth with a strong, fair, easterly wind, which lasted up to Tuesday, the 27th. The wind was then S.E. and fresh, and we were sailing under single-reefed mainsail, second jib and staysail. Ran vessel off to the westward to close reef mainsail and shift jibs. Wind increasing to a gale, hauled staysail down. Barometer steady at 30·1.

28th.—At 1 A. M. wind freshened to a hard gale, the vessel filling her decks full and full. At 8 A. M. watched for a smooth, and brought vessel to; came to splendidly, not shipping any water; then close reefed mizzen, and set it. While preparing close-reefed mainsail, to set it, a heavy sea struck the ship, carrying away nine stanchions, and all bulwark on fore side of rigging, also some lee bulwark. During a squall, small jib and mainsail were clean blown away; ran up storm staysail, vessel laboring heavily under the tremendous sea that was running; barometer falling rapidly, 29·30. Noon, laying to under reefed storm staysail and double-reefed mizzen; sea having settled to a true run, vessel lay to more comfortably; wind traveling about 50 miles an hour. Our position was now 75 miles N. of Cape Finisterre. During the day we used oil bags over the bows to prevent the seas breaking on board, which answered admirably, for the seas were terrific, and it was blowing with hurricane force. At 7 P. M. an ugly sea fell over the port quarter, carrying away starboard quarter, bulwarks, etc.; and bowsprit at the same time was sprung. Midnight, still blowing hurricane force.

29th.—7 A. M., wind slightly moderated, set close-reefed trysail during the heaviest of the breeze from E.S.E. Noon, wind lessening and sea taking off considerably, set storm jib, and after making good some repairs, gilled vessel along, heading S. by E. ½ E. during the night.

30th.—8 A. M., gale freshening to hard gale from south, barometer 29·25; lay to, and again resorted to oil bags. At 2 P. M. took in trysail and storm trysail; laying to under storm jib and close-reefed mizzen; seas terrific. 12 A. M. gale abated, made sail, and bore away for Vigo; wind veered to S.S.W., traveling at a furious rate; barometer rising, 29·35.

Jan. 1.—8 A. M., gale freshening, and heavy sea. At 2 P. M. made land, fetching Arosa Bay; very thick, with blinding rain; tacked ship, and gilled her along toward Vigo. During the night wind fell off, and veered to N.W.

Jan. 2.—At 3 P. M. brought up off Vigo.

Mr. Popham and party left the yacht at Vigo for repairs, which will occupy a fortnight, and proceeded by rail to Gibraltar, to await the Dauntless's arrival.

TUCKER AND TUCKUP.

Editor Forest and Stream:

Many years ago tuckers or Tuckerton skiffs, so called after a place of that name on the New Jersey coast, were built and used by the seaside dwellers for fishing, oystering and hunting waterfowl. They resembled the sneakbox of the present day, and, like them, were admirably adapted to the shoal bays and narrow waterways contiguous to the coast; and, as any one who could split a rail could build a boat, they became noted and numerous. The sails, as well as some of the boats, were made by the women, who could handle them as well as the men. A 15ft. boat fitted out complete could be bought, delivered at Camden, for $25. A cedar swamp was always handy, and wrecks sufficiently frequent to furnish a supply of cordage and fastenings free of duty. In the winter of 1839 a sailing club was formed by young Philadelphians, with their headquarters across the Delaware River. The fleet consisted exclusively of tuckers, that had been hauled to the club house from the seashore on oyster wagons. As only two men were allowed in a boat during a race, 16ft. was made the regulation length. Being cheap and handy they soon became popular, and were used outside of the club. The writer, feeling that improvement was possible, built a boat within the restricted length with stem and sternpost plumb, and plenty of sheer, which was partially broken by crown of deck. The bowsprit was as long as the boat, and other spars in proportion, and she was able to carry them from her great beam and length of bottom. Her success was chiefly due to her greater bulk and sail-carrying capacity.

Of course tuckers soon disappeared after the advent of the new boat, which was called a tuckup, probably from the keel rising to the stern with the curve of the rabbet line, the deadwood being fastened to the underside of keel. The hypothesis is that bigness being power, all other considerations of form became obsolete. It is only recently anything has been done to establish a rule of measurement other than that of length, for the purpose only of classification. The Pennsylvania club was the first to see through the fog, adopting a boit-rope-sail-area rule, with good results. Then the Quaker City Club awakened out of a long sleep, and after a heavy pressure had been brought to bear on the yet comatose understanding of some of the anti-progressionists a length and sail area rule was finally pushed to adoption. Windward ballast, excessive beam and overgrown sails were the outcrop of the coming of the tucker. Young men often handled their boats alone and were obliged to "hike" (lay out to windward) with little of the man left in the boat but his toes, while jib and main sheets and yoke ropes occupied both hands, assisted by well developed jaws, causing an incessant strain on back and loins that was surely laying the foundation of disease in after life. To sail in these boats meant death. Many of my early boating chums have long ago paid the penalty of overtaxed muscles, wet skins and exposure in these floating coffins. The modern tuckup has been variously called a "thing of life," a "winged spectre floating on the air," a "water nymph clothed in white," etc. And when the summer solstice comes and placid waters shimmer 'neath cerulean skies, then the "hiker" gets his work in, tackles a "thing of life," upsets and is drowned.

A first-class tuckup, 15ft. long, 4ft. beam and 18in. deep, with fancy trimmings and large and small rig, costs from $200 to $250. When sharp on the wind a sudden lull after a flaw is apt to turn the boat over to windward on top of the hikers (crew), catching them under the sail. Running down wind is still more dangerous, requiring great skill and quickness. If it blows fresh the peak is slacked and the boom lifted to prevent the boat from diving out of sight. Sometimes the sail goose-wings, throwing the peak to the opposite side of the boom and threatening to toss the crew over the masthead. I have seen them settle down bodily under water by the weight of men on one side and wind on the other, with the mast perpendicular. None but an expert has any business in one of these flyers on race day, when they are driven for all that's in them. I have on these occasions seen as many as nine upset to windward simultaneously. Fifty or more of these little flyers, with clean sails, bright mountings and uniformed crews, angle making with a moderate nose-ender, is truly a pretty sight. On Sundays, when wind and water are propitious, the wharves along the city front are crowded with sightseers watching the graceful movements of these miniature boats passing in panoramic review. The chance of being drowned at any moment adds to the show, like the "artist" who risks a broken neck on a flying trapeze. Courage that fearlessly faces danger in great emergencies commands respect, while a callous disregard of life is brutal and heathenish, and is recognized only by sluggers, dog and cock fighters, and the like. I say this in no disrespect to the athlete who risks his life from a meritorious desire to excel in the pursuit of manly sport. Cowards and lazy men never sail in tuckups; it is the initiative school for young aspirants to fame as a sailor in a yacht club, merchant marine or naval service. And if he don't get drowned or die with rheumatism or consumption or a broken heart, he's sure to get there in time.

My previous communication referring to old style boats yet in commission was not written to disparage builders of the present day, who compare favorably with any in the land, but to show how little interest is taken by local yacht owners to foster home productions, except in tuckups and other types of skiffs owned chiefly by the working classes. Our river is stocked with boats old enough to vote, of the cabin class. Most of them are brought from the East, and our builders rebuild and modernize them, as the spirit moveth the stagnant aquatic blood of our wealthy yachtsmen. Fennimore, Collins, Wignall, Faunce, Wiser and other well-known builders have produced some of the fastest boats in this country. Prominent among them was the Scud, Dawn, Flying Cloud, Glengarry, Keyser, Minerva, Runaway, Jilt, vulgarly called John Donkey, etc. I fail to recognize in the first and second class more than one new boat (Olga of the second) built here for many years. The Trenton men, so far as they have built (third class), take home all the prizes every time, and to them probably we will have to look for further progress.

R. G. W.

SHADOW.—We publish the following at the request of Mr. Lewis Temple, whose first statement in regard to Shadow has been questioned. The letter was sent by Mr. Temple some time since, but was not received until recently. *"To the Editor of the New Bedford Standard:* It seems to be a knotty question as to the origin of this celebrated sloop model. Had I known that Mr. Lewis Temple was to have published his article of 'credit to whom credit is due,' in reference to the origin of the Shadow, I should have asked him not to; but in the main what he said is true, the Herreshoffs to the contrary, especially about the high horse. Mr. N. G. Herreshoff said to me while his brother John B. Herreshoff was building the Shadow, and one year and a half afterward, that he did not think as much of the Shadow's model as he did of the Clytie's. As far as my knowledge goes in the matter of lines held by present and semi-past modellers, there is but little that is new. Most of us remember the Baltimore clippers of some years since; compare these lines with the present and you find nothing but a modification. A little more depth, more canvas, and leaded keel, and you have it about all. I acknowledge, as I always have, that John B. Hussey suggested the name Shadow, and feel sure that but one knows better than he how suggestive that name was of the little intrinsic value she proved to me. Very truly, E. R. SISSON."

BUILDING NOTES.—The new cutter for Mr. Everett Paine was designed by her builder, Wm. Eddy, of Marblehead, and not by Mr. Burgess, as was incorrectly stated. She will be 29ft. on deck, 22ft. 6in. l.w.l., 8ft. 6in. beam, 5ft. 6in. draft, with 2¼ tons of lead on keel.....Wood Bros. have orders for a steam yacht of 73ft. over all, 63ft. l.w.l., and 12ft. beam, and also one 45ft. over all, 40ft. l.w.l., and 12ft. beam.....Martin, at East Boston, is building a jib and mainsail racing boat, 25ft. over all, 20ft. l.w.l., 7ft. 6in. beam, and 5ft. draft, with clipper stem and iron keel. ...Chas. Borden is building a 24ft. catboat for racing, a shoal centerboard boat.

YAMPA.—Mr. Chapin's schooner made excellent time down the beach, the first part of the run being under reefed foresail and headsails only. She made Hatteras Lightship in 26 hours and Fernandina in four days. Her owner speaks very highly of her performance in rough water.

GROWTH OF THE CUTTER FLEET.—*Editor Forest and Stream:* The paragraph in your last issue enumerating the many cutters now building in Boston is of more than passing importance. It shows that despite the victories of Puritan, Mayflower and Volunteer, there is to be no retrograde movement toward the centerboard light draft. The sloop appears to be in less favor than ever, the cutter is becoming the ruling type along the Atlantic coast and on the great lakes. Even two of the three new schooners are keel ships, and only one, the Burden schooner, a centerboard compromise. Even she draws within a few inches as much as a keel. You can well afford to shoulder the soft impeachment that FOREST AND STREAM is a cutter paper, for the community owes the introduction and present popularity of cutters to its intelligent foresight and well-directed efforts. It will not be long before other oracles will come in out of the rain, and as usual claim the lion's share in the reform movement which has transmitted the orthodox sloop into the wholesome sort of craft now taking her place. Evidently the cutter is bound to carry the day upon her own merits without further assistance, and no amount of candy-rattle patriotism can stem the tide setting in stronger every year. —A. B.

LAKE ONTARIO.—Belleville, Ont., Jan. 20.—*Editor Forest and Stream:* Yachting matters are very dull here at present, the only new craft now on hand or, so far as I can learn, in contemplation for next season, are three steam launches, and a sailing punt 25ft. by 8ft., which Mr. W. P. Clark is building for his own use. It is reported that Cuthbert has two or three small craft in hand at Trenton, as to which I will send you particulars later. The little cutter Cypress has, I observe, been purchased by parties in Hamilton. She is a flyer as compared with most boats of her size, but has no chance with centerboards from 4ft. to 5ft. longer, and of twice her beam, against which she had to sail last season. A subdivision of the second class, placing the limit at 32ft. or thereabouts corrected length is desirable in the interest of such yachts as the Cyprus and Minnie A., which are too small for the second class and too large for the third.—PORT TACK.

MORE BURGESS CUTTERS.—Mr. Burgess has designed a schooner for A. S. Rice, of Rockland, Me.; a keel boat 55ft. over all, 45ft. l.w.l., 14ft. beam, and 8ft. draft. The iorn keel will weigh 12 tons. The head room will be 6ft. 1in., with a low cabin trunk. Mr. Burgess has also in hand two cutters 19ft. 6in. l.w.l. for the Corinthian Y. C., third class; one for W. S. Eaton, Jr., to be cutter-rigged, and the other, for R. S. Peabody, to be sloop-rigged. Still another cutter is the new boat for Messrs. Dunham, 32ft. 6in. l.w.l., 10ft. 8in. beam and 6ft. 9in. draft, with 6½ tons of iron in keel. Another small cutter is for E. W. Codman, to be 22ft. 6in. l.w.l., 9ft. beam, and 5ft. draft. Mr. Burgess has also designed a compromise boat of the Puritan type, 30ft. l.w.l., for Australia.

ROYAL NOVA SCOTIA Y. S.—At the meeting on Jan. 19 the Yacht Squadron decided to adopt a new class for the benefit of the younger sailors, to be 1½ rating by the Y. R. A. rule. This will create a class of small yachts which can race together without allowance, while the dimensions and type are left to the designer. Under the rule the latter may select any proportions of length and sail area, provided the product of the two does not exceed 9,000; thus an 18ft. boat can carry 500ft. of sail, while a 20ft. craft is allowed but 450. Under the rule a class of cheap and useful yachts is likely to be built up.

HULL Y. C. RACES.—The Hull Y. C. announces its fixtures for the coming season as follows: June 23, pennant races; July 7, club cruise; July 14, first championship; July 28, 67th regatta, cash prizes; Aug. 1, ladies' day; Aug. 4, second championship; Aug 25, open race. Championship sail off announced later.

GALATEA.—This sloop, 38×14ft. l.w.l., has been purchased by Mr. N. L. Stebbins, who will use her for his photographic work, as well as for pleasure purposes.

MARGUERITE.—This schooner, iron in frame, will have a centerboard trunk of plate iron.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Beusfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

AN AMATEUR'S EXPERIENCE.

Editor Forest and Stream:

Mr. MacKendrick seems to have been a little angry when he wrote his last letter in answer to "Cruiser," and drops the original subject to assail all Class A canoes, and Pecowsic in particular.

Can it be possible that Mr. MacKendrick would really like to have all the smaller sizes of canoes thrown out of the Association, regardless of tastes, weights and waters. The FOREST AND STREAM stated quite correctly last week that when veteran canoeists change to a 28in. canoe they do not do it for the sole purpose of getting a faster canoe, but because they think it is better in several respects. Perhaps Pecowsic is a racer. I am not upholding such a model; I do not like her myself, but I believe in giving her credit for the good points she has, and the good she has done the Association. I think we have Mr. Barney and his Pecowsic to thank for the many improvements in sails and fittings made in the past two years. Not that he has made all of them, but he has forced all the racing men to use their ingenuity to beat him. More than one canoeist will agree with me when I say it is more Mr. Barney than Pecowsic. Take myself for instance racing against him; no matter what boat I used I have no doubt but what he would leave me two miles behind in a three-mile race. Now as regards Vesper and Notus. If Mr. MacKendrick will take the trouble to make a model of each, as I have done, he will plainly see what a superior boat Notus is.

My experience with canoes and small boats dates back to 1880. My first was an open boat 15ft. long and 32in. wide, built very flat on the bottom; she was rigged with a 75ft. sprit sail, and had a 4in keel. The next was a Shadow model built by a man in Syracuse, rigged with two balance lug sails and leeboard. I cruised a good deal in her and sailed whenever I had a chance, but she was far from perfect. There was the trouble with her that every one who has sailed a very flat canoe has noticed; she would roll so in going before the wind that it was almost impossible to keep from falling out of her. Then again in paddling down a riff or running a rapid, if she struck a stone anywhere near the keel you could not get her off without putting all the weight up in the bow, and the chances were then you would have to get out and float her off. The next was a Racine Shadow. Of that I will say little except while I think of it I am going to give away a certain person who a little time ago wrote the FOREST AND STREAM under the nom de plume of "Deja." I am credibly informed by several people that this gentleman is a resident of this city.

"Deja's" total experience with canoes was limited to seeing this Racine Shadow. Our crack sailing canoes were condemned as being poor boats on account of comparison with this poorly sailed Racine. This craft came to an untimely end on an eel rack; a sharp stake tore off one of the veneers. A gentleman of Tunkhannock thinking she could be repaired offered ten dollars for her, and the owner consented to let her go.

My next canoe was built in the spring of 1887 by myself. I am telling a different story than most amateur builders when I say she was the homeliest craft that ever floated. It was my first attempt at boat building and I know it will be my last. That is one point on which "Deja" and myself agree exactly. He says in one of his letters that boat building is beyond the skill of the amateur carpenter and I believe it. I started this canoe on the lines of the Jersey Blue. It was built of narrow strips blindnailed. First of all I made a mistake in cutting the rabbet, and when I got on two or three streaks found I had the midship part of the keel curved down about 2in., but which turned out to be a good mistake after all. When she was planked I put in the ribs and pulled out the moulds. The next morning the ribs had straightened out until the sheerline was almost straight from bow to stern. If the nails had given out in the ends I would have had a good raft. Still I finished her. I found when I launched her that she was dangerously cranky, but she could sail, especially beating. I put in some large air tanks and fastened a piece of railroad iron about 7ft. long to the bottom boards. There was nothing on the river anywhere near her size that could sail around her; but she was too cranky for me so I gave her to a poor man, against whom I had a particular grudge; he was not a real good swimmer either, but I never heard of his being drowned.

The good sailing qualities of that boat led me to drafting and soon after I gave an order to a boat builder who made me a smooth 14½×30 with the midship section very much like Notus, but with quite hollow lines and a trifle more deadrise.

In running the Susquehanna with her I struck a good many rocks and shoals, and in only one instance was I obliged to get out of my canoe to get off; usually she would slide off herself. My companion who used a canoe similar to the Shadow without the tumble home, generally waded and floated his canoe before him. This canoe did not quite suit me, and the Notus does not, but it comes nearer to it than any I have ever seen, and I have on the stocks now at the Watertown Boat and Canoe Company's shop one on those lines as near as possible only 15ft. long, and the keel is rockered about 1½in.

Now I claim that a canoe of that description will perform a great deal better than Vesper in these points: First, she will draw only a very little more water than Vesper, if any. Second, she will run rapids with comparatively little danger of sticking on rocks. Third, she will sail steadier and faster and going up stream will paddle a great deal easier, which with me is a great big point. Now, Mr. MacKendrick, give this matter a little thought, and I think you will see that any boat with a reasonable amount of deadrise will be a great deal better for all purposes than one built perfectly flat. We have entirely drifted away from your first subject, which I think was a better one than this. We can both for cruising and I think your letters have done considerable good in all the clubs, and on that ground we can shake hands if we do quarrel on all others. GRACIE L.

BINGHAMTON, N. Y.

SAILING CANOES.

Editor Forest and Stream:

In the fall of 1885 I offered, through your columns, a few suggestions in favor of a somewhat larger, safer and more comfortable variety of sailing canoe being recognized by the A. C. A., and thereby raised a considerable breeze among the champion paddlers and others of undoubted gymnastic ability. The breeze nearly capsized me, but not quite, for you see by this that I am still alive.

It would seem also that my heresy was not entirely vanity and delusion. Possibly, like some other doctrines, quite good in themselves, it may have been a few years in advance of the existing state of civilization.

Be this as it may, it would appear that the leaven has been working, for I see by your remarks of Jan. 19 that "several new canoes of large size" are next season to be navigated by officers of the Association. Also, it is to be remarked that the editor "welcomes these larger canoes as a most important addition to the fleet." Now, really, were I a boy again I should be inclined to exclaim, bully for the editor! But, being an old chap, will content myself by asking you to go one step further and advise that these new canoes be placed on fair and equal footing with their slim sisters, and offered at least one race, under the Association rules, in such fair and unequivocal fashion that all may understand.

No one has ever yet named any valid reason why this should not be done, nor why every racing honor under the rules should go to those gentlemen alone who can do the "balance act."

Let me make your readers understand clearly that I do not now propose, nor have I ever proposed, that the little 30in. canoes should sail on even terms with the wider ones, for of course the former would get beaten every time in such a bargain.

My proposition once more is as follows: Place all sailing canoes of any beam exceeding 32in. in a class by themselves. Give them at least one race under the rules at the meets. Tax either their size or their sail area for time allowance. And just so sure as you are a true canoeist, you will have done more for the best interests of honest canoe sailing than has ever yet been done. The rule proposed will drive into the Association very many good members who are now kept out in the cold by a narrow, selfish policy, even more unfair and ungenerous than that pursued by the present holders of the America's Cup.

ROSLYN, L. I., Jan. 20. THOMAS CLAPHAM.

Editor Forest and Stream:

Appended to a communication from "Cruiser" in the last issue of the FOREST AND STREAM were some very pertinent remarks from the editor. The following especially will find an echo with many an old boatman, who likes a little more room, and an abler craft than he can find in classes A or B. "There is undoubtedly a wide field for a larger craft than the ordinary A. C. A. canoe, something of the same model and rig, but of great size. Such boats are useful on waters where a canoe is inferior to the ordinary sailboat, and they are at the same time far superior to the latter." It may be interesting to the readers of the canoeing columns to hear that at the recent meeting of the executive and regatta committees of the W. C. A., held at Dayton, O., on the 7th inst., class C was definitely added to the regatta list, and the following measurements and limits adopted for the new class, viz: "Class C—Length not over 18ft., with a limit of 32in. beam for that length. The beam increased 2in. for every 6in. of length decreased. Limit of beam, 40in." The nucleus for this class already exists in two fine boats owned by Vice-Commodore Bartlett and Mr. Moore, of Fremont, O. KELPIE.

EASTERN DIVISION MEET.

A LOCATION for the Eastern Division meet has been proposed on the Thames River, on a commanding bluff eight miles below Norwich, six above New London, and about a mile from the starting point of the Yale-Harvard races. It is a few hundred yards from Montville, at which all New London trains stop, and the Norwich line of New York boats. Two boats run daily down each morning from Norwich and up each afternoon from New London. The Norwich line leaves New York daily, one boat stops at New London and the other touches there and at Montville and then goes to Norwich. Montville is by sail four hours' ride from New York, three from Hartford via Norwich or New London, four from Springfield, and four from Boston via New London or Norwich. Canoes could be shipped by daily steamer from New York by Norwich line from North River and weekly from East River by propeller Delaware; from Springfield by rail, from Hartford by boat daily to Lyme and rail to New London, or steamer Sunshine triweekly to New London, and by steamers Ella or Block Island to Montville, and from Boston by rail. At Yale's Ferry, if the camp were held July 1-4, board could be doubtless obtained, where the Yale and Columbia crews had just been. If any should prefer, fifteen minutes ride by cars will furnish good hotel accommodations at New London or Norwich with frequents trains to and from the camp. The view is fine and commands the full sailing course, which could be triangular. The prevailing wind is southeast and there is a moderate current with the flood and ebb tides. If the water should be rough a course could be used one-quarter of a mile further up the river and with still less current. For paddling races, whichever way the wind might be, a smooth course could be found, finishing off the camp or a short distance away in Haughton's Cove. The canoeists of the Thames will give a cordial welcome to a division meet on our beautiful river.

NATHAN A. GIBBS.

THE CHAPOQUIT'S LOG.

ONE sultry morning in early July the Chapoquit found itself upon the steamboat wharf at Rockland, Me. The frail craft, after getting several hard knocks at the hands of the hurrying truckmen, was put into a dock filled with slimy mud, tin cans and defunct lobster pots, to await the incoming tide. It had rained during the early morning and a dense fog hung over the harbor, almost shutting the steamer from view and concealing the immense piles of baggage disgorged from her capacious hold. Here and there the bare masts of a coaster pierced the mist for an instant to be again hidden by the floating vapor. Sight-seeing being out of the question, a committee of one sat beneath an open shed and made his plans for the cruise.

Mt. Desert lies some sixty miles to the eastward of Rockland. The innumerable islands dotting the intervening water afford an accessible lee, and, if occasion demands, suitable camping grounds for the night.

About 8 o'clock the fog lifted and the sun burst upon the harbor and hillsides as if it were even brighter from having been veiled for a time; a cool breeze ruffled the lazily bearing bay until it shimmered like burnished silver. A bustle among the fishermen announced the tide had turned, and in a few minutes we were paddling out into the harbor. Behind us the white dwellings nestled on the uplands like reflections of the white-winged fishing smacks in the offing. Gaunt derricks bristle among the gray quarries, and the yellow, sandy roads twisted away from the wharf like so many prehistoric snakes.

Dead ahead lay the emerald islands in their silvery setting, with many a rusty ledge showing its wave-worn battlements above the ceaseless foam at its base. The ship channel was entered, and the Chapoquit headed across Penobscot Bay for the thoroughfare, North and Vinal Haven. Owl's Head stretched away on the right, and on a bald headland commanding the sea a white lighthouse stands amid a scrubby growth of dwarf evergreens. At length the light was left far astern, and the resistless swell of the open sea surged under the canoe as she bowled along with a scant quarter-inch of cedar separating dry skin from a soaking—or something more unpleasant.

The blue haze of the thoroughfare gradually resolved into wooded hills and dales, and at 11:30 a reach of smooth water was entered and the buoyant waves were lost in dancing ripples. A number of pinkies bore around an island loaded to the scuppers with cordwood and slabs for the lime kilns at Rockland. One of these nondescripts had great rents in her mainsail patched with a section of a ragged carpet, a much-worn out blue shirt, and mud-colored horse blanket. These curious vessels are owned and sailed by along-shore farmers, trips being made during the summer to dispose of the wood cut in winter, and were it not for the excellent sea qualities of this type of vessel, I fear there would be many lonely homes along this rock-bound shore.

Spreading sails to the favoring breeze we skimmed over the sparkling ripples with an occasional dash of spray and now and then a puff that sent all hands to windward. Intending to have plenty of time to leisurely prepare for night, one of the islands was selected for a camp, and running into a beautiful little handy cove the Chapoquit was placed on her wheels and carted into a grove of evergreens. A fire soon sent out its wreaths of smoke, and in a trice a juicy rockbass was broiling over the ashes, just as "Seneca" does it. Supper disposed of, we took a ramble over the island, which was afterward found to be Calderwood's Point, and by the time our legs were limp it was bedtime. Rigging up the tent and inflating the mattress was next in order, and quickly accomplished; but getting asleep was quite a different matter. Twilight had faded into shadows, a solid gray mist came in from the sea, changing the water to a cold leaden hue where so lately its purple and crimson were reflected from the resplendent heavens. The dull moans of the surf on the outer ledges, the lap of wavelets along the beach at last ceased their monologue, and we fell asleep. A sleep, perhaps more refreshing, because of the lonely island and its solitude.

The sun had wheeled far above the fir tops when life was visible beneath Chapoquit's deck. In the refreshing morning air a hasty breakfast was disposed of, and under reefs we again proceed up the coast. A fresh breeze sprang up and its full force was felt for the next few miles, and it was hard work breasting the heavy rollers against the wind, balancing on the crest of one billow to plunge into the valley beyond it, and when the protecting lee was left astern, matters began to appear serious. The green seas curled into foam as they seethed under the light canoe, and if some of them had been miscalculated this log would have gone to the bottom instead of down to posterity. A herring boat had been watching proceedings for some time, and at length ran alongside and proposed taking canoe and crew ashore for five dollars. His offer being declined, the irate skipper turned loose his vials of wrath, eased off his sheets and ran down the wind in intense disgust, not deigning to honor Chapoquit with even a side glance till he was a mile away.

By 11 o'clock the water became smoother and a course was laid for Swan's Island. With wind abeam and just enough of it to drive the canoe along at a good pace, rare sport was enjoyed in exploring quiet bays and water nooks, running near the barren ledges and pretty islands, dodging swaying bar-poles with their waving pennants of seaweed and kelp that marked the sunken reefs and shoals. The day was glorious, and the memories of hazy mountains on the mainland and Mt. Desert towering as it were from a sea as blue as the sky, dotted here and there with snowy sails and green islands seem much out of place, as the dreary winds rattle blinds and whistle around chimney pots while this is written. Then the bell buoys tolled their funeral warning, and their dreary tones on a night like this are warning vessels away from certain destruction.

But such a day could not last forever. As the day advanced murky clouds gathered to windward and hung in a thick bank along the horizon. The vessels in the offing sent down their light sails, and the outlook for the canoe grew dubious. By dint of hard paddling we at length got under the lee of Swan's Island. What little wind there was died completely as we urged Chapoquit over the flattened swell. The hatches were hastily drawn and all hands crept beneath an overhanging rock to await conclusions. A mist had shut out vessels to leeward, and one by one the islands were lost to view. A line of white foam fringed the blackness of the wild sky, and a deep roar, each moment growing louder, plainly told the canoe was none too soon in reaching shelter. The fierce wind churned the water into foam, which flew before the violent gusts as so much dust. Incessant thunder jarred the island till it fairly trembled. A drop of rain wet the canoe, then another, and we looked out upon a chaos of angry waves and wild winds that my pen is too feeble to describe. The spruces bent to the earth, tugging at their roots as if they would be torn from the ground; zig-zag lightning sprang from sea to zenith in blinding flashes, illuminating for an instant the foaming waste of tumbling billows and swaying trees with its ghastly glare. The storm lasted for an hour and settled into a steady, soaking rain, and after a supper of canned goods we turned in.

When morning dawned we sighted a jigger at anchor in the cove and went aboard. She was a schooner-rigged craft, with a cargo of dry and wet goods, hardware, tinware, groceries—in fact she was fitted out as a general country store, and the vessel herself was the delivery wagon. Her captain and owner was a raw-boned Yankee from Cape Cod, his crew his son. His boat took the place of the itinerant peddler's cart so often met with in sections sparsely settled, and he probably borrowed his way of getting a livelihood from the many hawkers who infest Cape Cod, and make doorbells weary of existence. He visited every island in his circuit of 200 miles, dispensing staples, tobacco and rum to the fishermen who have their shanties there.

The sea being rather rugged we engaged passage to Southwest Harbor and in an hour the Fannie Francis was pounding away on the starboard tack for Lopau's Point, under bobbed jib and double-reefed mainsail. The cabin of this curious craft was a sight, with its rows of clothing for ladies and gents suspended in mid-air, kegs and boxes of provisions lashed to the floor, and held in place by ropes, while half a dozen pigs squealed and grunted in a packing case nailed to the floor. A gouty compass vibrated in its corroded case, and the skipper admitted he couldn't "depend much on the danged affair anyhow."

When Swan's Island was well astern, a dory shot out from the lee of a low ledge, and running alongside the jigger, its solitary occupant clambered aboard, and after receiving a head of tobacco in exchange for a piece of silver, jumped into his boat, cast off, and, hoisting his sprit sail, put back for the reef and his lobster traps.

Lobster fishing is one of the principal industries of this section, and the isolated fishermen furnish the canning factories with the greater part of the lobsters used. Each man owns as many traps as his means will admit—some 200 or more, but usually less. A trap is simply a grated box, similar to an orange crate, with a small opening at one end. This box is sunk, after baiting with fish, in deep water on a rocky bottom, and there anchored, its position being determined by floats. The lobsters get into the traps, and often three or four are taken at one haul, and their weight sometimes exceeds 20lbs.

At about noon the jigger ran into South West Harbor and dropped anchor off Freeman's boat slip. The tide here has a rise of about 12ft., and small boats are usually moored to what resembles a gallows rising from the water; and with the herring weirs—most unsightly affairs of stakes and brush—one might easily imagine himself in some far-away country instead of within a few hours of Boston.

Mt. Desert Island is as large as a good sized county in Massachusetts, very irregular in its coast outline, with gullied ravines and lovely little reaches in endless variety. Green Mountain towers 1,527ft. above the sea, and on its summit is the most elevated government signal station along the coast. There are 25 or 30 post-offices on the island, the principal town being Eden, separated from Lamoine on the mainland by Mt. Desert Narrows.

Bar Harbor, the modern Newport, is 15 miles from S. W. Harbor, and at dusk Chapoquit glided into its landlocked bay and up the float into Connor's boat house, and the weary crew slept that night upon a bed of down at Rodick's. In the morning on going down to the wharf we were greatly amazed at the transformation. Where schooners had sailed the night before with plenty of water a horse was dragging a cart across the rocky bottom to Bar Island, a quarter of a mile away. And here we will leave you as we board the return steamer, and our pleasant cruise is a memory of the past. CHAPOQUIT.

PASSAIC RIVER.—A meeting was held in Newark on Jan. 28 of the Passaic River canoeists with Mr. L. B. Palmer, Ianthe C.C., in the chair, and Mr. C. V. Schuyler, Arlington C.C., as secretary. A meet will be held on Newark Bay on July 1-5. The regatta committee appointed includes Messrs. Palmer, Cox and Kitchell, and the committee on camp Messrs. Mitchell, Peebles and Bradsley. Secretaries of clubs on the Passaic will please send lists of members to the secretary of the meet, C. V. Schuyler, Arlington, N. J.

SHUH SHUH GAH C. C.—The Misticki C. C., of Winchester, Mass., has changed its name to Shuh Shuh Gah, as it was before confounded with the Mystic C. C. The officers for 1888 have just been elected as follows: G. B. Riley, Captain; C. S. Sergeant, Lieutenant; F. C. Childs, Purser; F. A. Apollonio, Secretary. George Harrington with the officers, ex officio, constitute the Executive Committee.

THE MUTUAL LIFE INSURANCE statement in another column shows a gratifying increase in the business of this great company for the year 1887. The company has nearly 148,000 policies and annuities in force, amounting to $427,628,932.51, and the total assets are $118,806,851.88. Mr. Chas. H. Raymond, 142 Broadway, is the New York agent of the company.

Answers to Correspondents.

A. K.—The Severn district is better than the other one named. Some account of it was printed in our columns a few months ago.

L., Houlton, Me.—I have a spaniel pup about 6mos. old that is extremely gun shy. I do not know that he has ever been frightened by a gun in any way. Will he be likely to outgrow it and what is the best way to overcome it? Ans. Read "Training vs. Breaking."

H. C. G., Bodines, Pa.—Can you inform me where I can obtain five wild turkeys? Would want a gobbler and three hens, to turn out in the spring and have them breed. Forty years ago there were plenty here, but now we have none. Ans. They may perhaps be ordered through the firm of Reiche & Bro., Park Row, New York.

AMATEUR, Syracuse, N. Y.—Will you be so kind as to give me the dimensions of what is called a "grilse" rod of split bamboo? The length, caliber of ferrules and style of finish. I cannot find any description of such a rod in any catalogue. Ans. The term is not used by American tackle dealers. As a grilse is usually lighter than a salmon the rod used in New England for grilse is lighter. An American salmon rod of about 18ft. would be called a "grilse rod" in England, where longer and heavier rods are used, as a rule, than in America. In Wales a two-handed rod of 15 to 18ft., two-handed for trout. This rod would be called a "salmon rod" in this country. If you want a rod for grilse get a two-handed rod of 15ft. or use a heavy trout rod.

J. W. S., Chateau county, Mont.—I can secure a lake of about 140 acres, in which our common Rocky Mountain trout (*Salmo purpuratus*) have been plentiful, but they are scarce now, because the lake has been overfished. The lake is fed by springs and has a small outlet; it is very deep, but has shallow bars, some of them gravelly. *Coregonus* would thrive there, and I think of stocking it with them and with brook trout. I know something of fish hatching, having spent a winter near a hatchery in the State of New York. I would ask: 1. How much would the apparatus for hatching cost? 2. How many pounds, or tons, of fish could I take annually from the lake after the third season? 3. Can I procure eggs of *Coregonus* and trout from the East? I can get 20 cents per pound for all the fish I could raise. 4. Is there any book on trout culture with directions for building a hatchery? 5. What is the fish we call a "bull trout"? Ans. 1. Near New York city the apparatus for hatching 200,000 trout eggs would cost about $75 (exclusive of house). What it would cost in your country depends upon the price of lumber, labor and wire cloth, after adding freight. 2. Not knowing the conditioas of food, enemies, etc., we cannot guess. 3. Yes; the latter can be bought from private parties, but the whitefish eggs should be applied for to the U. S. Fish Commission. 4. Get "Domesticated Trout," by L. Stone, or "Trout Culture," by J. D. Slack; we can furnish them. 5. If the red spots are large it may be the "Dolly Varden" trout (*Salvelinus malma*), but if they are very small, the size of a pin head, the fish may be *S. navesit*. It is impossible to diagnose a fish from popular names.

G. L. B., Jr., New York.—I would like to know if I cannot use a gun or any firearm if my father gives his consent. I am sixteen years of age. The other day I went into Hartley and Graham's, Maiden Lane, to purchase a flint-lock pistol for a curiosity. The man who was waiting upon me said that he thought I couldn't get one as I wasn't old enough. Now I have been using a gun for the last two years and I never knew before that I could not. I intend to use one though whenever I please, my father having given me his consent for my so doing. I think it would be pretty hard for me to give up the only thing I care for in the way of pleasure. Ans. Messrs. Hartley and Graham were acting within the law. A city ordinance forbids the sale of firearms to persons under eighteen years of age. The law is designed to stop the sale of dangerous toy pistols and other arms to young folks who will do mischief with them. It is a very wise law, and ought to be very strictly enforced. An evening paper of Jan. 5 reported a case in point: "Abraham Sandberg, who keeps a clothing and pawn shop at No. 22 Sixth avenue, was arraigned at the Tombs court of special sessions this morning, charged with selling a revolver to Henry Chandless, a boy thirteen years old. The Society for the Prevention of Cruelty to Children have received a number of complaints about this shop. Some time ago they sent out a circular warning the dealers in firearms not to sell firearms to persons less than eighteen years of age. This has had little effect, and they are now going to proceed against these men who violate the law in this respect. The revolver sold Chandless was a dangerous weapon, being a self-cocking one with a large-sized calibre. Sandberg pled guilty and was fined $50." The ordinance need work no hardship to those who, like you, want to buy arms for legitimate purposes; you can select what you wish and then some older person can buy it for you.

E. E. N., Troy, N. Y.—The sleeping bags are very simple and easily made. They are usually oval and oblong and the ordinary size is six or seven feet in length by three or four wide. The bag should be double, the inner one being of the skin selected, and the outer of canvas, duck or drilling. The two should be sewed together around the top and at the corners at the feet. A stout string—tape or cotton cord—should run around the opening of the bag so that if he desires to do so, the occupant can tie the bag tight about his throat. A sleeping bag is an enormous addition to one's comfort in cold weather, and the only objections we have ever heard urged against them is that when the weather is not very cold they are too warm for comfort. Obviously the reply to this is that one need not sleep in his bag in warm weather, but can spread it under him and cover himself with as few or as many blankets as may suit him. The choice of a skin for the inner bag may present some difficulties. Blanket is sometimes used, but it is not nearly so comfortable nor so warm as fur. The skin should be light and dressed very soft, and should at the same time be well furred. Buffalo is to heavy, caribou skin is highly recommended and would be admirable we imagine in very bitter weather. Lynx is light and well furred. One of the best of the bags that we have seen was made from a number of small skins, apparently of dog. We think that woodchuck skins in good fur would make a capital bag. It would be well in making a bag for use in an open camp where one may have to sleep close to the fire, to have the canvas or duck which forms the outer envelope, dressed with some preparation which would make it fireproof. Most of those who have camped in this way will remember how often they have had their blankets burned by sparks which snap from the fire during the night, and as canvas might catch from a spark and smoulder a long time, the bag might easily be ruined—the outer covering being burned and the skins scorched.

ADVERTISER'S ADULATION.—Clinton, Conn., Jan. 28, 1888.—Forest and Stream Pub. Co., Gentlemen: Please display the inclosed ad. until further notice. I have always found the FOREST AND STREAM the very best medium for reaching the public. Yours truly, SWIGHT HOLBROOK.

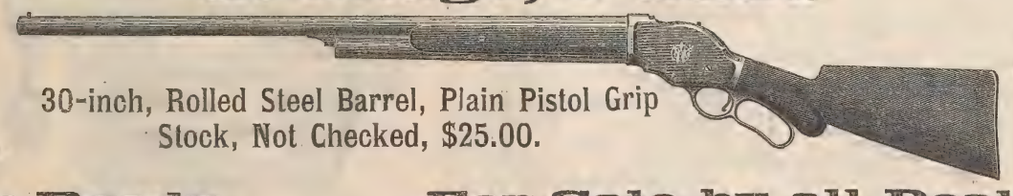
FOR SALE AT THIS OFFICE.

TO FLORIDA ANGLERS.

Keeping fully abreast with the times, we have the last few seasons given particular attention to the manufacture and introduction of tackle specially adapted to the needs of Florida anglers.



We have an unusually fine assortment of the following goods, used and recommended by expert Florida anglers:

Pearl Florida Spinners, Mottled Pearl Baits, Pearl Squids for Spanish Mackerel, Pearl Mullet, Florida Bass Flies, Tackle for Channel Bass, Red Snappers, Sheepshead, Salt Water Trout, Etc., Etc. Also New and Special Tackle for TARPON, including our famous Tarpon Line.

If your dealer does not keep our goods in stock, or will not order them for you, send us 10 cents for our 120-page illustrated catalogue.

AMPLE ACCOMMODATIONS, AT REASONABLE RATES AT ALL THE WINTER HOTELS.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Aududon's Birds have never been equalled.

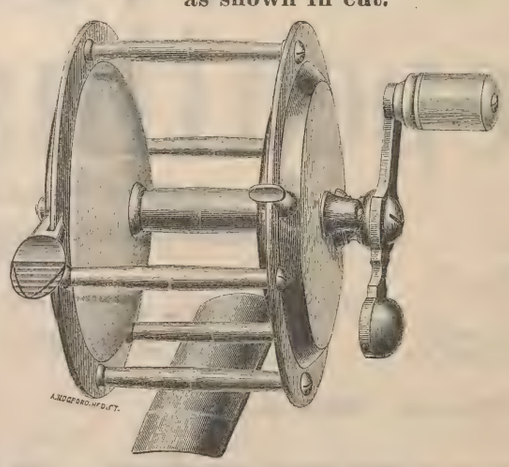
Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.



LIST OF BIRDS REPRESENTED:

Black Vulture and Head of Deer	$12 00	Chimney Swift	$4 00	Bohemian Waxwing	$6 00

CANVAS CANOES;

AND

HOW TO BUILD THEM.

By PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 15ft. 6in.×27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.

FOREST AND STREAM PUBLISHING CO.,
40 Park Row, New York.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actua canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. Th upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

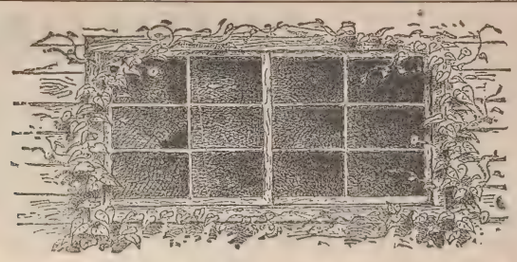
No. 8—deer shooting—is a forest scene In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channe outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scen is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an édition de luxe.



The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Fligh
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

ANSWERS TO CORRESPONDENTS.

THE FOREST COMMISSION REPORT.

IN anticipation of the annual report of the Forest Commission of New York, the Commissioners have drafted a special report on legislation for the action of the Legislature now in session.

The first subject taken up by the Commission is that of leases of forest plots for summer residences. Of the present occupants some have taken possession without any authority whatever, and some have been appointed custodians by the Land Commissioners, who, having no authority to lease the land directly, were simply evading the intention of the law in appointing custodians with power to build, improve and live upon it; but whatever may be the decision with regard to custodians appointed prior to the passage of the act vesting the forest reserves in the control of the Forest Commission, all appointed subsequent to that date are necessarily null and void, and the Commissioners, holding that it is not desirable to exclude the public from a proper and reasonable enjoyment of the forest preserve, and believing that it was not the intention of the Legislature to throw any obstacles in the way of such proper enjoyment, ask for legislative action to confer on them all necessary power in the premises.

The Commission further recommend the necessary legislation for the appropriation of taxes raised on the lands of non-residents to the building and maintenance of roads running through the lands assessed. Under the present system the highway taxes are paid to the Commissioners of Highways, who have power to expend it in any part of the town in which in their opinion it will do the most good.

But the most important feature in the Commissioners' report is their recommendation for change of venue in prosecutions for trespass upon State lands, a recommendation based upon the difficulty of finding witnesses who dare or are willing to furnish the State with information in their possession with regard to such trespasses. In fact the anarchical conditions of affairs, and the reckless defiance of the law in the North Woods, have reached such a pitch that the late district attorney for Herkimer county, A. B. Steele, Esq., in speaking of the difficulties of carrying on prosecutions for cutting timber on State land, asserts that "the whole area of State lands is being cut over, and that if a person inform on a trespasser neither his person nor his property is safe." The Commission ask for authority to bring actions for trespass in the name of the State in any of the fifteen counties of the forest reserve.

The report has some very sensible recommendations on the subject of "occupancy" as a recognized means for the recovery of land sold for taxes, and the Commission pleads somewhat piteously for such a reapportionment of the appropriation as will enable them to perform the duties assigned to them. This is a matter which should not require special legislation. The appropriation having been sanctioned under two or at most three general budget heads, the Governor should be armed with full power to make all necessary reapportionments under the several heads at the recommendation of the Commission. Perhaps it was not so much the fault of the Legislature that provision was not made for detailed expenditure under every prescribed subhead, as the failure of the Commission to submit a detailed statement of requirements under budget heads.

But in spite of all shortcomings the State of New York is to be congratulated on having secured a body of Commissioners so evidently anxious to do justice to the onerous responsibilities they have assumed from a simple sense of public duty, for it will be remembered that the Commissioners are in receipt of no pay nor emoluments.

THE SMALL-ARMS TRADE.

WITHIN the past few days two events have started a great deal of tongue-wagging and repeated assertions that there was a scheme afoot to form a controlling interest in the small-arms trade. The two matters which started all this talk about a gun trust were first the bidding in at the court sale of the Remington works at Ilion, by Messrs. Hartley & Graham, of that great manufactory, for $152,500, and second the purchase of the Whitney Arms Co. works at New Haven, by the Winchester Repeating Arms Co., of the same place. The fact that these two occurrences took place within a few days one of the other was the occasion of the widespread notion that something in the nature of a coalition was afoot, and that competition of a destructive sort was to be done away with under the terms of a protective agreement.

Neither of these sales were sudden steps. The sale of the Ilion works was in obedience to a court order secured by the receivers, Brill & Russell, and the purchase for this small sum, provided the sale is ratified by the court, will leave the purchasers a very handsome profit whether they wish to go into arms manufacturing or not. The appraisement of the property at auction prices put the value at over a million of dollars. There is in the inventory the factories, guns and sewing machine patents, costly machinery and plant in almost endless variety, water-ways and franchises, real estate, etc. The fact that an agent of the Winchester Company was present at the sale and did not take up the property is given special significance by those who had a pecuniary interest in seeing a much larger sum realized. The sale of the Whitney Arms Company works at New Haven has been under consideration for several years, and repeated offers of the works have been made to the Winchester Company as the most probable purchaser. Now that the Winchester people are somewhat pushed with work the Whitney works have been taken probably at figures fixed by the purchasers.

The strongest ground for suspecting that there may be something of a trust in process of formation is the fact that arm manufacture has not been for some time past in a very satisfactory way. There are great private armories fitted with fine machinery of an expensive sort and of exclusive patterns, capable of turning out rifles by the hundred, but there are no contracts to keep these establishments running at a profitable rate. Competition has been pushed to an extreme which must leave but the barest minimum of profit, if it leaves any at all, until to-day there is no piece of fine mechanism upon the market which is offered to the purchaser at such a low price as a fine rifle.

With those facts in mind it is no wonder that there is a widespread notion among dealers and others conversant with the trade that there is something in the nature of a trust under way. Frequent mention is made of the fact that a cartridge trust or pool, formed several years ago for the regulation of the prices of metallic cartridges, has been in successful operation, and the inference is that it would be a short step to the establishment of a gun trust. With the Winchester, the Colt, and the new Ilion owners in a combine, the trade would be largely controlled, and so far as big contracts were concerned a practical monopoly would exist. This would be of more importance in regard to military rifles, and more especially as concerns contracts for foreign delivery since the U. S. Government has for many years carried on its own small-arms works at the Springfield armory.

In the making of sporting rifles, it is doubtful whether a pool would have much influence. There are many small concerns turning out fine small-bore arms, and these could hardly be brought into any sort of a working combination. There is not so much danger either from an excessive cutting of rates in this part of the trade. The name of the maker, his reputation and standing among sportsmen is a large part of his capital, and this is not readily sacrificed. A maker of repute can always command a fair price for a good article, and while trusts may operate where goods are sold in bulk and through the customary channels of trade, they would not avail much where the repute gained by years of skill is one of the factors to be allowed for.

The fact is that just now there is a popular widespread distrust on this whole subject of pools and combines. In the monopoly of certain staples of life they have recently worked palpable injury and borne hardly upon the great mass of the community. When another one is hinted at there is little wonder that an outcry should be raised, and so far there is no open act or confession to show that a small-arms trust is under way; but, in the meantime, the fact remains that the purchasing prices of fine weapons have been for some time down to a point far below anything like a decently remunerative figure, and even were some sort of a trade understanding reached, there will always be enough cheap arms in the market for those who seek them, and there will always be sportsmen ready to pay a superior workman a fit price for a superior arm.

THE MAINE JIGGING CASE.

THE case of trout jigging at the Upper Dam, Maine, last year, has again been brought up by the printing of this card in a New York paper:

"We are in receipt of several private letters requesting our opinion as to the truth of the charges against Mr. Stewart of 'jigging' trout in Maine waters. We desire to answer them publicly. We have read carefully all the testimony, published and unpublished, in the case; a score of affidavits not yet given to the public have been before us; an exhaustive brief of the case has been prepared for his own enlightenment by the writer; personal inquiries have been made as to the practices of the defendant on other waters, and more especially as to the character of tackle and methods used by Mr. Stewart when fishing the waters of the Upper Dam, with which we are familiar, and we have reached the conclusion that even the most prejudiced jury would be forced to render the Scotch verdict 'not proven.' Personally we believe in Mr. Stewart's entire innocence of the charge made against him. WM. C. HARRIS."

We beg to say, in all kindness to Mr. Stewart, that nobody cares a rap what Mr. Wm. C. Harris may profess to believe in this matter. He has never been constituted a piscatorial pope, nor is his position in the angling world so exalted that his say-so, unsupported by evidence, will be accepted as a final verdict in the jigging case. If Mr. Stewart has "a score of affidavits" which he thinks can offset the evidence printed in this journal, the very best possible use he can put them to is to send them to the FOREST AND STREAM for publication. Our columns have always been open for any rejoinder he might care to submit, they are open now, they will be open in the future. If he has documents to prove his innocence they will be of ten thousand times more good to him printed in the FOREST AND STREAM than briefed for one individual, whose "enlightenment" leaves all the rest of the world in the dark, and whose championship, though it costs little, is worth less.

The report of the Passaic County (N. J.) Fish and Game Protective Association printed elsewhere is an instructive document. These New Jersey citizens appear to have gone to work in a sensible, straight-forward and successful way to enforce the laws, and conserve and replenish the game and fish supply. The record is here printed for the instruction, edification and emulation of other societies with similar aims.

NEW JERSEY'S CHINESE WALL.

THE New Jersey notion of game and fish protection is to build a Chinese wall around the State and admit strangers equipped with guns and rods only on payment of an admission tax. The practical working of the non-resident game law in one part of New Jersey has been actually to give over the five lower counties into the control of non-residents. The West Jersey Game Protective Society is composed of Pennsylvania sportsmen, and they rule that portion of New Jersey about as they please.

This principle of exclusion has just now run mad. Senator Roe, of Gloucester county, has introduced a bill at Trenton, requiring non-resident sportsmen to pay a fee of $25, in addition to the game society license. Senator Roe believes in the wall system, and he believes in building the barrier high, with the ancient device of broken glass on the top and modern barb wire strung along the face.

The Philadelphia contingent of foreigners, who make up the West Jersey Society, are not inclined to view Senator Roe's heroic measure with much favor. They claim that the proposed law would clash with their charter privileges; and they have announced that they will fight the bill.

Senator Roe should not stop at the $25 non-resident license fee. There is a further work to be done. Out in Rockland and Orange counties, in New York, quail and European pheasants have been put out to stock the game covers there. These birds have increased and multiplied and set out to fill the earth, New Jersey included. They have crossed the State line, and quartered themselves upon New Jersey farmers. While Senator Roe is raising his wall he ought to see to it that no loophole is left for the ingress of this foreign game.

NOTES AND COMMENTS.

THROUGH the kindness of a correspondent, "Birdo," of Port Royal, Tenn., Major H. W. Merrill has procured a hunting horn which has an interesting history. It was taken from the head of a Texas beef, killed for the use of the Confederate army at Port Hudson, La., in 1862, and was converted into a hunting horn by Private W. J. Grant, Co. I, Capt. R. Y. Johnson, 59th Tennessee Infantry, then stationed there. The horn was carried 3,000 miles by Mr. Grant. The cloth strap still attached to the horn, by which it is slung over the shoulder, was made from gray cloth used for uniforms in the Confederate service. The horn is 22in. in length (originally it was 24in.) and has a mellow tone, which can be heard at a great distance. It is worthy of note that this piece of handiwork from a Confederate camp should have come into the possession of a retired officer of the United States Army. Major Merrill tells us that the horn reminds him of those of the oxen which supported the baptismal font in the Mormon temple at Nauvoo, Illinois, which he saw in the year 1842, when he visited Jo Smith, and with his long leathern hunting coat and broad-brimmed sombrero created a sensation among the Mormons.

Prof. Charles Linden, whose death is announced elsewhere, was for many years a valued contributor to the several departments of this journal. Among the more extended series of papers from his pen was one relating his angling adventurec in Labrador some years ago. He was a student of bird life, a devoted angler, most entertaining in conversation, and always found on the right side. He was early interested in the effort to secure protection for the National Park, in the work of the Audubon Society, and all other movements looking to a wise use and conservation of the gifts of a bounteous nature. Perhaps the very last thing Prof. Linden wrote while rational was the paper describing the swarms of butterflies he found on the Nouvelle; it was published in our issue of Aug. 11.

What a forcible figure was that used by Prince Bismarck, when, in his Reichstag speech last Monday, insisting upon the necessity of Germany's maintaining an immense armament to withstand the menace of other powers, he declared "it is only because there are pikes in the European carp pond that we cannot become carp ourselves."

The House Committee on Fisheries have given two days to hearing testimony and argument on the bill to forbid menhaden fishing within the three-mile limit, and they have listened to a number of advocates on either side. Their report has not yet been made, but it is expected that it will be favorable to the bill.

The National Rifle Association's offer to turn over the Creedmoor range to the State of New York is one which should be accepted. Long-range markmanship has virtually died out, and Creedmoor is now used by the National Guard to such an extent that the State should assume the burden of supporting the range.

Prof. Bolton's inquiry into the vocabulary of terms used in addressing animals is as novel as it may prove to be interesting. His communication on another page explains the special information he seeks; and readers of his note are invited to give him their coöperation.

THE ROCK CLIMBERS.

VII.—A PIECE OF MEAT.

IT was a long day, twenty-four hours at least, and that is a good while to go without food or sleep, when one is working hard.

The Rock Climbers were a trustful band. So far they had climbed a good deal and had received no material reward. They believed, however, in the truth of a variety of old saws, such as "*Labor omnia vincit*," "By industry we thrive," Patient waiting, no loss," "Perseverance conquers all things," and other sayings of a similar character, with which the reader is perhaps sufficiently familiar. So they kept on climbing.

One morning, however, something occurred which made them feel both hurt and angry.

It was just about daylight when an individual, coatless and hatless, with hair standing on end and sleepy eyes, evidently just from his blankets, stepped out of the tent. He yawned, stretched himself, looked over the quiet lake, and listened for a moment to the "talking" of the geese in the cove opposite, and then shivering in the keen air, proceeded to break the ice on the water bucket and to perform his ablutions. While doing this, the light grew stronger, and at length, when he turned to re-enter the tent, the sun was just gilding the eastern hills. As its first rays touched the front of the tent his eye caught sight of some pencil marks on the canvas, which certainly had not been there the day before, and looking closely, he was horrified to see scrawled there a grotesque and ribald paraphrase on one of the sweetest poems of the English language. This is what he read:

> Some city nimrod, who with rusty gun,
> The little foolhens of the glade withstood.
> Some windy would-be hunter here may run,
> Some — — guiltless of the billy goat's blood.

For a moment he could hardly believe his eyes, for it seemed incredible that any one should venture to treat with such irreverence the faithful labors of this little band. But there was no mistake about it. The letters stared him in the face. What was worse, there could be no doubt that the scoffing words had been written by one of their own number, for there was no other white man within thirty miles of the lakes. This must not be repeated. Something must be done. Few and sad were the words they spoke, but that morning by 8 o'clock all the horses were saddled, and soon after, the four men were loping as hard as they could go toward Goat Mountain.

The distance to the point of rocks running down from Otu Komi is about seven miles, at least half of this being through small aspens. Then the trail passes over an undulating prairie just above the lake shore, and afterward through small pines and spruces. No time was wasted on the ride. When it was practicable they loped or trotted, and it was only in the narrowest or marshiest places that the animals walked. Where the trail passes up over the rocks it is so steep and broken with loose boulders and high steps that every one dismounted and led up to the top. Here the trail was left and a course taken leading diagonally up the side of Goat Mountain, which in an hour brought them to the edge of the timber on the northeast shoulder of the mountain, nearly a mile above the trail.

Tying the horses in a little park surrounded by spruces —for the mountain side was so steep that they dared not picket them and let them graze—the men stepped out to the edge of the grove and looked the hillside over for goats. One at least was discovered immediately, lying in the shade in a crevice of the rock. He seemed but little larger than a pea, he was so far above them, but looking through the powerful glass one could see his horns and the shadow cast by his ears. Further off and lower down were two other white objects which may have been goats, but they were so distant that it was impossible to determine with certainty what they were.

Their plans were soon laid. Yo and Appekunny were to keep on straight up the mountain, to go around the animal and try to approach it from above, while the Rhymer and Jack, taking a lower course, should endeavor to reach it from below. If it became alarmed at the advance of either party, and attempted flight, it might thus expose itself to the other. Then after a pipe had been smoked, the men rose to their feet, took up their rifles, and set their faces to the task before them.

The climb for those who had the lower course was rough and hard. They moved along the face of the mountain, over smooth shale slopes, or rough slide rock, now plunging into deep ravines and clambering painfully up the opposite sides and again facing the vertical ledges, always working a little higher up on the mountain and nearer the game. Appekunny and Yo, who kept on up the shoulder of the mountain, found their climbing not difficult, though very steep. With many pauses for breath, they kept at it, and after an hour and a half found themselves on the lower edge of a steep slope, on which were scattered here and there stunted spruces and pines, gnarled and twisted by the winds that sweep unceasingly over these mountainsides. From here they could see the goat still lying in the crevice of the rock and now not more than 500yds. distant. It was cold here, and in the bitter wind the breath froze, so that moustache and beard were ornamented with great icicles. But the goat did not find it so, for he had chosen a spot well out of the sun, and there, just below a mass of snow and close by a frozen rivulet, he was lying in the shade trying to keep cool.

The upper part of the slope, which was now before the hunters, was bare of trees, and in plain sight of the goat, and in order to get above him it was neeessary either to cross this, or to go back and around, which would add a mile or more to the distance they had to go. Appekunny was of opinion that it would be perfectly safe to crawl across this open spot in plain sight of the animal, averring that goats are so unsuspicious or heedless that they scarcely ever take the alarm, even when the hunter shows himself in plain sight within a hundred yards. They started, therefore, crawling on hands and knees and keeping as close to the ground as possible. The open spot was about 50yds. across, and they had passed over half of this distance when the goat slowly rose to his feet. Without moving a muscle the two men lay there and watched it. After a moment, it took a step or two forward and looked down over the precipice into the great rift in the rocks below. For five minutes it stood there, then slowly turned and walked back to the seemingly vertical wall behind it, paused there a moment, as if thinking deeply, raised itself on its hindlegs, and seeming to put its forefeet into some crevice, raised itself awkwardly, and then drawing up its hindlegs, gave itself a push with them which sent it up to a little jutting point of rock, where there was room for all four feet. Here it stood for a few minutes, motionless and in the same contemplative attitude which it had assumed before. Presently it again raised itself, and again seemed to pull itself upward by means of its forelegs, not leaping, as might be expected, but apparently turning its elbows out and lifting itself between its arms, much as a man would lift himself between a pair of parallel bars. The whole movement was as slow and clumsy as could be imagined, and yet wonderfully strong and effective. The animal did not seem in the least frightened; there was no indication in his movements that he had been alarmed. He went up the cliff with the utmost deliberation, stopping every now and then to take a bite of some tempting bit of vegetation, and often waiting for a moment or two to thing something over.

At length he disappeared over the top of the cliff, and comments on his extraordinary mode of progression were freely uttered, but as he had gone, and as it was impossible to cross the deep, dark gorge, which lay between him and the hunters, and so to follow him directly, they started on up the mountain to reach its crest. It was noon before this was done. Here the snow lay deep, but the ascent was moderate and rocky, and progress was easy. Off on the north slope of the ridge, the white mantle, dotted here and there with black pines or broken by projecting rock points, stretched away down into a "hole," in which heads the large stream which flows down into the lake between Otu Komi and Goat Mountain. A dreary, cold, lifeless region it was, though in summer it is reported to be good ground for sheep and goats. Occasionally in the snow would be seen fresh tracks of goats, some of which had recently come up out of this hole on to the south side of the mountain.

Having reached a point half a mile above where the goat had last been seen, the men left the crest of the ridge and advanced along the mountainside, walking among the scattered stunted pines over the sharply inclined slide rock. Up here there seemed to be no game nor any sign of game, and it was concluded that the goats must be further down the hill. Appekunny and Yo passed along the mountainside about 50yds. apart for a mile or more, carefully looking for tracks, until they had satisfied themselves that no game had passed up the slope that day, then Yo went down and joined his companion, and suggested that they should keep on until they came to the cliffs, which were half a mile before them, and should then turn back, and look for goats lower down, trying at least to find the one they had seen earlier in the day. This they agreed to, and they had started for the cliffs, when suddenly a white spot came into view on one of the nearest cliffs, and on examining it with a glass it was seen to be a goat lying down on a shelf of the cliff just above the slide rock.

Carefully they stalked it, passing cautiously from tree to tree, until at length a point of rocks concealed the animal from view. Then hurrying forward they peered carefully around the last point of rocks, behind which it should have been, but it was nowhere in sight. It seemed impossible that it should have been alarmed and got away, and a few moments' careful scrutiny of the rocks showed that this was not the place where it had been lying. Though the general aspect of the point was the same, a big red crag, by which the goat's position had been marked, was absent. The animal must be beyond one of two points just before them. It was not seen beyond the first of these, but on rounding the second, there lay the goat on his little shelf just as he had been when first discovered.

Yo was anxious to get the animal, it was the first goat at which he had ever had a fair shot and the camp needed meat, but he was not conscious of feeling more excitement than if the animal before him had been an antelope

or a deer. Still he took a careful and rather long aim, and as the shot rang out and was thrown back by the cliffs above and tossed about from crag to crag the goat sprang to its feet, and as it rushed across the narrow shelf on which it had been lying, it was seen that its left foreleg was swinging helplessly, evidently broken high up. This was satisfactory, for as it had been lying a little quartering toward the gun, a ball that had broken its shoulder must have passed through heart or lungs. The goat ran to the edge of the shelf as if about to leap off, but the plunge of 60ft. straight down was too much for it. It turned and ran back toward the crevice, down which it had come and reared against the rocks as if to try to ascend, but as it did so Appekunny fired a shot which struck the rocks in front of it, and it again ran back to the edge of the shelf. Just as it reached it, its knees gave way and it pitched forward, whirling over and over through the air, struck a ledge and bounded out again, rolled over and over down the slide rock into a narrow smooth water course guttered out of the slate, and in this channel slipped, slid and rolled over and over, an inert mass, down the mountainside and out of sight.

"Hurrah," shouted Appekunny, "You've got him, sure enough, and you ought to, for you took a long enough aim."

Yo felt reasonably sure that the creature was dead, but he had heard so many stories of the way in which these goats when mortally wounded crawl away and hide themselves in the crannies and crevices of the rocks, that he was anxious to get his knife into his first goat and so to make sure of it. Without wasting time in words, therefore, he followed the animal down the mountainside, springing from rock to rock in such hasty fashion as to call forth from his companion more than one caution to him to look out for his neck. Down where the goat had tumbled into the ravine the rocks were plentifully besmeared with blood, and 50 or 60yds. further down, at the foot of a step, the animal lay dead, the upper part of its heart torn to pieces. It was a female two-year-old, and had never bred.

About this time the Rhymer and Jack, after a fruitless climb during which they had fired no shot, started for camp, which they reached about dark.

It took some little time to drag the carcass on to a convenient shelf for working on it, and to get it in shape for transportation down the mountain. By this time it was 4 o'clock, and the sun had long passed behind the western peaks, the sky was overcast and daylight beginning to fade. The chances of their getting into camp that night were small. Hurrying down the mountainside they struck the trail, Appekunny in the lead with the head, hide and shoulders of the game on his back, while Yo followed with the hams and saddles. On the way down they counted nine goats at various points. They traveled as fast as possible, and at length on passing a little pine tree, Yo hung his load in it to be brought down another day. By this time it was getting dusk and had begun to rain.

The horses were a mile above the trail on the mountainside, and of course must be brought down, so presently Yo turned off to get them, but found his way barred by a number of deep ravines filled with brush and slide rocks, through which it was difficult to force one's way, and progress was very slow. By the time he reached the horses he found that Appekunny had also come for them, and was starting down the hill. It was now quite dark and raining, and as he picked his way slowly down the hill, dragging after him his unwilling horse, he presently heard a wail like that of a lost soul rise out of the darkness below him.

"Look out for the trail," was the cry, and in reply to an answering shout came back in mournful accents, "I can't find the trail; I've lost the trail." And the echoes took up the sounds, and rocks and pines called back *trail, tra-i-l, ail, ail,* till the air was full of the dismal murmurs. Presently the men met down in the timber, about where the trail should be, and after a little found it, followed it on foot for 100yds., then lost it, found it again and so went on for half a mile very slowly and unsatisfactorily.

At last Appekunny said, "Let's camp. We can't find the trail; and if we could I don't propose to risk my neck going down on those rocks in the dark."

"We'll try it once more," replied Yo, "and see if the horses will follow it. If they won't we must find a place where there's a little feed, and camp there. I wish we had a piece of that goat meat, I'm hungry."

"I left my load back on the trail," said Appekunny, "hoping that we might get down over the rocks before dark. It's no use to try to go back there now, I could never find it."

"Not the least chance of it," answered Yo. "No matter; we'll have a good breakfast to-morrow morning. Now I'm going to ride a ways and see if Caribou will follow the trail."

Caribou declined to do any such thing, and presently horse and rider found themselves in the dead top of a fallen tree, and off the trail.

"No use, Appekunny," called out his companion. "Let's camp."

A few yards back was a little open park where there was some grass for the horses, and here they unsaddled, tied the horses out, and built a fire. They had no food nor water, but the night was mild and the rain had ceased falling, so that there was every prospect that they would be fairly comfortable. The fire was built near two large spruces, and it took but a short time to find a slender pole which was run across the lower branches of these trees about six feet from the ground. Over this pole the saddle blankets were hung, forming a lean-to, which reflected back the heat from the fire and which was warm and comfortable while the fire lasted, but it took only about an hour for this to burn down, and then one or other of the men would get cold, and rise to mend the fire and smoke and get warm, and then would curl up again and take a little more sleep. All night long the geese could be heard talking on the lake not far from them, and other flocks coming in and announcing their arrival in trumpet tones. The sky had cleared and the night was warm, there was plenty of wood, and the men were comfortable and contented.

At last daylight came. The horses were saddled, the trail found at once, and an hour and a half later two very hungry men were in camp eating breakfast faster than the two others could cook it for them. Yo.

The Sportsman Tourist.

THE CALL OF THE MOOSE.—II.

EARLY in the summer it had been arranged that a party of four should start for a three weeks' trip to the Big Woods, in the month of September, to hunt, fish, prospect and have a good time generally. Two of them, George and Ronald, the best moose callers in the Province, were to have been met here by Billy and Matteo. These two had taken a light team early that September morning and left the settlement, intending to meet their friends on the lake, as agreed. Forty miles of a drive and a tramp of seven had brought them to their canoe. Embarking, they had crossed Fire Island Lake, and made the carry just as the big owl spied them at the outlet coming out of the woods, as described last week.

The old owl having made his meal and, no doubt, moved by curiosity, determined to find why these two men were moving about at such an unseemly hour instead of lying quietly in some snug camp till morning. He was the more bent on this because just at sunset, away up at the head of the lake, he had seen two others shove off from an island and paddle away in their canoe. He thought it strange at the time, as it was too late to go fishing; however, he was getting hungry, so he started off to look for his supper, and forgot all about the men and the canoe until he saw the second party come out of the woods. Having had a good supper he made up his mind to follow them, spread his great wings and sailed quietly after and overtook them at the "rips" leading into the lake. Here he took up his position on an old hemlock and listened.

"You see that old hemlock, Billy, where owl just fly to?" (This made the owl a little nervous, as he thought he had got there so silently the men had not seen him, and the Indian had his rifle between his knees, and the bird's first thought was to fly away; however, the rifle did not move, so he made up his mind to stay where he was.)

"Yes, Matteo, that is the old tree where we hung up the three bears two years ago this fall. There is the little hill where we camped that night. I remember it well." Billy relapsed into silence and smoked for a long time without speaking. The Indian, however, seemed bent on conversation; he presently said, "You very quiet to-night: wat matter, Billy, not feel well? Something bodder you, suppose."

"Yes, I feel very well; but sad thoughts are in my mind. I was thinking how only two short years had passed since we camped under the shadow of that old tree a joyous party. I think I can hear the merry laugh and see the bright faces of the group as they appeared that night; how full of health and life and hope they all were. One of the four has gone, as you know, never to come back; he has crossed the dark river, gone over the divide, to the happy hunting grounds of your people, to the white man's heaven, cut off in the prime of his manhood and strength from among friends who loved him well. No more will his joyous shout be heard in forest and on stream; no more will his smile welcome us at the door of the 'home camp' as we return from the hunt. He is gone, Matteo, never more to return, and my heart feels sad to-night for my lost friend."

"He very great friend of ours, Billy; like him very much, me too. Big Man up 'bove call him; have to go; wantum for somet'ing, you an' me can't tell. Never mind, Billy. He only gone little piece ahead. We follow putty soon; bymbye meetum there, suppose." Thus the poor Indian expressed himself; how simple, how much to the point, and yet it struck home to the heart of his listener deeper perhaps than a choicer address from the lips of some great divine clad in the orthodox robes of mother church, and preached from the pulpit.

Thus these two talked of their dead friend, until the moon showed clear above the top of the old hemlock, warning them that it was time to be moving. As they embarked in the canoe, the Indian remarked, "Pretty fine night. No wind. Meby call on big stillwater. What you think? P'raps get answer. Finish whole business to-night."

"I think that Ronald and George will be out to-night, and we might spoil their sport if we called on the lake, Matteo."

"Think meby they up on Crooked Brook, not on lake at all. Ronald know if we come. Call on lake sure count of fine night. If he call on lake, we hearum sure. If no hearum, we call. Get answer to-night, I think."

To this arrangement no objection was made, and shoving off they proceeded slowly up the lake. A lovely picture lay spread before them. The glassy surface of the water glistening like burnished silver in the clear moonlight, reflected the great trees in the clear water, as in a mirror. They seemed to nod their welcome to the strangers, as the tiny ripple from the prow of the canoe disturbed the shining surface. Beautiful little islands dotted the expanse, here and there like jewels set in a silver crown. Far in the background the dark hills showed clear against the deep blue sky, while old Bald Mountain, towering high above them, seemed to stand sentry over all to guard the narrow entrance to this beautiful land. Alas! to think how short a time the solitude will be left thus; how short the distance on the other side of those hills, where the iron horse can be heard puffing and snorting; and the ring of the triphammer, the glow of the furnace, the smoke, the bustle of the busy world. A few short years and all this beautiful sylvan scene will have vanished. Where now only the bear and the moose, the trout and the otter find a home, the axe of the lumberman and the pick of the miner will be followed soon by the little bands of steel which will civilize the wilderness, changing it, who can say if for the better? Oh you who waste your health, your time, your money, at the fashionable resorts along our coasts, if you could only view this scene as it appeared before those two that night, before it will be blotted out from the face of the world forever by the march of civilization, you would hasten before it will be too late. But as old Natty Bumpo is made say, "All men have their gifts;" some prefer the quiet stillness of the wilderness, "God's country," there to commune with nature: some the bustle and turmoil of the crowded city. So let it be. Each to his liking. Thoughts such as these filled the mind of the steersman as the canoe made its way slowly up the lake. Hark! what sound is that which makes them both cease paddling and listen intently for some minutes. Presently it is heard again, a great way off, but swelling and echoing in the calm stillness of the night, *Ouigh, ouigh, ouighă*, the last sound long drawn and very plaintive comes distinctly over the still waters. Well, they know the sound, these two. It was not to find out the nature of it that they listened so intently; it was to locate it. Very strange and puzzling it would have sounded to one who had never heard it. It resembles no civilized sound on earth or in air; a peculiar weird cry, and once heard not easily forgotten; but these two knew well its meaning. It was the call of the cow moose.

"That is a cow calling, Matteo, but a long way off. What shall we do?"

"Don't think that cow-call. Little too often. Think that them fellar calling on stillwater."

"Well, that settles it, so far as our calling is concerned," answered Billy, "so we may as well move along;" and soon the canoe was going faster through the water than it had done before. For about half an hour they paddled steadily on without speaking, the lake becoming gradually narrower as they approached the head or inlet. On the right the hills appeared to run down close to the lake, and were thickly wooded with beech and maple; and on the left a long stretch of bog or marsh, studded here and there with clumps of alders and stunted cat spruce, and long, narrow threads like streaks of silver showed where the tiny creeks ran far up into the bog. But, hark! The two friends drop the paddles and reach forward as if to grasp their rifles. There it is again, clear and distinct, and sounding much nearer than it really is—*bok, bok.* The Indian's eyes seem to flash red in the moonlight as he turns to his companion, "Moose comin', Billy, big one, too. What do? Say quick!"

Billy knew what the Indian meant; he knew that the moose would not cross the open bog in the clear moonlight, but would follow the timber around, and to do this he would have to make a long circuit and cross two stillwaters. At either of these crossings he could be intercepted and shot, by following the creek through the bog in the canoe, and arrive there a long time before the moose. All this passed like a flash through his mind, and having weighed everything carefully, he said, "It may not be our friends who are calling. It may be strangers. We will follow quickly up in the shadow. The moose will go round. They have not heard the answer, whoever is calling. There it is again. We will make for the big stillwater. If it is our friends who call, all right; if not, there will be no harm done." "Putty big moose; may be scare him call much more. You an' me get him sure, if *meet* him now." Not a sound came from the moose now. He had heard the last call and was evidently listening; for presently they heard the rattle of his horns against some tree, accompanied by one low *bok*, and that was all. "He go right 'long now; but them fellar better not call 'gain," said Matteo, and he dipped his paddle and they moved along. Billy wished he had a telephone, so he could whisper to the caller over the water not to say another word; but he had not, so they moved forward. Whether the last *bok* had reached the ears of the callers they could not say; but no further sound disturbed the still night, neither from the moose nor the callers. Quickly the canoe moved along, and presently entered the mouth of the stillwater. Here our friends stopped to listen a moment, and a faint *bok* from away up in the timber announced that the moose was still moving.

Following the creek for about a mile and a half the canoe arrived at a small barren, dry and covered with little rocks and the tall trunks of burnt trees. From the head of the barren to the top of the creek or stillwater it was but a few hundred yards, and between these points they knew the callers must be hidden, and across this little haven the moose would probably come, if he came at all, and then follow the edge of the water to the call. Here quickly drawing the canoe into the shade of the long bushes and lily pads growing along the margin, the two canoemen settled themselves to await further developments. Seated on the bottom of the canoe, rifle in hand, they quietly waited. The moon was now on the home stretch, and showed the smallest objects clear and distinct. Ten, twenty, thirty minutes went by, still no sound. Forty-five minutes by the watch. Hark! a sound, but it is in the air, and along comes the big owl and settles himself on an old dead tree; *ho-ho-ho-to-ho* he called as he fixed himself on the limb. Was there some secret understanding between these two of the wilderness, the bird and the beast, and was this call a signal to warn the moose that his arch enemy lay in wait for him and advising him to turn while there was time? Casting an angry glance at the bird, Billy whispered to his chum, "If the moose don't come, Matteo, I will shoot that owl." To which he replied, "Moose come sure this time, don't you be 'fraid; big one, too, mind I tell you."

Another half hour passed with not a sound save the splash of muskrat or otter in the creek. Then, ah! the

clear, sharp snap of a dry limb told where a heavy foot had been placed; and there he was, stalking slowly over the little barren, his nose thrown high up, his ponderous horns seeming to rest on his shoulders as he sniffed the air, the long "bell" hanging from his throat. A magnificent specimen of the brute creation he was. For a few seconds he stood, then advanced slowly, hardly making a sound; an immense beast, but still moving as softly as a cat. On, on, to the very edge of the water, not 30yds. from the bow of the boat. Little he dreamed that two of the deadliest marksmen in the Provinces had their eyes fixed on him. His breath showed white in the night air. Slowly he swayed his huge head back and forth, as if to take in the ground and scent danger if any lurked near. Alas, poor brute, you have come to your fate. The slightest sign of fear, one suspicious act showing the least inclination to turn and fly, and the deadly rifles would have jumped to the shoulders in a moment. But not a sign did he show, slowly first one foot then the other, splash, splash. He enters the water and turns up the creek a little way; then stops; again a little way and stops, evidently listening. Presently further up, ahead of the moose and to one side, a sound is heard. What can it be, it sounds like water poured from a height, from one vessel into another containing water. That is exactly what it is. It is the birch horn of the hunter filled with water and allowed to empty itself slowly into the creek. The effect of this sound on the moose is instantaneous. With one mighty *bok* he springs forward. One, two, three, four plunges he makes, when two reports ring out on she still air, *crack, crack*, followed by a heavy splash. How puny, how insignifi ant those slight reports. But one may know by the heavy plunge and the total silence which follows that the shots have done their deadly work. A loud shout comes from Matteo, "He's down, Billy, make hurry quick;" and grasping the poles they are soon on the creek.

About 100yds. further up another canoe is now seen; hurrying forward they meet midway; and there with one great horn out of the water, the o her buried deep in the mud of the creek, the nose slightly out of wat r, dark blood and foam mixing with the clear liquid of the creek, the mighty monarch of the bog and barren slowly breathes his last. Not a word is spoken, not a sound is heard, save the labored breathing of the poor brute, as his head sinks lower and lower, and presently his nose sinks beneath the water. *Ho-ho-ho, to-hoo*, cries the owl, as away he flaps, evidently satisfied now as to the mission of the hunters. Roused by the owl a great cheer goes up from the two canoes, with a hearty shaking of hands and explanations on both sides. A stout rope having been produced from one of the canoes, they are ranged up side by side. A hitch is taken round the two horns, the two ends are made fast to the sterns of the canoes and they slowly make their way down the creek and up the lake to the camp on the island, arriving there just as the first gray streaks of light appear in the east, the moon having hid herself soon after the death of the moose, as if ashamed of lending her aid to such bloody work. It takes the united strength of the party to roll the big beast out on the beach. This done, they gloat over his mighty proportions, his horns, his head and shanks. Then they betake themselves to their tent to snatch a few hours of needed rest. The sun is high in the heavens when they awake; the fire is soon rekindled, a bountiful breakfast, composed of moose stake, fried onions, potatoes, hard-tack and hot coffee is soon prepared by Billy, then all hands proceed to dress and skin the moose.

Much has been said and written concerning the size and weight of these animals. The writer has seen them estimated as weighing 1,200 and even 1,500lbs. This may be correct, but he has never seen one of that size. Nine hundred pounds would represent the weight of the largest he ever saw. The present moose was a fine one, in prime order and with good horns. He was soon stripped of his skin, the shanks being cut around high up, to make moccasins, or boots. The skin was stretched between two poles to dry; and the quarters having been thoroughly washed were hung up.

The remainder of the day was spent in fishing, and shooting black ducks on the lake, and grouse in the birch covers. Early in the morning of the following day, Ronald and Matteo taking one of the canoes proceeded down the lakes and to the settlement with the meat and head; the meat to be sent to friends at home, and the head to be set up by a taxidermist, as a trophy.

A week still remained, but it is not my purpose to tell here how George and Billy spent the time; sufficient to say they enjoyed their outing. They called no more, neither did they still-hunt although sign was plenty. One moose was enough. They fished, and prospected, and shot grouse and ducks, and put in as pleasant a week as was possible for two enthusiastic lovers of the wilderness to spend, and when the time came to strike camp, it was with a feeling of regret that they saw the last package placed in the canoe, and then taking their places they bid adieu to the little island where they had passed so many happy days. Globe Sight.

New Glasgow, N. S.

BOB.

BOB. Dear, kind, patient old Bob. Will I ever forget that day in the woods with Bob? Not while these hands can steady a gun barrel and these eyes glance along its shining steel.

My acquaintance with Bob dates back to those good old days, when wing-shooting was seldom talked of, never attempted in our country; and a bird on the wing was as safe as a squirrel in a hollow tree.

I was spending a week at old Si Evans's on Rock Creek. The month was October. Pike and bass fishing were both at their best, and a right royal time I was having, breakfasting before daylight, wading all day in the clear waters of Rock Creek, listening at very short intervals to the music of the reel, whirling as only a Rock Creek p ke or bass can make it whirl, returning at night tired and hungry to a game and fish dinner cooked in the style that has made Si Evans's hotel famous through all the Western country.

I first saw Bob before daylight on a frosty October morning. I came down-stairs very early, all equipped for a day's fishing. In the office of the hotel a bright wood fire was burning. Mr. Evans was busy trimming his lamps behind the little counter. Before the fire sat Bob. He never even looked around at my entrance; he sat with stolid indifference looking at the fire.

He was very ugly. His little face was pinched and wrinkled and gloomy looking, his eyes were deep set and covered with shaggy eyebrows, a tuft of gray whiskers hung down from his long chin; his body was long and fat, his legs were crooked and bowed, with big joints and big feet.

Ugly as he was, there was something dignified in the way he sat gazing at the fire, pursuing the bent of his own thoughts, regardless of all surroundings.

"What is it, Si, and where did you get it?"

"Oh, that? Why that's Bob. I raised Bob from a little dog."

"Well, you didn't have much success raising him," I said, with a laugh. "He isn't much larger than a rabbit now."

"Oh, you needn't laugh, Mr. Fred, he's a good little dog. Are you going to take your gun with you to-day? because if you are, take Bob along; he's a good little dog."

After a short drive Bob and I landed on the banks of Rock Creek. Thick gray fog was hanging over the stream. The morning was cold. I put on a large chub for bait. The third or fourth cast succeeded in fastening my hook into a sunken log well out in the stream. The hook was a favorite one that I didn't care to lose, nor did I care to risk a wetting by wading out to it at this time in the morning. I fastened the rod and took up my gun, concluding to spend an hour or so in the woods, trusting that something would loosen my hook in that time. Bob during all this time sat quietly on the bank, apparently absorbed in a deep canine philosophical question. I spoke to him as I took up my gun. He quietly got up and trotted after me. We took our way across the broad meadows toward a distant piece of timber. Several times while crossing the meadows I turned and spoke to Bob; he looked up, then looked down; and whether he was pleased with my recognition of him or not I couldn't tell. If he was he gave no sign of it. Bob unfortunately lacked that most expressive part of a dog's anatomy, a tail, so it was difficult to interpret his feelings. Bob never left his place behind me until we entered the woods. Then he trotted off, poked his head into all the fallen treetops, investigated every little clump of bushes, and finally got out of sight altogether. Ten minutes later his sharp, short bark came from another part of the woods. I turned toward it, remarking, "Blast that dog! He has a ground squirrel treed and will scare all the game out of the woods with his bark." I pushed my way through the thick underbrush in the direction of the bark. Suddenly *whirrrl, whirrrl, whirrrl*, went the grouse, seemingly out of every tree and bush in the neighborhood. Bob took it very good-naturedly and trotted off into the woods. Evidently he had hunted with awkward so-called sportsmen before.

A few minutes later I heard his bark again. This time I approached more cautiously. At last I saw him sitting unconcerned in a little open place in the woods. Motionless he sat, save that every no v and then he would raise his h ad and give a short sharp bark. On a bush a few rods from him stood a large cock grouse, his head up, his neck stretched, evidently an interested listener to Bob's canine music. Bang! The concert ceased, the grouse was bagged, and Bob trotted off once more.

His bark soon sounded through the woods again. This time he had an audience of three; two were bagged. And so on until we had captured seven very fine ruffed grouse.

Soon I heard his bark again, this time it seemed to be moving. It came closer. I was trying to make out what this could mean, when a rabbit darted across the opening before me and entered the brush before I could shoot. Bob came following after some 30 or 40ft. behind the rabbit. A setter follows a rabbit so close that it is compelled to hole to escape. Bob seemed to understand this; he followed at a slow dog trot, just enough to keep the rabbit amused. I could hear his yelp going further and further, then circling round, then coming nearer and nearer. Presently the rabbit darted out of cover almost where he had before. This time I was ready for him and he joined the grouse; and the dog trotted off. In this little patch of underbrush Bob and I bagged four rabbits.

Bob was hunting along the hillside above me. I was following along the bank of Rock Creek. Suddenly I saw three wild ducks on the further side of the creek; fine big fellows they were. I shot and killed one and wounded another. Bob came running to me at the crack of the gun, stood a minute on the bank, then discovered the duck fluttering in the water. Without a word from me he jumped in, swam across, passed the dead duck (as it was safe), caught the wounded one, brought it to me, then went back for the dead one.

Seeing me move off, he seemed to understand that his services were not longer needed and trotted into the woods without waiting an approving nod, potting or frisking about and lowering his head as a setter is prone to do after he has made a success ul point. Bob had too much business on hand to wait for any such nonsense.

Soon I heard his now musical bark again. This time I found the dog lying at the foot of an oak tree. I examined the tree very carefully, but could see no grouse on it, and walked on, Bob reluctantly following. Presently he lay down at the root of a hickory sapling and barked up it. There was no grouse on it. I started to leave. Bob barked more savagely. I turned back and examined the tree more carefully. This time I discovered a gray squirrel sticking to the trunk of the tree. Four squirrels were soon taken in this way.

Bob and I were on top of a little ridge. Suddenly I heard the familiar bark of a gray squirrel in the valley below us. I started toward it. Bob got right behind me and seemed to pick his steps for fear he would make a noise and scare the squirrel. Presently I saw the squirrel in the top of a hickory tree far below us. Bob saw it at the same time. He darted past me down the hill. The squirrel began to jump from tree to tree. When I got down Bob was at least a dozen trees from the one on which I had first seen the squirrel, but the squirrel was on the tree he was under. Bob and I bagged thirteen squirrels in that piece of hickory timber. My last charge of powder had been used on the thirteenth squirrel. It was growing toward noon. We had made a satisfactory morning's work—seven ruffed grouse, four rabbits, two ducks, thirteen gray squirrels. I felt very well satisfied as I shouldered my game—not a light load—and turned back to Rock Creek.

When we got back to the place where I had left my rod I discovered that the line, instead of extending across the creek in the direction of the sunken log, now stretched far down the creek. Taking hold of the rod I was agreeably surprised to find a 5lb. pike on the end of the line. Landing the fish, I fixed on a new bait, threw out the line, and sat down on the bank, as I was very tired. After resting a few minutes I thought I would look at the bait to see whether it was alive.

My line was a good deal longer than my rod. I felt too indolent to reel it up, so I threw the rod back of me, caught the line in my hands and pulled up the bait. I was holding the bait in my hand, when splash went a pike that had been following it. He almost jumped between my feet in his eagerness to get it. I threw the bait into the water and I could see his big fan-like tail turn as he caught the lure and ran off with it. After a lively little tussle I landed him, a fine fellow that weighed good 10lbs. I put on another bait, and almost instantly another took it, which proved exactly the same size—a not uncommon thing in pike fishing.

Bob and I then had lunch. An hour's rest and a smoke freshened me up considerably. There were some choice looking pools below me on the creek, and I concluded to go to the nearest one and try it. The bass began biting very keenly. I wandered from pool to pool, grew interested in the fishing, and wandered further than I intended. I was certainly a mile below where I had first caught the pike. But the temptation was enough to lead any one astray. I had eighteen black bass, ranging from 2lbs. to 4lbs. each, and two of them weighed a little over 5lbs. apiece. But where was Bob? I had not seen him for a long time. In fact, I had not thought of him any more than I had thought of the game and pike I had left on the creek bank. I hurriedly gathered up my bass and started back. When I came near the spot I saw the game and pike lying perfectly safe where I had left them, and by the side of them lay Bob.

I stopped and watched him a while. There seemed something noble in the faithfulness of that little black dog. He knew I had left them unprotected, and through all the hours of the afternoon he lay there and watched them. While I stood looking at him some pigs, wandering through the woods, approached nearer than I suppose Bob thought they ought to. Instantly he darted out, drove them far up over the hill, then returned to his charge.

A few minutes' work transferred game and fish to my buggy. It was sundown. I had one large chub bait left. It was just the bait to tempt a hungry pike. I had seen a very large pike the day before in a pool a short distance up the creek. Calling Bob after me I started for the pool. The sun had gone down when I reached it. It lay dark and gloomy looking in the midst of the woods. A fallen treetop lay in the midst of the pool; I slipped my bait in near this and dragged it along the top of the water. It had not gone five feet before the pike ca ne with a rush that shot him 2ft. in the air, the bait lying across his huge mouth. Down he plunged and shot up stream.

He was large, he was angry, he was fierce. I was afraid to let out too much line, so I started to run along the bank. As I did so my foot caught, my ankle twisted, and I fell heavily. I tried to get up, but could not. The pain was intense. I sat there and played that fish out, worried him to the bank and dragged him up on the grass. He weighed 18¼lbs., but it was the end of my fishing.

My ankle swelled. I tried to get up but couldn't. My position was not an enviable one. Here I was in the midst of a woods; no house near me; possibly not one person in a week along here. Certainly I would have to stay here all night.

I tried to get up again. Again I fell down. I tried to crawl. This gave me too much pain.

Bob had been with me all the time. Suddenly I missed him. I called and whistled, but no Bob came.

I had been there possibly two hours, when I heard voices coming through the woods. One I recognized as that of old Si Evans.

Soon Bob came running up and rubbed his nose against me, followed closely by Evans and his man. The explanation was soon made. It was all Bob's doing.

"Where," said I, "did Bob learn so much?"

"Oh! I trained him since he was a little pup," said Evans. This explained all, for a more thorough sportsman than old Si Evans cannot be found in three States.

By the help of the men I got to my buggy and had the pleasure of taking the finest bag of game into Dashville that any single man had taken in that year—seven ruffed grouse, two ducks, four rabbits, thirteen gray squirrels, four pike and eighteen black bass, all the result of one day's sport.

The next October, when I got back to Si Evans's, almost the first words I said were: "How's Bob?"

"Dead," answered Si.

Although the day I have described was many years ago, one of Bob's descendants now lies on the rug before me as I write. His silver collar has engraved upon it these words:

TIM.

Great-great-great-grandson of Bob.

F. I. Sherman.

Kingfisher in Winter in Massachusetts.—Taunton, Jan. 30.—In your issue of Jan. 26 R. B. Lawrence reports on the 20th inst. a kingfisher on Long Island Sound. On the morning of Jan. 25 I caught in a trap at our trout pond a kingfisher. The mercury was about 10° below zero and there was about 5in. of snow on the ground. This is the first kingfisher I ever saw in the winter. I know that the bird has some down and is quite heavily feathered, but I never heard that it tried to brave our Northern winters. Where had he kept himself so long? We set our traps on trees that have been sawed off where they are about 6in. in diameter. The tree is then trimmed down for 10 or 12ft. and kept bare. This bare tree has an attraction for every bird that comes into the neighborhood. We have had these traps in position for several years and have caught a great many hawks, owls, kingfishers, jays, etc. —C. B.

Natural History.

THE WAYS OF WOLVES.

THE wolf's season of courtship comes on in February in this country and runs a little into March. As it approaches he may be observed as falling into an uneasy spirit, as if in anticipation of some great event about to happen to him, but not knowing whether it may be of evil or good. His eyes grow brighter and his ears more pricked up. He is less inclined to stay in his covert, and the mysterious spirit increasing upon him, he presently finds himself trotting all about in broad daylight. Also he howls more at this season than any other, particularly when it is in full headway; and this gives much color of truth to the view of those who hold that the long howl, melancholy as it seems to be, is merely a song of love, intended to fascinate the female ear. When he comes to a full understanding of what ails him, he no longer steps about as one who would hide himself, but waxes quite audacious. The female in the meantime has become aware that she is a personage of much importance, and does veritably put on many airs and practice many gambols which she had not before thought of. She, too, quits her secret places even in daylight, and goes abroad full of curiosity to see and be seen. Now both sexes come together in packs, and there are many outrageous fights between the males as to which shall possess some coveted beauty. From all I can discern, it is not left to the choosing of the female as to what wolf shall be her mate, but she is a prize to be fought for, yielding herself contentedly to that one who has badly whipped or killed some others who would have her. Thus these love affairs would never be taken as such by one not acquainted with the wolf's ways; on the contrary, he would only see in them scenes of death and terror. It is a fact, according to my observation, that there are many more male than female wolves, perhaps as 3 to 2, or 4 to 3; hence it follows that the male who would have a mate, can only secure her through hard fighting and many grievous wounds. Thus the old saying that "Faint heart never won fair lady" applies well to wolves.

When thus in pack the wolf becomes quite imprudent, not caring much whether he gets out of man's way or not. If thus pressed, I think he might attack man, but am not sure that such an instance has occurred. Should a dog, however, then venture among them, as dogs sometimes do, attracted by the noise, he is instantly set upon, and he is fortunate indeed if he escapes without being cut entirely to pieces.

At such times, if one will well rub the sole of his boots with asafœtida, and then go abroad in the woods, he will soon find that he is tracked by such wolves as are not yet better entertained elsewhere. They will follow him to his house, and sometimes bite at the corners thereof, as if they would tear a way in. If not so, they will sit around and howl greatly. I cannot account for this behavior, unless they suspect that a female wolf had taken refuge in the house.

However, an excellent friend of mine tells me that his father, having a mind to kill some wolves, went into the woods with his heels greatly smelling of asafœtida; having first selected a tree into which he should climb with his rifle. The wolves beset him forthwith in eager numbers, pressing after him so closely that the hunter lost his head, making all possible speed to the chosen tree, and climbed it so hastily that he dropped his rifle. He had barely fixed himself in his perch when the wolves were rearing upon the trunk and tearing the bark with their teeth. Now the moon was at full tide, and the wolves should have readily perceived that my friend's father was no she-wolf. He never undertook this method of killing wolves again, and was sometimes heard to say that the first gray hairs came into his head that night while fleeing to the tree with the vociferous wolves close at his odorous heels. I marvel what the wolves would have done had they caught him.

When the wolf has won his mate he escorts her to a home, whether his own or hers I cannot say. This is often in a narrow valley or gorge between rugged hills, whose sides are strewn with great rocks or covered with forest. Their bed may be in a cavern or in a difficult nook hidden among stones, or sometimes in a hollow log. It is simply a heap of dead and dry leaves. Here for some days they give themselves up to mock merriment after a manner of dogs, playing hide and seek, running short races, wrestling, tumbling, rolling. Some of my backwoods friends who have watched them intently in these sports, describe them as having a high old time, also as manifesting very much tender feeling for one another.

About 90 days after the beginning of these curious doings, they are rewarded for their pains by an interesting litter of puppies, usually from three to seven. The sports now cease, and hard work begins with the male parent to support his family, which duty he discharges faithfully and affectionately. He does not permit the mother to go far from the little ones, but leaves her at home to watch over them, while he goes forth to maraud for food for both. In this he differs entirely from the domestic dog, who seems to care very little if at all for either mother or young. Then he becomes a terror to sheep and pigs. But should he discover a sow in the woods with pigs, and find her too much to be managed by himself alone– for sows are very courageous and dangerous in defense of their young—he hastens to his mate and acquaints her with his discovery. Then both sally forth, and while one rallies the sow with threatening movements in front, the other darts in behind and snatches a pig and away. This is repeated till each is supplied with one or more pigs, as they may want. When the young get their eyes open they too demand their share, and the father's labors are much increased. It is a singular fact that he seems to love them more tenderly than the mother; for he stays by them, furnishing them food, instructing them in the art of capturing prey, long after the mother has ceased to care for them. When she would wean them she becomes harsh to them, absenting herself for longer and longer periods, soon losing all sense of natural affection. When they are about half grown, the father also casts them adrift to shift for themselves. I presume, however, that they find it not hard to secure a living, for at that time there are plenty of young animals and birds which they may readily catch. Though they are but young wolves, the Father, whose creatures they also are, provides them with their daily food.

He who is skilled in knowledge of wolves has little trouble in finding the place where they are rearing their young. Every evening between sunset and dark the male gives mouth, making the gorge resound with a couple of his long howls; also every morning between dawn and sunrise he tosses the same resonant music in the air, which at those still hours is heard far and wide. The eager puppy hunter gives ear, and having heard a few times marks the way unerringly, as the hunter of wild honey marks the way by the flight of the bee. Thither goes he, and his practiced eye soon detects the very locality. He marks the somewat trampled leaves, on which a drop of blood here and there leads him to the spot where the babes are sleeping or having their little gambols. Now, if he has marked well, he has probably already seen the father wolf crouched on a rock high on one side of the gorge, and the mother wolf similarly crouched on the opposite side, watching in silence what is going on below. They see the puppy hunter enter their beloved recess and take the puppies in his hand, storing them in a sack; and still they crouch on the overhanging rock. When he has started away, downward they dash to their recess, and if any puppies have been left they are instantly borne to some other place.

Now, why does not the wolf fight? For he is truly a mighty man of war. I have thought that in his secret heart he might feel a pride and pleasant feeling in that his children are to become the companions and friends of man; something that he himself wants but never hopes to attain; therefore that he cheerfully disarms. However, this may be but mere fancy.

After the wolf has won his mate I know not whether he continues this relationship from year to year, or discharges her when they have reared their young, to enter the lists next season for a new one. But a friend of mine who has great experience of wolves believes that their marriage is for life, giving this instance in demonstration: That he had closely watched a pair for four years, rearing their young at the same place, each having some marked features by which he was able to distinguish them from all other wolves. After four years the female was shot, and the male appeared next season at the same place with a new mate.

The male wolf very readily associates with the female of the domestic dog at certain times and half breeds are the result; but I question if the female wolf ever so associates with the domestic dog. If such cases occur the union would seem to be unfruitful, for I have never seen a half wolf in the wild state, nor have I heard of a well authenticated case. Besides, the female wolf has so many lovers of her own race ready to fight and die for her that she could hardly choose a dog if she would.

I had intended in this paper to speak of the wolf as tamed by man, but that must be deferred. N. A. T.

ABILENE, Texas, Jan. 12.

CHAT ABOUT SNAKES.

IX.

I SUPPOSE that many of my readers will consider my snake experiences incomplete without some reference to the "oft discussed subject" of snakes swallowing their young. I never had but one sensation in that line, and as the evidence was not direct, but circumstantial, they can draw their own conclusions. I once received a letter from my friends, Messrs. Thrall & Mumford, New Harmony, Indiana, saying they had expressed me a lot of snakes, and in one of the boxes would be found a female garter snake (*E. sirtalis*) with a number of young ones. On opening the described box I found only the female, but noticed that she seemed in very good condition. She was placed in a case alone, and the next morning the keeper reported that she had given birth to young ones during the night. On going with him I found the old one showing a diminution in bulk, and counted some fifteen youngsters about her. It is needless to say that I drew a strong inference from the occurrence.

X.

I have a very distinct recollection of once acting as a human python trap in rather an unexpected manner. Having found the usual afternoon resort of a blueback (*Cephalophus pygmœus*), I seated myself at the foot of a tree for the purpose of shooting it, and as the cover was rather thin, I had thrown a lot of partially dried leaves over my extended legs for the purpose of concealing them. I was very much interested in watching the actions of a party of the banded ichneumon (*Hespestes fasciatus*) in front of me, when they suddenly disappeared. Judging that they had seen something, I remained immovable, and turning my eyes over my right shoulder saw a python, about seven feet in length, worming along in a direction that would take it straight across my knees. He had not accomplished half the passage when the gun was dropped and he was clutched by one hand just back of the head, and the other some four feet along the body. His jaws opened with an angry hiss and he vainly attempted to bite, while the free portion of his body whipped around my right arm, giving it such a squeeze that the marks were visible several days after. With my arms spread and extended in front of me it was a hard job to gain my feet, but finally succeeding I broke through the bush, and on coming to its edge, a shout to my keepers attracted their attention and they met me with an empty sack, into which my capture was hastily dropped. The moment it was done my arms fell almost powerless by my sides from the continued muscular effort in straining against the powerful ∽-like contractions of the python, but rubbing soon restored their normal use and feeling.

XI.

"Mr. Thompson, here's a whopper which I killed just now, in the road out there," said a lad who came into my yard dragging a large puff adder (*Vipera arietans*) after him. It was the first one I had seen, and of course his head was dissected and fangs extracted. As he seemed as if he had, a short time previous, eaten a hearty meal, I opened him to find out of what it consisted, and to my surprise found him filled with a tapeworm of more than double his length. Soon after my arrival in Natal, I had been cautioned by a physician to be careful and eat only well-cooked meat, as a precaution against tapeworm, a very common complaint, particularly among the natives, who preferred all flesh just warmed. My adder experience gave me a hint, which, on following it, proved that nearly everything which came under my knife suffered more or less from *tœnia*. As I have said, the Zulus were severe sufferers, and it may be of interest to the medical profession to know that their remedy is a strong decoction of the male fern, taken fasting. On inquiry, I learned that it was their antidote before they ever saw a white man.

XII.

Many of my friends, knowing of my propensity for crawling through the bush, would frequently ask if I were not afraid of meeting snakes. I met them so seldom that the possibility never entered my mind, and if I did, the chances were that, either alive or dead, they would find their way into the pockets of my shooting jacket. I once met one, bent on a plundering expedition, in which he evidently showed fair reasoning powers. For several mornings I regularly visited a very thick portion of the bush to watch the construction of the nest of Smith's weaver bird (*Hyphantornis ocularius*). (The black-throated weaver of the colonists.) Contrary to the usual habits of the genus, they do not assemble in colonies, but are found only in pairs, in the densest bush, and construct a curious retort-shaped nest of thread-like bark fibres, placed on the tip of a branch, in order to foil the plundering monkeys and snakes. One morning on getting in the vicinity of the nest, the notes of alarm from the birds notified me that something was interfering with their domestic affairs. Cautiously approaching, I saw a small brownish snake, about three feet in length, attempting to rob the nest, but the slender twig to which it was attached would not bear his weight. After several unsuccessful attempts, he desisted and remained quiet, coiled around a larger branch. He then raised his head and swang it back and forth a few times, as if to take in the surroundings, started down the tree and began to climb one close at hand. Casting my eyes upward I instantly divined his intention. There was a large limb near enough to the nest for him to reach it, and as he crawled out on it a load of shot cut him nearly in halves. Picking him up and dropping him into my pocket, I went my way, surprised at his attempt to take advantage of the weaver's lack of precaution. On my return home dissection proved what I suspected. It was the *Dasypeltis inornatus*, a snake provided with those peculiar gular teeth for the especial purpose of feeding on birds' eggs.

XIII.

I frequently spent several days at a time on one of the sugar plantations, near Durban, and late one afternoon my host and myself were enjoying our post-prandial pipes under his veranda, when a sharp bleat of the little blue buck caught our ears.

"There's a confounded snake catching a buck," said my friend. "Let's go and kill the brute."

"Have a little patience and I'll catch it for you."

"Not a bit of it; I can stand your birds, bugs and butterflies, but not a snake do you bring about this house. It's bad enough to have them sneaking about at night and catching the chickens, besides scaring the lives out of the coolies, while cutting cane."

"He'll not be brought on the premises, as I'll hang him up in a tree until to-morrow, when I'll take him away. You spoke of their scaring coolies while cutting cane. What's a coolie's fright and a few chickens to the service they do in ridding your plantation of the cane rats (*Aulacodus swindernianus*)? which annually gnaw down quantities of your crop?"

"Whew! I never thought of that, and have always killed them on sight. You shan't attempt to capture him, and the first one of my help I see killing one, will catch it."

"Well! I suppose I must lose a fine specimen and content myself with the knowledge that I have taught you a little common sense."

"Be quiet! and, if the acknowledgment of my not knowing my own business will not satisfy you, go and catch him, but not another one shall you ever take off this estate, and I have found out that the snake crop must be protected if I want to grow sugar."

Taking the coverlid off my bed, I walked along the edge of the canefield, which was close to the house, and found the python, just as he had finished the buck. So soon as he saw me he attempted to reach cover in the cane, and on my cutting him off, coiled for a fight. The coverlid was tossed over him, and its edges tucked under until they were brought together, when he was thrown over my shoulder, carried to the house, dropped into an empty sugar sack and hung up in a tree, as I had promised.

XIV.

Many years since I was crossing the Atlantic in a steamer with a collection of animals, among which were two pythons, one of which had a singular trick of managing to get out of his box and coiling on top of it. My live stock was between decks, just abaft of one of the partitions across the vessel, and the emigrants' luggage had been piled up so as to form a wall to keep intruders away from the cages. I had a green keeper in charge and I found out he was in the habit of giving snake exhibitions to the emigrants, in order to show his prowess and obtain free beer. Bending the points of the hooks down which secured the top of the case, I forbade any more performances, but on going down on the following day, found the python occupying its favorite position, when I screwed down the lid and gave the keeper a strongly worded lecture. The next day, while standing on deck, the keeper hastily approached and said, "That snake," but no more, for my hand stopped further utterance. "Shut up," I savagely answered and hastened below, followed by the chop-fallen keeper. A thorough search failed in finding the truant, and I "uncorked the vials of my wrath" on the keeper, who acknowledged giving another snake show and forgetting to screw down the lid of the box. For two mortal days the thoughts of that snake gave me no peace—I could not sleep, and wandered about expecting every moment it would turn up in the berth of some hysterical female passenger, and I would be keelhauled for my seeming negligence. We were just off Fire Island, and I was on deck chewing the end off a pipe stem, when one of the quartermasters shot out of the forward gangway, followed by several of the crew, and shouted, "There's one of those infernal snakes loose below." I sprang forward with the intention of embracing him, but toned down and said, "Yes! and has been for the last two days. Just show me where it is and I'll catch it." Going below, to where they had been breaking out the emigrants' baggage, a large chest was gingerly tilted up from the top of another, and there lay the python coiled between them, the heavy cleats of the upper

one making sufficient space for his insertion. I was just finishing screwing down the lid when the keeper made his appearance, and instantly divining what had occurred, leaned against one of the cages and burst into convulsive sobs. The relief and lack of beer had completely unnerved him. Knowing that the captain would be instantly informed, I tried to dodge him, but he ran me down in the smoking room. Without giving him a chance to scold, said, "If it had ever been known that there was a snake loose among your passengers, every one of them would have passed the balance of the voyage on deck." He saw the point and good-humoredly answered, "In not spreading the alarm, you took the most prudent course."

XV.

I have met but two ladies who seemed to lack that horror of snakes, almost universal with the sex. One was Miss Catherine C. Hopley, the other caught me unawares, and I neglected to obtain her address. My keeper and myself were busy unpacking a lot of native snakes, when a shadow in the doorway caused me to look up, and seeing a lady about to enter, I said:

"Madam, if you have the common fear of snakes, I would suggest that you wait for a few moments, until I get these so secured that you can see them without fear of injury."

"What kinds are they?"

"Only the harmless species, or you would not see me handling them so carelessly."

"That being the case, I think I will venture in."

She passed in, and just as I had finished shifting, she paused in front of the case containing a large diamond rattlesnake (*Crotalus adamanteus*), and said in a low tone, as if communing with herself, "So this is the much-dreaded diamond rattlesnake, and I am very glad to have seen one," and suddenly turning addressed me, saying, "Do you know, I don't think the devil ever assumed any such form as that to bamboozle a poor weak woman, besides, it is contrary to all natural law, and I don't believe it."

Bowing in silent acknowledgment of the cogency of the lady's reasoning, I passed out of the building and left her alone in her quest of ophidian knowledge.

FRANK J. THOMPSON.

FORTY YEARS AGO.

When I read in your interesting paper the pleasant reminiscences from the pen of Mr. Frank J. Thompson, memory carries me back to nearly forty years ago, when I was a boy employed as a clerk by Mr. Thompson in New York. The firm was then Sanborn & Thompson, on Water street, below Wall. In our building there were half a dozen volunteer firemen, all members of "No. 8 City Hose," then lying in Cedar street, between Broadway and Nassau street, on the ground where the large life insurance company building now stands. From that little carriage house turned out some of our best merchants then in business down town. When the sweet and never to be forgotten music of that clear old bell in the City Hall tower (it rang many a brave fellow's death knell) came in for a fire in the seventh and eighth districts there was fun in the old store on Water street. Mr. John Clancy was the first out; he was a little lame, but he got there all the same; he was foreman of the hose cart. Then followed Larry Clancy, Will Hubbel, Phin Lawrance and myself, the whole party soon overtaking Mr. John Garcia. We made a merry crowd, and the little hose cart was quickly rattling over the pavements with as kind-hearted and manly a set of firemen as ever manned a rope. And when the fire was out and Jack gave orders to take up and "man the rope, boys," the music of the silver-toned bells and merry songs from the boys, the bright-colored lanterns, with which the little cart was decked, as we wended our way to headquarters through the then quiet and deserted streets of the big city, were all something grand to me and never to be forgotten.

As I sit here to-night in my quiet country home, with all my dear ones around me, the wind sighing through the skeleton trees, the patter of snow on the windows, and my old dog Quail at my feet on the hearth, resting from his day's labor on the golden stubbles after the little brown beauties, a feeling of sadness steals over my heart, when I think where are all those noble fellows. It all seems but as yesterday. So far as I can learn they have all crossed the unknown gulf to join the great majority, all but Mr. Thompson and myself.

ALFRED A. FRASER.

THE CEDARS, Oakdale, L. I., Dec. 26, 1887.

POWDER-DOWN FEATHERS IN HERONS.

Editor Forest and Stream:

In "Key to North American Birds," revised edition, by Elliott Coues, part second, page 86, the author says, in speaking of the matted patches of oily feathers on the breasts of herons, "the design is unknown."

I think I can explain its use. Some twenty years ago, when I first began to study birds, I took my earliest lessons in taxidermy from John C. Deacon, an Englishman, then about fifty-five years of age. He had studied birds all his life, was apprenticed to learn the trade of taxidermy in London when a mere boy, and had traveled with parties collecting for the British Museum. I sat by him one day watching him skin a great blue heron, and he called my attention to the "matted cushion" on the breast and asked me "if I knew the use of it." I told him I did not, so he explained it to me. "I have watched them many a time," he said. "They wade in shallow water where there are small fishes, and pick off some of the fibres from the breast with their bill and drop it on the water, and as the fish swim for it, they make a lightning-like dart with their bill and catch the fish." I have never myself been fortunate in observing them feed in that way, but I have no reason whatever to doubt Mr. Deacon's word. I should think the question could be solved by some of the many readers of FOREST AND STREAM by watching them closely in their native haunts. I hope to hear from others on the subject through FOREST AND STREAM.

C. E. B.

RIVERPOINT, R. I., Jan. 19.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Received by purchase—One kinkajou (*Cercoleptes caudivolvulus*), one Persian gazelle (*Gazella subgutturosa*), two paradoxures (*Paradoxurus typus*), four American goldfinches (*Chrysomitris tristis*) and two rheas (*Rhea americana*). Received by presentation—One Virginia deer (*Cervus virginianus*), one black squirrel (*Sciurus carolinensis*), three Virginia quail (*Ortyx virginianus*), one screech owl (*Scops asio*), two garter snakes (*Eutœnia sirtalis*), and one alligator (*Alligator mississippiensis*).

TALKING TO DOMESTIC ANIMALS.

Editor Forest and Stream:

In controlling the movements of domestic animals by the voice, besides words of ordinary import, man uses a variety of peculiar terms, calls and inarticulate sounds—not to include whistling—which vary in different localities. In driving yoked cattle and harnessed horses teamsters cry "get up," "click, click" (tongue against teeth), "gee," "haw," "whoa," "whoosh," "back," etc., in English-speaking countries; "arre," "arri," "jûh," "gio," etc., in European countries.

In the United States "gee" directs the animal away from the driver, hence to the right, but in England the same term has the opposite effect because the driver walks on the right hand side of his team. In Virginia mule drivers gee the animals with the cry "hep-yee-ee-a;" in Norfolk, England, "whoosh-wo;" in France, "hue" and "huhaut;" in Germany "hott" and hotte;" in some parts of Russia "haitä," serve the purpose. To direct animals to the left another series of terms is used.

In calling cattle in the field the following cries are used in the localities given: "boss, boss" (Conn.); "sake, sake" (Conn.); "coo, coo" (Va.); "sook, sook," also "sookey" (Md.); "sookow" (Ala.); "tloñ, tloñ" Russia; and for calling horses, "kope, kope" (Md. and Ala.); for calling sheep, "konanny" (Md,); for calling hogs "chee-oo-oo" (Va.).

The undersigned is desirous of collecting words and expressions (oaths excepted) used in addressing domesticated animals in all parts of the United States and in foreign lands.

In particular he seeks information as to:

1. The terms used to start, hasten, haw, gee, back and stop horses, oxen, camels and other animals in harness.

2. Terms used for calling in the field, cattle, horses, mules, asses, camels, sheep, goats, swine, poultry, and other animals.

3. Exclamations used in driving from the person, domestic animals.

4. Any expressions and inarticulate sounds used in addressing domestic animals for any purpose whatever.

5. Expressions used in directing dogs in the field or elsewhere.

6. References to information in works of travel and general literature will be very welcome.

Persons willing to collect and forward the above mentioned data will confer great obligations on the writer; he is already indebted to many correspondents for kind replies to his appeal for the "Counting-out Rhymes of Children," the results of which have been published in a volume with that title. (Elliot Stock, London.)

To indicate the value of vowels in English please use the vowels-signs of Webster's Unabridged, and in cases of difficulty spell phonetically.

All correspondence will be gratefully received and materials used will be credited to the contributors.

Yours truly, H. CARRINGTON BOLTON.

UNIVERSITY CLUB, New York City.

CHARLES LINDEN.

READERS of this journal, to whom the name of Prof. Charles Linden, of Buffalo, has long been familiar, will hear with sadness of his death, under peculiarly painful circumstances, in that city, Friday, Feb. 3. On the 3d of last July Prof. Linden left Buffalo to spend his summer vacation at Carleton, New Brunswick, a French Canadian settlement on the shores of Chaleur Bay, where in former years he had found health and recreation with his rod and gun. The Nouvelle River was full of trout, while the surrounding forests were filled with game. He was alone, but took up his abode with his old friend, J. R. Michaux. After a week or two he began to act queerly, and in a short time it was clear to his friends that his mind had become unbalanced. His Buffalo friends were advised of his condition; Dr. Eugene Smith went to Carleton, and in their company Prof. Linden returned to Buffalo. He was placed in an asylum and tenderly cared for by friends until his death. His age was fifty-six years.

Prof. Linden's career was feelingly outlined to a Buffalo *Courier* reporter by Ottomar Reinecke, the accomplished editor of the *Freie Presse*, as follows: "Prof. Linden was one of the noblest men I ever knew. Twenty-five years ago I brought him to Buffalo, and I think I did a great good to the cause of science when I did it. He was then a sailor on the lakes. He had graduated from one of the high schools of Europe, but his love of nature had brought him to America. I became acquainted with him, and learning of his great love for natural sciences. I talked with the late Judge Clinton about him, and the result was that he was employed to take charge of the collections of the Society of Natural Sciences. He came on here from Chicago, where he had gone with his ship, and took charge immediately. By the zeal he manifested he at once gave to the society an importance it had never before attained. He brought to us the Bodamier collection of birds from Europe, which at the time created a sensation in the world of natural science, and it is to-day the best of its kind in America. Then he began the collection of American birds, and under my guidance he learned to stuff them, which resulted in his getting together a wonderful number of rare specimens. We sent him abroad every summer and he visited almost every country. In Brazil he made a very large collection. He went one season to Florida, where he did immense work among the everglades, working by himself for weeks at a time. In 1872 he went to Hayti and it was the same all through the West Indies, and in the mountains of North Carolina and along the Virginia coast near Fort McHenry. He went a few years ago to the mouth of the Amazon River and explored it as far as San Tara, and he collected a great number of birds on that trip. In Florida he explored the St. John's River, and wherever he went he brought back the results of his labors. Once in the Alleghenies a rich man was so impressed with the value to science of the work he was doing that he gave him a blank check and told him to fill it out for what amount he needed to help him in his studies. Prof. Linden did not accept it, for he had no use for money. He only made friends, and his only knowledge was to study and impart knowledge. A friend in need could ask for anything and be sure of getting it. Of late years he has gone more for pleasure than work to Quebec, where his last affliction came upon him. But his illness dates from his Florida trip, for he suffered greatly from all sorts of exposures. We succeeded in getting him a position in the High school, and he filled it with honor to himself and all connected with him. He organized the Field Club, and in his classes were found the best scholars in the school, or in Buffalo for that matter, and if you talked to them you will find that they all admired and loved him. He leaves a great circle of friends who will deeply regret his untimely end. He was a correspondent of the papers both of this country and Europe, many and a good article *The Courier* has printed from his pen. He was born in Breslau, Germany, in the province of Siliesia, and his mother and sister still reside there. It will be years before we will get another man like him. None of his scholars were ever rejected by the State Board of Regents, I can tell you. He did a great deal of collecting for the Harvard museum, all the birds that were new or doubtful being sent there to be identified. In 1876 he had a novel experience. In the month of July in company with Judge George A. Lewis, a Mr. Sawyer and a Harvard undergraduate, he hired a schooner in Boston and sailed up the Labrador coast, where the party was shipwrecked. Prof. Linden got terribly excited for fear his friends would be lost. For himself he said he did not care, but he thought too much of his friends to have them perish. After some scolding at the captain he ordered Judge Lewis to tie a rope about his waist and swim ashore. The Judge was equal to the emergency, at last reaching a great rock, to which he fastened the line, and by its aid the party reached terra firma, not much the worse off. The schooner was broken up on the rocks, but the bold navigators were picked up by an English brig and were put ashore at one of the French-Canadian ports some hundreds of miles below. After being safely delivered from their peril, the party visited Carleton and other settlements on the bay of Chaleur, in the province of Quebec, and Prof. Linden was so delighted with the spot that he had visited it nearly every summer since. Last year was not an exception, and he left Buffalo July 3 for Carleton. In occasional letters he spoke of enjoying himself in sailing and fishing, being surrounded by a class of people whose hospitality made him feel much at home.

"He used to have a room six or eight years ago over the old building occupied by the Young Men's Association. Judge Clinton and I went there several times, and we concluded that it was only a matter of time when he would burn to death, for if the place got on fire there was no way for him to get out. At last he consented that we should provide him with a knotted rope and we did so. One morning he rushed into my office and thanked me for saving his life. It seems that the ash-box caught fire and he woke up and found himself half dead from suffocation. He grabbed his watch, money and guns and slid down the rope, escaping without a scratch."

"He was known to many thousands of people in this city," says the *Courier*, "and by many of them he was tenderly loved, for a nobler-hearted man had never made Buffalo his residence."

EXPERIENCE IN MAINE.

Editor Forest and Stream:

Having read in a late issue of your excellent journal an article entitled "Big Game of Maine," I beg leave to relate my recent experience in that State with a view of getting a glimpse of some big game.

The section I visited lies about fifty miles northwest of Moosehead Lake, and is most accessible by the way of Canada, being only fifteen or twenty miles from the border. I was at first much surprised to find so little game, and one could travel all day without seeing any marks of deer. In fact, in the country I traversed, there was not more than one deer where there are six in some parts of the Adirondacks. No signs of moose or car bou could be found, until we had reached a point fifteen or twenty miles from any public road, and even there I only saw where one or two moose had been feeding a month previous.

From reliable information obtained while there, I learned that the guides and hunters who at that point live in Canada, make a business of going over the border into Maine on the deep snows and crusting deer and moose. Especially do they range the whole country in quest of moose, and kill all they can find at any season without regard to law or with a view of saving anything more than the skins; having lost their horns, their heads as specimens are worthless.

I could not learn that a game warden had ever visited that section of country. And those so inclined felt secure in killing game in any way and at any time they were likely to be most successful.

A guide told me that last winter he caught a herd of caribou on a pond playing on the ice, and killed four of them, and would have killed more had they not got out of his way, and that too in the close season. He admits killing five caribou last year, while the law of Maine allows only two.

No one there seemed to pay any regard to game laws, in fact, everybody seemed ignorant that there was any law against killing game at any time. In view of all this information I ceased to wonder that game was scarce in that locality.

I have a friend who, during the past fall, visited the same locality with the same object in view. Judging from a letter now before me he had about the same experiences, and arrived at the same conclusions. After hunting six weeks he succeeded in bagging one deer. Paid his guide $60 for services, besides leaving him a good winter camp, with cooking utensils, and provisions enough to last him all through the cru ti ig season they m ke so much account of there, besides leaving $25 for other incidendal expenses. He took the saddle of his deer and started for his home in New York State.

At the border between Maine and Canada he obtained a certificate, certifying to the Canadian officials that to his certain knowledge the bearer's venison was killed in the State of Maine. But on arriving at the express office the agent refused to transport it, and he was obliged to dispose of it to escape confiscation. On the whole he seems pretty well disgusted, and in view of the loss of his hard-earned trophies, and in relation to the officers whose duty it should be to protect the game, he says, "They can sit around a hot stove while the worthless skin-hunter and vagabond guides are crusting the last specimen of their noble game, while neither the State of Maine nor the Dominion of Canada got one farthing. But a non-resident who would leave $50 for every animal killed is fleeced at every corner." I cannot, of course, speak for other parts of Maine, but the locality I visited last fall will require a thorough revolution and an enforcement of the game laws for a long time before big game become plentiful. MUSSET.

NUMBER FOUR, N. Y.

Editor Forest and Stream:

Having returned from a recent camp-out in the wilds of Maine in search of game, and thinking a few notes might be of interest to some sportsman undecided as to future resorts, I am induced to say that no person living in the Eastern States need make a trip thousands of miles West to find game in abundance. The northern half of the State of Maine, and in fact the western part, as far south as the Dead River region, abounds with bear, deer, caribou and some moose. Should this territory seem too small, the Dominion of Canada can be added to the list. Two of us while camping on the north side of Moose River last November, concluded to explore some of those snow-capped ranges which lie ten or twelve miles distant from our camp. So we packed up our kit with provisions for a week, and shouldering guns set forth. The second afternoon we reached the foot of the range, stuck up our canvas tent, cut some wood and finished the day looking for signs, which proved to be numerous in all directions. The snow in the valleys at this time was scant 2in. deep upon the ground, and as the leaves were frozen, successful stalking was out of the question. But as several fresh trails of caribou seemed to be unsuspiciously moving around, we decided to give them a trial early next morning. The night passed off slowly as repeated turns had to be taken in replenishing the fire. Morning came, and after breakfast we set out to climb the mountain, which it took two hours and a half to accomplish.

The snow became deeper and deeper at every step until we found ourselves wading through 18in. Shortly after reaching the summit, we struck a fresh trail of caribou which we followed over into a sag in the mountain, where we came upon a regular yard, packed and trodden down hard, as they apparantly come in from all directions to lie down and rest over night. Old and fresh beds were there in profusion, some of them showing tracks of the hoof 6in. in diameter. The bark from numerous small saplings had been scraped by the bulls in burnishing up their antlers higher than I could reach. After looking this ground over carefully we took out upon a fresh trail, following but a short distance to where the game had either heard or winded us and taken fright, leading off over the sidehill at a fearful pace. Being convinced that further attempts to sight the herd would prove unavailing, we turned, and by a circuitous route made back to camp.

The next two days were spent like the first in ascending the summit early in the morning, and following fresh trails till the game was started, when it would be given up and a return made to camp.

We now waited two days for a change of weather, when the snow fell, to our disgust, 20in. during one day and part of a night, compelling us to hasten back to the home camp near the railroad, thus ending our hunt for caribou for the season.

Notwithstanding this seeming ill-luck, we still flatter ourselves that had we been there one month earlier in the season, to have taken advantage of the first few light snows, we could have got within range of this game as easily as up to the Virginia deer.

From what I saw as well as learned from a noted hunter of that vicinity about the caribou, I think it holds its own against hunters and the inroads of civilization, better than any other of the deer family. The peculiar construction of its feet enables it to scurry off on top of a light snow quite like a rabbit, or on top of a thin crust where a dog would hardly venture. It never frequents by night lakes or ponds to feed or fight flies, to be potted over by the jack-hunter; nor can it be run to water by dogs in summer. It is seldom if ever obliged to yard, as the moose or deer, for deep snows in winter, thus eluding both the jack and crust-hunters as well as the hound. The only successful mode of capture being by stalking upon a light snow, it would seem to be, and probably is, about the only animal we have that can not be successfully legislated into the game bag. Notwithstanding it has been stalked by the Indian as well as the white man for many years past, it still roams over the wooded highlands of the Pine Tree State in large herds, and will furnish ample recreation for future sportsmen after most other game on the continent has become extinct. CAP LOCK.

Editor Forest and Stream:

The later reports from the Maine hunting and fishing regions indicate that the people are just digging out from one of the worst snowstorms and cold snaps on the records of that by-no-means warm State. The snow is remarkably deep in the woods. This is favorable, so far, to the moose and deer, but the danger is ahead. Such snows are liable to be covered in March and April by crusts. The deep snows of a year ago saved the moose and deer, except in the vicinity of the lumber camps; for these snows were not followed by crusts. This year the worst may be yet to come.

There is very little money in the hands of the Fish and Game Commission to do the work of protecting this most noble of game, hence the hopeful hunter of the legitimate season must look to kind nature to conserve the game. No hunting could have been done in the woods of Maine for at least twenty days the last of January, and it has taken at least a week into February to render the roads in the settlements passable; so that nearly a month of the time of danger is past. Recent letters from the Maine lake regions, or rather the nearer lake regions, indicate that very little hunting was done after the close season began, even during the few days of pleasant weather and little snow the first of January.

Mrs. Sessions writes from the South Arm, Richardson Lake, that the hunting generally stopped as soon as the law came on. She also writes that two caribou were killed on or near the lake road, just before Christmas. Hence it would seem that the caribou of the monstrous track, which set so many of the sportsmen crazy, who were shown the great footprints last summer and a year ago, that this old fellow has fallen. Still there may be more of them. The theory is that this game animal is also on the increase, under the protection that is granted by the well disposed hunters. I am very glad to be able to state that poaching is not the order of the day in the vicinity of Andover. Indeed the sentiment is better there than at Upton, only a few miles further to the west.

Again Mrs. Sessions writes that a couple of hunters stopped with her to dinner a day or two before Christmas. They had succeeded in killing a deer and they invited her to go down to the wharf and see it. She went, and as she writes, "I have been mad with myself ever since; the little creature looked so pretty and so innocent! I wish that I had never seen it. I cannot understand why it is that men want to kill all that is pretty and harmless in the woods." Well, if our wives, our mothers and our sisters were the only hunters, there would be little need of protective game laws. But not so with the fish protective laws; for I could give the readers of the good FOREST AND STREAM the names of a number of ladies who are perfect trout killers with the fly-rod, but they "don't want their names mentioned." Some of them are remarkably fond of trolling, too, and one I know has a record of two over 4lb. trout in one day. Then there is another lady, a little afraid of a boat or a canoe, but she does delight in standing on our wharf at the camp and catching chubs by the hour. Her record must be up among the bushels of chubs. Indeed, last summer she kept our bait pails nearly full of minnows; only saving the little ones from her chubbing. Well, that makes us think of being there again. Only about three short months and the time will have come. Mrs. Sessions writes that the ice is very poor and made up largely of snow. Indeed, one of the lumber toating teams broke in at the Narrows the other day, and the horses were drowned, so poor is the ice. Such ice should go out early; but very much depends on the April and May weather.

SPECIAL.

Editor Forest and Stream:

I have offered $25 for the conviction of any person, during this close season, for killing moose, deer or caribou in the State of Maine. The notice will appear in the Lewiston Falls *Journal*. Who will do likewise to make it warm for them? N. C. L.

SALEM, Mass.

AT CLOSE QUARTERS WITH A BUCK.

Editor Forest and Stream:

The following extracts are from a letter written by my nephew, who is attached to a surveying party in Colorado. They may interest some of your readers.—F.

RIFLE CREEK, Col., Jan. 9.—*Dear Uncle Frank:* Perhaps you may be astonished to hear from such a place, but it is a fine country for large game. I received a letter from father the other day in which he stated that you were thinking of coming out here. Let me write a hint or two just as if you were starting to-morrow. Like a monster fool, I was told to buy a .44-40 Winchester, 73 model magazine, "it was always easy to get ammunition." I did so, but sold it for half price before I had been here two weeks. I have ordered a .45-90 single Winchester with Lyman sights, one that will kill. The best time to hunt blacktail deer is in November, then the bucks are very fat and are traveling down from the back mountains to the valleys. I have seen eight or nine hundred in a bunch, but there are usually from five to thirty. The greatest number I ever killed in one day was seven, it is one thing to see them and another to get them, not to speak of packing them into camp.

The place where I went was about six or seven miles from the head of the ditch on which I am at work, there is a horse trail all the way up to a good log cabin where I camped, it is on what is called the "old Ute hunting ground." The surface is rolling and covered with aspen and patches of bunch grass, there are no rattlesnakes, no flies, in fact nothing but deer and an occasional elk, there are plenty of bears and mountain lions, but it is very seldom that one is seen, it is always an accident if you run on one. It is absolutely essential to have at least three blankets, as it freezes every night in the year but is warm and hot at noon. At this time there are plenty of deer within a half mile of our camp, but the bucks are lean and the snow is so deep upon the sidehills that it is hard to get them after shooting one.

The Denver & Rio Grande Railroad runs to Glenwood Springs, from whence we run due east for 21 miles by stage or horse, thence on a random line N. 45° E. for 10 miles, when you are hedged in by deer, or at least you would have been this past season. About a week ago a ranchman wanted me to go up with him to look for a pony of his that had strayed, so I got my horse and a .45-70 rifle, he called his dog and we went up back of the road not more than a quarter of a mile till we saw a band of six deer. Winslow fired at a big buck and evidently missed. I fired through the aspen timber; the bullet went along the skin of the deer's back and plowed up the snow beyond. At this he turned and walked toward us, about 150yds. off. Winslow shot and I fired, I shot and Winslow fired till the deer caved in on the snow. The underbrush was so thick that it was hard to get a good shot. I was nearer and ran down to him. I was just going to shoot into the back of his head, for I saw he was not dead, when Winslow came up and said "Don't shoot!" so I stepped back a yard or two from the deer's tail, expecting to see some fun when he started to cut the buck's throat; I knew there would be some kicking. At that instant the dog came up and made a dash for the deer's head, upon which the buck starts up, wheels about and makes one jump at me. I had no time to aim, or in fact to bring my rifle up, but pulled it off at him. I found afterward that the bullet struck his face and ground along his neck under the skin. At the shot he rushed away out in the open, but the dog brought him to bay and I gave him one between the horns for a finisher. He was not three feet from me when he turned. As he was weighed and not found wanting in the regulation 250lbs., I should not care to have been punched with his points, of which he had seventeen in all. P.

EXPLANATIONS AND FELICITATIONS.

Editor Forest and Stream:

Please allow me space in your columns to straighten out a little your newsy correspondent "Special." At present he seems to have been thrown off the scent of Maine deer poachers, and it seems too bad for him to get so very heated on the wrong track. In your issue of Jan. 19 was a communication in which he gives our Phillips *Phonograph* a general "sitting down on." The cause of his wrath seems to be mostly the following item, which I give in full as it appeared in that paper:

C. B. Curtis, of Gorham, N. H., has been stopping at West Phillips the past week. Curtis, be it remembered, is the boy who figured so conspicuously in the fight when the *Phonograph* Jumbo bear was killed. He arrived too late this year for a bear hunt, but on the first day of January succeeded in capturing a fine deer, which he took to his home the next day to present to his many friends. Go for him, George.

Now, the deer referred to was a dear young lady, as appears from this marriage notice printed in the same issue of the *Phonograph:*

Phillips, Jan. 1, by Rev. T. N. Kewley, Mr. G. Bert Curtis, of Gorham, N. H., and Miss Carrie E. Kempton, of West Phillips.

"Special" goes on in this way in regard to such wicked business:

This item was written from West Phillips, Me., and the sportsman mentioned was from New York. It is against the law to ship game out of that State. The George mentioned is Game Warden George D. Huntoon, of Rangeley. The deer was killed after the season was closed, and yet the local paper has no word of encouragement for the game warden; neither is it in sympathy with the enforcement of wholesome statutes for the protection of what might be made of great value to the locality where the paper is published.

Now, to make everything pleasant, do you not think it would be about the correct thing for "Special" to express a couple of boxes of choice Havanas up this way? I will do him the favor to see that they are passed around.

For the further benefit of "Special" I will state that there are four hunters on Dead River by the name of Douglas. Two days ago I saw a man with whom I am well acquainted and whose word I consider above question, who is spending the winter on the Spencer, which is a stream that runs into Dead River. The moose were all killed in that vicinity, one within a mile and a half of his camp. He says that as far as he knows there is not a suspicion entertained there that any man has killed more than one moose. The names of the hunters who are credited with the killing are as follows: Andrew Douglas, his son, Gus Douglas, Joe St. Ober (Indian), Ike James and a Mr. Savage. These are the facts as they were told to me by a man who I am sure would tell them as nearly right as he knew. It may be that the law has been broken there, but what is the use of accusing a man or men through the public press with only suspicion on which to base the charges? I do not wish to shield a guilty moose killer in the least, neither do I wish to see an innocent man wrongfully accused.

FRED C. BARKER.

RANGELEY, Maine.

Editor Forest and Stream:

I learn, by way of the daily papers, that the monster moose, killed in the Dead River region this winter, and of which the FOREST AND STREAM has already had an account, is being mounted for the Smithsonian Institute.

Another well-known sportsman and celebrated guide is gone—that is into the ranks of matrimony. The *Boston Herald* says that "One of the happiest of the occasions that are always happy, was that of the marriage of Capt. Fred C. Barker of Camp Bema and Rangeley steamboat fame, to Miss Ella F. Kimball of Rangeley, Me. The event took place at Rangeley, Feb. 2. There are few men better known to the numerous sportsmen who visit that attractive region than Capt. Fred, and there are few to whom more hearty congratulations will be extended. The captain has been wedded to his steamers in the summer, and to his hunting and trapping expeditions in winter. None have been more successful in pleasing the sportsmen who have patronized him, and his woods expeditions have ripened into a knowledge of the forest and its inhabitants at once practical and valuable. But the wonder to the sportsmen will be 'how he came to go and do so?' and whether he could have been meditating such a step when he has been on those long tramps, alone through the woods, to Parmachenee, to see his friend John Danforth? Capt. Fred is well-known in Boston from his lectures on hunting and trapping."

The readers of the FOREST AND STREAM are also acquainted with Capt. Fred, and thousands of them will join in congratulations; but they will hardly wish him too many repetitions of the day. The captain is a warm friend of this same FOREST AND STREAM, and copies of the latest numbers are generally to be found on his little steamers as they ply across the lakes in summer time.

SPECIAL.

DEER DRIVING IN DAKOTA.

FOR the last hunt on the last day in 1887, we left town at 9 o'clock A. M., and drove about three miles north. The day was stormy, and one of the worst of the season. The dogs were put out about 10 o'clock, and in a very few minutes they were on the fresh tracks of two deer. The wind blew so fiercely that we could not hear the dogs when south of us for more than an eighth of a mile, and often not then. Mr. O. F. D. was standing in an old wood road, and hearing the hounds near by looked up, and there stood a fine large doe. With double-barreled shotgun, loaded with buckshot, at a distance of 40yds., he fired and missed the deer; but he declared he could have killed a chicken or a rabbit at the same shot. About the same time a large buck with immense horns came trotting slowly past Mr. T. G. He said he was so near that he was certain he could hit the deer's neck, and shot at it; but scored a clean miss and saw the deer bound away. Mr. R. and Mr. W. had good shots, all missing. We ought to have brought home at least four deer. But these same gentlemen have brought in lots of them, making fine shots and having fine sport.

The hounds are slow, very slow; a man can walk as fast as they go; and if a deer is in sight, they seem to pay no attention to it, but to the track. A fast hound would not live here forty-eight hours, as they would be shot; but every one knows that these dogs do not drive deer out of the country, and the deer are not afraid of them, and keep only a short distance ahead. There never were known to be so many deer so near town. W.

BISMARCK, Dakota, Jan. 5.

THE HUNTING RIFLE.

Editor Forest and Stream:

For years people have been discussing in the columns of your paper the choice of a hunting rifle.

Numerous articles, intended to be exhaustive, have been written upon the subject of trajectory, and other communications have dealt with different details of construction, sights, and the like. I have read nearly all that you printed about these matters, and although I have hunted every year, I am still using the same gun I did ten years ago. I could get a better one—that is to say, there are many that have a flatter trajectory, use more powder, carry more lead and possess I know not what other advantages, if such they are and not merely differences—but why should I? I can do all I wish to do with the rifle I have. I can knock off a grouse's head at 20yds., or kill a moose at 200. The gun is an ordinary '73 model, 20in., round-barreled Winchester; a weapon that to some of your correspondents would be a thing to be avoided as incapable and deficient in nearly every requisite of what is their ideal of "a hunting rifle." Now, I have an idea which the majority of writers on "choice" have not. I do not wish "a hunting rifle." Give me a fair rifle and I will do the hunting myself. My idea is that the discussion should be rather as to the "choice of a rifle for a hunting man." That a man who can hunt should have a good gun is sensible, but that any man, hunter or not, should have "a hunting rifle" such as seems to be in the minds of a good many of the choosers—a weapon that, like the magic ones in the fairy tales, has only to be pointed vaguely anywhere in the general direction of the object desired to insure its downfall—is nonsense.

Hunting is one of the things that, in this age of mechanical contrivances, cannot be done by machinery. I know of no apparatus for determining the freshness of tracks, their direction, which is which, what they show as to the whereabouts of game at any moment, etc., etc. The hunter, fortunately, must do something himself, although it is true that this is opposed to the spirit of the age, which desires to do as little, and get as much for it, as possible. Of course, the use to which a gun is to be put must affect the choice of a suitable one. The largest animal we have east of the Mississippi is the moose, and a gun that will kill one of these at 200 or 250yds. answers every purpose.

In the hunting in this eastern region very few shots are made at as much as 200yds., still fewer over that distance, and I can see no necessity for the large bores and heavy powder charges advocated by so many people.

In a late number of your paper I read an article praising the powers and performances of a Sharp gun, describing the geographical distribution of the fragments of a squirrel which had been sitting on the ground and near which a ball from this formidable "hunting gun" had struck, and also the wrecking of a deer's head by another shot from the same battery. Now of what use would such a weapon be to any hunter this side the great river or in Ontario and the eastern Canadian country? I am sure I do not want a gun that destroys game; that casts the fragment of an ear of a squirrel one place and the half of its hindleg another; that "wrecks" a deer's head or that makes a hole into which one's unclinched hand can be passed. I prefer to use a weapon with which I can kill such game as I wish at any reasonable distance, and kill it with the least injury to the carcass, hide, etc. If my hunting and shooting powers are deficient, I would rather go on as I am than make up for these shortcomings by the use of a cannon that is sure death if it hits within three feet of where I would put a ball if I could. This is somewhat in accord with the principle that actuates a fisherman to use a light rod and tackle instead of a pole and cord. I have never hunted west of the Mississippi, but if the numerous articles published from time to time in the FOREST AND STREAM, describing the events in that region, are true, the plan there seems to be to shoot when any game comes in sight and to keep on shooting as long as it remains there. Of course, in that kind of shooting, one needs something that will kill no matter where it hits, if at all. So, also, if a man is to potter about after grizzly bears he will be likely to ask for a heavier gun than mine, because his object is to destroy a noxious, dangerous beast, not as in deer hunting or the like, to kill so as to save the animal in the best possible condition. So much for guns in general, now a word or two as to sights.

East of the Mississippi, where in hunting the shooting is seldom over 200 or 300yds., as I have said, there is no necessity for using an elevating sight. If a man has a sufficiently correct eye to tell at a glance how far away game is—and he must do that to be able to set his sight at the proper elevation—it should be correct enough to enable him to make a proper allowance in aiming with a fixed sight, and he should do this at once easily and naturally, without conscious thought and effort, or estimation of distance and subsequent calculation of allowance.

I use a simple solid flat-topped hind sight with a rather coarse V-shaped notch in it. The front sight is filed flat on top, so as to be about wide enough to fill the notch when down level with the top of the hind sight. This is the sight for 100yds.; for other distances it is easy to draw coarse or fine as required. Some fifteen years or so ago Capt. A. A. Clay, of Pennsylvania, invented the only peep sight I know of that is really a good hunting sight. It is made by drilling a hole through the hind sight just below the bottom of the notch. As the size of the hole and the distance from the notch depend upon the shooter's eye, and whether the sight is to be on the barrel or the small of the stock, they can be determined by making cardboard or other patterns and trying them. The front sight is cut under a little at the rear so that its top is nearer the eye than its base, and has inserted in this top at an angle so as to catch the light, a small bar of silver, ivory, or the like. This is a good sight and infinitely preferable to the Lyman. Using it is not like squinting through a knot hole; it allows the game to be seen and aim to be taken as quickly as with an ordinary open notch. As soon as the front sight drops down into the notch of the hind one it naturally finds the center of the hole into which the notch apparently opens, for the bar which separates the two disappears. The hind sight can be set on the small of the stock or on the level as best suits whoever is to use it. A good many hunters and good shots have used this sight and like it. I have one I have had since 1875, but used very little because I prefer a fixed sight to an elevating one, and a plain notch to any kind of peep hole. No doubt many of your readers will think my style of sight, especially on so short a barrel, too coarse for any sort of good work, but when I look back over a record of hunting from 1870 to now, with this kind of sight—for I hunted of course before then—I do not see how I could well have bettered my shooting with any kind of sight, nor do I see where any of those I came in contact with did any better, whether on squirrels with long, old-fashioned "mountain rifles," or with modern breechloaders after moose and the like.

CECIL CLAY.

WASHINGTON, D. C., Jan. 28.

Editor Forest and Stream:

The following is submitted as demonstrating the wide range of usefulness covered by a single weapon, and which may be developed by very simple and practicable means.

Personally I prefer the .32-cal. rifle to the .22, even for short range and light shooting, as being less trifling and not so much like a plaything, and as being instantly available, under judicious management, for much more telling work than the .22 is capable of under any circumstances, while it may also be made to answer most of the requirements of the latter with very little trouble.

Under this idea I recently set about making some trials with a view to bringing out the possibilities in both directions from what may be considered middle ground.

As a preliminary matter I procured samples of the following named bullets, all of the grooved variety, viz.: Ballard .32-165, Maynard .32-153, Remington .32-125, Winchester .32-115, Smith & Wesson .32-85, and a round bullet of about 50grs. (130 to the pound). Of these I found all but the Ballard and Remington samples to be interchangeable, the former being larger than any of the others in diameter, and the latter much smaller. These were consequently laid aside.

As all rifles by the leading makers may be regarded as about equally good, the sportsman may safely be guided in a selection by his individual preference for such matters of detail as breech mechanism, style, etc. In my own case the Maynard rifle was chosen mainly because of the facility with which the barrel may be detached and the arm packed for transportation. The barrel is 24in. long and adapted to the Winchester .32-20-115 cartridge.

In my experiments with the round ball I found that by using from 5 to 15grs. of powder I could get accurate work up to about 50yds. The best results were obtained by loading the shell three-fourths full of powder, placing on it a thick wad cut from ordinary gun wadding with a No. 10 "belt punch" (to be had at any hardware store) and seating the ball with sufficient pressure to make it bind firmly in the mouth of the shell. If the ball is of proper size a little more than half's it bulk will be exposed. Contrary to my expectations I found that the bullet, when thus inserted and a moderate pressure exerted, was held quite firmly and would not fall out under fair usage, even though the larger part was exposed.

The advantage in selecting a ball rather full in size lies in the fact that it will more completely fill the bore and take the rifling better than a smaller size, it being shot naked, but of course lubricated in the usual manner.

By reducing the amount of powder and increasing the wadding this cartridge may readily be adapted to indoor shooting, if desired, and a minimum of noise, smoke and cost be realized.

Touching the matter of expense, to which some of us at least are not indifferent, it may be stated that the cost per hundred shots may be figured down to about forty cents, when full quantity of powder is used. The shells, as a matter of course, being considered part of the original outfit, as they will last a long time.

Allowing the above to suffice as showing what may be accomplished on the descending scale in the .32 line, I will state as an illustration of its capabilities in the other direction, that a well-known and very successful hunter and guide of the Cheat River region in West Virginia, whose acquaintance I made last fall, was using a .32-20-115 Winchester rifle as a general hunting arm. When I expressed surprise at his choice of so small a size, he told me that during the short time he had owned the gun it had killed eleven deer, none of which had gone out of his sight after being hit.

His somewhat remarkable success may, however, be considered as largely owing to his skill as a shot. He can usually put his bullets where they will tell most effectually, in which event one size is about as good as another. I do not wish to be understood as advocating so light a cartridge for deer shooting generally, but cite this instance simply as an example of what so-called "pop-guns" are capable of when put to the test.

For distances between 50 and 100yds. I have found the Smith & Wesson 85gr. bullet very satisfactory. In fact, I find on referring to my score book, that the best shooting there recorded at both the above distances has been done with this bullet and the full powder charge without wadding. Its advantages, within the limits named, are less dangerous range, entire absence of perceptible recoil, lower curve, involving less trouble with elevation, etc., and some difference in cost compared with the regular bullet.

I have also tried, with fair success, a bushing or false chamber made by drilling and reaming the rear end of the regular shells, which is somewhat bottle shaped, until an ordinary .32 short C. F. cartridge will enter freely. The head of the 20gr. shell must also be reduced in thickness so as to make room for the rim of the straight one. The thickness of metal around the base of the former is ample for this purpose. Although I have not made a thorough test of this device, I am persuaded that it affords a practical method of changing from the use of the one kind of ammunition to the other whenever circumstances may make such change temporarily desirable.

In altering the 20gr. shell it should be left full length, the forward part serving to guide the bullet of the short cartridge into the rifling with the requisite precision.

W. D. ZIMMERMAN.

NORRISTOWN, Pa.

LEAVENWORTH, Kan., Feb. 3.—The two weeks of warm weather we have had have started the streams to running and the lakes and ponds are filled with water. Several large flocks of wild geese have been seen in the past few days, and quite a number have been killed. A few flocks of ducks have also made their appearance. I note that prairie chickens seem to have wintered well, as there are several large flocks of fifty or more in each on my farm in Atchison county. Quail are very scarce.—JR.

SAILING FOR DUCKS.

NEW YORK, Jan. 27.—*Editor Forest and Stream:* In your issue of yesterday I noticed an article on Long Island duck shooting, in which the writer states that he cannot see how running ducks down with a steamer can do more harm than stringing a line of boats off a point. Admitting that the harm is equal, two wrongs do not make a right. We must allow duck shooting within a limit, and if a certain ratio of ducks that come to our bays in the fall and winter are to be killed, is it not better that most if not all devotees of the sport should obtain a few ducks, than that a few sportsmen should have all? Certainly the average sportsman cannot indulge in the luxury of a steam yacht, and if he could the shooting in our waters would be of short duration. If we are to have steamers going at the rate of ten miles an hour constantly chasing ducks from their feeding grounds, we can with safety pronounce the last solemn rites over beach and point shooting, as they will be things of the past.

I am not familiar with the shooting at Mamaroneck or Captain's Island, but I am thoroughly familiar with that to be had in Gardiner and Peconic bays. Previous to the passage of the present law the beach and point shooting was excellent along those bays, beginning Oct. 1 and running far into cold weather. Where it was not uncommon season before last for a fair shot to bag from six to twelve birds for a morning's work, this season he would be fortunate if he got one duck in from six to twelve mornings. This was the case at all points along these bays. Now there certainly must be some cause for this radical change. The feeding grounds are there still, and the cold weather brought along the birds as in previous years, why did they not remain until the bays closed with ice, as they had always done? For the simple reason that they were driven out and off from their feeding grounds. As soon as the open season began two or three men in their steam yachts commenced at the headwaters of Peconic Bay and chased everything before them almost to Montauk Point. Every day from sunrise to sunset they were cruising about under full head of steam chasing the birds until the ocean from Montauk to South Hampton was black with them. And while they got a few birds, they prevented every one else from getting any. They do a great harm for very little sport. If this law continues, duck shooting will soon become an unknown thing on the east end of Long Island. The law is very obnoxious to sportsmen in general in this section, and ought to be repealed.

J. M. M.

SAILING FOR ANTELOPE.

Editor Forest and Stream:

I don't like to see so much loose criticism in the papers about my hunting adventures on the prairies, and especially my manner of shooting antelope, so I will tell your readers how it was done. I built a wind wagon (if you know what that is) and rigged it up with sail enough to drive it over the level prarie, when the fall breezes blow. Then taking my crew of four, well armed with repeaters and shotguns, we would sail around till we got to windward of a herd of antelope, when we would run slap-dash at them, and as they always run up wind, we'd give them Hail Columbia as we passed. We always got more or less as we had plenty of cartridges, but we never could get the cripples, for they could run up wind faster than we and able to beat our wind wagon. Still, as we went to shoot, that didn't make any difference, as we were always able to kill enough to take home.

After several days of grand sport we found the antelope getting wild, so my friend, Major Smith, of the Fifth Regiment U. S. Horse Marines, then stationed at Fort Mercury, kindly loaned me a Gatling which, mounted on our bow, did great execution. We enjoyed a week or so hunting, when the horrid hunters banded together and complained that we were ruining the hunting (did you ever hear anything so absurd?) and made it so unpleasant for us that finally we had to stop.

Was it not a shame to make a row? And then it must be remembered, too, that we did not get more than one antelope out of every six or seven knocked down, so there was a plenty left, if they got well of their wounds.

SANGWILLAH.

MIDDLESEX COUNTY ASSOCIATION.—The Middlesex County Association for the Protection of Game and Fish, held their first banquet at Hotel Chafee, Middletown, Conn., Jan. 31. The members convened at the hotel at 8 o'clock, and after transacting business adjourned to the spacious dining-room, where an elaborate dinner was in readiness. It was voted to purchase trout fry and stock the streams in this locality, also quail, to replace those that had succumbed to the severe winter. Steps were taken to induce farmers who knew of any destitute quail in their locality to report the same to the association and they will provide feed for them. The society in the past few years has stocked the streams with 67,000 trout fry, in addition to those gratuitously furnished by the State. It was also voted to take steps for the formation of other societies of a like nature; and also toward a State association for the protection of game. Mr. Collins, of Hartford, warden of the Hartford County Association, gave some very interesting facts about his success as game warden. The following members were present: J. W. Alsop, Col. John C. Broatch, Capt. C. W. Harris, A. W. Bacon, E. N. Hubbard, Samuel Russell, C. E. Jackson, A. R. Huntley, Wm. Lyman, Jas. K. Kelsey, John H. Sage, Frank Brainerd, O. V. Coffin, J. N. Camp, Wm. VanDuersen, John R. Pitt, Wm. Jamieson, J. W. Trantum, Geo. M. Pratt, T. P. Bill, M. W. Hennigar, G. N. Clark, G. H. Parkinson, A. G. McKee, Wm. Lane, Geo. A. Chafee, S. A. Robinson, C. G. R. Vinal, Mayor C. R. Lewis, Edward Jackson, A. Putnam. Host Chafee, of the hotel, who is a member of the association, displayed considerable taste in decorating the tables, and the feast was all that could be desired. The following officers were elected: President, Hon. Joseph W. Alsop; Vice-Presidents, Robert N. Jackson, James A. Kelsey, Middletown; William Lyman, Middlefield; John H. Sage, Portland; Secretary, Col. John C. Broatch; Treasurer, Capt. Chas. W. Harris; Executive Committee, Samuel Russell, Augustus Putnam, Geo. A. Chafee, Albert R. Huntley; Counsel, Silas A. Robinson.

SHARP-TAILED GROUSE are sold in the Boston markets under the name of prairie chickens. For the table the sharp-tailed is the finer bird.

A BRUSH WITH EPHRAIM.

IT was in the year 1852 that Dr. F. closed his office door in a mining camp, to spend a few days at his ranch down in the valley. At that season of the year it was a very busy time with the field hands. But the Doctor being a very kind-hearted gentleman, told them to rest in the morning until breakfast time and he would catch up the horses. So the next morning at the break of day he saddled his horse and rode out in the valley. He had not ridden far before he saw some object in the distance which he thought to be one of the horses. On he went until quite near, when to his surprise it proved to be a grizzly bear. The Doctor quickly turned about, took his back tracks and was soon at his ranch-house door. He called his men, told them what he had found, and said he would ride up and down the main road and invite all his neighbors to the hunt.

It was but a short time before they arrived, mounted and equipped in good style as they thought, some armed with rifles, some with smoothbores and some with army revolvers, all muzzleloaders in those days. The plan was soon made to ride in single file within short range of one another, and to skirt the edge of the valley near the foot-hills, and finally out-flank and cut off Bruin from the mountains. But in this they failed, for the bear, taking in the situation, left in good time for the highlands.

Thereupon the whole line of hunters (except one) dashed on upon his trail. This one, Mr. B., started around the opposite brow of the hill hoping to cut off the bear. In this he succeeded much sooner than he anticipated, for all at once he met bruin face to face. The old man soon unhitched the contents of his smoothbore, which set the bear in a terrible rage, and Mr. B., not liking the looks of his eyes nor the sound of his voice, made up his mind very quickly to take his back tracks to the valley. It was then and there that the race commenced between life and death, and it looked as if death might win. Nevertheless Mr. B. rolled the large Mexican spurs up his pony's flanks, and at nearly every leap gave a whoop, which rang out on the mountain air and even reached the ears of the pursuing party. On, on they came with lightning speed, and at the edge of the valley are within range. Now every man shoots at will. Some of the shots sting bitterly; and to the great joy of old old Mr. B., bruin falls to the ground to rise no more.

NORTH WINTERPORT, Me. L. H. S.

AUXILIARY RIFLE BARRELS FOR SHOTGUNS.—I noticed some time ago an inquiry of those who had experience about auxiliary rifle barrels for shotguns; and although many must be in use in this country, but little response was made. I have a fine shotgun and fine auxiliary barrel plated, and plated front protector, as also a breech sight to use as peep. This sight can be made to slide from side to side. I have had these arms several years. The rifle barrel was discarded for the following reasons: I found that when the rifle barrel was used in the right barrel the ball struck about a foot to the left at 50yds.; and when fired in the left barrel it struck about a foot to the right. That is the lines of fire crossed each other near the muzzle. At the same time when shot was fired from the gun barrels it went very accurately at the same distance. I suppose this is because the shot takes its direction from the last few inches of the muzzle, whereas the rifle barrel was held in position in the direction of the axis of the gun barrel at is breech. The recoil of the powder charge was so great that it blew the primer from the cartridge against the firing pin with such force that it bent the pin so it would not work and had to be repaired by the gunsmith. My experience is given that my brother sportsmen who think of using auxiliary barrels may move with caution and know that all auxiliary barrels are not fine shooting arms even under favorable conditions.—HOCK-O-MOCK (Bath, Me.).

ARKANSAS VARMINTS.—Beebe, Ark., Jan. 28.—Some time ago I promised to give you an account of a wolf chase, but I cannot do it, as we have no dogs that will trail them. Wolves are to be heard any night running, and wolf sign is plenty. Stories of encounters with wolves and panthers are told around the fires at night, some of them bordering on the improbable and almost beyond belief. One man fought a panther successfully with a club and got off without a scratch. Frank Ford killed a large panther with his fists. Jack Rudolf, a young trapper, killed a half-grown panther with his hunting knife. A farmer named Cramer is reported to have been chased by wolves. Game is plenty. I am going trapping for fur as soon as the waters go down a little more, and shall probably have some interesting items for you soon.—G. J. B.

A DISCLAIMER FROM LITTLE ROCK.—Little Rock, Ark.—*Editor Forest and Stream:* I notice an article signed "The Wise Acre" in your paper of Jan. 19. It alleges of four boys from this city that, going out shooting, in less than an hour one had both legs shattered, one lost an eye and another was minus a hand. There has not been an accident of any kind with boy hunters here in the past four years. Four years ago two or three boys were out hunting and one accidentally got a charge of small shot in one foot; but it was nothing serious and soon got well. We nearly all use breechloaders of the latest and most improved pattern, not the old-style cap gun, and some of us are pretty good shots.—LITTLE ROCK BOY.

HOW IT WORKS.—Philadelphia, Jan. 28.—While off on a fishing trip last September, I was induced to try my hand at gunning, a pleasure I had not indulged in for eighteen or nineteen years. The result was a thorough awakening of the old passion and a very bad case of the "gunning fever." Before the winter closes I want to put myself in possession of a good gun and some theoretical knowledge, which, with the practical knowledge acquired in years gone by, will enable me to be ready to enjoy some sport with gun as well as rod when the spring season opens.—X.

DILLINGERSVILLE, Pa., Feb. 3.—The late storm was very hard on game. Out of nine covey of partridges I knew of, I have heard of but four since the snow; the cotton tails are all right, and on deck, but they have a hard go just now to find food.—L. W. M.

MR. HENRY C. SQUIRES will sail this week for Europe, to be gone a month.

PASSAIC COUNTY F. AND G. P. A.

THE annual report of the secretary of the Passaic County Fish and Game Protective Association records that during the year 1887 the prosecutions for violations of the fish and game laws have not been as numerous as they were the preceding year, violators of the laws being aware of the fact that detection meant punishment. It is a gratifying fact that the wholesale violations of the law have ceased and that if game and fish are illegally taken it is done very quietly so as to avoid detection. Men who in past years made a practice of taking fish and game out of season and in illegal manner have abondoned that practice and some have gone even so far as to assist the Association when it was in their power to do so.

The principal prosecutions had during the year were for violations of the laws prohibiting the killing of song and insectivorous birds. This class of offenders have given the Association a great deal of trouble. A number of Italian residents in the suburbs of Paterson were in the habit of shooting everything that had feathers; they prosumed this was a free country and if they chose to have song birds for diet they had a right to indulge in them. This has been stopped, but not until a number of them had been fined and three imprisoned. Since the last meeting of the Association in October there have been four prosecutions of this nature. In three of these cases the offenders professed repentance and ignorance and were allowed to go on the payment of costs of prosecution. The fourth was the case of a man who knew better, and so he was fined $10 in addition to the costs.

The Association has at present a membership of seventy-two. At the beginning of the year there was a balance in the treasury of $19 65. The expenses during the year were $47 83, leaving a balance in the treasury on the first of January, 1888, of $32.12. Prosecutions, as a rule, paid for themselves. When violators of the law were arrested and were allowed to go on payment of the costs no entry was made on the books of the Association as the proceedings had no effect on the treasury, just as much money having been returned as was taken out. It has been the aim of the officers of the Association to make each prosecution pay for itself, and I find at the end of the year there is a balance of only five dollars to the credit of the Association from prosecutions, the rest of the income being derived from the payment of dues.

One of the principal faints of the freebooters of Greenwood Lake was that thousands of fish escaped during the summer months into the Morris Canal. The Association accordingly entered into an agreement with Mr. T. E. Fuller, the proprietor of a hotel at the lake, by which Mr. Fuller agreed to put in a screen if the Association would furnish the netting. The netting was woven to order, having a mesh of one and a half inches. This is to be doubled, the meshes broken, and put in in sections. It has not yet been put in, but Mr. Fuller will undoubtedly carry out his part of the agreement as soon as the weather permits. The necessary permission to put in the screen has been obtained from the canal company.

Another subject of complaint at the lake was the wire which at some places spans portions of the lake and thus interferes with casting as some of the best places of the lake. Correspondence drew from the Superintendent a promise that the wire would be removed as soon as possible.

The quail with which the Association stocked the woods of Passaic county two years ago are doing well, and the cheerful call of "Bob White" is heard in places where it had not been heard before in many years.

In the early part of the year the Association determined if possible to improve the fishing in the Passaic River. The stream already contains bass, pickerel, perch and other varieties of fish, and steps were taken toward securing some *Ictalurus albidus*, the white channel catfish of the Potomac. The fish, if successfully introduced, would afford amusement and food for hundreds of the residents along the banks of the Passaic. "The Fishery Industries of the United States," a government publication, says of this fish: "The white catfish of the tributaries of Chesapeake Bay is very abundant in the Susquehanna and Potomac rivers, and forms an important part of the fish supply of the Washington market. It reaches a weight of 2 to 5 pounds." A letter of inquiry addressed to the United States Commission of Fish and Fisheries elicited the following reply: "In response of yours of Jan. 8, I am directed by the Commissioner to say that the species of catfish referred to by you is not to be obtained in the Potomac river at this season of the year. The channel catfish is migratory, and is only present in our waters during the shad and herring season. Arrangements could be made to procure, at little trouble or expense, a supply of these during the spring from fishermen either on the Potomac or on the Delaware, which would, of course, be much more convenient to you.—M. M. MCDONALD, Chief Div. Dist."

The matter was dropped for the time being, but was again taken up and the secretary instructed to make further inquiries. According to the Government publication the catfish referred to is a fresh-water fish, inhabiting the Potomac and Susquehanna rivers. According to Prof. Baird it is a migratory fish and may be found in the Delaware. If it is migratory where does it migrate? If it forms an important part of the fish supply of Washington markets why should it not be introduced into the waters of New York? It is reported to be a hard fighter at the end of the line and it is certainly very prolific. Would it not be a material addition to the fish supply of this part of the country? The Association would be glad to obtain further information on these points.

The Association applied through counsel to the Supreme Court for a certiorari to set aside the dog ordinance of Paterson which requires the owner of every dog to pay a registry fee of two dollars annually, but Judge Dixon decided that two dollars was a reasonable fee for the trivial work done by the city in registering each dog and declined to grant the certiorari. The prosecution was accordingly dropped. CHAS. A. SURINER,
Secretary and Treasurer.

THE ALBANY GAME LAW MILL.

[*Correspondence of Forest and Stream.*]

ALBANY, Feb. 8.—As the game committee of neither House has held any meeting as yet it is unnecessary to state that the progress of legislation is slow. Indeed, the Assemblymen have spent so much time in looking after the Assembly ceiling that they seem to have paid very little attention to anything else. The game committees are, however, to meet this week and arrange for hearings upon several of the bills. A number of the bills will also be printed.

The hearing, which will be of the greatest interest, is that upon the code that is proposed by Mr. Roosevelt. It is declared, by those who assume to know, that the bill does not stand any chance of passing in its present state. The provisions which it contains forbidding the hounding of deer have stirred up all the elements which opposed the Curtis anti-hounding law of two or three years ago; and which were responsible for its repeal. They declare that the Curtis law was a direct loss to Franklin, and other of the Adirondack counties, because it prevented tourists from coming into the woods at all.

It is very evident that very much of the legislation of the coming winter will turn upon this very point, whether hounding shall be permitted or not.

A bill introduced in the Assembly by Mr. Cromwell, Feb. 1, makes it unlawful, by day or night, to place any purse net, pound net, weir, or other device, except the hook and line, for the capture of menhaden or other fish, in the waters of Raritan Bay within the jurisdiction of the State of New York and of Richmond county; or in any arm, bay or river emptying into the same. But this shall not forbid fykes as now allowed by law subject to regulation by the supervisors. A violation of this law is punishable by a fine of $100, or imprisonment for 30 days. One half of the money collected is to go to the poor of the county, and the other half to the informer.

AN ESTIMATE OF "FOREST RUNES."

THE name of poet may be ungrudgingly applied to the next volume on our table, "Forest Runes." Mr. Sears, under the *nom de guerre* "Nessmuk," has been known for years to the readers of Porter's *Spirit of the Times* and FOREST AND STREAM, by occasional contributions, and has also published recently a guide to sportsmen entitled "Woodcraft." But he has been little known to the general reader. The present volume, the first collection of his poems, ought, however, to give him a national reputation, for very few of our poets have shown any such original power of expression or such creative force of imagination as we find in these poems of "Nessmuk."

We learn from the brief but spicy autobiographical remarks in the preface that Mr. Sears is a man approaching sixty-five, whose boyhood in Massachusetts, of which he is a native, was passed in the woods or in the company of the remnants of the Nipmuck tribes. Later on he became a hunter by profession. He tells us that he was fond of rhyming in youth, but that he never made a study of the laws of prosody, while his life has been passed chiefly in the forests with his rifle, and his associates have been men of action rather than of thought. Inferentially we learn from these poems that at some period not mentioned he visited Brazil, where he was much impressed by the scenery and people.

In style Mr. Sears's poems are vigorous and racy; they are free from sentimentalism. The expression is direct, the diction nervous and clear, the rhythm musical and sometimes powerful. The thought is rarely profound, but it has the flavor of being suggested by experiences, which seem to have been familiar enough with hardship to have given the author a touch of pessimism.

In "An Arkansas Idyl" and "How Miah Jones Got Discouraged," "Nessmuk" takes a more merry tone, and shows in this sort of "folk lore" a facility of humorous suggestion and rhythm not inferior to that of Bret Harte and John Hay. But his true originality and power are best exhibited in the poem entitled "The Mameluco Dance." It represents a tragedy among the swarthy, black-eyed, hot-blooded half-breeds of Brazil. As a piece of dramatic description, as an example of stately blank verse, full of rush and fire, it is entitled to a very respectable rank in American poetry. The blemish of the poem is the closing passage, after the murder of the Vaquero, which is a great descent from a lofty scale of poetic excellence to prose, and indicates defects which the circumstances of the author's life account for.—*The Independent, Jan. 5, 1888.*

Camp-Fire Flickerings.

"That reminds me."

228.

"THAT reminds me," said Colonel Tucker to the Bank President. "Several years ago I was superintending the building of the dyke at the head of Brown's Island (on the Ohio River). Just below the old wing dam, on the line of which we were building the dyke, was a famous place for taking bass and jackfish at certain seasons. One morning an unusual number of amateur anglers had gathered there from various quarters. They were having very poor success. The fish wouldn't bite. At length Parson G., rector of the church at S., appeared on the scene. The Dominie's outfit was rather unclerical in appearance, and none of the workmen knew who he was; but I knew him very well. He soon had his tackle in order, and was not long in finding the fish. As the sport progressed and the Parson's string rapidly grew in numbers, one of the workmen was so filled with admiration for his skill that he called out to him above the roar of the water, 'Say, mister, you beat the devil!' The Parson looked solemnly over his shoulder and answered back, as he reeled in another jack, 'That's my trade, my friend. I've been trying hard to beat him at all points for the last ten or fifteen years with more or less success. I am glad you think I can down him at this business!' There was a quizzical look on the man's face as he took hold of his wheelbarrow handles and went on with his work. The enjoyment of that brief interview was all mine—and the Parson's." BLIVENS.

229.

On no part of the hunter's life does his mind dwell with pleasanter retrospect than on the evenings spent around the fire after the day's sport is over. When the years have dimmed the memory of the cold and the failures and the other discomforts, he sees only the glowing fire, feels again its genial influence as it permeates his whole body, producing that delicious languor which makes his sleep so sweet, and hears again the voices of his companions, now stilled in death, as they relate the adventures of other days.

It was on a winter night, when the thermometer was among the minus twenties, that a party of us sat thus around a glowing fire, in the house of a miller, in one of the valleys of the Alleghenies. The hours were spent in telling of hunting experiences. We were of three or four hunting parties who had met at this place by accident, for all desired to enjoy the hospitality of this excellent family. Everything about the house was as neat and comfortable as any of us had at home. The wife was a model housekeeper, and set a table that it makes one's mouth water only to remember. After each one had contributed his story to the entertainment, some one called on our host to tell his turkey hunting experience. Although living in the territory where deer and turkeys were so plenty that we had come many miles to enjoy the privilege of hunting here, he never went out after game.

"About twenty years ago," said he, "I was working in the mountains above here. Turkeys were then very plenty. I have seen a hundred in one flock. One day a friend told me that there was a very large flock in the woods above the house and insisted on my going with him to get some of them. We took our rifles and started up the mountain. After going half a mile we came to a field in the woods. On approaching it carefully we saw what I thought to be about an acre of turkeys. They were busy feeding, and as they were not hunted much in those days, they were not very wild. We got near enough to shoot and I wanted to have both fire together, as that would give both a chance. He insisted that as he was the best shot, he would shoot first, and I could have the next chance. I saw that I could not do any better, so I let him have his way. He fired into a bunch of about fifty that were close together, and missed them all. They rose and flew. All of them went together except three. I was so mad at him for taking the first shot and then missing that I told him to take his choice of the two flocks, and I would take the other. He went after the large flock and I started across the hollow after the three.

"I was following a path, and when I came to the bottom of the hollow I found it winding around a little patch of laurel. As I was making the turn around this I came within five steps of a large black bear, which was rooting among the leaves. He was quartering from me, and as he was making a noise in the leaves did not hear me coming. You may know that I stopped rather suddenly. I began to consider what I would do. I could see a light spot just behind his ear, and as I had heard hunters say that was the spot to shoot at, I said to myself, if I only had a gun I would shoot him right in that spot. He was so close to me that I could almost have laid my hand on his rump.

"Just about the time I had completed my survey, and concluded what I would do if I had had a gun, he had rooted around until he was almost facing me, then lifting his head he saw me, and there was one surprised bear in that hollow. He gave a great grunt and in a second had plunged into the laurel. As soon as he was gone I remembered that I had stood there looking at him all that time with a rifle in my hands. I was so disgusted that I said to myself that any one who was such a fool as that had no business hunting after turkeys. So without going after them I went home, and have never hunted any since, unless they came where I could shoot them from the door. HOMERUS.

KNOTTED EELS.

Editor Forest and Stream:

In fishing for striped bass in tide-ways or near the mouths of rivers on our Atlantic coast, many rod and reel anglers have used live eels for bait for several years past. The eel is attached to the hook by running the barb up through both jaws. This method of attachment securely fastens the eel and imposes the least possible restraint to its free and natural action.

When thus fishing, I have, on several occasions, on reeling in my line for a fresh cast, found the eel tied in a single knot near the head, with the tail free. It was then directing its energy toward drawing the head through its own bight in the endeavor to disengage the hook.

Such a mishap to the angler can occur only when the current is too feeble to keep the eel extended in the water, or when the line is allowed to run from the reel too freely.

On the occasions referred to above, the eel had tied the knot by turning up the caudal extremity, passing it around the body and down through its own bight, just as one would tie a knot in a piece of line. The process then was to reduce the coil which surrounded the head to the smallest possible size, letting the hook fetch up against the coil, and by such means, if possible, to tear the hook from the mouth, free the head and regain liberty. Sometimes I have seen the eel when in this position relax the coil, draw the head and hook through the same and leave a knot in the line above the hook.

These proceedings are similar to those adopted by the eels referred to in the letter of Lieutenant Richmond, published in your issue of the 2d inst., as having been caught by him in the waters about the island of San Clemente.

Eels have great muscular power, and when seized near the head by the hand provided with a bait cloth, have to be held with a firm grip to prevent their escape. When lightly held, especially without the cloth, they throw a coil against the hand for a purchase, pull back with the head, and away they go. ARTHUR MARTIN.

WASHINGTON, D. C., Feb. 5.

Editor Forest and Stream:

The eel of San Clemente Island mentioned by Lieut. E. T. C. Richmond in your last issue is the large moray of the Pacific coast, *Muræna mordax*, Ayres, of which many specimens were sent to the Smithsonian Institution by Professor Gilbert and myself in 1880. So far as my information goes, Lieut. Richmond's description of its habits is perfectly correct, and I think that no account of its peculiarities has yet been published. It is very difficult to draw these morays from the holes in the rocks when they are fairly braced. DAVID S. JORDAN.

BLOOMINGTON, Ind., Feb. 4.

TROUT OF THE TRACADIE.

ABOUT the 10th of August, 1886, I visited the Tracadie River, in Gloucester county, New Brunswick, and there enjoyed two days' fishing. I was staying at the time with my family at Mr. Davidson's in Tracadie village. I left this in a light carriage on Thursday morning at daylight, and after a six-mile drive reached one of the uppermost houses, where I left my horse, and met my guides, two Frenchmen, with a clumsy dugout. My son Jack, a lad of 10 years, was with me, and the canoe was pretty well crowded with the four of us and a few traps. We had four miles to paddle up a broad estuary with bluff banks before we reached the rapid water; and with a nasty, chilly head wind it was tedious work. However, in about an hour we arrived at the stream and commenced ascending by poling. The guides were not good canoemen and the canoe wabbled badly, but we pushed along all day, only stopping to fish at dinner time and in the evening, when we camped at the forks of the Lord and Foy Brook, some nine miles above the head of tide.

The stream is not broad, but is the *ne plus ultra* of trout streams, with nice sharp broken runs, deep holes at the turns, and gravelly bottoms, with excellent chances for casting and plenty of fine fish. At this time, owing to rain, it was very high, in fact too high for first-class fishing, the water being quite black.

Our night in camp was not over and above comfortable, as at about 9 o'clock it began to rain, and as our tent consisted of the jib of a small fishing smack, Jack and I had to shape ourselves to accommodate the jib, for it could not be made into shape to properly protect us. However, the prospect of a good day's sport, and a hearty breakfast of fine fish just out of the water, renewed our spirits and we started very early, fishing down stream. We found plenty of fish of good size, running from ½lb. to over 4lbs. The smaller fish we caught in the rapids, but in every large deep pond at the turns and from under the jams of drift wood at the bends, we would lure some of the monsters. With our light 8oz. rods we had our hands full; in fact, I would pick and choose where to strike heavy fish, and where the small fry; and I kept Master Jack's attention to the smaller fry, fearing a smash up if he hooked a big one.

At dinner time, in the middle of a heavy shower, we met a party of a dozen Frenchmen with their canoes, on their way up stream to drive down some cedar blocks with the rise of water. They were taking their dinner on the top of a jam at one of the best trout holes, and two of them were vainly endeavoring to lure forth some of the trout by means of angle worms. I presented them with our morning's catch, consisting of a common candle-box full, and proceeded diligently to refill it.

In this one hole in sight of the Frenchmen I hooked and landed eight trout, the smallest not less than 2lbs., and the largest (the heaviest I caught that day) scaled when I reached Mr. Davidson's 5¼lbs. At the time I was handling this fellow I was fishing with a cast of three flies, and another fish, I think of equal size, hooked on, but I lost him by the hook breaking.

It cleared up after dinner and before we reached the tide water the box was again full. In one hole where the fish were in swarms and where we cast from the bank, my boy hooked and landed three fish at one cast, the three together going 3lbs., and were of almost equal size. He was very proud of the feat. When we reached our team after another long paddle we were tired enough, and after the drive home over the six miles of road after dark concluded that at that time Mr. Davidson's comfortable quarters were preferable to all the trout streams in the world. But with the morning came the longing to be back again on this glorious stream, and that longing still continues, to be gratified, I hope, in 1888. It was the best day's trout fishing I ever had, the only trouble being that the fish were too plenty and too easy to hook. CHAS. W. BECKWITH.

FREDERICTON, Canada.

OUT OF THE FRYING PAN INTO THE FIRE

I AM not an expert fisherman nor an old hand at fly-casting, but just an ordinary sort of fisherman, and I go in for bait. I have tried the fly a number of times, but could not work it to my satisfaction, and only one fish caught is the result of my many attempts. Nevertheless I am a devoted lover of the gentle art, if not a scientific one, and avail myself of every opportunity that offers to indulge in it. Whatever occasion calls me away from home, be it business or pleasure, sees my rod and net staff in my trunk or strapped to my umbrella. My folding net, lines, hooks and reel are likewise stowed, either in trunk or valise, and sometimes I take my minnow pail as well.

Last summer I felt the necessity of a vacation, and acting upon the suggestion of my needs I packed my duds and started for the piny woods and piny hills of northern Louisiana. My brother was working a sawmill away up there in the backwoods somewhere, and I concluded to go to him. As I had never been so far back before, the anticipated pleasures of new sights and scenes were added to my expectations, and after a four weeks' ramble I must say that they have been fully realized. Lolling and straying here and there through the pines and along the creeks and rivers for four short weeks, without a care, and just as fancy dictated, served to renew my entire being. Time slipped along so easily and quietly that in reviewing the events now I find it difficult to separate them.

The sawmill was picturesquely situated upon the banks of Little River, surrounded on all sides by the sombre Southern forest. The refreshing odor from the woods and the new-sawn pine filled the air, and thus inhaling I would pass the early morning hours strolling around the building and listening to the soothing buzz of the tireless saw. The sawdust was dumped into the river, and when the shadow of the mill fell upon the water's edge, I would bring out my tackle and fish along the edge of the sawdust. I seldom failed to catch a good string of green trout (black bass), and nice lively fellows they were. We call them green trout down here, and are loth to give up the name, for it was taught to us in our childhood. Had I had the temerity to call my string of black bass by their right name, the mill hands would have laughed me to scorn as an ignorant dude. I had the good sense to stick to the old name, and by catching "whoppers" upon very light tackle I managed often to elicit remarks of approval from them.

But like the idle boy, truant from school, I felt the want of companionship, for the mill was a busy place, and every one, even down to the children, seemed to have some work to do. In the evenings when work was done and supper was over we would gather around the quarters and talk of fishing and hunting. Hunting was the favorite theme of these sons of the forest, but fishing came in for its share; and marvelous tales were told of such and such a creek, away back, where the waters fairly swarmed with "great big ones." To be loafing around among the busy ones was irksome to my sensitive nature, so I mounted my pony one day, and with saddle bags packed, and rod and net and gun across the pommel, I started for the creeks. My destination was the farm of a friend of my brother's, and I am happy to to say that this old man proved to be a true born sportsman. He loved to fish and hunt and so did his good wife, and many times we three would tramp it to some "good place" on some "good creek," and cast our lines in pleasant places. All the creeks were good, but some were better than others, and we would vary the order occasionally as fancy dictated. For green trout a certain spot would be best, for goggle-eyed perch another, for sac-a-lait another, and so on. But one of the best all-round spots was a beautiful cove at the bottom of a hill, about a quarter of a mile from the house. The old man said he had so built his dwelling as to be convenient to the fishing, and I believe him.

In the evening while his old lady was cooking the supper, he and I would take our rods and go down to the creek under the shade of the pines. By chopping the bark from some old log we would gather enough "sawyers" for bait, and half an hour thereafter would find us back at the house with a lively string of fish. A cold spring was at the kitchen door, and while the old lady heated the frying-pan we cleaned the fish and passed them over to her. Into the pan they went, and out they came again as soon as they touched the hot grease—literally out of the frying pan into the fire. I had often heard of it and never expected to see it realized, but when seen I was not surprised, for these fish appeared to be endowed with great vitality. I did not notice any particular difference in one variety from another, they were all lively.

Thus the days slipped by me, lazily strolling, fishing, sleeping and eating, and when time was up I bade a sad farewell to my kind entertainers and started for home.

NEW ORLEANS, La. L.

THE MENHADEN OIL BUSINESS.—It is said that the proprietors of fish oil factories on Long Island are considering the feasibility of allowing their factories and steamers to remain idle throughout the year. No money was made during the past season, owing to the scarcity of the fish and the low price of oil and fertilizers. If operations are discontinued several hundred men will be left without employment.—*The Long Islander, Feb. 4.*

A BOYHOOD MEMORY.

WHEN I was a boy only eight years old I went with my oldest brother one day to Pickerel and Bostwick lakes, hunting and fishing. My brother would row the boat and let me hold on to the trolling line, and when a fish of any size took hold he would take the line and haul the fish in. We only caught a few bass and two pickerel. A few days after that I told my younger brother that it was great sport to troll for bass and pickerel, and I believed I could go straight to Pickerel Lake, and a little way from there was a small lake—called Round Lake—of about three acres, with a little boat just about right for two small boys, and if he would go with me we would go fishing by ourselves and not let any of our folks know it. So it was agreed that on the morrow we would steal away. Getting my father's old chalk-line and a very large pike hook that he used to fish with in Canandagua Lake, N. Y., we started, having only fat pork for bait and some frogs which we killed on our way. We found the lake and the little boat, which was half of an old water-logged canoe with a board nailed on the stern where it had been sawed in two. Bailing it out and having only a piece of fence board for a paddle, we pushed out. My little brother, who was only six years old, was instructed by me to pay out the line as my older brother had shown me on the former trip to these lakes. He had the line out scarcely 25ft. when he cried at the top of his voice, "I've got a bite, take the line, quick." I grabbed it, and both of us pulled with all our might and brought in a pickerel that would weigh 8 or 10lbs., but when we had got him up alongside of the canoe we could not get him into the boat, so fastening the line to an old stub of a nail that stuck up in the stern I paddled to shore and we landed our fish safely on dry land. We bailed out our boat and tried it again. I have never enjoyed a day's fishing as I did that. We caught forty large black bass and five pickerel; but the tug of war was yet to come. How could we get our fish home? We could carry them but a little way at a time, and then we had to sit down and rest. We tugged at them as long as we could, and finally hid a part of them by the side of an old log and covered them up with leaves, carrying the largest ones home. We found that our people were out looking for us, thinking we had gone down to Bear Creek, which was but a few rods from the house, and had been drowned. They were rejoiced to see us and our big string of fish, but both of us were spanked for daring to go to the lakes alone. I went back with my older brother and found the fish we had hid, but we never ran away to go fishing or hunting again, nor have I ever had such luck catching bass and pickerel since. One reason why we only caught such large fish was because our hook was so large the small ones could not get it into their mouths. RUNAWAY.

LOWELL, Mich.

SUNAPEE LAKE.

Editor Forest and Stream:

I notice that "Swirl" wishes information in regard to fishing at Sunapee Lake, N. H. My home is within 25 miles of the lake, and I have been there many times, camping there the last three summers. I have not fished for trout very much, preferring the bass fishing, as I have better luck with them. Our parties have had no trouble in taking a good string on a good day. I think that the trout fishermen had pretty good luck last summer, for I saw quite a number of splendid strings, the fish ranging from ¾lb. to 5lbs. and 6lbs. I was told by a person who saw the fish, that a gentleman from Newport, N. H., had landed a 7½lb. lake trout. This was last August. But unless the day is a good one, the trout will not take hold.

I think "Swirl" will find Sunapee Lake one of the most beautiful that he has ever seen. If he cares for a climb, there are splendid chances. Sunapee Mountain close by, from the top of which a splendid view of the lake and the country north and east is had. Three hours with horse and foot will put him on the top of Kearsarge. To get to Sunapee "Swirl" should go to Concord, N. H., and take the Concord & Claremont R. R. to Newbury, which is on the southern end of the lake. From here a steamer will take him to the four principal points on the lake. Blodgett's Landing, however, is the most desirable point I think. There is a small hotel here, the Forest House, at which one can get accommodations at a small price. There are also some splendid places to camp on this side. I shall be pleased to enlighten "Swirl" further if possible. CAMPER.

COLLEGE HILL, Mass.

PICKEREL THROUGH THE ICE.—Worcester, Mass., Feb. 4.—The Jacobs brothers, Asa R. and N. S., had great luck pickerel fishing through the ice in Holden yesterday, and brought home to show their friends 45¾lbs. of solid fish. The largest five in the lot beat the record thus far. The largest weighed 5¾lbs., the next 4lbs., another 3¾lbs., a fourth 3½lbs., and the smallest of the big five tipped the scales at 2¼lbs. Asa caught the 3½ and 4-pounders within an hour of each other, and it was considered wholly improbable that N. S. could equal his luck. But late in the afternoon when the sun was sinking low down in the horizon, N. S. saw a flag go up on one of the tackle, and without delay he ran and pulled up the line. As he landed the father of all the fish in the pond on the ice and compared its size with the other big fellows, he could not express his feelings, but insisted that they at once take up their lines and start for home before the big pickerel could get away. It was a catch of a lifetime. The big five will be on exhibition at E. S. Knowles's store on Pleasant street this afternoon.

THE RENOUS SALMON CLUB, of New Brunswick, Canada, was incorporated last week for the purpose of hiring fishing privileges in New Brunswick and catching the fish therein. The trustees are Emil Hurtzig, Frederick Storey and William J. Pickney.

Capt. Benjamin R. Dixon, from near Portsmouth, Va., was in the city a day or two since, and gives an account of one day's experience in hunting recently. He went out in a battery for ducks, and after killing 30 brant discovered a covey of porpoises that went in with the tide and got left on the ebb, which he proceeded to attack and killed five. The ducks and the porpoises brought him the nice little sum of $19.—*New-Berne (N. C.) Journal.*

Fisheulture.

REPORT OF THE U. S. FISH COMMISSION.

(Continued from Page 30.)

MR. E. G. BLACKFORD, Fish Commissioner of the State of New York, in charge of the oyster investigation, makes a report of his work with the steamer Lookout, which was placed under his orders from Aug. 15 to 20, 1885. The localities visited were: Montauk Point, Greenport, the Kills, Executive Light, Port Jefferson, Prince's Bay and two trips up the Hudson River. At Montauk Point there were but few oysters found in the ponds, which are entirely cut off from the ocean, except during violent storms. At Greenport a fine growth of oysters was found on the beds of the Greenport Oyster Company. Many poor, green-colored oysters were found at the Kills, a result, it is claimed by the oystermen, of the refuse from the oil works, and a similar condition was observed in Prince's Bay.

W. de C. Ravenel makes a report of operations at the Saint Jerome oyster breeding station during 1885. By June 1 he had the ponds ready to receive the spawn, but found no number of ripe oysters until the 20th. Although young oysters were found twenty-eight days after introducing the first lot of spawn into the ponds, only about six or seven hundred were on the collectors when they were taken up in October. Ponds used in artificial oyster culture should have the full rise and fall of the tide, which is impossible where the water has to be filtered to prevent the escape of the artificial spawn and the introduction of natural spawn. The sand filters attached to the flumes became so foul in two or three days that no water could pass, and were so constructed that they could not be cleaned. The collectors, upon which the best results were obtained, were mortar-coated slate placed in wire trays resting on trestles 8in. in height, the under surface of the slate being always clean. Another excellent and cheap collector was made of plastering laths nailed together, about twenty-four in a bundle; these were either allowed to float, or were sunken by weights. Tables of the weather, temperature, and density of the water are given.

"An exposition of the principles of a rational system of oyster culture, together with an account of a new and practical method of obtaining oyster spat on a scale of commercial importance," is made by Prof. John A. Ryder, who thinks it possible to secure an abundance of spat under conditions which can be controlled, and within such an area, and at such a cost as will render it possible for persons possessing the proper knowledge to undertake spat culture, or the propagation of the oyster as a business. Since 1880, Prof. Ryder has devised, and had constructed, no less than twenty forms of incubating apparatus in which it was hoped to obtain spat from artificially fertilized eggs. In most of these filters were used, and in only one form were results of economic importance obtained, and as filters soon clog and become useless they can never be used in any practical system. Reviewing this report some years after it was written, we do not feel as sanguine that the whole problem of oyster culture has been solved, as Prof. Ryder d es. He goes deeply into the subject, discoursing of the effect of light, density of water, bathymetric distribution, horizontal distribution, temperature, food of fry and adults, effect of currents, and other questions, but the fact remains that up to the date of this report there had been no system devised whereby the oysterman can grow his oysters from artificially hatched or naturally hatched spawn and get "sets" in quantities sufficient to plant and pay for the labor expended. This is the crucial test in oyster culture; to produce spat which will grow into "seed oysters" in quantities so that they may be sold at a profit to the planters, who now go from the Northern States to Virginia for seed. Up to the present this has not been done. Prof. Ryder's article is fully illustrated and forms an important addition to the literature of the subject.

FIXTURES.

DOG SHOWS.

Feb. 13 to 17.—First show Fort Schuyler Kennel Club, Utica, N. Y. E. J. Spencer, Sec.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

Feb. 28 to March 2.—Show of Philadelphia Kennel Club. W. H. Child, Sec.

March 27 to 30.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5853.**

RULE NO. 2.

Editor Forest and Stream:

As to Rule 2, I consider it a great mistake to compel owners of puppies to register them before the age of one year. A large per cent. are lost before maturity by death or checked in development by disease, and should they have been shown after eight weeks of age, and registered, the only advantage to be derived from it is the A. K. C. fee of 50 cents. But it is certainly detrimental to overload the stud book with names and pedigrees of dogs never more to be heard of. On the other hand, if a young dog matures well and becomes a prize winner before being registered, his wins are then put on record with the registration, adding much to its importance and worth. LOTHIAN.

A new proposition comes from Mr. E. S. Porter. He suggests that the American Kennel Club should adopt the *American Kennel Register* as its official preliminary registration book, and let subsequent registration be voluntary. While appreciating Mr. Porter's manifest desire to allay by such compromise the "opposition to the A. K. C.," we absolutely fail to recognize in his plan any principle different from that involved in the present preposterous Rule 2. Compulsory registration in the *American Kennel Register* would be precisely as unjust, unwise and obnoxious as compulsory registration in the stud book. There is no distinction. We are assured that neither the publishers nor the editor of the *American Kennel Register* would be a party to any agreement with the American Kennel Club to compel registration in the *Register*. As for the FOREST AND STREAM, this journal is and has always been opposed to compulsory registration. Mr. Porter's plan of compulsory registration by which the *A. K. R.* would benefit has nothing in it to prompt a change of our position on this subject. In that position we are confident that we represent the attitude of an overwhelming proportion of the intelligent and independent breeders and owners of this country, and we acknowledge no authority by which the Anti-American Kennel Club can compel registration by any such ruse as Rule 2.

The registration rule has been a great success in England because the Kennel Club had the power to enforce it. If the club had not already enjoyed the respect of exhibitors, it could not have commanded their submission in this manner. In America things are different; an excellent stud register exists already, and the kennel world is very much divided in its opinion of the body that seeks to assume the governing *rôle*. From the defiant tone of the correspondence that is now raging in our contemporaries on this subject, we presume that American kennel men intend the A. K. C. to understand plainly that before they can command success, they must deserve it.—*The Stock-Keeper.*

It must not be forgotten that the registration sought to be enforced by the A. K. C. clique is registration for revenue only. They require funds to pay a secretary, and their scheme is to forcibly tax dog owners who cannot be induced in any other way to contribute to Mr. Vredenburgh's support. The engineers of this scheme are perfectly willing to sacrifice the interests of the smaller clubs, as it has been shown such a rule would do, if they can bleed exhibitors at the large exhibitions. The interests represented by the American Kennel Club to-day are not the kennel interests of the country in general; they center at No. 44 Broadway, New York.

Editor Forest and Stream:

As my name was announced in the Philadelphia local papers as one of the judges at the coming bench show here, I wish to inform my friends that I have tendered my resignation. Being very much opposed to Rule 2, I could not possibly exhibit or judge at any show enforcing this rule. When I accepted the position I did not expect that Rule 2 would be enforced at Philadelphia. EDWARD LEVER.

PHILADELPHIA, Feb. 4.

We are informed that a well-known spaniel judge, who was invited to judge at the Philadelphia show, refused, giving as a reason his unwillingness to be connected in such a capacity with any show where obnoxious Rule 2 is enforced.

Editor Forest and Stream:

I wish to retract my statement that the A.K.C.S.B. under Mr. Vredenburgh's supervision has admitted spurious pedigrees; I find that these entries were previous to Mr. Vredenburgh's editorship. My explanation is that I never looked into but one of the stud books, that I bought one from Mr. Vredenburgh himself at the New York show, and I recently found these spurious pedigrees in an A.K.C.S.B., but not the official. How such a substitution occurred, I cannot imagine, as I cannot recall having ever bought any but the one I got from Mr. Vredenburgh. However, my present purpose is simply to apologize to Mr. Vredenburgh for my unjust charge. W. WADE.

HULTON, Jan. 28.

RULE 7.

Editor Forest and Stream:

It is said of Rule 2 that it was secretly passed to bring shekels to the pockets of an unscrupulous clique, and that the dog interests of this country were not considered as being in any way associated with the passing of that tyranical, high-handed and gluttonous scheme.

So great has been the interest taken in the passage of Rule 2, or Empty-your-pockets rule, that those whose duty it is to watch over and protect the interests of the dog appear to have temporarily neglected their duty in leaving other and equally unjust measures to take care of themselves. How about Rule 7? What were the motives governing those who framed or passed it?

The authorities of any show may reserve to themselves the right of declining any entries they may see fit.

That is Rule 7, and I would like to know why it was adopted. Rule 22 reads:

Any person who has been guilty of misconduct of any kind in connection with Dogs, Dog Shows or Field Trials, may be suspended by the committee of any show.

The latter is a just rule, and I am for its enforcement every time. Of course there are cases when entries must be returned, for instance, if there is not accommodation for the number received, but no set of men should be permitted to refuse the entries of good dogs in order that their own indifferent specimens be allowed to walk away with the prizes. If this is the object for which dog shows were created, the sooner they are done away with the better. Do gentlemen like Colonel Stuart Taylor, Colonel Morgan, Mr. Thayer, Mr. Porter, Mr. Grosvenor, Mr. Fay, Mr. Hemingway, Mr. Child, and others, knowingly lend their names and influence to the passing of measures which are intended to rifle the pockets of the honest exhibitors and add renown (?) to the third-rate kennels of individuals whose only recommendation to be considered gentlemen consists in the weight of their purses and the cut of their clothes? Methinks not.

Rule 2 is bad enough, but Rule 7 is worse. The former will kill itself, while the latter will fairly disembowel dog shows by bringing them into disrepute with all right-minded and honest people.

Let the gentlemen (not the snobs or the tricksters) connected with the A. K. C. ponder over the following facts, and at the next A. K. C. meeting make it known that they are not there to be a catspaw for those who are lowering the status of dog shows to a level with the more vicious and corrupt institutions of the age.

It is well-known that Mr. John Davidson was ousted from the judges' ring by a newspaper man who had no knowledge, practical or other, of dogs, and how the newspaper man was assisted by a dog show superintendent who was a puppet in his hands. It is also well-known that the New York show has been gradually but surely going down hill, and that the public place little confidence in any one connected with it. Last year there were not more than 700 *bona fide* entries against 1,000 or more at Boston. Lamentably ignorant decisions by incompetent judges, and bulldozing management are the true cause of the troubles. The climax was at hand. Lost confidence had to be regained, or at least entries had to be scooped in to give a better appearance to the shattered bulwarks. Possibly Mr. Davidson has been pardoned for having done his duty, or it may be that he is only put up to swell the entries. A good name can do much for a shaky house.

Mr. Davidson judged the pointer classes at Boston and expressed the opinion that a dog named Robert le Diable was a muchly over-rated animal and that he had no business alongside such dogs as Beaufort and Graphic. A Mr. Hitchcock, of New York, also exhibited a dog named Tammany, and Mr. Davidson gave him second prize. This dog Tammany, being crooked in his forelegs, has no earthly chance of success in good company, and his owner, who is only a novice in the dog fancy, has recently begun to realize that such is the case. Robert le Diable and Tammany must be exhibited at New York this month, and Mr. Davidson is not the man to give them what they are not entitled to. So far so good.

A month ago I received a letter asking me to name my lowest price for Beaufort. I did not put a price on him. Ten days ago I received another letter, but from a different quarter, and as usual the writer wanted to know my bottom price. Again did I refuse to put a price on the dog, and on Sunday I entered him in the New York show.

On Monday evening Mr. Percy C. Obl, (whose office is at No. 44 Broadway, with that of the W. K. C. and the A. K. C.; and who acts as agent for the W. K. C. in dog transactions), called on me to ascertain if I would sell the dog. I named a figure, but he did not think his customer would go beyond $500. The sale of course did not take place; and on Tuesday I received my entry back from the W. K. C. It is marked, "Declined by order of the committee." The committee is F. R. Hitchcock, C. du Bois Wagstaff and T. H. Terry; but a gentleman who recently called at the office says, "Hitchcock seems to run the whole business."

I am very pleased to have the entry returned, as there is far more satisfaction in exposing rottenness than in winning a prize. If Mr. E. C. Sterling had been judge instead of Mr. John Davidson, would the entry have been "declined?" Fancy the Secretary (F. R. Hitchcock), Committee (F. R. Hitchcock), owner of Tammany (F. R. Hitchcock) returning my entry so that his own dogs and those of his friends may win. He certainly did not return it for any other reason, and I challenge him to name in these or in any other columns a single case in which I have "been guilty of misconduct in connection with Dogs, Dog Shows or Field Trials;" and my name has been before the public for twenty years, Mr. Hitchcock's about twenty months.

This action on the part of the Secretary-Committee-Owner of Tammany will throw light on the stud book question. The Secretary-Committee-Owner of Tammany is said to be one of the prominent leaders in the movement. Let the public judge him and others by their doings and not by the cut of their clothes. If it will do this, the dog interests of the country may yet be saved from complete wreck. Do men, who exclude good dogs from their shows to let third-rate specimens win, wish to improve the dog and advance his interests, or do they work for ulterior motives? Make this the issue, gentlemen, and you will not go wrong.

Rule 7 is further evidence that the A. K. C. is controlled by persons who are unworthy the confidence of respectable people, and such a rotten concern should be lowered into its tiny grave, and without further delay. The mourners will be few.

Why not form a National Dog Club on a sound and broad basis? The time for the birth of such a club is at hand. I have a large number of letters from prominent dog owners asking why nothing is being done. The A. K. C. has been untrue to itself, and the gentlemen connected with it can no longer afford to have their names associated with the baser motives of the scum of dogdom. Take my advice, gentlemen, and get out before you are held responsible for the unscrupulous conduct of others. Fancy, for instance, the name of Colonel Stuart Taylor, Naval Officer, port of San Francisco, 1884–1888, being placed on record as favoring Rule 7 and the way of enforcing it! A nice thing, truly, for a man of unsullied reputation to face.

We have had enough of Rule 2. It will kill itself. Now for Rule 7. What do dog owners think of a dog show secretary refusing to accept entries in order that his and his friends' dogs may win the prizes? Here is food for reflection for many weeks to come. You, Mr. Editor, have driven the sword of truth and right up to the hilt in Rule 2. Your work has not been completed, neither will it be completed until you have routed, bag and baggage, the well-clad traitors to our cause. What humble assistance I can give is at your disposal.

In conclusion, allow me to thank the Secretary-Committee-Owner of Tammany for having frankly admitted that his and his friends' dogs have not the ghost of a chance of success in competition with Beaufort when the judge is an honest and capable man. This acknowledgment of my grand dog's superiority is worth more to me than ten champion prizes; it also explains why the late Mr. Charles Lincoln called on me and requested me to exhibit the dog when a St. Louis man was the judge, and it is a great compliment to Mr. Davidson.

I shall be pleased to hear from the Graphic Kennels as to whether their entries have been returned. Any of their dogs can beat Tammany and Robert le Diable, so it seems probable they won't be allowed to compete. CHAS. H. MASON.

PUPPIES AND GUNS.

Editor Forest and Stream:

Dr. Wm. James, of Harvard College, will find Herbert Spencer's philosophy all right; but when it comes to a puppy anticipating the gun which he has never been taught the use of, that is giving the dog credit for more than most of us would claim for a human being. Let us suppose for instance that a child grows up in a home where there is a gun; one day his father comes home and takes it into his head to have a hunt; he shoulders the gun and starts for the woods. The boy never having seen a gun discharged and not knowing its use would not anticipate, but he would not be a boy if he did not run for his hat and beg his father to let him go too. And so it is with the puppy; the putting on of one's hat fills him with excitement, for long before old enough to hunt he has begged hard to be allowed to follow his master when there was no gun in the question.

But let us not contend that this is not a hereditary transmission in the puppy, but rather lead the Doctor (and he need not go far) to find proofs of hereditary transmission of acquired habits in the dog; and I will mention one which has come under my own observation. Since field trials have led to the more perfect training of our pointers and setters I find that this is no unusual occurrence. When a young dog is taken on his first hunt, never having seen a game bird, and never having had a gun fired over him, he will drop to shot of his own accord; or in plain English, the dog will fall on his belly at the first discharge of the gun; and if encouraged will continue to do so. That this is the result of a high degree of training in the dog's ancestors may well be believed, if it was not always the habit of dogs so to do; and I am so informed by others, and my own experience of thirty years leaves me no room to doubt it. A young pointer under 9mos. old hunting in company with a setter dog that would not drop to either wing or shot, found and pointed in front of my old dog a bevy of birds—the first he had ever seen. At the crack of the gun he went down, not through fear, it was easy to see; for at the word he was off and soon pointed a single bird which flushed wild, and the puppy dropped to wing. This was repeated five times, but long before the finish I had given away my gun and was following the young dog to encourage him in his wonderful performance. C.

GAINESVILLE, TEX.

PLACE, MAN, BOOK, DOG, RESULT.—London, Ont.—*Editor Forest and Stream:* I have read Mr. Hammond's "Training vs. Breaking," and re-read it, and am more pleased each time I read it. My bitch was utterly untrained and uneducated when I got her, and the results of my training her by Hammond's directions so far surpass my expectations.—W. E. SAUNDERS.

NIGHTS WITH THE COONS.

I.—THE TENDERFOOT'S COON HUNT.

DID you say something about coon hunting. Yes! Well, I've been there! Up to my ears in it, you bet! and come back alive, and was able to tell of it. How was it? Well, this was the how of it. You see I was visiting my friend, Mr. Norman, who has a weakness for coon hunting; coon dogs, climbers, dark nights, and all the rest of it, and he proposed a coon hunt. Having made due preparations, we started. We drove about four miles, to where we expected to take in a third companion, a Mr. B., who, according to Norman's account, was perfectly crazy to go cooning. But on arriving at Mr. B.'s house we found him sick and therefore unable to go. Norman, who went to the door, came back shortly to the buggy where I was trying to quiet his refractory dogs, with the information, "He can't go; he's sick; but there's another fellow over here a little way who is just as crazy to go cooning as he is, and there are lots of coons over there, too. We'll drive over, 'twon't take but a few minutes." And we drove off.

Half a mile brought us to the foot of a hill, which proved to be a mountain by the time we had reached the top. Up, up, we climbed, and still I could not see any signs of the top. Up and on we went, until we must have gone at least four miles, and four miles, too, of the very steepest kind of road. My patience was almost gone, and I gently inquired if we were anywhere near the end of that "little way" he had spoken of. "Oh, yes," he said, "we are right here now. Just a minute or two and we'll be there. Why, I drove clean over here one day in just twenty-seven minutes by the watch, and 'twan't much of a day for driving, either." Another mile of climbing and not a house in sight yet. It was getting late, 9 o'clock at least.

"They will be in bed and fast asleep," I said, "long before we get there." Norman looked around at me as if to take the full calibre of my mental ability, remarked, "Never you fear; they'll wake up easy," and on we jolted. The road was evidently a trifle more level, and we jogged along across what seemed to have been in bygone days a corduroy road, for now and then we would strike a log lying across the way that would give us a fearful hoist, only to get settled in time to meet the next one. A repetition of the first, and so on for half a mile, when we came to our destination.

They were all in bed. Not a light was to be seen. "Well, you hold the horse and I'll go and wake them up," said Norman. Thump, thump, thump! on the door. No answer. Thump, thump, thump! Again I held my breath. They have all gone away. Yes. No. There is a light. "Halloo! what's wanted?" There was some one home after all and Norman was likely to wake them up "easy," I thought, by the racket he was setting up. In a few minutes he came back with a strong robust farmer, whom he introduced to me as Mr. Meetinghouse. If his name was saintly he was not a saint, as will appear later. Mr. Meetinghouse looked me over from head to foot and mentally set me down as the veriest tenderfoot alive, and he would give me a jolly time following them whether they got any coons or not.

About half a mile back on the road we had just passed over, was a most impenetrable bog swamp, running off to the north about three miles, where it terminated at the foot of high ledges on one side and level barrens on the other. This swamp was, at different points, from a few yards to a mile and a half wide, and was the ground of our proposed hunt. The whole surface of the ground was covered with a kind of bog grass, which gave it a level appearance; but it was chock-full of deceitfulness, when investigated by anything that had to walk on solid ground. To make it still worse, there was a thick growth of alders leaning in every direction, interspersed here and there with laurels of the thickest and most crooked growth; and further, there was scattered through and among the bogs and brush a running creeper covered with long catclaw briers, and which for want of a better name were locally dubbed "Mowhawks" or "Mowhawk briers." They are the most tenacious scratchers it has ever been my misfortune to encounter: and they bid defiance to any kind of cloth material as covering for protection against them.

This anything but lovely spot was to be the scene of our night's exploits.

Mr. Meetinghouse, or John, as Norman called him, wore light duck overalls, and went at a rattling gait; and when he struck one of those thorned creepers there was a change of base and a concentration of profanity. I soon learned, as I followed in the rear, to turn aside and go around those places where profanity seemed to be the densest. In this way I escaped most of the trouble that John seemed to have with the briers. But the brush and bogs made it fearfully bad walking, and after an hour of steady tramping I began to inquire if there was any better walking in that whole region. John's answer was invariably "Yes, there is a path just ahead. We'll get over into it in a minute." But that path was a delusion and snare, or else it was a very lively path, for we never got nearer than "right ahead; we'll be in it in just a minute." This was what John told me more than a score of times, till I came to the conclusion that we had been chasing that identical path all the time and had not been able with all our exertions to overtake it. It still kept just ahead of us about a minute or two, and when last I heard of it at 5 o'clock the next morning it was right ahead of us the same distance it had been all night; but I did not see the path just the same.

Having been educated for a civil engineer, I became on all nightly excursions naturally much interested in the north star, and on this particular night I found and kept my eye on the star as usual; and after about two hours of hard tramping I noticed that John kept leading us off to the right continually. I mistrusted he was getting "turned around," as old woodsmen say, but I said nothing and followed on after a time. We came to a halt by a little brook to listen for the dog, which all this time seemed to have no success in finding coons. A consultation was held as to the proper way to go next. This resulted in finding that John thought the north was off toward the southwest, and Norman toward the east; while I still held to the old star that had guided me home so many nights before. Here was a pretty kettle of fish; but luckily one of us had a pocket compass, which set everything right in a few minutes, and upon investigation we found we were but a short distance from where we entered the swamp. Then followed a long tramp of perhaps three or four miles, through bogs and brush, sometimes crawling under and through the laurels, which grew very thick in that locality; over ledges and rocks, and finally back by another way nearly to the house—and no coon yet.

"I hate to give it up without a coon; don't you?" This was what John said. "We ought to start one right over across the road." "Go ahead, then," said I, though I am free to confess that I was not very urgent about going. I had begun to lose faith in his ability as a coon hunter, but I did not propose to back out till I was obliged to. So over the fence we went; and sure enough in a few minutes the dog had struck a trail. Yes, we would have a coon yet. It was an old trail, but the dog was good for it, and we could hear his slow melancholy baying as he followed out the devious and tedious windings and turnings of the trail, and we sat and shivered and listened, till after an hour of almost frozen happiness we heard him "bark up." Then followed a scramble to get there as quickly as possible. Away we went across an old coal bush, with its parallelograms of brush and stubs, down through a laurel run until near the bottom, so thick that even John was troubled to find his way through, and yelled out as he disappeared in a bunch of laurel, "You can follow me or take your choice elsewhere." I espied an opening in the brush that even John's sharp eyes had passed unnoticed—perhaps intentionally—and slipping through I found myself in the bed of a dry brook. Following down with what haste I could make, I soon came to open land, and running across an old barren field I was at the foot of the tree. Yes, the tenderfoot got there first.

The coon was up a great birch, at least 75ft. from its base and out on a limb, which hung over part of a broken up ledge, adding perhaps 25ft. more to his elevation.

The reader to more fully understand what followed must imagine a broken up ledge, falling off in rapid drops of eight and ten or more feet at a time, and rocks of all sizes, from that of a small barn to common sized rocks one on another in the most reckless manner conceivable; and 50 to 75ft. up this steep incline of rocks and moss a great tree, towering into the darkness, with a dark object out on one of its limbs 100ft. from the rocks beneath. That was the coon! To add to the weird fantasy, imagine three excited individuals, each with lanterns, which cast great shadows in all directions; the howling of the dog, the hooting of a distant owl, and with all the excitement of expectation; and you have the picture.

John cuts a club and Norman gets into position away up among the rocks with gun in hand to shoot him out. John gets upon a shelf of rock with club in hand to help the dog, while I am placed upon a point of rock with two lanterns to light the scene of butchery. Norman shoots. Immediately I see a dark object leave the limb and fall straight as an arrow from an Indian's bow for John's upturned face. A dull thud, a groan, and man, coon, dog, club, lantern and all disappear among the rocks below. They have fallen off the shelf down some 6ft. into a kind of trough between the rocks, and there they lie a conglomerate mixture of man, dog, coon, lantern, etc.

I saw the fearful blow he had received, and knew within my heart that John's neck was broken and that he was dead. He lay there motionless as the rocks by his side, till I had clambered down and had reached his head, and then I saw that he still breathed. He was badly injured. I must get him into a better position. Besides that the dog and coon were having a fight on top of him. Blood was running in streams from his eyes, nose and mouth. He could live but a few minutes. I would get him down to the flat rock that I stood on. I could bring him water in my hat from the spring brook below. All this flashed through my mind as I lifted his head and said, "John, you are hurt, are you not?" If a dead man had come to life I could not have been more surprised than I was at what happened at this moment. The dog made a pass at the coon and both fell on to and over John, down among the holes and rocks in front of me. John bounded to his feet. Another bound and he was by the side of the dog; grabbed the coon by his hindlegs, just as he was slipping into a hole to be irrevocably lost among the rocks; pulled him out and dashed his brains out against the rocks at my feet. And I, well, I just looked on and saw him do it. He was not so dead as I had thought. But he was hurt though he was loath to admit it. In a few minutes one eye was so badly swollen that he could not see out of it, and otherwise his face was disfigured. It was a narrow escape and one long to be remembered. We were a short half mile from his house, and after John was hurt we had good going all the way. We had tramped ten or a dozen miles of the worst kind of going, only to come back close by home and get the coon.

This was my tenderest experience in coon hunting, but I went again, but will tell of that another time.

THE TENDERFOOT.

[Further coon hunting experiences, sent by other correspondents, will follow from week to week.]

AN EVENING AT THE RENDEZVOUS.

THE weather has been so intensely cold the past ten days that members of the Fur Company have ventured out very little, and, so far as reported, only four foxes have been added to the list since my last letter.

The fraternity gather nightly in "Lisha's" store, where they smoke their cigars and talk over the latest chase and all matters pertaining to their favorite sport. Were there ever a jollier, happier set of fellows than a company of fox hunters? Would that I could faithfully portray the scene as the group are seated in this pleasant resort discussing the coming hunt, which is just now the all-absorbing topic. The arm chairs are all filled, and seats are improvised for the others by bringing out boxes, and one or two are perched on the counter, while still another sits on a ton of shot which is stacked in the corner. Lisha has finally exhausted his hospitality by giving up his high chair at the desk to Webb Thayer, who has come in a little late.

Unele Nathan sits in his accustomed place, serenely smoking his cigar, hale and hearty at the age of seventy-three, and just as full of it as a boy, the very essence of good nature. He can take a joke, no matter how hard it rubs, and takes offense at nothing short of actual insult. He is a recognized authority on all that pertains to fox hunting; has owned some dogs as good as ever chased a fox, and has indulged in his favorite pastime in and about Worcester for nearly fifty years. Loud, the dog he now owns, is not quite up to the mark, though he is well bred and was raised with great expectations. I shall have more to say of this dog later on.

Mr. E. T. Balcom, another old timer with white hair and portly form, sits opposite. He is rather too infirm to take a hand in the chase very often, though he did attend the last grand hunt, and if he feels pretty well proposes to go again this year. He likes to come in every evening and hear what the boys have to say, but is content to rest on his laurels and tell what old Towse and Flora did years ago, when he used to "hang up about a dozen of em" in a season.

Billy Dean sits on one of the boxes with eyes and ears wide open. He is an unfledged fox hunter; started in this season with a pair of hounds, and has bet three boxes of cigars that he kills a fox before the first of March. He proposes to attend strictly to business, is chuck full of "sand," and the best judges predict that he will win.

Webb Thayer, the gentleman who occupies the high chair, is a young and talented lawyer; has been an application member of the Fur Company several years, but Uncle Nathan has always adhered strictly to the rule which provides that to enjoy full membership a candidate must have killed a fox. This year President Kinney, by an elastic interpretation of the rule, has decided that an applicant may be admitted who has *shot at* a fox; and Mr. Thayer is now full fledged. Webb says Dan drives a fox well, and he also hopes the poor dog will have a chance to shake up a fox before he dies of old age.

Robert Golbert is perched on the counter. Robert is not a thoroughbred fox hunter, and previous to the hunt last year "took no stock" in the sport. He went out on that occasion, shot at a fox and failed to connect. He says he is going again this year and shall stand all day on the same spot where he got a shot and also that he wants his name put down for the supper at the Bay State House in the evening. He comes in often, and when the boys are all present, takes great delight in making Webb Thayer's life a burden by asking in all seriousness, "Let's see, Webb, how many have you killed this season?"

Mr. Rand is the quiet member, a fine straightforward gentleman, about sixty years, who has hunted foxes ever since he was big enough to carry a gun, and says he shall keep at it as long as he has the use of his legs. He has killed a great many and missed a great many more. He don't smoke, in fact he has no bad habits. He is nearly always present to hear the stories, but is not a great talker himself. If the company ever elects a chaplain he should receive every vote.

Will Perry is the red hot member. He is a gentleman of leisure and is fond of everything that means shoot, be it trap-shooting, birds or foxes. With leisure and abundant means he can go anywhere and hunt anything he likes on the habitable globe, and he has in his life time taken in a pretty wide range. Will is a jolly good fellow, but very critical on fox dogs; the boys say too much so. The fact is the superior qualities of old Jumbo, the famous hound that was lost a year ago, have spoiled him for an ordinary dog, and he can't seem to get fixed with one to his mind. He keeps on trying them, however, and says he will find the right one after a while if there is one in the country.

Charlie Howe is in his place as usual. He is another thoroughbred, always ready to make up a party for a fox hunt, good-natured and accommodating; is a perfect athlete and can outwalk an Indian. He leads the party so far this season with six foxes to his credit.

I now introduce the genius of the Worcester Fur Company, Johnny Slocum. He sits on pile of shot in the corner; a genial, whole-souled, kind-hearted fellow whom everybody is obliged to like. Johnny is absolutely original. Sensitive as a child, he would no more make an unkind or disparaging remark about a brother fox hunter, or his dog, than he would cut off his right hand. He is not a rapid talker, but weighs every word, and when he has finished his story you can safely bet your clothes that it is the exact truth. Born and raised in New Bedford, the sailor's dialect still sticks to him, and he has a peculiar way of relating the details of a fox chase, which is an entertainment that must be listened to to be fully appreciated, for no pen could do it justice. He came here about thirty years ago and must be about sixty years old, though a stranger would not guess him to be over forty-five. He has no occupation known to the public but fox hunting, and he gives it his undivided attention throughout the season. The boys say he can hold a "royal flush" and never betray it by any facial expression. Johnny "don't want the earth," give him a good foxhound and a $10 note and he is satisfied.

The entire party are in their places. Lisha learned a bit of news during the afternoon that will make fun for the evening. This noon as Uncle Nathan shoved his chair back from the dinner table he remarked, "Loud has been gone just three weeks to-morrow and I begin to think I shall never see him again. Possibly he's broken through the ice and is drowned, though I should hardly think it, for where could he find any thin ice down round East Ridge, cold as the weather has been? Well, I declare to goodness, if there ain't Loud now!" And sure enough there he sat on the lawn looking up wistfully at the window. A moment later and the returned prodigal was in the arms of his master. The past two weeks the boys have made it pleasant for the old gentleman every evening by asking mean questions and making sarcastic remarks. "Uncle Nathan, I didn't s'pose Loud was a stayer, no doubt he's been driving a fox all this time."

"Oh, go on and abuse Loud all you want to," said the old man as he smoked his cigar contentedly, "I shan't get mad."

On this evening of the dog's return John Thayer had hardly got inside the door when Lisha broke out with, "John, Loud has got home."

"Loud—got home! Oh, Nathan, another affliction; how one trouble does follow another. I did hope you would be spared this, and he had been gone so long I really began to think he never would show up. When did he come?" asked John.

"This afternoon. I saw him sitting on the lawn when I got up from dinner," said Uncle Nathan, calmly.

"I noticed Uncle Nathan looked unusually happy when he came in, this accounts for it," said Lewis Divoll.

"What's his condition?" asked Mr. Raud.

"Oh, he's a wreck, a perfect wreck, thin as a herring and feet all torn to pieces; the poor fellow has suffered terribly."

Will Perry could hold in no longer. "I guess the cats have suffered down round Shrewsbury, and as for his feet he's probably torn them clawin' meat out of that old frozen dead horse. Talk about Loud, why I've seen him hunt at least twenty-five days and I never yet saw him drive a fox ten minutes. I want to bet that no living man can hunt him and start a fox in a solid week. Nathan, you know that new dog I'm trying, he aint good for anything, and I'm going to send him back. Asa and I were out to Holden with him the other day, and I was cussing him right and left, when Asa said, 'I think he's better than Loud.' I never was so insulted in my life."

Johnny Slocum's sensitive heart bleeds for Uncle Nathan, and he comes to the rescue. "Wall, now, I dunno why ye should run down 'nuther man's dog. I've seen Loud do pooty good work—most allers seems bizzy and tryin' ter du suthin'. Nathan, 'member the day when ye killed the fox on Rattlesnake Hill? I'll never forgit when he took that turn ter the east'erd how he claw'd it 'cross that little fresh medder over by the rezervorey. He did jest as good day's work that day as enny body's dog, didn't he, Nathan?" "I thought so," was the modest reply.

"Going to sleep with him to-night?" asked Lisha.

"Well, I told Connelia to make the bed for two, and now if you've all abused Loud enough I'll go home, but I just want to say that I shall nurse him up and have him in condition for the grand hunt, and I'm going to tie a pink ribbon in his collar that day to identify him. I hope I shall get him started with the fastest pack there is in the hunt, and along in the afternoon you will find the little cuss there or thereabouts."

"Come, boys, it's 9 o'clock, and Lisha wants to close up," said Mr. Raud, and with a pleasant good night the happy company go home.

E. SPRAGUE KNOWLES.

WORCESTER, Mass., Jan. 27.

FIELD TRIALS CHALLENGE.—Mr. A. B. Truman, of San Francisco, Cal., sends us for publication a challenge to all California dogs, including the field trial winners, for a two days' trial on quail, points only to count, and names his pointer dog Rush T. The race to be for $200 each. He states that he has deposited $50 forfeit with the editor of the *Breeder and Sportsman*.

THE PHILADELPHIA DOG SHOW.—We are requested to state that a kennel prize will be awarded to fox-terriers at the coming Philadelphia dog show. It was inadvertently omitted from the premium list. The regular classes for fox-terriers will be changed to correspond with the collie classes. Mr. J. Otis Fellows will judge spaniels.

A SYRACUSE KENNEL CLUB.—Several prominent owners of dogs are contemplating the organization of a kennel club on a liberal basis, at Syracuse, N. Y. We believe it is their intention to hold field trials and bench shows. There are so many excellent dogs in that city and vicinity that the promoters of this movement will find abudant material for a creditable showing.

POINTER DOG STOLEN.—*Editor Forest and Stream:* On the night of Feb. 2 my liver and white pointer dog Moffit of Naso, by champion Nick of Naso ex champion Patti M., whelped Aug. 8, 1887, was stolen from my kennels in Jersey City. I will not offer a reward for the return of the dog, but will pay $100 for the conviction of the thief.—C. J. PESHALL.

MR. A. C. KRUEGER has removed to Pittsburgh, Pa. His address for the present is 808 Fifth avenue.

AUGUSTA DOG SHOW.

AUGUSTA, Ga., Jan. 30.—*Editor Forest and Stream:* The initial exhibition of the Augusta Poultry and Pet Stock Association has just closed after a five days' exhibition. It was a grand success in every particular. The exhibit of poultry was the finest ever seen South, and the bench show feature was larger than the most sanguine ever expected, more than 200 dogs being shown. The Fountain City Kennel, of Augusta, the Gate City of Atlanta, and Mr. Graham, of Chester, S. C., each exhibited very fine kennels. Mr. T. F. Rackam of New Jersey judged all classes of dogs, and made the following

AWARDS.

MASTIFFS.—*Dogs:* 1st, withheld; 2d, Fountain City Kennels' Booth. *Bitches:* 1st, withheld; 2d, A. Hull's Juno. *Puppies:* 1st, withheld; 2d, Fountain City Kennels' Juno; 3d, W. H. Holman's Venus.

GREAT DANES.—1st, D. Timon's Pap Grover; 2d, D. Morrison's Bis.

ST. BERNARDS.—ROUGH-COATED.—1st, withheld; 2d, W. H. Geddings's Leo.—SMOOTH-COATED.—1st, withheld; 2d, G. S. Hookey's Monk.

NEWFOUNDLANDS.—*Dogs:* 1st, E. Collins's Doc; 2d, F. A. Calhoun's Tasso. *Bitches:* 1st, D. Morrison's Kate; 2d, H. Kennedy's Queen; 3d, F. A. Calhoun's Frank.

GREYHOUNDS.—1st and 2d, W. R. Joyner's Fly and Tom. High com., W. F. Thomas's Rex.

POINTERS.—LARGE—*Dogs:* 1st, Fountain City Kennels' Button. *Bitches:* 1st, D. E. Huguenin's unnamed.—SMALL—*Dogs:* 1st, Fountain City Kennels' Spot; 2d, Grier & Boardman's unnamed. *Bitches:* 1st and 2d, Fountain City Kennels' Rose May and Nellie, 3d, L. Walton's Flora. *Puppies:* 1st, Grier & Boardman's Wright; 2d, T. H. Little's Beauty L.

ENGLISH SETTERS.—*Dogs:* 1st and 2d, J. A. Graham's Rex and Jack. *Bitches:* 1st, J. A. Graham's Whisper San Roy; 2d, Henry May's Bessie W.

IRISH SETTERS.—*Dogs:* 1st, withheld; 2d, T. Morrison's Tige. *Bitches:* 1st, J. B. Keener's Nellie. *Puppies:* 1st and 2d, D. C. Price's Dash and unnamed.

GORDON SETTERS.—*Dogs:* 1st, Henry May's Mackmaster. *Bitches:* 1st, L. A. Roberts's Fannie; 2d, L. E. Goodrich's Nell. *Puppies:* 1st, Henry May's Puck.

SPANIELS.—BLACK—1st, Dr. A. Carmichael's Rosa.—OTHER THAN BLACK—1st, withheld; 2d, Grier & Boardman's Cluny.

FOXHOUNDS.—*Dogs:* 1st, J. T. Butler's Plumer. *Bitches:* 1st, B. D. Sibley's Lucy; 2d, J. T. Butler's Fanny.

BEAGLES.—1st and 2d, withheld; 3d, D. Morrison's Vic.

COLLIES.—*Dogs:* 1st, O. H. P. Scott's Cubeb; 2d, F. E. Beane's Collie. High com., J. A. Holman's Baker. *Bitches:* 1st, O. H. P. Scott's Lady Neph; 2d, Grier & Boardman's Belinda. High com., H. H. Alexander's Pedro. *Puppies:* 1st, Grier & Boardman's Belinda; 2d, J. W. Hanna's Beulah. High com., Miss Hattie Phinizy's Rob Roy.

BULL-TERRIERS.—*Dogs:* 1st, withheld; 2d, T. T. Cassin's Grip. High com., H. C. Bowers's Duke and P. H. Evans's Punch. *Bitches:* 1st, W. H. Hillis's Nellie; 2d, withheld; 3d, D. D. Bowles's Daisy.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, H. Madden's Barney. *Bitches:* 1st, H. Madden's Fanny.

TOY TERRIERS.—1st, H. Madden's Easter; 2d, Forest City Kennels' Bijou.

PUGS.—*Dogs:* 1st, D. Morrison's Jim Daudy; 2d, Miss Carrie Carter's Jack. *Bitches:* 1st, D. Morrison's Lady; 2d, G. Ever's Bessie; 3d, Fountain City Kennels' Vera.

POODLES.—1st, withheld; 2d, D. Morrison's Tum Tum.

MISCELLANEOUS.—1st and 2d, H. Madden's Duke and Prince.

J. M. W.

THE AMERICAN PET DOG CLUB.

THERE was a meeting of the American Pet Dog Club held in New York Feb. 2. There was an interesting discussion relative to the proposed constitution and by-laws but no final action was taken. The following is the classification so far as adopted:

Beagles.
Greyhounds, Italian (not over 14lbs.).
Mexican hairless.
Poodles, black; other than black.
Pugs, Chinese.
Pugs, 10 to 17lbs., 18 to 25lbs. (bitches not over 18lbs.).
Spaniels: Blenheim, Japanese, King Charles, Prince Charles, Ruby, all others under 28lbs.
Terriers: Bedlington, black and tan not over 7lbs., over 7lbs.; bull not over 20lbs., Dandie Dinmont, fox under 8lbs., Irish, Maltese, Scotch, Skye, Yorkshire blue and tan, 5 to 15lbs., Yorkshire other than blue and tan, same weight.

A cup, value $25, offered by Mr. N. Rowe, was accepted, and it was decided to offer it at the coming W. K. C. Show for the best pug owned by a member of the American Pet Dog Club. A cup was also offered by Dr. M. H. Cryer, value $50, as a breeders' prize. The cup to be known as the Pug Breeder's Challenge Cup, to be competed for under the following conditions: The competition is open to all American-bred pugs, whether registered or not. To be competed for annually at one of the following shows in the order named—Boston, New York, Philadelphia, and at the annual show of the American Pet Dog Club. If any of the above named shows exclude non-registered dogs the cup cannot be competed for at such shows without the consent of the donor. A dog winning the cup shall have his name, and the show and year won, engraved upon it, and he can compete for it as often as the owner chooses. If a breeder wins the cup with three different dogs of his own breeding, it shall become his own property. The first competition will be at the coming Boston show, April 3 to 6. The club adjourned to meet at the call of the president the week of the New York dog show.

FOX HUNTING IN SOUTH CAROLINA.

My hounds are bred out of the Spartan kind,
So flewed, so sanded and their heads are hung
With ears that sweep away the morning dew,
Crook-kneed and dew-lapped like Thessalian bulls.
Slow in pursuit, but matched in mouths like bells
Each under each—A cry more tunable
Was never holla'd to nor cheer'd with horns.

—*Midsummer Night's Dream.*

IT has always seemed strange to me, after reading in your valued columns, and those of other sporting papers, of the numerous clubs instituted in your nothern country for the purpose of fox hunting, that some of these associations have not taken up their quarters in a country abounding in red foxes. As I understand it, this exciting sport at the North is only an imitation of the true thing, in the shape of drag hunts, or at least one poor caged, dispirited reynard is turned loose and given a little start of the dogs. Here with us may be found numberless of those free born, strong and swift members of the tribe, which are a match for any pack of dogs on a frosty day. Our gray foxes are easily caught, but Master Red is as far ahead of him as Tremont exceeds in speed a plough horse. Our lands are cheap here, we are only twenty four hours from New York; it seems to me only sensible that one of the hunting clubs in your section should purchase a small farm in this neighborhood, establish their kennel and stables and enjoy the real sport. Our farmers have no objection to the chase passing over their lands after the cotton crop is harvested.

The object, however, of this letter is to inform your readers of the recent performances of four ten months old pups which I have raised with great care.

Mr. John McIver and myself, in the second week in November, started for the Wateree river, about thirty miles hence with our pack of dogs for the purpose of a camp fox hunt. After leaving town a mile behind, the leashes of the dogs were loosed and they were permitted to run at large. The four pups immediately flew at full speed down the road, and taking to the fields and woods were soon lost to us; so we journeyed on and saw no more of them for ten days. On our return we were informed that they had jumped a red fox and caught him in a run of three hours, a most remarkable performance in so young a pack. These dogs are descended from the stock of Mr. Henry Burton of Newberry county, consisting of English fox-hounds, imported by him before the war. The breed, however, has been greatly improved by crossing on our native deer-hounds, which has given a greater length of ear, better noses, and greater speed. These four young dogs are beauties; one of them black and white; three of them blue speckled and all with tan heads, almost red. Mr. McIver, who is a devoted fox hunter, will show the four pups at the dog show in Augusta, Ga., on the 20th of this month.

B. I. R.

CHESTER, South Carolina.

SOME DISEASES OF THE TEETH.

ONE of the principal objections to a pet dog is that the breath frequently becomes offensive as age advances, in some cases this disagreeableness is present even in young dogs that are highly bred and delicate. This may be entirely prevented if the owners would only give a little attention, occasionally, to their pet's teeth when the dog is young.

CAUSES.—In some cases it is the result of the puppy or milk teeth remaining in the mouth when the permanent ones have come, and, as a consequence, food more easily collects between them, which decomposes, and an offensive effluvium is emitted each time the poor little animal breathes. This condition of things, as a rule may be prevented by giving a puppy when he is changing his teeth, which takes place at about the fourth month—sometimes earlier and occasionally later—large bones to gnaw, or hard dry biscuit to eat, in this way the sucking teeth are generally dislodged. If this should not happen, then they must be carefully removed with a pair of forceps. Particular care is necessary when drawing these teeth, as they are extremely brittle and easily break, and from their shape it is difficult to remove the stump—besides, to do so is to put the dog to a good deal of unnecessary pain. Again, by leaving the milk teeth in, the new ones are prevented from assuming their proper position, and are thereby more likely to become diseased and loose, and drop out, and thus the dog becomes prematurely old, therefore no puppy should be allowed to retain the sucking teeth after six months. The accumulation of tartar around the teeth of pet dogs is very common. If this is not removed the gums become inflamed and swollen, and leave the teeth and bones forming the cavity for the teeth, which becomes diseased, the dog showing unmistakeable signs of toothache. The teeth soon get loose and fall out. This is not all, for as a result of the irritation of the tartar against the check, gums, and tongue, sore and unhealthy ulcers frequently form, which are extremely painful, and prevent the sufferer from eating. The tartar should be at once removed by careful scaling. This may be done in some cases when the tartar is not quite thick, with the point of a penknife, but where a large quantity has collected around the teeth, a stronger instrument is required. A proper instrument, if possible, should be obtained. The cost is only eighteen pence, but if one is not procurable, then a steel nail-cleaner may be used. At one end of this instrument there is a strong point which does well to elevate the tartar; the other end is round and sharp, and slightly bevelled, which answers well in cleansing or scraping the surface of the teeth. Very loose teeth cannot be scaled but should be removed, as they are quite useless; besides, they cause pain when the dog is eating. After his teeth have been cleaned, they should be well brushed with a weak solution of Condy's Fluid, and if this is thoroughly done, all decomposed food and the loose pieces of tartar will be removed. In brushing the teeth the brush should not only be carried across the teeth but it should be applied from downward to upward on the lower jaw, and from upward to downward on the upper jaw, in this way the space between the teeth is also cleaned. Dogs at first object to having their teeth brushed, but if it is done daily they soon get used to it, and after they have been once properly cleaned the regular use of the brush, and an occasional large bone to guaw, prevents further accumulation of the tartar.

The gums also require attention. When they are much swollen, inflamed, and separated from the teeth, the application of a solution of chloride of zinc—eight grains to the ounce of distilled water—used once a day with a small piece of sponge, or camel-hair brush, will be found very healing. In some cases, when the gums are very spongy, tincture of iodine, sparingly applied every other day for a week, answers better. Ulcers on the cheek and tongue usually heal very quickly after the tartar has been removed, but occasionally a stimulant is required. For this there is nothing better than a solution of nitrate of of silver—six grains to the ounce of distilled water—applied morning and evening with a camel-hair brush, and the mouth washed out occasionally with a weak solution of Condy's fluid.

In consequence of the peculiar shape of the dog's tooth, it seldom decays as the human tooth does, it may be covered with a quarter of an inch of tartar, yet when this is removed, the tooth is generally found sound. Of course, now and then one may find a spot of decay in one of the fangs or molar teeth, in such cases, the diseased parts should be thoroughly removed by scraping, and the hole filled with white gutta percha; this will prevent the decay spreading, or the adjoining teeth becoming similarly affected. Abscesses occasionally form at the root of the tooth, the face or jaw is swollen and tender to touch, and matter escapes between the tooth and gum. The tooth should be immediately removed, or else the abscess will break externally and a fistulous wound, difficult to heal, may be the result. There is another disease affecting the tooth, erroneously called canker, the complaint affecting the enamel, giving the teeth a spotted appearance, which is eaten away, the dentine becoming exposed. This disease is generally seen in puppies over four months affected with rickets, or it may occur when a dog changes his teeth during a severe attack of distemper, in my opinion the result of the high fever. Teeth affected in this way are soft, and wear away very quickly with hard food, as bones, &c. Milk teeth are never thus diseased. There is no curative treatment for this complaint but by keeping the teeth clean with daily brushing and the use of charcoal, the disorder may be checked. In conclusion, by keeping the teeth in good condition, a dog's existence is more comfortable, the health is better, and his life is prolonged.—*A. J. Sewell, M.R.C.V.S., in Pet Dog Journal.*

THE BEAGLE CLUB.—*Editor Forest and Stream:* The following officers of the American English Beagle Club have been elected for 1888: President, Herman F. Schellhass; Secretary and Treasurer, W. H. Ashburner; Executive Committee—W. S. Diffenderffer, M. J. Gaines, Dr. J. W. Downey. The amendment to the Constitution, making annual dues $2, has been carried. Members who have not paid their dues for 1888, will please forward to the treasurer at an early date the amount, as the Executive Committee desire to know what to depend upon for specials at coming shows.—W. H. ASHBURNER, Sec. and Treas., 727 North Thirty-eighth street, Philadelphia, Pa.

DEATH OF RINGWOOD.—Granby, Conn.—*Editor Forest and Stream:* A few days ago I found my stud beagle imported Ringwood dead in his kennel. When last seen the dog was apparently as well as usual.—N. ELMORE.

ENGLISH BLUES.—Oxford, Me., Jan. 19.—*Editor Forest and Stream:* After a number of years of breeding I have produced a strain of foxhounds that all come blue mottled and tan. These hounds are bred down from fine imported English stock. I claim the name of English blues for them.—L. N. EDWARDS.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Alex, Adonis, Agnes and Anna. By C. H. Spring, Newton Lower Falls, Mass., for orange, white markings, rough St. Bernards, two dogs and two bitches, whelped Nov. 24, 1887, by Hector (A.K.R. 3249) out of Linda (A.K.R. 2552).

Arnold and Æneas. By C. H. Spring, Newton Lower Falls, Mass., for orange and white rough St. Bernard dogs, whelped Nov. 24, 1887, by Hector (A.K.R. 3249) out of Linda (A.K.R. 2552).

Agrippa, Argus and Adaline. By C. H. Spring, Newton Lower Falls, Mass., for rough St. Bernards, one dark orange and one light orange, white markings, dog, and one dark orange, white markings, bitch, whelped Nov. 24, 1887, by Hector (A.K.R. 3249) out of Linda (A.K.R. 2552).

Brooklyn Boy. By J. C. Schuyler, Berryville, Va., for black cocker spaniel dog, whelped Nov. 15, 1887, by Black Pete (A.K.R. 3071) out of Vida (Obo II.—Topsy B.).

My Lady Betty. By Dr. F. W. Kitchel, Perth Amboy, N. J., for black spaniel bitch, whelped April, 1887, by Black Pete out of Doris.

Count Rock. By C. A. Ives, Bridgeport, Conn., for black, white, tan and ticked English setter dog, whelped Sept. 7, 1887, by Rock Belton (Yale Belton—Princess Lilly) out of Countess (Prince Phœbus—Rosey).

Billee Boy. By S. B. Macfarlane, Philadelphia, Pa., for orange tawny and white St. Bernard dog, whelped Oct. 15, 1887, by Leo (Rene, A.K.R. 410—Margery, A.K.R. 1072) out of Lady Olive (imported Hessian—imported Empress).

Colonel Dowdell. By S. B. Macfarlane, Philadelphia, Pa., for orange tawny and white St. Bernard dog, whelped May 27, 1887, by imported Merchant Prince (Bavard—Pastime) out of Lys (Hermit, A.K.R. 23—Sombre, A.K.R. 798).

Frousey. By C. H. Smith, St. Stephen, N. B., for iron gray Skye terrier bitch, whelped Aug. 15, 1885, by DeVeber's imported Bonzo out of Dickson's imported Jessie.

Toodles. By C. H. Smith, St. Stephen, N. B., for dark orange and grizzle Skye terrier dog, whelped March 1, 1886, by imported Dombey out of imported Gampa (Skye—Nellie).

Dunbar, Duncan, Dundonald, Dunblane and Dundee. By Geo. Shepard Page, Stanley, N. J., for dark brindle deerhounds, three dogs and two bitches, whelped Dec. 25, 1887, by Dunrobin (A.K.R. 1236) out of Shelloch (A.K.R. 2214).

Dunrobin Kennels. By Geo. Shepard Page, Stanley, N. J., for his kennels of deerhounds.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Passion—Prince Foreman. Rosecroft Kennels' (Birmingham, Conn.) English setter bitch Passion (A.K.R. 3424) to their Prince Foreman (Foreman—Jolly Nell), Feb. 6.

Devonshire Queen—Nick of Naso. Floyd Vail's (Jersey City, N. J.) pointer bitch Devonshire Queen (A.K.R. 3127) to C. J. Peshall's Nick of Naso (A.K.R. 4391), Feb. 6.

Blemton Dingle—Regent Vox. Blemton Kennels' Hempstead, L. I.) fox-terrier bitch Blemton Dingle (Resolute—Damietta) to their Regent Vox (Tackler—Sandy Vic), Feb. 4.

Lucretia—Lucifer. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Lucretia (Venetian—Lurette) to their Lucifer (Splinter—Kohinoor), Feb. 3.

Blemton Bagatelle—Sentinel. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Blemton Bagatelle (Mephisto—Trifle) to their Sentinel (Bacchanal—Safety), Feb. 1.

Blemton Sylva—Bacchanal. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Blemton Sylva (New Forest—Regent Virtue) to their Bacchanal (The Belgravian—Bedlamite), Feb. 1.

Lurette—Lucifer. Fred Hoey's (Long Branch, N. J.) fox-terrier bitch Lurette (Spice—Olive) to Blemton Kennels' Lucifer (Splinter—Kohinoor), Jan. 31.

Venatrix—Bacchanal. Wm. Scully's (Toronto, Can.) fox-terrier bitch Venatrix (Venator—Nellie) to Blemton Kennels' Bacchanal (The Belgravian—Bedlamite), Jan. 30.

Blemton Lottery—Sentinel. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Blemton Lottery (Venetian—Lurette) to their Sentinel (Bacchanal—Safety), Jan. 12.

Shame—Lucifer. J. E. Thayer's (Lancaster, Mass.) fox-terrier bitch Shame (Raby Tyrant—Richmond Olive) to Blemton Kennels' Lucifer (Splinter—Kohinoor), Jan. 28.

Daze—Dusky Trap. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Daze (Deacon Pincher—Diamond Dust) to Blemton Kennels' Dusky Trap (Dusky Splinter—Spider), Jan. 12.

Blemton Arrow—Resolute. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Blemton Arrow (Royal—Blemton Dart) to Blemton Kennels' Resolute (Result—Diadem), Jan. 25.

Moonshine—Lucifer. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Moonshine (The Moonstone—Media) to Blemton Kennels' Lucifer (Splinter—Kohinoor), Jan. 26.

Blemton Fun—Dusky Trap. Blemton Kennels' (Hempstead, L. I.) fox-terrer bitch Blemton Fun (Bacchanal—Marguerite) to their Dusky Trap (Dusky Splinter—Spider), Jan. 27.

My Lady Betty—Black Prince. Dr. F. W. Kitchel's (Perth Amboy, N. J.) spaniel bitch My Lady Betty (Black Pete—Doris) to A. C. Wilmerding's Black Prince (Benedict—Madcap), Jan. 29.

Nell—Count. W. N. Sibley's (Philadelphia, Pa.) bull-terrier bitch Nell to F. F. Dole's Count (Marquis—Kit), Feb. 1.

Blanche—Count. Jas. Meddrah's (West Winsted, Conn.) bull-terrier bitch Blanche (Count, A.K.R. 3178—Miss Doonie) to F. F. Dole's Count (Marquis—Kit), Dec. 29.

Frousey—Dombey. C. H. Smith's (St. Stephen, N. B.) Skye terrier bitch Frousey (DeVeber's imported Bonzo—Dickson's imported Jessie) to John Peters's imported Dombey; Nov. 9.

Blanchie May—Fritz. J. C. Schuyler's (Berryville, Va.) pointer bitch Blanchie May (A.K.R. 5063) to C. W. Littlejohn's Fritz (A.K.R. 1351), Jan. 28.

Fanny Gladstone—Count Noble. J. M. Fronefield, Jr.'s (General Wayne, Pa.) English setter bitch Fanny Gladstone (Gladstone Flounce) to B. F. Wilson's Count Noble, Jan. 29.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Bessie Noble. Oscar D. Thees's (New York) English setter bitch Bessie Noble (Count Noble—Lady May), Feb. 2, eight (three dogs), by P. C. Ohl's Planter (Dashing Monarch—Vanette).

Frousey. C. H. Smith's (St. Stephen, N. B.) Skye terrier bitch Frousey (imported Bonzo—imported Jessie), Jan. 8, four (two dogs), by John Peters's imported Dombey.

Fancy. Greenwood Mastiff Kennels' (Greenwood, Mass.) mastiff bitch Fancy (A.K.R. 5503), Jan. 29, nine (seven dogs), by Wyoming Kennels' Monarch (A.K.R. 5507).

Isabella. C. C. Richardson's (Westfield, Mass.) mastiff bitch Isabella, Jan. 7, fourteen (seven dogs), by his Bismark.

Sibyl. Maple Grove Kennels' (Baden, North St. Louis, Mo.) St. Bernard bitch Sibyl (A.K.R. 797), Jan. 28, thirteen (six dogs), by their imported Rudolph II. (Cadwallader—Myra).

Shelloch. Geo. Shepard Page's (Stanley, N. J.) deerhound bitch Shelloch (A.K.R. 2214), Dec. 25, nine (four dogs), by his Dunrobin (A.K.R. 1236).

Lavalette. Frank Forester Kennels' (Warwick) English setter bitch Lavalette (A.K.R. 2353), Feb. 3, seven (five dogs), by Memphis & Avent Kennels' Roderigo (Count Noble—Twin Maud).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Ossian. Deerhound dog, age not given, by Dunrobin out of Shelloch, by Geo. Shepard Page, Stanley, N. J., to R. Wayne Parker, Newark, N. J.

Wacouta Chief. Fawn mastiff dog, whelped Sept. 26, 1887 (A.K.R. 5640), by Wacouta Kennels, St. Paul, Minn., to Chas. H. Schlick, same place.

Wacouta Hal. Fawn mastiff dog, whelped Sept. 26, 1887 (A.K.R. 5641), by Wacouta Kennels, St. Paul, Minn., to E. F. Gould, Rockwell, Ia.

Wacouta Wilfred. Fawn mastiff dog, whelped Sept. 26, 1887 (A.K.R. 5647), by Wacouta Kennels, St. Paul, Minn., to N. C. Royster, Birmingham, Ala.

Wacouta Mat. Fawn mastiff dog, whelped Sept. 26, 1887 (A.K.R. 5645), by Wacouta Kennels, St. Paul, Minn., to B. E. Farwell, Greeley, Ia.

Judy. Fallow red dachshund bitch, whelped Nov. 11, 1885, by Bismark out of Judy, by Associased Fanciers, Philadelphia, Pa., to J. E. Thayer, Lancaster, Mass.

General. Orange and white St. Bernard dog, whelped April 29, 1885, by Prince Leopold out of Nell Gwynn, by M. Callahan, Pittsfield, Mass., to Associated Fanciers, Philadelphia, Pa.

Duchess II. Liver Irish water spaniel bitch, whelped Aug. 17, 1882, by Moro out of Fan II., by M. Lafferty, Philadelphia, Pa., to Associated Fanciers, same place.

Scamp II. Black and tan dachshund dog, whelped June 5, 1887, by Congo out of Lux II., by Wm. Loeffler, Preston, Minn., to Associated Fanciers, Philadelphia, Pa.

Lee—Gypsy Nell whelps. Black and tan beagle dog and white and tan bitch, whelped March 20, 1887, by Pottinger Dorsey, New Market, Md., to Associated Fanciers, Philadelphia, Pa.

Little Ned—Spangle whelps. Four beagle bitches, whelped July 5, 1887, by Geo. W. Proctor, West Gloucester, Mass., to Associated Fanciers, Philadelphia, Pa.

Count Gladstone—Paris Queen whelps. Two English setter bitches, whelped July 16, 1887, by Geo. W. Proctor, West Gloucester, Mass., to Associated Fanciers, Philadelphia, Pa.

Goldie (A.K.R. 1353)—Italic (A.K.R. 1354) whelp. Golden fawn Italian greyhound bitch, whelped Sept. 2, 1887, by Chas. J. Tanner, Topeka, Kan., to L. Hunsen, same place.

Black Prince—Marion whelp. Black spaniel dog, whelped Oct. 25, 1887, by A. C. Wilmerding, New York, to Mr. Hepworth, same place.

Blink—Lead whelps. White, black and tan beagles, whelped Dec. 12, 1887, by J. M. Fronefield, Jr., General Wayne, Pa., a dog to Chas. Lithgow and a bitch to Jos. Walls, both of same place.

DEATHS.

Fennel. White and tan fox-terrier dog, whelped July 1, 1881 (Spice—Bloom), owned by R. Gibson, Delaware, Ont.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. S. M., West Winsted, Conn.—My setter dog bites and scratches himself a great deal. I can find no fleas or any eruptions, though in some places there is a redness. His hair also comes out badly. His health and appetite seem all right. His chief food is meal pudding and milk. What can I do to prevent his hair falling out? Ans. Keep bowels free with compound cathartic pills, one at a dose hidden in a bit of meat. Give five drops of Fowler's solution of arsenic morning and evening in the food for three weeks.

J. G. S., Brooklyn.—A hound puppy 9 weeks fell out of bed two weeks ago one morning, and in the evening he was very sick, and the next morning he could not walk without dragging his hindlegs. None of his joints are out of place or broken. His forelegs are all right. Urine keeps coming from him all the time. Ans. Rub along spinal column and legs twice or three times daily for fifteen minutes. Give five drops of tincture of nux vomica morning and evening in water.

J. W. G. D., Philadelphia.—My pug dog, age 4 years, is losing his hair. I have been giving him Fowler's solution of arsenic for two weeks, from three to nine drops daily, without any apparent benefit. His appetite is good, but his stomach is out of order, with foul mouth and other signs of impaired digestion. He is fed on milk, potatoes, bread, and a little animal food, from the table twice a day. He usually loses his hair in the early summer, but at this season of the year has always had a perfect skin and fine coat until this winter. Ans. Have a dozen pills made up, each to contain one grain of calomel and two grains of the citrate of iron and strychnine. Give one morning and evening.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THAT JAMESTOWN CHALLENGE.—Jamestown, N. Y.—*Editor Forest and Stream:* Please allow us to answer Messrs. Warner & Lowe's letter of Jan. 9. In our challenge published in your paper of Jan. 29 we said nothing about muzzle or breech-loading guns, but the editor called the challenge "a muzzleloader challenge." We do not bar any kind of gun made by W. & L. They claim that they make a better shooting rifle, either muzzle or breechloading, than can be procured elsewhere. We are not so conceited nor presumptuous as to say that H. V. Perry makes a better shooting rifle than all others, but we do claim that with Perry's make of guns we can beat any three, four or five men that will shoot W. & L. make of guns. They wish to reduce the number to two on their side. Our challenge is three on a side. We are willing to add one or two on each side, as the more there are on a side the more thorough the test will be. They do not accept our offer to pay one-half of their expenses if they will come to Falconer Crossing, but say "if we will come to Syracuse (and pay our own expenses) two of them will shoot against three or more of us, and that they do not wish to call in the assistance of their neighbors." There are many fine rifle shots in Syracuse and that section, and if those fine shots believed that no one is equal to W. & L. in making a fine shooting gun they would not have to be "called in," but would readily come in, as men are ready to do on our side. We accept their proposition to shoot the match under the rules of the old N. R. C. that meets at Vernon, Vt., so far as rest and weight of guns are concerned, and we will meet them half way, which will be at or near Le Roy, and will meet them May 8, the time they propose. As to the money, we will furnish that as soon as the conditions of the match are agreed to, and we do not question their honesty and ability to do the same.—J. ROBERT MOORE, BEN. GARFIELD, H. V. PERRY.

OWENSVILLE, Ind., Jan. 31.—There was a full attendance on the range of the Owensville Ballard Rifle Team to-day. The wind and slush of a melting snow made the shooting disagreeable; standard target, 200yds.:

NEWARK, N. J.—That Newark will be the scene of the grand National Schuetzenfest of 1888 is now a settled fact. At the annual meeting of the Newark Shooting Society on Thursday evening last, the matter was carefully considered from all sides, with the result that the society finally decided to undertake the management of the Fest, and July 2 to 7 inclusive were decided upon as the dates. Flattering encouragement has been received from riflemen from almost every State and Territory in this country, and even from a number of European experts. The chances are that the number of entries will exceed that of any similar affair ever held in this country. The shooting will be open to all comers, and there will be no provisions made by which, as in previous contests held in the West, the prizes will be arranged in such a manner that none but local cracks have any chance to win a good prize. A meeting will be held in Lehmann's Hotel, Feb. 24, to arrange all preliminaries, and invitations have been sent to every shooting society in the country, requesting each one to send delegates. The shooting rules and programme will also be arranged at that time. At Thursday's meeting the directors were instructed to set to work at once to raise a guarantee fund of $25,000 to cover any deficit that may occur. It is the intention to offer a very large list of prizes, in order that all may have an equal chance. Several alterations will be made in the Shooting Park previous to the Fest, one of the most important of which will be the erection of a number of new targets. At least thirty targets will be required to accommodate the large number of marksmen.

DAVID W. JUDD.—The death was announced on Monday last of Mr. David W. Judd. He had been ill of pneumonia but a few days when his sudden demise came as a surprise to many friends and acquaintances. He was of New York, but had just finished his course in Williams College when the war took him to the front as a correspondent, and for nearly 30 years he has been connected with publishing in various capacities. In 1872 he went to the Legislature from Richmond county, and it is due to his exertions in the Assembly that the Directors of the National Rifle Association were enabled to get from the State the capital necessary for the purchase of Creedmoor. From the start he was a life member and for several years he was an active director of the Association and before retirement from that was made an honorary director. He had a keen appreciation of the importance of a well armed and efficient body of shooting militia. The Judd prize, the leading off-hand match at each fall meeting, was named in his honor and in recognition of his services at the formation of the Association.

PROVIDENCE, Feb. 2.—All was in readiness at the grounds of the Narragansett Gun Club, at Providence, to-day, but F. C. Bennett, of Boston, failed to put in an appearance. Chevalier Ira Paine offered to give $1,000 to the poor of Providence and Boston if Bennett equaled either his score of 99 or his own alleged score of 914. Mr. Paine now claims that his title of champion is undisputed.

NEWARK.—At the annual meeting of the Newark Shooting Society last week the following officers were elected: President, Christian Feigenspan; Vice-President, William Hayes; First Shooting Master, August Begerow; Second Shooting Master, J. Coppersmith; Treasurer, Julius Stapf; Secretary, L. E. Muschl; Board of Directors, H. Schiener, F. Haefli, F. C. Watts, Albert Seitz and A. Volheye.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ESSEX—EASTON MATCH.—Newark, N. J., Feb. 4.—*Editor Forest and Stream:* In last issue "Skipper" gives an account of the Essex-Easton match, in which the incidents are not over drawn, save in the summing up. I can only speak for myself, and having no special interest in any gun or powder, I believe in giving credit to whom it is due. The seven shells used by me in the match referred to were selected at random from twenty-five loaded to order by Messrs. Von Lengerke & Detmold at their store in this city, and I hardly presume they would violate principles of good faith by filling them with powder other than as ordered. Not being a scientist or an experimentalist, I am just "old fogy" enough to stick to a "good friend," be it American wood powder or an L. C. Smith gun. I am inclined to think "Skipper" has been misled by the sharp, cracking report caused by the deep snow on the ground, or through erroneous information as to the powder used.—FORD.

SOLOMON CITY, Kan., Jan. 5.—Shoot at live birds, 30yds., both barrels, strong wind, cold and sleet, freezing:

Thos Robertson	22220—4	Morris Robecker	10010—2
C H Smith	03012—3	T J Edworthy	00110—2
C F Dewar	02211—4	Burt Johnson	22000—2
Jno Kraenchi	20010—2		

Robertson and Dewar first, Smith second, Edworthy third, in shoot off.

Second Shoot.

T Robertson	2	M Robecker	1
C H Smith	0	T J Edworthy	1
C F Dewar	1	Burt Johnson	1
Jno Kraenchi	1	W M Irwin	0

Third Shoot.

Robertson	2	Robecker	3
Smith	3	Edworthy	5
Dewar	3	Johnson	3
Kraenchi	w.	W H Dewar	6

C. F. Dewar first, C. H. Dewar second, Edworthy third.

Fourth Shoot.

E E Crooks	0200000010— 2	C T Dewar	2212220212— 9
T J Edworthy	1000002112— 5	B Johnson	2100001210— 5
C H Smith	0012011002— 5		

Fifth Shoot.

Crooks	11220—4	Smith	02012—3
Edworthy	10011—3	Johnson	12001—3

Seventh Shoot, 20 blackbirds, 21yds. rise, both barrels: Crooks 16, Edworthy 17, Smith 14, Johnson 13.

WILLIAMS VS. FLINT.—The pigeon shooting match for a silver cup, between "Mr. Williams" and E. E. Flint, of the Carteret Gun Club, was shot at the club grounds, Bergen Point, N. J., on Feb. 4. The conditions were 50 birds each at 30yds. rise, 50yds. boundary, ties at 5 birds each. The weather was very bad, with rain falling and freezing from the start. There was but little wind, however, and as the birds were a very strong lot, they had to be well hit to kill. The shooting as a whole was very good and at the end of 10 birds was a tie, at 8 killed, the 2 misses by each shooter falling dead in the grounds. In the next 10 Mr. Flint made a clean score, and as "Williams" missed his 20th bird Flint led by 1 bird. The score was tie at 25, but Mr. Flint again led by 1 bird at 30. At 35 they again tied, each having killed 30 birds, after which Mr. Flint made a bad break, and in loosing 4 birds it gave "Mr. Williams" such a lead that he won the cup by a score of 44 to 38, having killed his last 13 birds very handsomely:

Mr. Williams.....1111101111111111111101111011111111111111—44
E E Flint.....0101111111111111111101111011101110100001011101—38

The shooting was specially clean and good, for, although the boundary was 50yds., all of Flint's killed were gathered inside the 21yd. boundary, while of the 44 killed by "Mr. Williams" only 2 were gathered beyond the 21yds., namely, 1 each at 35 and 50yds. "Mr. Williams" shot with a Greener gun weighing 7¾lbs. and with Ely salmon-colored shells charged with 3½drs. of Schultze powder and 1¼oz. of No. 7 shot in the right and No. 6 in the left barrel. Mr. Flint's gun was a Purdy, hammerless, weighing 7¾lbs., with Kynoch paper shells loaded with 2¾drs. of Schultze powder and 1¼oz. of No. 7 shot. Mr. Jas. B. Metcalf was referee. The birds were gathered by the dogs Dell and Phil. Time of shoot, 1¼ hours.

FLOYD-JONES AND MURPHY.—The third pigeon-shooting match at 100 birds each, between C. Floyd-Jones and Walter G. Murphy, was shot on Feb. 2, on the Carteret Grounds, Bergen Point, N. J., and resulted in the success of Mr. Floyd-Jones by a score of 83 to 81 killed, and as Mr. Floyd-Jones won the first match by a score of 78 to 77, and lost the second by a score of 77 to 67, this match was the rubber. The conditions were the same in all three, viz.: 100 birds each at 30yds. rise, 21yds. boundary, from five ground traps. The weather was a decided contrast to that of the previous Saturday. It was clear and, for a February day, warm. There was really no wind to affect the shooting in any sense, and as the birds were a good strong lot the large crowd present (nearly all personal friends of the two shooters) were treated to one of the best exhibitions of trap shooting ever witnessed in this country, and one that could not have been excelled at any of the crack clubs in England or on the Continent, and had it been shot at Monaco the two Americans would have found backers against shooters sojourning there. The match opened with Mr. Floyd-Jones at the score, and from the very first bird the shoot became one of great interest, and as neither missed in their first ten the excitement ran high. At the 12th bird Mr. Floyd-Jones scored the first miss—it was a fast driver that fell dead just over the 21yds. boundary. Murphy continued with a clean score to the 23d bird, when a strong tower was able to reach the 30yds. boundary. He also missed the next bird, a very easy incomer, and as Mr. Floyd-Jones lost his 25th bird at 50yds., the first quarter of the match showed an even score of 23 killed. At 30 birds the score was still a tie with 28 killed, but at 35 birds Mr. Floyd-Jones led by 1 bird. At 40 birds each had killed 36, and as Mr. Floyd-Jones missed 4 in the next 10 to Mr. Murphy's 2, the score at half the match was, Murphy 44 to Floyd-Jones 42. In the second half of the match the traps, which are automatic, worked very badly, much to Mr. Murphy's annoyance. He held his lead, however, and at 60 birds he still led by 2 birds, although losing his 54th bird through the fault of the dog, who chased it into the 35yds. boundary. In the sixties Mr. Floyd-Jones gained a bird but soon lost it again, and at 70 birds Mr. Murphy again led by 2, the score standing 63 to 61, with Murphy's friends offering to back him at $100 to $50. There was no change at 80 birds, each missing 1 bird in each 5. In the next 5, however, Floyd-Jones gained a bird, and at 90 the score stood 75 to 74, and as Murphy missed his 92d bird the score was a tie. The excitement became intense, and as Murphy missed his 95th bird Floyd-Jones led one bird. The partisans of both men could scarcely be kept quiet, but there was no wrangling, both shooters appearing promptly at the score. They killed their 96th and 97th birds. Mr. Floyd-Jones lost his 98th. If Murphy killed the score would again be tie. He failed. It was a hard case of luck, for a fast quarterer to the right fell dead at 35yds. Mr. Floyd-Jones then killed two fast drivers, and as Mr. Murphy missed his last, Floyd-Jones, amid the cheers for "Old Long Island," was hailed winner by a score of 83 to 81. It was a great shoot, and one that showed Mr. Floyd-Jones as possessing the greatest nerve, he shooting as it were an uphill race from the very start. For not only was the New Jersey party confident, but they made no disguise in saying that Murphy was the best amateur shooter that ever faced a trap in this country, and although defeated after having the victory, as it were, in his hands, no one congratulated the winner more cordially. The match was for $1,000 a side, and the betting was very heavy, especially on the street, and there will be a good many checks drawn this morning which will have to be credited to expenses. The score by killed and missed is as follows:

Floyd-Jones	1	1	1	1	1	1	0	1	1	1	1	1	1	1	0	1	0	1	1	1	1	1	1	1	1	1	1	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1

SPRINGFIELD, N. J., Feb. 5.—Union Gun Club's second monthly badge match, 25 Lockport bats, 3 traps, 18yds. rise, N. G. A. rules, 7 prizes:

E D Miller	1111111111111111111111—25
J M Roll	1101101111111111111101101—21
C H Johnson, Jr	1101011101110111111111111—21
Frank Dunican	1011111111101101111111—21
H R Brentnall	0111101111111111111111—23
Will Wade	1101011010101111101001001—15
W Sopher	1111110111111001111111100—20
Conover	1111011011111111111101111—22
W R Williams	1111010011111111111111111—22
G Pudney	1111011111010101111111111—21
R Morrison	1110310001111111111111111—21
I Bryant	1111011111111101010011110—19
E Sickley	1111111111111111111101101—24
Zip Sayre	1111111111111111111111111—25
W Hames	1110111011011011010101101—18

First prize, diamond badge to E. D. Miller, second, twice, with 25 straight on each shoot. Ties on 24 for second at 5 birds, 18yds.: Elmer Sickley, 11101—4. Zip Sayre, 11111—5; gold badge. H. R. Brentnall third, silver badge. Ties on 22 for fourth at 5 birds, 18yds.: Conover, 11111—5. W. R. Williams, 11001—3; corduroy hunting coat. Ties on 21:

C H Johnson	10111 11111 11111 11111 11111—19
G Pudney	11110 11111 11111 11111 11011—18

Roll 4, Duncan 3; Johnson took fifth, a gun case, W. Sopher took sixth, corduroy pants. Joe Bryant, seventh, canvas hunting coat. General sweepstake shooting the remainder of the afternoon, in which several straight scores were made. Mr. Zip Sayre, the eagle hunter of Eagle Mountain, surprised himself as well as the members of the club with his remarkable shooting, attributed, he says, to his new gun, and the nerve and courage he acquired while hunting panthers in the Pennsylvania woods last fall. Next shoot, March 5.

NEWARK, Feb. 4.—No weather that ever comes to New Jersey is nasty enough to stop the old timers from shooting pigeon matches. At Erb's grounds to day the drizzling rain froze on the coats, hats and guns of the gunners, the hair of the two setters that retrieved the birds was covered with ice and the ground was as slippery as a skating pond. The main match was between Sam Castles, Newark's veteran, and Henry Siegler, who for twenty years has been considered the best shot in Montclair. They had $50 apiece staked upon a 25-bird match, at 30yds., under Hurlingham rules, and a lot of their friends gathered to witness the sport. The shooting was not up to the average of either of the men, but it was good under the circumstances. The score:

Castles	1010211211102110111101011—19
Siegler	2221112011010011012122001—18

Three 5-bird sweepstakes were shot with Class, Castles, Siegler, Youmans, Earls, Reinhart and other local cracks in them.

Feb. 2.—Frank Class, of Pine Brook, N. J., and James Thompson, of Yonkers, N. Y., shot a pigeon match at 100 birds each at Erb's grounds, this afternoon for $200 a side, Hurlingham rules. Class killed 91 birds out of the 100, having outshot Thompson on the 87th bird and continuing the shooting for a record. The score was as follows:

Thompson	2220120201011102211012011121201012210011102101
	1112120112021222121012011111120101212001—68
Class	1111200201320212222121012011 1111212102101212111
	2121222111121022112111111111111211111111213111—91

The shooting was fine, in view of the excellence of the birds and the fact that the field was covered with snow, against which the white birds could scarcely be seen. Thompson was not satisfied with the result and immediately made another match on the same conditions. It will be shot during the month at Yonkers.

GRAHAM AND BOGARDUS.—Wm. Graham, the English shot, writes from Merchantville, N. J., saying: "As I see in some of the papers erroneous reports of the match between myself and Miss Annie Oakley, which took place at the Easton Gun Club grounds on Monday, I take the liberty of writing just what took place. It was this: Our match, originally made to be shot at 50 live birds each, myself at 30yds. rise and Miss Oakley at 25, was curtailed owing to scarcity of birds to 32 live pigeons each, and the result of it was a dead heat, each killing 11 out of the 12. We also shot at 18 clay-birds each, in which Miss Oakley won, breaking all her clays to my 9."....A shoot will take place at Merchantville, N. J., on Saturday, Feb. 11 betweeu Capt. A. H. Bogardus, William Graham and J. Frank Kleinz. W. J. Mitchell, of Virginia was to enter, but on account of unexpected business was compelled to withdraw. The above shoot is a sweepstake at Hurlingham rules, 30yds., 5 traps and 50 birds each, for $100 a man, highest score to take all the cash. Capt. A. H. Bogardus writes that his son and self expect to arrive in Philadelphia on the 8th inst., as he has an engagement with his son at Boston, commencing on the 13th.

WELLINGTON, Feb. 4.—To-day has been a busy one for the trappers of the Wellington Gun Club, they being kept constantly at work from 1 to 5 P. M., C. B. Sanborn was the winner. In the merchandise match at 20 bird, Scott and Garfield scored a point for first with 17 broken birds; McCoy and Bert a point each for second with 16; Schaefer, Stanton, Bond, Bill, Swift and Nichols one each for third with 15; C. B. Sanborn and Chase one each for fourth with 14; Phelps and Edwards one each for fifth with 13; Curtis and Moore one each for sixth with 12; Baxter and Stanley one each for seventh with 11; Snow, Brown, Colony and Broadstreet one each for eighth with 10. The winners of other events were: Six pigeons, Stanley; six blue rocks, Bill, Bond and Snow; six pigeons, Bill; six blue rocks, Schaefer; six pigeons, Green, Bond and Scott; ten blue rocks, McCoy and Bert; six pigeons, Bill and Scott; ten pigeons, Swift; six blue rocks, Bert and Bill; six pigeons, Scott.

MONTE CARLO SCORES.—Letters from the Mediterranean tell of the opening of the great international pigeon shooting week, on the 16th ult., the fight from the start was between the Italian and English shooters. The first event, the Poule d'Essai, was won by Sig. L. Garoli, with a score of 14 killed. Conditions, 2 birds each at 24, 26 and 27 metres; ties, miss and out at 28 metres. Nine out of 58 snooters tied at 6 birds; 5 missed their seventh, and the final result was that Sig. Garoli took first prize with 14 birds, Mr. Cobb second prize with 13, Mr. Sutcliffe third prize with 12, and Sig. Cortese the fourth with 8. The second event was the Prix d'Overture, at 5 birds, 25 metres, 2 misses out. It had 81 entries and 68 shooters. The final result was the success of Sig. Guidicini, who killed 10 straight, taking first prize, M. d'Orsdet second, Mr. Bertram third and Mr. Marlesford fourth. Last year Mr. Murphy, the New Jersey amateur, was at Monaco, but failed to win any of the big prizes. He won several matches and one of big prizes at Cannes.

CAPT. BREWER.—A pigeon tournament took place at the Marquis of Allesbury's private grounds, the Hatch, near Surrey Hall, Windsor, on Tuesday, Jan. 31. The most important event was a match between Mr. W. H. Parsons and Capt. Brewer, the American shot, to shoot at 100 birds, 35yds. rise, Mr. A. Ball laying £150 to $100 on the American. A start was made with 10 birds each, the American killing 8 out of 10, while his opponent only brought down 6 out of his first 10. The next 10 Brewer killed 9 and Parsons 4. The third 10 Brewer killed 6 and Parsons 5. The fourth 10 Brewer brought down 8, while his antagonist only killed 4, thus Capt. Brewer won easily. He had 31 birds to his score against 19.

NEW DORP, S. I., Feb. 3.—The New Dorp Gun Club held its monthly shooting match to-day, for a gold medal. H. S. Levand won the medal by shooting 5 out of 6 birds at 21yds. rise. S. Burbank won the second prize by killing 4 out of 6 birds.

NOTES.—James Pilkington, the Harlem oarsman, and David Sheppard, of Newark, will shoot to-day at Erb's grounds in Newark, Long Island clubs will govern the contest....The shooting match between the University of Pennsylvania and Harvard teams will not take place until April.

ATLANTIC AMMUNITION TOURNAMENT.—In list of prize moneys given last week, the 30 per cent. should have been given to third highest score.

Yachting.

Small Yachts, By C. P. Kunhardt, Price $7. Steam Yachts and Launches, By C. P. Kunhardt. Price $5. Yachts, Boats and Canoes, By C. Stansfield-Hicks, Price $3.50. Steam Machinery, By Donaldson, Price $1.50.

THE NEW SECOND CLASS YACHT.—The action of the New York Y. C. in rejecting the proposed classification retains the limit of the second class at 73ft., and Mr. Auchincloss's new yacht will be designed to come inside this class. She will be of steel, 69ft. 6in. l.w.l., 20ft. beam, 9ft. draft, with lead in a trough keel and a centerboard. She will be built in New York from Mr. A. Cary Smith's designs.

A WINTER CRUISE IN THE SOUTH.

WINTER cruising over the regular yachting grounds, from New York to Mount Desert, is apt to be pretty rough work, with more hardship than pleasure for the largest and best equipped craft; but for those who have the time a vast expanse of water is open to the south for all yachts of moderate draft, and each year more are seen in the bays and sounds of the Carolina coast. The following cruise in these waters was made in the Monarch, of the Quaker City Y. C., a sloop 55ft. over all, 15½ft. beam, 4ft. 9in. draft—an able sea boat, and speedy, as her log will show. Her cabin has two staterooms 9x7 each, one of which is used as a galley, head room 6ft. 6in., large forecastle; and having no cockpit there is plenty of stowage room aft. She carries two men before the mast.

We left Philadelphia on Dec. 10, at 5:30 P. M., having a crew of five in the cabin, in a light fog, which soon closed in heavy, obliging us to anchor off Kaighn's Point, after making but 3 miles. The fog lifted Sunday about noon, so we made sail, but it closed in heavy again almost at once. Knowing the ground thoroughly, however, we worked in to the cove, and, keeping leadline going, drifted slowly down until off Red Bank, where to avoid drifting into the eastern channel, dropped anchor. Took bottom slightly twice but came off easily; logged 6 miles.

Made sail Monday at 7 A. M., fresh S.W. wind blowing, tide against us; passed Billingsport at 8 A. M., and Thompson's Point 10 A. M.; wind lighter, but at noon off Chester came out of the west in strong puffs, obliging us to turn in reef in mainsail, and sending us down to Delaware City in a hurry. Passed everything under sail and dropped anchor off locks of Delaware and Chesapeake canal at 2:30. Wind being straight out of the locks, took tugboat into lock, paid canal fees, towing 25-ton vessel $4, lockage $3.25; by use of a little judicious "grease" our driver was induced to tow us through to Chesapeake City, 14 miles, the end of the canal, in 3¾ hours, nearly 4 miles an hour: this was said to have nearly beaten the record for speed.

At Chesapeake City two of our friends, Arbelo and Barth, were compelled to leave us, returning via Ericcson line steamer. Distance logged under sail 33 knots, by team 14 knots.

At 7 A. M. Tuesday the canal tug took us in tow behind two schooners, and towed us out of Black Creek six miles. Charge of towage, $1.25. Made sail down Elk River, wind light S.W., thermometer 48°. Passed Turkey Point out into the Chesapeake Bay at noon; wind fell to a zephyr, so took yawl boat and shot eleven ducks for supper, only one bluebill, the others were "old grannies" and rather tough fare. Passed Pool's Island at 11 P. M., wind south, light; thermometer 37°. At midnight wind freshened and came out S. W., and we made good time, anchoring off mouth of Patapsco River at 3:30. Logged, by tug 6 knots, under sail 26 knots.

Wednesday morning made sail 6 A. M.; no wind. Sculled into channel to get advantage of flood tide. At 1 P. M. wind came out S. E., light; thermometer 53°. Shot six ducks while waiting for the wind. Dropped anchor at Ferry Bar, Baltimore, at 3.15. Logged 14 knots. Here Martin and Vanscirer were compelled to leave, so we all returned to Philadelphia by rail.

Saturday, Dec. 17, returned from Philadelphia and came aboard at 6 P. M. A heavy snow storm had set in at 3 P. M., entirely stopping street car traffic in Baltimore, and I was compelled to take a hack to reach the yacht. When I got aboard there was 12in. of snow on deck, which made things warm and comfortable below.

Sunday, cleared deck for action; wind heavy from west; thermometer 32°. Made sail at 10:30; passed out of Patapsco River at noon; ran into West River at 2:30, and anchored off Turkey Point in a fleet of twenty pungies, and alongside of Maryland police boat, which the next night had a fight with oyster pirates and was badly whipped. Logged 32 knots in four hours' sailing.

Made sail Monday morning 7 A. M. with the fleet of pungies, wind light from southwest, thermometer 34°, had a scrub race with the pungies and passed the last one before 8:30. Wind came out heavy from west at noon and for two hours we logged 11 knots an hour, which in our section is called fast traveling; crossed mouth of Potomac River at 1 P. M., a very heavy sea running, boatmen told us that a long roll could always be counted on off the Potomac, and we found it so. Many of the swells being from 5 to 6ft. from hollow to crest. At 2 P. M. the wind fell light from southwest, breezing up again at 7 A. M. from the west, falling light again from southwest about 8 P. M. Dropped anchor at 9:50 inside the mouth of the Piankatauk River. This is one of the most perfect harbors for small craft I have ever seen, being completely landlocked within a half mile from the bar. The channel is crooked, but this adds to the value of the anchorage, the shoals breaking up the swell. There is no railroad communication with any of the shore towns, consequently all traffic is carried on by means of the water; one result of this being that the bay is at all times dotted over with small craft. No better yachting water could be devised; harbors being plentiful and easily entered: while wind is plenty, water salt and plenty of it, and no shoals to bother anything drawing less than 9 to 10ft; well lighted and buoyed and plenty of company in sight at all times. Couple this with pleasant, hospitable people on shore, and no eastern water can compare with it. Logged for the day 100 knots in 14½ hours.

Made sail Tuesday morning 8 A. M., wind light northeast, so that we made only a mile an hour for the first 3 hours, thermometer 38°.

As we drifted out of the harbor a small fleet of oyster tongers were working in. One man hailed us, and ascertaining our home port, asked after several of our yachtsmen, having been employed on a Philadelphia yacht. He told us the tongers were coming in as a heavy storm was impending, and advised us to work into the next harbor. Having faith, however, in our yacht, which has never yet failed us, we kept her head at it. Sure enough, at 11 A. M. a heavy sea began to roll in, followed shortly after by wind from S.E., the barometer falling from 30.20 to 29.90 inside of an hour. Ran set in shortly after the wind; turned in a reef in the mainsail shortly before noon, but finding we were getting to leeward of York Spit light, which it was absolutely necessary for us to weather, we were compelled to put whole sail on her again, a nasty proceeding, as every sea was washing us, and the spray was striking the mainsail 10ft. above the steersman's head. We lashed our boats securely and put on the covers, without which we should surely have lost them, as every large sea washed completely over them, but the covers kept the seas off.

As we passed the light we created some commotion, both of the keepers coming out to see us and waving their hands to indicate that we were to run into York River for a harbor, but as Norfolk was our destination, and our mettle was up, we kept going after turning in two reefs. We passed Old Point Comfort at 2 P. M., after which

anchorage, the swell in which annoyed the ladies, and without difficulty made into East Bluff Bay, a splendid landlocked harbor with 7½ft. of water. Logged 15 knots. From 7 until 9 P. M. the barometer rose from 30.10 to 30.75. At the same time the wind came out from the north, while a heavy sea rolled in from the S.E., so in order to lay perfectly snug we warped into a little creek at head of bay, where there was 5ft. of water. About midnight the storm from N.E. rolled in, and things were lively for a while, but toward morning it moderated somewhat, and at 9:30 Thursday morning we made sail, wind N.E., heavy, thermometer 40°. Ran out two miles to N.W. to clear shoals and then set course S.W. ½ W. for buoy in slue of Brant Island shoal, 20 miles away, which we made, end on, in two hours, and boiled up the Neuse River at the rate of 10 knots an hour. Off Wilkinson's Point we found the pile beacon down, and not knowing the water this bothered us somewhat; but we made Newborne at 5:45, having run 70 knots in 8½ hours, a record to be proud of when it is considered that it was in strange waters and half of it in a river.

CHAS. L. WORK.

NEW YORK Y. C. ANNUAL MEETING.

THE annual meeting of the New York Y. C. was held on Feb. 2 at the club house, with Com. Gerry in the chair. The principal business, the election of officers, rusulted as follows, after a warm contest, the ticket of the nominating committee being partly rejected: Com., Elbridge T. Gerry; Vice-Com., Caldwell H. Colt; Rear-Com., E. D. Morgan; Sec'y, John H. Bird; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch, M.D.; Regatta Committee, Gouverneur Kortright, Stephen Peabody and Alexander Taylor, Jr.; House Committee, Edward E. Chase, B. C. Cleeman, E. A. Houghton and Robert S. Bowne; Committee on Admission, Chester Griswold, Joseph P. Earle, George L. Ingraham, Frederic Gallatin and Edward M. Brown. The following candidates were elected: T. Brownell Burnham, Robert W. Imus, Joseph Aydelaide; Cyrus Field Judson, Charles D. Middleton, schooner Helen; Henry Stanton, James L. Hutchinson, steam yacht Ladoga; Dr. W. Barton Hopkins, Arthur C. Gilman, Joseph Bushnell, Edmond Blunt, schooner Azalea; Edgar Hendricks, Clifford B. Hendricks, Walter Jennings, Joseph D. Sterling, schooner Leona; DeLancey A. Kane, J. Leslie Cotton, A. E. Bateman, steam yacht Meteor; W. A. Wolf and G. L. Ronald, steam yacht Sentinel.

Mr. Ogden Goelet, of the schooner Norseman, offered again the cups for schooners, $1,000, and singlestickers, $500, to be raced for on the cruise. The Martha's Vineyard Y. C. offered cups of the same aggregate value for a regatta off Martha's Vineyard during the cruise, which were also accepted. The subject of the proposed classification was taken up and after a brief discussion, in which the measure was opposed by a few of the owners of the old wooden sloops, it was resolved to make no change in the present classes. The date of the annual regatta was set for June 21.

THE POPULARITY OF CUTTERS.—*Editor Forest and Stream:* I think the conclusions of your correspondent "A. B." in last issue are pretty sound. Looking over the last two numbers of your paper, I notice no less than eleven new cutters building in Boston, as follows: Mr. Longfellow's Olga, Messrs. Adams's Baboon, one for Mr. Fowle, one for Mr. Eaton, one for Mr. Paine, one for Dr. Jameson, one for Mr. Taylor, one for Mr. Wyth, one for Mr. Peabody, one for Messrs. Dunham and one for Mr. Codman. This is a big crop for one port and vicinity in two weeks. I think at least twenty new cutters are now under way in the East and that some thirty-five or forty will be built throughout the country before the season opens, besides two which are to be imported from England. Facts speak for themselves. This is the banner year for cutters. If in face of three straightaway victories of such fine compromise centerboard craft as Puritan, Mayflower and Volunteer, advertised as no other vessels have ever been, we find a larger number of cutters building than ever before, your correspondent "A. B." is not far out of the way when he calls the cutter the typical yacht of America to-day. It is also worth mentioning that while there are some twenty cutters started in the East only two sloops have so far been taken in hand in New York. Good yachtsmen about New York will not complain that the yachting center has been shifted to the East, as long as Boston continues to boom cutters in such great shape.—DEEP SEA.

QUAKER CITY Y. C.—The annual meeting of the Quaker City Y. C. was held on Feb. 1, at 1127 Chestnut street, Philadelphia. The following officers were elected for the ensuing year: Com., Chas. D. Middleton; Vice-Com., Chas. L. Work; Rear-Com., Wm. H. Mickel; Pres., John H. Sloan; Sec'y, Sam'l B. S. Barth; Cor.-Sec'y, Wm. S. Hoffman; Treas., Jos. J. Arbelo; Meas., Sam'l A. Wood; Fleet Surgeon, Wm. G. MacConnell, M.D.; Board of Trustees, Alfred Rex, Horace F. Smith, Oswald McAllister, Chas. E. Ellis; Regatta Committee, Addison F. Bancroft, Wm. J. Thorman, Chas. L. Wilson. After the meeting had adjourned the members sat down to the annual banquet. The treasurer's report shows the club to stand on an excellent financial basis. The present rooms at 1127 Chestnut street will be retained and a new club house will shortly be erected on the river.

THE NAVAL RESERVE.—A meeting of the New York branch of the U. S. Naval Institute for the reading and discussion of of a paper on "Our Naval Reserve," by Capt. A. P. Cooke, U.S.N., will be held to-night at the club house of the Seawanhaka C.Y.C., which has been offered for the occasion.

MARGUERITE.—This schooner is of wood with an iron centerboard trunk; not of iron, as a printer's error last week would imply.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. D. Rushton. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON..... } Albany, N. Y
Secretary-Treasurer: F. L. MIX. }

Vice-Com. *Rear-Com.* *Purser.*
Central Div..R. W. Bailey.....W. R. Huntington.....J. K. Bakewell.
Atlantic Div.Henry Stanton..A. S. Pennington.E.W. Brown, 146 B'way, N.Y.
Eastern Div...L. Q. Jones.....Geo. M. Barney...W. B. Davidson, Hartford.
N'thern Div..A. D. T. McGachen. W. G. McKendrick. S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

CANOES OR BOATS.—*Editor Forest and Stream:* The two fine boats referred to by "Kelpie" in your last issue were rigged with bow-facing oars. Are such rigged boats considered canoes? Should they not be classed as sneak-boxes and single-handed cruisers? How does the A. C. A. class such craft?—BIG CRUISER. [A canoe, by the definition of the A. C. A.; must be capable of being efficiently propelled by a paddle, and the fact that she carried oars in addition would not necessarily disqualify her. If the boat is too large to be propelled by a paddle she could not be entered in the races.]

PRIZES FOR PADDLING RACES.

Editor Forest and Stream:

Granting, for the sake of argument, that the purely racing interest has been fostered and encouraged by the A. C. A. to the exclusion of the cruisers and their favorate craft, has not the greatest incentive to the building of the fast boats, which represent the racing craft of to-day, been the desire to become possessor of the international trophy cup? Have not hulls been "all cut away below," sail areas increased and canoe jewelry multiplied, all for a chance of winning this much sought trophy of racing skill? The paddle, the most necessary adjunct of the cruising canoe, has fallen into "innocuous desuetude," and the man who can merely win paddling races and flags thereby has but small share of canoe glory. He may have paddled hard the entire season, on cruise or pleasure spin, gained health and muscle thereby, and found himself in the fall as brown as an Indian and as tough, but no glory is his, because, forsooth, he has not spent his summer with his toes under the lee coaming and the seat of his nether garments in the wash to windward. Paddling races have but few entries, and perhaps one reason may be that a flag is small reward for a hot mile race. If the cruiser has been neglected the paddler surely has, and in my opinion, if suitable cups were provided for each, it would do more toward doing the cruising man justice than all the legislation that the executive committee is capable of.

My suggestion is this: Let a subscription in the hands of the FOREST AND STREAM be started, which I will head with $5, for the purchase of two cups, not necessarily expensive ones—something in oxidized copper for instance—suitably ornamented and engraved, to be held by the members for one year, as is the Trophy cup, and subject to the regatta committee of the A. C. A. One to be awarded to the winner of the Class I. paddling race, and the other to the winner of the "combination" race (which will surely represent the true cruiser better than any other one race can). The names of the members and the year in which they held them to be engraved on the cups. Let the Trophy Cup stand, as it does at present, an emblem of the highest degree of speed that time, money and brains can develop in a canoe, with the existing rules for measurement, with which the racing man seem perfectly satisfied, but let there be a cup for those who do not care for "lean hulls and acrobatic deportment," and also for those who enjoy the paddle.

Let the A. C. A. members who want to see good racing, even though they are not racing men themselves, contribute as much as they see fit. The racers will surely contribute, and if the "cruisers" are as ready with their dollars as they have been with their literary efforts, we shall have at Lake George next August three cups which we may be proud of, and which will be worth racing for. PADDLE.

CRUISING CANOES AT THE MEET.

Editor Forest and Stream:

Being away from home for some weeks I was not aware that you had closed the discussion in which some of us have been engaged until it was too late; however, I trust that the generosity for which you are noted will be extended in this instance to an opponent, and that you will at least give me a chance to reply to your own and "Cruiser's" criticism of my last letter before finally closing the discussion.

In my last I said I would give our sailing races for sails that could be lowered, and you want to know why? Well, I condemn them for the same reason you have been condemning the skimming dish style of yacht for the last few years, on the principle that in a great many cases they are a most unsafe sail. As the skimming dish may be used in shallow water with safety, so can standing sails be used in narrow rivers and other places, but in all places where a standing sail can be used safely a hoisting sail can be used equally well, and the reverse cannot be said by the advocates of that style of sail, among which I am sorry to see you take your stand. Dottrel and myself, of our club, had an experience last season on Humber Bay that I would like a standing-rig man to have seen. The day was dark and lowering when we started under paddle (with our sails lowered down on deck and nothing but the masts standing) out the gap to go along the lake shore. The wind, which was dead ahead and very light, suddenly blew up such a squall accompanied with rain such as I never before witnessed. We were about 400yds. off shore, and it was but the work of a second to head for it, and paddle as we had never paddled before. Squall followed squall in rapid succession with the waves running several feet high. Our seats were level with the combing, and several times for the space of ten and fifteen seconds we had to slide out and sit on the weather gunwale to keep our craft, with only bare masts, from being blown clean over. We reached the shore right side up, however, and if ever two human beings were glad of being able to sit down on the mother earth and congratulate themselves, we were the pair. Now where would a standing-rig man have been in that storm, and many others that take place? The squall was on us in a minute, there was no time to look after crawling forward to take down sails. I have no hesitation in saying that no ordinary-sized canoe could live four minutes with a standing sail flopping around the mast in such a storm.

With the vivid recollection of that experience before me I don't want any one coming around talking to me about the advantage of a perfect cruising rig of five standing sails, three of which are kicking about your feet while you use two. To carry the three under your feet while cruising you have to get a canoe with a fair tank in the bow so that there will be room for the moderately long masts to be stowed. Will the advocates of this style of cruising state where your duffle is stowed when you take up one-half of your canoe with the three extra sails, because if they are to be interchangeable you can't stow stuff on top of them. While they are at it they might say what the three odd sails look like after you have been cruising for say three days with just the ordinary amount of canoeists' dirty feet tramping on them, or do they tie them up in a bag and take half an hour untying knots every time they want to use them. Of course tastes differ in this as in other points, but I am surprised to hear you utter these words, "Is not Pecowsic, so far as rig is concerned, the best fitted all-round canoe yet devised? No special sails with long spars to be left ashore when not racing." I would just like to ask which is the better, to leave sails ashore or to have them kicking around under your feet, and getting you all in a muddle. I happen to know what Mr. Barney's opinion was in '86 on that point. He had broken the jaw of the sail he wanted to use and had to take the next size smaller. A friend standing by advised him to carry an extra sail and he said he would sooner take the small sail alone than be bothered with another sail under his feet. "Cruiser" says, "In '87 one boat was luffing and begging in the puffs, while her sister was wishing for more wind. Now why did not the one who had the small sail get down on his knees and fish up his larger one, and the one with too much sail take from his perfect suit the next size?" Surely it cannot be possible that after all the claims that have been made about their being easily carried and so easily interchanged, it cannot be possible that they left their perfect suit on the shore. I would like to hear from "Paddle," who appears to know all about it, where they were. Come now, "Paddle," let us have the information for the benefit of the disgruntled pot-bellied cruisers and the public at large. Until we hear from "Paddle" I will be inclined to think that the claims that are made about the ease of stowing and changing the suit of five standing sails is all claim with no facts or actual practice to substantiate it. Before leaving this point I might just say that I am aware that this style of thing may possibly kill itself in time, but that is no reason why the A. C. A. regatta committee should not grapple with it and encourage a better sail by giving more races for sails that could be hoisted and lowered, or if they want to do it in a better way adopt the one rig idea of Commodore Gibson's, only confine the rig to two sails. No one would be at a disadvantage if all had hoisting sails as they should. The standing rig is just one more point to show how everything is sacrificed for the "get thar" man, but is it just square to the rest of the Association of whom the "get thar" men form a small proportion. "Cruiser" tries to score a point *re* Notus and Vesper, and says that Notus is in every sense a staunch, able and sturdy craft, but adroitly dodges the question at issue, as what I asked was "Is Notus as stable a craft as Vesper?" Thanks to the FOREST AND STREAM I was well posted on the points that he mentions *re* smooth skin, etc. It may be true that I am not as good a critic as I might be, but until "Cruiser" advances more facts on the case I will still adhere to my opinion that Vesper is the steadiest or more stable craft of the two. In another paragraph "Cruiser" says, "In Mr. MacKendrick's opinion all Class A boats are bad, and ought to be discouraged." It's a case of the wish is father to the thought, and as I take a rather more liberal view of the situation than "Cruiser" credits me with, I object to having that saying left on my door step as the father of it.

The stand I take is this. The A. C. A. can, has, and always will encourage some class of a canoe by the races and rules which they lay down. I do not think any one will dispute that point. And the races and rules governing them have a direct influence on the class of boat that is built, as witness the regatta programme for 1886. As that now ridiculous race the 75ft. was put down as a test for the international event, and the $300 cup, and what was the outcome of it; a fellow had to have a canoe that would take as good a stand in the 75ft. limit race as in the unlimited, and the Pecowsic came to light, as every one knows that a lean, narrow hull can be driven faster with small sails than a fuller craft.

Well, after a deal of kicking by some of those whom "Paddle" pleases to call the disgruntled, the 75ft. limit was removed off the test for the international event, but still kept on the regular programme, without any one offering a word in its defense; and even now no one offers any reason why it should be retained, except that they have had it for several years. It seems to me that in these days of rapid advancement, things should be able to show a reason for their existence. As to "Cruiser's" point that I have offered nothing better, well, that is an open question; but if I have a boil on my neck I'm very well pleased to get rid of it without asking for anything else to take up its abode there. But if you must have a race instead, give us two unlimited ones.

The stand I take is this: The A. C. A. is now directly encouraging the class of canoe such as Pecowsic. Is it the best class of canoe in existence that it should be especially favored in that way? I think not, and I feel confident in saying that nine-tenths of the Association think with me. Then why should it have a race, the 75ft. limit, which, as I pointed out a year ago, it is bound to scoop every time, besides having less speed, if not better, chance in the unlimited? Will "Cruiser," or others who object to the 75ft. limit talking a walk, please answer why?

In this line I do not lose sight of the fact that there are canoes and canoes, and that tastes differ, or that the Class A has its place and probably Pecowsic hers. But I take the stand that they should encourage the best all-round canoe they can find, and I do not think either Class A or Pecowsic fills the bill. If the rules as at present do not do that, I would not hesitate to have them altered. With regard to calling Pecowsic a machine by some and a good cruiser by others, matters not, and makes her neither one nor the other; and with all due regard for Mr. Barney and with due appreciation of what canoeists owe him, I beg to place myself again, as I did two years ago, down as an objector against that style of canoe being favored while much better canoes are not getting a race. W. G. MACKENDRICK.

HAMILTON, Feb. 3.

THE ATLANTIC DIVISION, A. C. A.

THE following application was sent to Com. Gibson by the secretary of the meeting at which it was decided to apply for admission as a division:

NEW YORK, Jan. 5, 1888.

R. W. Gibson, Esq., Commodore A. C. A., Albany, N. Y.:

DEAR SIR—As secretary of a meeting of members of the A. C. A., held at No. 729 Sixth avenue, in the city of New York, on the 3d day of January, 1888, for the purpose of forming a new division of the A. C. A., I beg leave to submit to you the record of the proceedings of that meeting.

First—On the 1st day of December, 1887, a notice was published in the FOREST AND STREAM calling a preliminary meeting of canoeists to consider the question of the formation of a new division, a copy of which notice is hereto annexed, pursuant to which notice a meeting of the A. C. A. canoeists was held at No. 247 Fifth avenue, in the city of New York, on the 9th day of December, 1887, at which meeting a committee on organization was appointed.

Second—The committee on organization issued a circular calling a meeting of A. C. A. men for the purpose of forming the new division, and asking for a vote by mail from those who could not attend the meeting, a copy of which circular was published in FOREST AND STREAM of the 22d day of December, 1887, and mailed to each member of the A. C. A. residing within the proposed new division, with a postal card inclosed, addressed to the chairman of the organizing committee, upon which members were asked to record their vote, copies of which circular and postal card are hereto annexed.

Third—Pursuant to the circular of the organizing committee, a meeting was held at No. 729 Sixth avenue, in the city of New York, on the 3d day of January, 1888, at which there were present thirty-two members of the A. C. A. residing within the proposed new division. Mr. William Whitlock was chosen chairman of the meeting and the undersigned was chosen secretary. At this meeting the organizing committee presented proof of the mailing of their circular to all the members of the A. C. A. residing within the proposed new division, and delivered to me, as secretary of the meeting, fifty-four postal cards, being all the postal cards received by the committee in response to their circular, from which it appears that fifty-two of the men addressed voted in favor of forming the new division and two in opposition thereto. The postal cards showing the vote are inclosed herewith.

Fourth—At the meeting on Jan. 3 the following proceedings were had, viz.:

The following resolution was adopted by say thirty-two affirmative votes, there being no votes in the negative:

Resolved, That a new division of the A. C. A. be formed, and that the limits of said division be the limits secondly referred to in the circular of the organizing committee, namely, those limits which are bounded on the south by the valley of the James River.

The following resolution was adopted by a vote of 18 to 8:

Resolved, That the name of the new division shall be the Atlantic Division.

Thereupon the following gentlemen were unanimously elected to be the officers of the said new division, namely:

To be Vice-Commodore, Henry Stanton.
To be Rear-Commodore, A. S. Pennington.
To be Purser, Edward W. Brown.
To be member of the Executive Committee, T. S. Westcott.

The following resolution was unanimously adopted:

Resolved, That the secretary of this meeting prepare a record of the proceedings which have been had for the formation of the Atlantic Division, and forward the same to the Commodore of the A. C. A. with the request that the new division be recognized.

And thereupon the meeting adjourned. All of which is respectfully submitted. EDWARD W. BROWN, Secretary.

The boundaries referred to are as follows: Beginning at the extreme eastern end of Long Island, thence running westerly through Long Island Sound to the southwest corner of the State of Connecticut, thence in a general northerly direction along the boundary line of the State of Connecticut to the point where the southern line of Putnam county, in the State of New York, intersects the Connecticut boundary line; thence westerly across the Hudson River at the Highlands at West Point and following the Highlands through Orange county, New York, to Port Jervis, at the northwest corner of the State of New Jersey; thence southwesterly through Mauch Chunk and Harrisburg and along the Blue Ridge Mountains to the valley of the James River at Lynchburg in the State of Virginia; and thence, following the valley of the James River to the Chesapeake Bay, which would include all rivers emptying into that bay; thence, along the Atlantic coast to the place of beginning.

The following circular was sent out by Com. Gibson:

ALBANY, N. Y., Jan. 19, 1888.

To the Members of the Executive Committee:

GENTLEMEN—Please mail to me your vote, aye or no, to the question: Shall the Atlantic Division be authorized according to the application, a copy of which is inclosed?

The subject has been discussed by those most interested and the opinion is nearly unanimous in favor of it. The opinion of the remainder of the Central Division has not been canvassed, but there have been no protests from any of the members. The idea of a new division has received my support, as you are aware, ever since the Eastern Division was formed. I have in preparation an addition to the constitution providing for the future formation of new divisions in a regular manner; at present we are acting in accord with the precedent and customs, but there are no definite rules.

Also send me your vote, aye or no, to questions No. 2, etc. It has been suggested that the Commodore should nominate officers to fill the vacancies caused in the Central Division by the formation of the new division, so that the vote of the Executive Committee, as provided for in the constitution, may be taken on the subject.

Question No. 2—In case the Atlantic Division is authorized, shall Rear-Commodore Reade W. Bailey, of Pittsburg, become Vice-Commodore of the Central Division?

Question No. 3—Shall W. R. Huntington, of Rome; N. Y., be Rear-Commodore? (at present member of the Executive Committee).

Question No. 4—Shall James K. Bakewell, of Pittsburg, Pa., be Purser of the Central Division?

Your votes on these questions at the earliest possible date will be gladly received.

Mr. E. L. French, of Buffalo, N. Y., will remain on the Executive Committe of the division, and the number will then be complete according to the reduced membership. Yours very truly,

ROBERT W. GIBSON.

The Atlantic Division, according to the application following, having been voted for in the affirmative by the Executive Committee, is hereby approved.

The resignations of Vice-Commodore Henry Stanton and Purser E. W. Brown, of the Central Division, are accepted, and they ar

elected Vice-Commodore and Purser respectively of the Atlantic Division. The other officers of the Atlantic Division are as announced in the application.

By vote of the Executive Committee, Rear-Commodore Bailey, of Pittsburgh, Pa., is elected Vice-Commodore of the Central Division. W. R. Huntington, of Rome, N. Y., is elected Rear-Commodore of the Central Division. James K. Bakewell, of Pittsburgh, Pa., Purser, and E. L. French, of Buffalo, N. Y., remains member of the Executive Committee.

ROBERT W. GIBSON, Commodore A. C. A.

ALBANY, N. Y., Feb. 2.

TIPPY C. C.—*Editor Forest and Stream:* I take pleasure in announcing the continued existence of the Tippy C. C. It is not only alive, but if the annual meeting of Jan. 28 is any criterion, it has entered upon its fifth year under the most favorable auspices. Dr. C. F. Matteson had extended his hospitality to his fellow members, who responded almost to a man, with a degree of enthusiasm which a long period of enforced inactivity had apparently not affected. Proceeding at once to business, the club elected Messrs. D. H. Crane, W. M. Dunham and J. B. Keogh as captain, mate and purser, respectively. The constitution, as revised by a committee, was unanimously adopted, and Messrs. A. W. Kitchin and L. J. Marks were appointed to serve with Captain Crane on the newly created standing regatta committee. The purser's report was interesting as showing the club to be on a sound financial basis, with a full quota of live active members. The question of the coming season was discussed in some of its many phases, and as a means of raising the standard of seamanship in the club, it was decided to maintain a permanent regatta course opposite the club house at Thirty-ninth street, and to give a series of weekly sailing regattas during the summer months, keeping a record somewhat similar to that of the A. C. A., and awarding prizes at the close of the season to the leaders in each class. Adjourning to the mess-room, the hours sped by mid the flow of wit and spirit, and it was dangerously near Sunday morning when the last of us hoisted sail and stood for our moorings. In spite of the months which must elapse before the opening of navigation here, the usual course of tinkering has already been begun in some quarters, and preparations will soon be under way on all sides. At least two new craft are looked for, those of Messrs. Wood and Lee, the latter from a design by Captain Crane, and the old boats are expected to be faster than ever. In the past no one has shown such marked superiority over his mates as to discourage even the least sanguine, and with the additional stimulus alluded to, we look forward to a season of unusual activity.—PURSER (Chicago, Ill.).

CANVAS CANOES.—Lowell, Mass., Jan. 30.—*Editor Forest and Stream:* I have been watching your columns for some time in hope of seeing some articles on canvas canoes, and am somewhat surprised to find no mention of them. I am an amateur, sixteen years old, but am very enthusiastic over canoes. I own a canvas canoe rigged with a lateen of about 49ft. area, and I think of putting in a dandy next spring. Can you tell me whether canvas canoes are allowed to race at the A. C. A. meet or not, as I think of joining and would like to know. I live near the Merrimac between Lawrence and Lowell, and it is a great place for canoeists and all lovers of boats, as there is a stretch of nine miles of clear water and lots of good camping places. I would like to communicate with some amateur like myself, and if you will be so kind as to publish this note in your canoeing columns, I will be greatly obliged.—CANVAS CANOE. [Our correspondent will find articles on the construction and use of canvas canoes in the FOREST AND STREAM of June 21, Sept. 20, Oct. 25, 1883; May 22, June 26, Nov. 6, 1884; Jan. 15, July 9, Oct. 22, 1885; Feb. 3, Feb. 24, June 23, 1887, besides notes in other numbers. The book "Canvas Canoes, How to Build Them," published by the Forest and Stream Publishing Co., gives full instructions for building an amateur's canoe, as does also "Canoe and Boat Building." Canvas canoes are admitted on a par with wooden ones by the A. C. A.]

THE EASTERN DIVISION MEET.—*Editor Forest and Stream:* The location for Eastern Division meet has not been decided on and I trust the Thames River and location described by Mr. Nathan A. Gibbs in last issue will meet the eye of our Eastern Division members and that the subject will be fully canvassed and talked over by them. In looking over this location described by Mr. Gibbs I had in view not only the fine site for a camp, but also the fact that many of our brethern would cruise to the Yale and Harvard boat race, and the date of our meet being fixed for July 1 they would remain for a camp and races; and also unattached canoeists would cruise from along Sound ports and get acquainted with the division and see the good work and join our ranks. It seems to me no other location commands so many advantages for recruiting our ranks. But let us hear from some of the old and reliable canoeists of the Eastern Division and talk it over at an early date.—L. Q. JONES, Vice-Com. Eastern Division. [Montville is four hours by rail from New York, not by sail, as incorrectly printed. The headquarters of the college crews are at Gale's Ferry.

ARLINGTON C. C.—*Editor Forest and Stream:* At the annual meeting of the Arlington C. C., of Arlington, N. J., the following officers were elected for the ensuing year: Irving V. Dorland, Commodore; S. Rogers, Jr., Vice-Commodore, R. E. Malloy, Secretary and Treasurer, C. V. Schuyler and Wm. N. Geib were elected members of the executive committee. Richard Molloy, David H. Miller and John B. Thompson were appointed as a house committee and A. C. Molloy and C. V. Schuyler were appointed on the regatta committee. The building committee handed in a report stating the urgent need of increasing the size of the present house and submitted plans for a two story extension, and after discussion the plan was adopted and the committee directed to have the addition completed at an early date in the spring as possible. After the adjournment of the business meeting the club proceeded to enjoy the first annual camp-fire, which proved to be a very enjoyable affair in every respect and all present were unanimous in the opinion that our winter camp-fires should be a fixture.—ROBT. E. MOLLOY, Sec.-Treas.

A. C. A. MEMBERSHIP.—The following gentlemen have applied for membership in the Central Division: Edward T. Birdsall, New York; J. A. Gallavan, Trenton, N. J.—EDWARD W. BROWN, Purser C. D.

New Publications.

"THE AUDUBON MAGAZINE."

IN another column will be found an advertisement of the first volume of the *Audubon Magazine*, the excellent get-up of which in cloth covers, suggests that as far as external appearances are concerned the volume is certainly worthy of a place in any library. And the contents in no way belie the promise of the covers.

It contains a complete and condensed biographical sketch of John James Audubon, with an admirable portrait after a painting by the naturalist's own hand, an analysis of his own and his wife's characters, with striking incidents of his career and some of his early ornithological sketches. Then there are good solid chapters of descriptive and economic ornithology, a profusion of original bird stories, the records of the transactions of the Audubon Society, and a series of short tales and sketches, many of which are illustrated. Besides this the monthly chapter of descriptive ornithology is accompanied by an illustration after Audubon of the bird described.

Considering the very small measure of attention given to natural history in the ordinary public school course, and the utter ignorance of this subject in which a large proportion of American youth is being brought up, it would be difficult to ascribe too high an estimate of the value of the *Audubon Magazine* in families in which there are young people. The few illustrated stories catch the eye and are found amusing and interesting, and the young reader being tempted to look further finds a number of bird stories which excite quite a lively interest in him and prepares him, or it may be her, for a wish to know something more about birds. And what can be more interesting than the charming descriptions by Miss Florence Merriam of birds with which she is familiar sketched from the life?

The arguments against bird slaughter are not obtruded unnecessarily, nor accorded any undue amount of space to the exclusion of more interesting matter; but through the whole volume there runs a thread of sympathy with birds, a realization of their value in the general economy of nature, and their indispensable importance to man, which leaves it to be assumed without argument, that men stand in some sort of moral relation to birds as they do to each other; a moral relation based as in the other case on their being mutually indispensable to each other's welfare.

The general quality and whole tone of the *Audubon Magazine* is high, its matter instructive and elevating, and it would hardly be possible to invest a dollar to greater advantage for the youth of either sex, than in presenting them with the first volume of the *Audubon Magazine*.

THE SPORTSMAN'S PARADISE; or, The Lake Lands of Canada. By B. H. Watson, A.M., M.D. With illustrations by Daniel C. and Harry Beard. Philadelphia: J. B. Lippincott Co., 1888. Price $3.50.

The author of this book had no need to put "M.D." after his name on the title page. That he is a physician is manifest enough in the text from the beginning; and it is made equally plain that Dr. Watson believes in the hygienic influences of field and—sensible physician that he is—he has faith in their efficacy to heal, in cases where physic might better be thrown to the dogs. Dr. Watson sends his patients to the woods; he goes there himself for his health. These chapters are records of different trips made in the last nine years to the back lake country of Canada, where trout and deer and partridge are the lures to attract and detain the town dwellers, and where the blessed sunlight and ozone, the healthy fatigue of the hunt, the care-free days and the sound-slumbered nights, all work their beneficent healing and tissue building. There is no mistaking the spirit and the reality of the outings related in this book. The life is genuine, hardy, simple camp life. For your "sports," who, under the pretense of fishing, go into the woods with bottles and jugs and kegs, to live like sots, each day more drunk than the day before, nothing but well deserved contempt is here expressed, and a fine scorn is shown for the dudes who whine if they cannot be borne in parlor cars to some luxurious woods hostelry, from whose verandahs they may pot game or jig fish. No carpet knight nor parlor sportsman could keep up with our health hunting doctor when once he starts out to rough it with his gun. This honest and all-pervading zest for woods life in its rugged manly aspect will win the sympathy of him who reads the "Sportsman's Paradise," even though, as is quite likely, he may not agree with the Doctor in all his dicta. There is the question of deer hounding, for instance. Our author is a staunch defender of the practice of driving deer into the water, or having them driven there and forced into convenient shooting distance and held there that he and his companion may blaze away at them with repeating rifles until they are butchered. Much as opinions may differ on this, and ours differ most decidedly, we are more than ready to grant that the spirit of these chapters is a healthy one, and the volume, taking it as a whole, is a creditable addition to the literature of its class. The author is garrulous to a degree; but why not? who wants his sporting chronicles chopped short? There are here and there little excursions from the straight thoroughfare—by-ways into which one is quite willingly led, as when the Doctor, with professional bent, dilates on the efficacy of deer hunting to decrease lectures on the value of tramps for deer as a remedy for obesity, or tells a story to show that quail hunting will cure insomnia, or relates with minute particularization the incidents of a novel Canadian wedding. The volume is handsomely printed, the author evidently gave his publishers *carte blanche* to make his manuscript into a luxurious piece of typography. The type is large, the paper rich, the illustrations good, and the binding attractive. That Dr. Watson is a person of strong individuality is proved by the curious style of italicizing passages where special claims to such emphasis is beyond the comprehension of the average reader.

MOUNTAIN TRACTS AND PARKS IN COLORADO. By L. B. France ("Bourgeois"). Denver, Colorado: Chain, Hardy & Co., 1887.

Under the above title L. B. France ("Bourgeois") has given us a series of pleasant sketches of Colorado mountains, streams, folks, fishes and big-game hunting, which by way of variety he has illustrated by a series of pen photographs of himself, taken in the various moods, in which the busy citizen is apt to exhibit himself when he tears himself from his civilized environment, goes for a few weeks' outing into the wilderness, improves his appetite, digestion and physique by long marches and makes the successful attemps to provide his own larder with the spoils of his gun and rod.

Under these circumstances a man naturally feels good and is apt to picture himself as a splendid savage, crusted over by a few conventionalities; in such a frame, too, we may expect to find his inner man in harmony with the scenery around him and capable of reflecting nature, animate and inanimate, in all its moods and measures of intensity.

"Bourgeois" shows this capacity, and with a ready command of language, good descriptive powers, and a well-developed sense of subimity and beauty, he would achieve a very respectable position simply as a descriptive writer, but if "Bourgeois" has an eye for the sublime of nature, he has another for the ridiculous in man, and he finds enough in the companions of his journey, and indeed in himself, to vent his pleasant humor upon. There is no incongruous effect produced by sudden transition from the sublime to the ridiculous, the humor runs through the narative like a silver brooklet through mountain scenery, heightening the subimity of the mountains with which it harmonizes, although in such strong contrast with them.

And so the little work is a diversified medley of description of the mountain parks in which our author and his party pitched their camp, of the trails that led from one to the other of them, of the horses that did the packing, and of the men who went along, with sketches of the conduct of the horses and the character of the men under changing conditions of environment, and among these, sketches of streams and lakes and fishing adventures by day, and of story-telling and discussion of world problems around the camp fire at night, interspersed with philosophic reflections, with some tall yarns, veritable products of the soil, and touched up with the story of an encounter with a grizzly in the author's best style. The reader cannot help feeling that he would like to have made one of the party, and there can be no better evidence that the story of the outing is well told.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

S. M. S., Norwalk.—The gun has a high reputation.

W. K., Chicago, Ill.—The rifle you name has a high reputation for accuracy and you will find the particular style well suited to your purpose.

J. H. C., Brooklyn, N. Y.—The puppy's tail will probably come right with age.

L. W. M.—Choose the American arm of the grade named in preference to the other.

F. P.—Mr. Mason's book on prize dogs is not yet ready; it will be announced in due time.

J. O. W.—You might dispose of your Audubon plates by advertising them in our columns.

READER, Boston Highlands, Mass.—The address is J. W. Newman, 6 Hamilton place, Boston, Mass.

P. H. D., New Maysville, Pa.—The "Gunsmith's Manual" is the best work we know of on that particular subject.

G. R., St. John.—In a rifle chambered for long cartridges the short ones cannot be used with equally good results.

G. L. B., Jr.—Game shooting is out of season there now, except for wildfowl. There is no law to forbid trap shooting.

W. H. S., Newark, N. J.—You will find lines of centerboard yachts in "Small Yachts," published by the FOREST AND STREAM. The Gleam or Midge would probably answer your purpose.

R. M. M., Philadelphia.—1. Choose the laminated. 2. Bogardus's "Field, Cover and Trap Shooting" will furnish what you wish.

J. S., Kansas City, Mo.—It is necessary to determine a yacht's waterline in designing. The method of calculating displacement is given in "Small Yachts," but is too lengthy to reproduce here.

J. F. S., Salem, Mass.—Wild geese were seen passing over Essex, Mass., Feb. 2, bound south. Is not this a queer freak? Ans. Geese may be seen flying south in any month of the winter. They are not all regular in their southward migration.

W. H. M., Matthews C. H. Va.—1. The mounted specimens of eagles, foxes, quail, etc., have no regular market value, and it is impossible to put a price on them without seeing them. 2. Beagles sell for prices ranging from $5 to upward of $100.

J. P. P., South Boston.—The shooting will be quail and squirrels, and in past seasons we have learned that the quail shooting was excellent. Deer may be had within short distance. The weather will undoubtedly prove beneficial to you.

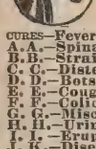
RIFLE, South Manchester, Conn.—Please inform me of some of the best systems used at rifle range to give the value of each shot on the standard target. Ans. Measure each shot with a tape from center of bullseye. This is the most accurate system of marking.

W.H.B., Tiffin, O.—Dissolve 1lb. sugar of lead in 1gal. water, and in another vessel 1lb. alum in 1gal. water. Soak the tent first in the lead solution, and afterward, when nearly dry, in the alum solution, then dry in the air. As the sugar of lead is poisonous it should be used with care.

J. B., New York.—1. Once a day is often enough to feed a mature dog. A puppy should be fed oftener. 2. Meat soup made into mush with oatmeal is excellent. Cook plenty of vegetables with the meat and give him a change occasionally. 3. The symptoms are often an indication of distemper. The person mentioned has well-bred dogs.

E. F. L.—1. The slickers can be purchased everywhere. 2. Consult some local hatter for the soft hat. 3. H. W. Huntington, Brooklyn, N. Y., breeds greyhounds. 4. You may procure the feathers from some of the tackle manufacturers. 5. Charles Scribner's Sons published the book. 6. For pointers see our advertising columns. 7. We cannot refer you to a Western ranch outfitting house.

A. B. C., Peoria, Ill.—1. Which will give the greatest recoil (used in B.L. shotgun) coarse or fine grain black powder? 2. Which the greatest penetration? 3. Which the greatest strain on the gun? 4. Is there any advantage derived from crimping paper shells except securing the charge? Ans. 1. Fine. 2. Fine powder burns more quickly, gets up a greater initial velocity and should, other conditions favorable, give greater penetration. 3. Fine. 4. Compressing and securing the charge.



J. D. M., Scranton, Pa.—At a pigeon match in this city this question was raised. The shooter was ready and said pull, the trap was then sprung, the bird took wing, was shot at and missed. The shooter claims that, just as he was about to shoot, some one touched his elbow and caused him to miss. The question is, could the referee after that debar the bird and give the shooter another one to shoot at, or should the bird shot at be scored a miss? Ans. The referee's decision should stand, the bird being scored lost.

W. H. L., Middletown, N. Y.—Where can I obtain Prussian carp and paradise fish small enough for the home aquaria? Mulertt, of Cincinnati, and Blackford, of New York, had paradise fish, but have none now. Ans. If neither of those named have paradise fish we do not know where they can be had in America. Mr. Blackford is the agent of the U. S. Fish Commission in distributing carp in the Eastern States and may have a few small ones now, although the distribution usually takes place in October.

H. B., Madison, Wis.—Mr. Bliss, in his "Wing and Glass-ball Shooting with a Rifle," states that the long .22cal. cartridge is not accurate. 1. Is it accurate, and if so how much further is it accurate for than the .22 short? 2. About how far is the common .22 short cartridge accurate, used in a 25in. Winchester rifle. 3. Barring the subject of wind, for this distance, is the .22cal. rifle as accurate as one of larger calibre. Ans. 1. Yes, when made up with proper bullet, and does good work at 200yds. 2. Good targets are made at 200yds. 3. Yes.

R. E. S. H., Terryville, Conn.—1. Is there a close time for pickerel in this State? 2. How is a click-reel used in fly-fishing? 3. What is the click for? Ans. 1. No. 2. The line is reeled off with the left hand for a yard or two and the rod in lifting the line off the water draws the slack through the rings. This is repeated until sufficient line is out. 3. It has a two-fold use. It tells the speed at which a fish is taking line from the reel, and it acts as a drag to keep the reel from giving out line when casting, as well as from overrunning or backlashing. In using reels without a click the overrunning is controlled by the thumb, and in this case the reel must be on top of the rod.

FOREST AND STREAM PUBLISHING CO.,

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1858, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Aududon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

LIST OF BIRDS REPRESENTED:

Black Vulture and Head of Deer	$12 00	Chimney Swift	$4 00	Bohemian Waxwing	$6 00
Redtail Hawk	10 00	Carolina Parroquet	10 00	Purple Martin	5 00

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING Co., 39 Park Row.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

SPORTSMAN'S LIBRARY.

We will forward any of these Books by mail, postpaid, on receipt of price.
Registration 10 cents extra. Our responsibility ceases after goods are mailed.

CANVAS CANOES;

AND

HOW TO BUILD THEM.

BY PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in.×27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.

FOREST AND STREAM PUBLISHING CO.,
40 Park Row, New York.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actua canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. Th upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

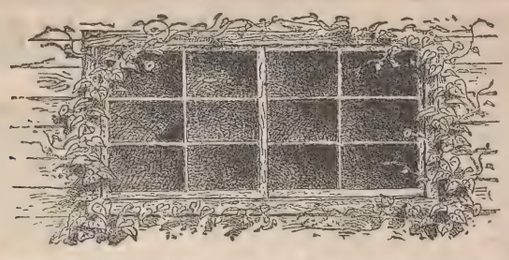
No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channe outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his sk ff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scen is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.



The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an édition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Flight
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

THE CHANGE AT CREEDMOOR.

THERE is a great deal of current misapprehension about the bill which has been introduced into the N. Y. State Legislature providing for a transfer of Creedmoor back to the State, by whose action the establishment of the range was made possible. The facts are very simple; Creedmoor to-day does not pay, and the directors of the National Rifle Association find themselves merely the custodians of a range property of which the State is the largest user, and in which the State has the largest interest. The directors are paid $4,000 annually by the State as compensation for the use of the range by the State troops. Now the directors propose that the State shall take the range, establish rules for its use, hire the markers when necessary, and have entire control here just as it does at the State Camp grounds at Peekskill.

The directors, however, make a very modest request. There is no intention of allowing the National Rifle Association to become defunct nor to reduce it to the position of a mere office association, without range outdoors. The monthy shoots, or weekly ones for that matter, it is thought should be kept up, and the annual fall meetings are not to be dropped. The directors in giving up the ground wish a provision to be made so that these civilian and military meetings may be retained and at the Creedmoor range.

It would be a great pity indeed if Creedmoor is to be abandoned entirely. The State can take hold of it, put it in order, and get abundant returns from it in the increased shooting skill of the National Guard of the whole State, and particularly of the cities of New York and Brooklyn. There is no other site near the metropolis, for the whole territory has been well searched. It is necessary that the great majority of the State National Guard in these two cities shall have opportunity to enjoy outdoor ball practice, so Creedmoor must be retained. The directors confess they cannot run it and the State can, therefore the State should take it, and the terms of offer are not in the least onerous.

In making the transfer, the directors present the State with a rich opportunity. It already has a proud history and it should remain for many years to come the practice ground of thousands, each one inspired by the story of the struggles which have been had in small arm work on that memorable range. Turned into pasture lots, cut up into a struggling town site, the range with its story of a decade and a half of endeavor and triumph will become a mere tradition. This is worth something, and this cannot be put into the bond of transfer against the modest reservation which the directors demand.

SNAP SHOTS.

AT a dinner given recently in New York by a well-known gentleman who is interested in big-game shooting in the West, it was proposed to form a club which should bear the title of the Boone and Crockett Club. Only persons who have killed one or more varieties of North American large game with the rifle are to be eligible to membership, and the name, embracing as it does those of two of the best known American rifle shots, sufficiently indicates the character of the organization. It is essentially a club of American riflemen who use the arm for hunting. The suggestion made by their host was warmly welcomed by the gentlemen present, and a few names were suggested of persons who might be glad to become members of such an association. The members of the club, so far as it is developed, are all persons of high social standing, and it would seem that an organization of this description, composed of men of intelligence and education, might wield a great influence for good in matters relating to game protection. It would be premature at present to speak of the possibilities of such a club, but as matters develop in regard to it, the public will be kept advised upon the subject.

Although the Commissioners find their appointment no sinecure, they do not hesitate to urge that the Forest Commission should be charged with the enforcement of the game laws within the forest reserves, and that the duties of game and fish protectors and forest guides should be combined. This would be for some reasons a desirable change. There have been employed during the past year fifteen forest guards, whose duties have compelled them frequently to traverse the game districts of the Adirondacks and the Catskills. By charging these officers with the duty of enforcing the game and fish laws the force of game protectors would be increased by fifteen. Again, if the game protectors whose districts include the forest preserve were charged with the additional duty of guarding the forests, the forestry police would be increased. If this suggestion be adopted, it is clear that the entire force of game and forestry wardens in the forest preserve should be put under the control of the Forest Commission.

Some one writes to ask the New York *Times* to "advocate a United States Game Commission in connection with the Fish Commission for collection of game birds from States and Territories where such birds are abundant for distribution in sections near the same latitude where birds are scarce or unknown." The transplanting of game can best be done by the enterprise of clubs or individuals. Then there is some one who is interested enough to endeavor to protect the transplanted species. If the chimerical scheme of the *Times* correspondent were ever realized the transplanted game would have no such protection.

The bill before Congress appropriating $30,000 for a statue of the late Prof. Spencer F. Baird, seems likely to pass, if it has not already done so, and the question is who will be intrusted with the execution of it. The friends of J. Q. A. Ward, the New York sculptor, are quite confident that he will be commissioned to design it, while others are pressing St. Gaudens to submit a model for competition.

Mr. C. J. Jones, the buffalo breeder of Kansas, recently made in this city a sale of live stock which is quite out of the usual run of such transfers. He sold to Mr. Austin Corbin, of this city, six head of buffalo, three bulls and three heifers. These are a part of Mr. Jones's herd of tame buffalo, and were captured by him as calves down in the Indian Nation and Texas. They will be sent East before long and will be put on Mr. Austin Corbin's place on Long Island, where in time a number of native American wild animals will be gathered by that gentleman. The price paid for these buffalo has not been made public, but that the figure was high may be inferred from the fact that on more than one occasion Mr. Jones has refused $500 apiece for buffalo.

In the Massachusetts Senate the Committee on Agriculture have been directed to consider "the expediency of providing by law for the offering of bounties for the destroying of injurious birds and other animals, including English sparrows, crows, hawks, foxes and woodchucks, which are destructive to farm crops." The committee may profitably familiarize themselves with the course of Pennsylvania. The law there giving a bounty for hawks and owls was repealed last year, because competent naturalists proved to the satisfaction of the Legislature that those birds were useful instead of injurious, and that laws to promote their wholesale systematic destruction did not partake of wisdom but of the rankest folly. If hawks and owls are useful allies of agriculture in Pennsylvania they cannot be injurious in Massachusetts.

We observe that Capt. Chas. A. Bramble, of Fredericton, N. B., has recently returned to his home, closely followed by a Dutch blessing from Mr. Wm. C. Harris, who is the editor of a paper printed in this city. It is understood that Capt. Bramble offered to sell the fishing rights of the Renous River to Mr. Harris, and Mr. Harris's intimate friends, Messrs. Fred. D. Storey and E. Hurtzig; and that when Mr. Harris failed to take his share, the entire interest was assumed by the others; hence these tears. It would be a mistake for Capt. Bramble or any of his numerous friends to take Harris seriously; he is only playing the part of a man who says naughty things when a fish gets away; and however much such objurgations may assuage the fisherman's chagrin, they do not affect the fish one iota.

When Mr. Harris accuses Capt. Bramble of sharp practice, he accuses by implication Messrs. Hurtzig and Storey, the Captain's associates in the deal. But Messrs. Harris and Storey have been intimate friends; and when Harris espoused the cause of the Maine trout jiggers, Mr. Storey, writing under the name of "Guy Herne," also gave what defense and comfort he could to the jiggers. It is a melancholy reflection that these friendly relations may now be strained; and indeed the most distressing feature of this Renous River complication is the spectacle of this little coterie of brothers of the angle, once so devoted, now fallen out and at sixes and sevens right on the bank of a salmon stream, as it were.

The inaugural dog show of the Fort Schuyler Kennel Club, held at Utica this week, was excellently managed, and the quality of the dogs shown was above the average even of our large shows. Mr. A. A. Francis, of Rochester, judged the setters and pointers, and Mr. James Watson, of Philadelphia, the remaining classes. A list of the awards will appear next week.

The Massachusetts Fish and Game Protective Association has petitioned the Legislature to change the woodcock season to Sept. 15, to forbid grouse snaring, to protect black ducks and shore birds in winter and spring, and to make a close time for lobsters in the egg-bearing season. The laws of Massachusetts are sadly in need of a change.

Dr. E. S. Holmes has resigned the presidency of the Michigan Sportsmen's Association, after a long term of most useful service; and his retirement will be a genuine loss to the society. His name is identified with the progress of game protection.

The statue of Izaak Walton, which is to be given by the anglers of England to Winchester Cathedral, where he is buried, will be the work of Miss Mary Grant, the English sculptor, who has recently visited this country.

The Megantic Fish and Game Club is practically enforcing the game law on its territory in Maine and Canada. If properly managed the preserve will supply good fishing and hunting for generations to come.

The value of a dog bite is fluctuating. A New York firm, whose dog bit a small boy, passing on the sidewalk, were sued for $2,000 damages. The jury last week gave a verdict for $250.

THE ROCK CLIMBERS.

VIII.—AT RED EAGLE LAKE.

THE Rhymer and Jack had started with one pack animal for Goat Mountain. There they were sure at least that there was game, and though the weather was cold and threatening, and ominous clouds hung low over the mountains of the upper lake, they had gathered together the few necessaries for a two or three days' trip, and had ridden blithely away.

Appekunny and Yo had intended to start the same day for Red Eagle Lake, but they failed to get off in time to make the lake that night, and the start was postponed until the following morning.

The next day, however, when they rose, the wind was blowing furiously, and they hesitated about starting. On the upper lake and on Singleshot it was snowing hard, with a good prospect of a general storm, and still they waited. By noon all the mountains were shrouded in storm clouds, and soon it began to rain furiously at the level of the lake. The men had made all snug for the storm. Saddles, flour sacks, ropes and other loose articles had been piled up under the lee of the brush and covered up with blankets, so that they should be so far as possible protected, guy ropes had been run out from the ridge pole of the tent in front and behind, so that their shelter should resist the buffetings of the furious blasts that rushed down the valley, and saddle blankets had been laid about the tent on the windward side, so that there should be no draft under the walls. Two or three good sized quaking aspen logs had been brought in and cut and split, and the wood piled in one corner of the tent where it should keep dry. Then the men went inside, and during the afternoon kept busy with book and pencil, only now and then looking out at the storm. Throughout the rest of the day the rain continued to fall, and the wind howled down the lake, hissing through the trees, and now and then pounding against the tent with a fury that seemed irresistible. The horses and mules, which had been turned loose with their picket ropes dragging, when the storm set in, had taken shelter in a little opening in the brush, where they were measurably protected from the violence of the weather, and stood there quietly with their tails to the storm, too uncomfortable to move or feed.

As the shades of early twilight began to fall, the occupants turned to and cooked their simple meal, and soon after rolled themselves up in their blankets to sleep quietly in spite of the howling gale.

During the night the storm passed off, and the next morning it was bright and pleasant. A high sea was still running on the lake, but the weather was mild, and the sun shone warm. Everything was wet, however, and it was necessary to dry ropes and blankets before a start could be made. When this had been done, two days' bread, bacon, coffee and sugar were laid out, the beds made up into side packs, and by noon Split Tongue, the mule, was packed, the two horses saddled, and the men moved out for Red Eagle Lake, leaving the camp for a while to take care of itself.

Red Eagle Lake lies in a narrow valley between Red Eagle and Kootenay Mountains, and so northeast of the upper lake. But few white men have ever trodden its shores. Beaver Bill has been there trapping, and last summer the Messrs. Baring, with Appekunny and Jack Bean, crossed over the point of Red Eagle Mountain from the lake and caught a glimpse of its waters. The Kootenays of old Back-in-sight's band go there every year, however, to trap, and as the travelers followed the well-defined trail which leads over the rolling hills and among the spruces, up from the Inlet flat, they saw many signs that these people had passed over this road during the past summer. For about six miles the trail crosses the foothills, and then follows Red Eagle Creek, which flows into the Upper Lake a couple of miles above the outlet. From this point on, it goes through the timber, and here were other signs of recent Indian passage; fresh breaks in the bark of the trees where a corner of a pack had bruised it; here and there a thread of red or white worsted clinging to a tree in a narrow place in the trail, showing where a rider's leg had rubbed against the bark, and now and then a tuft of goat hair or wool caught on a branch told that they had killed some meat during their stay.

About three miles before Red Eagle Lake is reached, the trail becomes quite dim and hard to follow, and is somewhat obstructed by down timber, necessitating frequent detours. At length they crossed to the west side of the creek, passed through some open timber into a little park where there was a recent Kootenay camp, through this park and through more timber to another little park; the last below the lake, as they afterward learned. On the upper side of this was a little group of trees, the chief of which was a mighty spruce with widely spreading branches, and under this the horses were halted, saddles and packs taken off, and camp made. The horses and mule were picketed in the little prairie, the beds spread down together, under the spruce; a lot of wood collected, and a fire started. There was still an hour or two of daylight left, and the men went down to the creek, which was but a few yards away, to try to catch some fish. It is a rushing mountain torrent, in some places 60 or 70ft. wide and shallow, and in others much narrower but deep, and is an ideal trout stream, its green hurrying waters looking as if they must give shelter to trout in great numbers. A splendid pool was found; but a number of casts failed to show the presence of any fish. After a little, however, Appekunny, who had baited a hook with a piece of bacon and thrown it into the deepest part of the pool, holding the line in his hand, gave a wild yell and rushed away from the shore followed by a fine 2lb. trout, which did not stop until he was safely flapping among the rounded pebbles on the bar, from which they were fishing. Then a small fish rose to Yo's fly, and was saved, but after that they declined to notice his cast. Appekunny, however, presently caught another on his hand line, and then Yo, putting a bit of bacon on one of his flies, caught a fine fellow that made the supple rod bend, and the line hum through the water in fine style. Then, as it was becoming dusk they took their way to camp, where trout, bread and coffee furnished them a substantial and delicious meal.

Early next morning they were afoot. The beds were rolled up in the pack cover and laid close to the foot of the big spruce, where they would be protected from possible rain or snow, and afterward, while one man got breakfast, the other watered the animals and changed them to fresh grass. A look at the point of Red Eagle Mountain showed a single goat, browsing among the precipices after the slow manner of these animals. It was impractical to climb the mountain at this point, and they thought it best to go first to the lake shore and take a wider view of the mountains from there. It was but a short half mile from their camp to where the stream left the lake, and they were soon sitting on the beach sweeping the mountains with the glass. The lake is a beautiful body of water perhaps a mile long by three-quarters wide. On either side the mountains hem it in. Their steep sides, timber-covered for only a short distance from their bases, rise steeply and soon break into a series of step-like ledges, which render hunting difficult, as the view above and below is very circumscribed. The valley above the lake is very narrow and is walled in by mountains that rise still more sharply than do those above the lake.

Far off on the mountain side, beyond a deep gorge which leads down from one of the basins lying between Red Eagle and the one next south of it, a goat was seen and watched for a little while, in the hope that he would lie down. He kept moving, however, and at length the hunters, after having marked him as carefully as possible, started up the slope to try to reach him. They climbed up the slide rock near the mouth of the lake and worked along the mountain south, passing through the cold, snow-filled basin, beyond which the goat had been seen, and hunting faithfully in all the likeliest spots. Tracks were plenty, and some of them fresh, but they neither found the animal they had been after, nor saw any other, until just about three o'clock, when as they were descending the mountain two goats were discovered far off across the valley, and well up on the mountain side. It was much too late to attempt to reach them that evening. Descending into the stream valley, they crossed it, and after a little came out on the shore of the lake, which they followed toward camp. Here were seen the tracks of a two-year-old moose, and also those of a white man, who could be no other than Beaver Bill.

They were plodding wearily campward in single file, when Yo called out to Appekunny, who was a few steps in advance of him, "Hold on a minute, Appekunny, while I swear," and as his companion turned and looked back at him, he pointed across the lake, where, high upon the mountain and within 200yds. of where they had passed along, two goats could be seen placidly feeding. No language could quite do justice to the subject, so little was said, but from the determined look on their faces as they started on toward camp it might have been inferred that the outlook for these two goats was not a pleasant one.

When they reached camp, there was a little daylight left, and they hurried down to the stream, where they caught three more trout. The night was cold and it was raining a little, and the fish manifested no disposition to take hold. One of those caught this evening was a bull trout, while all the others taken here had been the red-throated species (*Salvelinus purpuratus*).

It was still raining a little the next morning, when shortly after sunrise the two men were on the shores of the lake. They at once espied the two goats in the same spot which they had occupied the night before. After waiting an hour, first one and then the other lay down, and then having taken careful note of all their surroundings, the hunters started up the mountain side. The climbing was very steep and hard, for the rain had made everything wet and slippery, so that falls and slips backward were quite the order of the day. At length, however, they reached the ledge on which the animals were supposed to be lying, but after working along it nearly to the end of the mountain without seeing anything, it was decided that they must be lower down. The men therefore went back and clambered down two ledges to one whose summit when they reached it looked much more like that on which the goats had been seen. They went along carefully and slowly, feeling now quite sure that they were on the right track. Presently they passed around a point of rocks, and as Yo inch by inch raised his head to look over a little ridge before him, he saw a small goat lying down on a point of rocks about 75yds. distant. It was broadside to, and had one foreleg doubled up under it, the other being stretched out before it. Its eyes were closed and it seemed to be asleep.

From its position, with regard to the surrounding rocks, it appeared that this was the higher of the two animals which had been seen to lie down. The other was not visible. Without a moment's delay, Yo fired, and the goat sprang to its feet and made a step forward, which took it out of sight behind a great rock, and as it disappeared Appekunny called out, "Look, below you, at the other." Turning his eyes to the left, Yo saw standing on the edge of a grassy spot, and close to the timber, its tail toward him, and its head turned back over its shoulder, another and larger goat. Again the report rang out, and as the ball struck it, the animal leaped high in the air, so that it almost seemed as if it were going to turn a back somersault, showing far more agility than one would have expected from a goat. It came down on its feet, however, and with a single bound disappeared in the brush below it. "Good," said Appekunny, "you've got that one, anyhow. He's going down hill."

"I never saw any animal jump in that way," answered Yo, "except on receiving a fatal wound."

Meantime, the other goat had reappeared and was slowly walking up the hill, and a bloody smear upon its breast showed that it had been hit. It had only 15 or 20ft. to walk before gaining the shelter of the timber, and in going that distance it ought to have been killed. But it was not to be. The cartridge in the gun proved to be defective, and after snapping it three times it was thrown out, and another substituted just as the animal reached the timber. The last shot struck it, but too far back to be at once fatal. They hurried after it, and took the track up the hill, but on it went, walking straight up the steepest places and through the thickest brush, bleeding a little, but continuing its slow advance without interruption. At length it entered an almost impenetrable thicket of low twisted spruces, which grew on the steepest part of a very steep ledge, and here the tired men gave up the chase and started down the hill to look for the other goat. It was by no means certain that they would find it. They had already lost one wounded animal and there was no definite proof that the second was any harder hit than the first had been, though from its actions it was believed that its wound was mortal.

On reaching the level on which the goat had stood when shot at, the men separated, Appekunny going down the slope to cross the track, if the animal had gone diagonally down the slope, while Yo turned to the right and went to where it had stood when he fired, so as to take the trail from the beginning. On reaching the spot he found the grass plentifully besprinkled with blood, and almost at the same moment a shout from Appekunny told that he had struck the trail. All along the track the blood was scattered on the ground as if it had been thrown down by teacupfuls, and as they went down the hill side by side there was a continuous thick blood trail which assured them that the game could not have gone far. There was no mistake about where the ball had gone, for the blood was bright and sometimes frothy, and now and then a little piece of the lung was seen on the grass. So they followed it straight down the slope, through timber, over grassy spots and down the ledges for about 100yds, and there at the bottom of a broken precipice 50 or 60ft. in height, they saw the goat, dead. It was a female, two years old, and like the previous capture had never bred.

The animal was in very fine condition, and they saved the whole of it. While preparing it for transportation to camp, they were greatly annoyed by the elk gnats which were biting viciously, and yet it was very cold and snowing. At length they were ready to start, and Appekunny as usual led the way with the hide, head and shoulders, while Yo followed with the hams and saddles and a bag containing the heart, liver and ten or fifteen pounds of tallow. The loads were heavy enough to make them glad to rest at frequent intervals, but the way down was not difficult, for they followed the side of a deep gorge, and on the step-like projections of rock on its rough shoulder, the walking, though steep, was comparatively easy. They made good time along the lake shore, crossed the creek, where it left the lake, on a primitive bridge, formed of two drift logs thrown across it, and plunged into the timber on the other side.

By this time Yo's load had become very heavy, and he made but slow time through the down timber and over the rocky undulations of the valley. He was glad enough to hear, while still some distance from camp, the furious barkings with which the little dogs saluted Appekunny as he emerged from the forest near camp, and a little later to be greeted by the same hostile demonstrations as his own bent figure, bowed down under its load of meat, came in sight. The little guardians of the camp had all the goat flesh they could eat that night, and the hungry hunters also feasted on fat meat. The bread allowance was very short, however, and the next morning's meal would consist of meat and coffee.

After supper the meat was hung up in a tree, and a lot of wood gathered. It was raining a little, and the wind moaned in the trees with an ominous sound. It looked, in fact, as if it were "fixing for a storm," but it was hoped that they might have one more day of fair weather so as to reach their comfortable main camp before the storm set in. YO.

The Sportsman Tourist.

SAM LOVEL'S CAMPS.—VI.

SOON after his visit to Sam and Antoine at their trapping camp, Pelatiah had returned to Lakefield and taken service for the season with Friend Bartlett. The smiles of the pretty hired girl, the memory of which had almost as great a share as the wages offered in luring him from his mountain home, had thus far continued to brighten his life and make his faithful toil light, since it was rewarded morning, noon and night by the sight of the face that had become to him the most beautiful, by the sound of the voice that was the sweetest in all the world.

One Sunday morning in June the peace and quietness of the day seemed to have reached their fullness in and about the Quaker homestead. Pelatiah sat whittling on the platform of the well with his back against the pump, just breathing "Old Hundred" through his puckered lips. Near him stood the fat and sedate old horse which he had just harnessed to the "shay," and by his side lay the fat old dog, who, in semblance of sleep, was waiting to accompany his master and mistress to meeting. He could hear hardly a sound coming from the open doors and windows of the house. The buzz of a bumble bee imprisoned by the raised sash of the kitchen window was loud enough to well nigh drown the almost noiseless footsteps of Friend Rebecca Bartlett as she moved to and fro in preparation for departure, though occasionally above these was heard the cautious long-drawn clearing of Friend John Bartlett's throat, accomplished with care that it should be thoroughly though not too loudly done, partly as practice for the same performance during the stillness of meeting, and partly as a reminder to his wife that he was waiting for her. The hens in the dooryard clucked and crated in subdued tones, and the old red rooster, though his gay feathers were sadly "out of plainness," kept decorously "in the quiet" as if he was a member of his owner's sect. Two or three frivolous swallows twittered and swooped in pursuit of floating feathers, but the great body of the tenants of the eaves were holding a silent meeting on the barn roof. The bobolinks in the meadow, beyond the influence of the First Day atmosphere of the staid homestead, withheld not a note of their merry songs meant perhaps only for world's people and naughty strawberry pickers, but the robins in the apple trees were as voiceless as the unstirred leaves, and the catbird skulked in silence along the row of currant bushes. Pelatiah wondered if the pump would utter its usual discordant shriek, and was almost tempted to raise the handle. Then through forgetfulness or impatience he whistled aloud a few notes of the old Psalm tune, and Rebecca came to the door tying the strings of her "sugar scoop" bonnet.

"Peltiah," she said in a mildly severe tone, "thee needn't whistle for Bose, he's right there by thee! Thee may bring up the horse now."

While Pelatiah pocketed his knife and arose, brushing the shavings from his trousers, she went back to free the bumble bee from its glass prison, brushing it down the lowered sash with a folded handkerchief which exhaled the faint odor of dried rose leaves. "Now, get off with thee, thee foolish thing!" she said, as the bee blundered away into its regained paradise of out door June.

The chaise lumbered up to the horse-block, and the good couple got on board, Bose soberly wagging his tail as he superintended their embarkation.

"Don't thee think thee'd better go to meeting, Peltiah?" Rebecca asked, getting the young man within the narrow range of her deep bonnet. She asked him this question every First Day morning, and was regularly answered, "Wal, no, marm, I guess not this mornin'."

They slowly got under way, and when they were out of earshot of the hired man, Rebecca remarked, "Peltiah seems like a steady young man, but it is a pity he isn't more seriously inclined."

"He's a master hand with a hoe," her husband said, looking down the even rows of his young corn where not a weed was to be seen among the green sprouts that regularly dotted the mellow soil, "and I do' know as I ever see a better milker."

Pelatiah was anticipating a day of perfect happiness, for the girl, whose name was spelled Louisa and pronounced Lowizy, had as good as asked him to go to the woods with her for young wintergreens. That morning when he brought in the milk and they were alone in the cheese room, she had said there were "lots of 'em up in the maountain"—the rocky hill which Lakefield folk honored with that name, for a mountain they must have, and this of all the hills in town came nearest being one—"lots an' sacks of 'em, an' anybody might git a snag of 'em if they was to go up there naow. She wish't she had some, but she dasn't go alone, for she knew she should git lost, an' the' was an ugly toro in Austin's pastur'." Pelatiah felt that he would brave all the bulls in Lakefield to gather a handful of aromatic leaves for her, but he had not the courage to tell her so, and only said he would get them for her if he knew where to find them. Whereupon she giggled and said that she would go and show him where they grew, and that then, if there was time enough and she could "stan' it," they might go to the Pinnacle, where they "could see all creation an' part o' York State." So it seemed settled that when chores were done and the old folks had gone to meeting, they should go "a-browsin'," as Pelatiah inelegantly termed it.

Now he was waiting for her, while he conned gallant phrases and neat compliments, and thought just how he would tell her that he "liked" her. How easy it all was now, as he rehearsed it to his heart, but he knew that opportunity would frighten away all utterance, and he reviled himself for a bashful booby. Yet he felt himself brave enough in the face of real danger, and if the terrible bull that kept all the berry pickers out of Austin's pasture would but attack them he would show his devotion, how he would defend her even at the cost of his life. If the bull was put to flight then she would faint, as in such cases young ladies always did in the stories he read, and he would bear her in his arms to the nearest brook and bathe her face till he brought her out of her swoon. He had never carried a young lady in his arms; Lowizy was a buxom maiden, no light weight certainly, but he thought he could manage such a precious burden, though it would be more easily done if she could be induced to ride pickaback, which, however, would not be in accordance with the established usage of the stories. When she was restored to consciousness, opened her eyes and saw him bending over her, what if he could not help pressing his lips to her pale cheek? He blushed to think of it, and wondered if she would ever forgive him. If he should be badly hurt, who but she would nurse him; and if he died how could she help but grieve for him? The thought of it almost made him shed a tear for himself. But then it was very likely that the bull was a harmless bugbear whose viciousness was an invention of the owner of the field, and would give Pelatiah no chance of heroic deeds. So he drifted back to imaginary commonplace opportunities, till Lowizy came to the door more bewitching than ever, in a pink calico dress and a white apron with two little pockets stuck upon it like swal'ow's nests made of snow, useless but pretty.

Just then a young fellow, seated in a square-boxed wagon of amazing height, drove up at a pace which seemed reckless, considering how far above the ground he was perched; and as recklessly he sprang down to the ground, endangering the straps of his trousers, the long swallow tails of his blue coat streaming upward and the brass buttons flashing. He drew near to Lowizy, who greeted him too warmly and with too great a display of her best manners, Pelatiah thought, as he stood aloof glowering at the new comer, while the two conversed earnestly, though in a tone too low for any word to reach his ear. Then she ran into the house; and Pelatiah's heart grew sick with a foreboding of disappointment. He tried to whistle in token of indifference, but his sullen pout wouldn't be utilized as a pucker, and though defiant and attempting to fortify himself with the inward assurance that he was as good as the finest dandy of the lowlands, he could not help feeling mean and awkward as he contrasted his suit of sheep's gray, new though it was, and as much too long for him as all former clothes had been too short, with the gay and fashionable apparel of his till now unsuspected rival. It was exasperating to see the fellow take out a cigar, and having decided which end to light, begin to puff it; and then with his thumbs in the arm holes of his waistcoat, strut back and forth beside the wagon "Tew high an' mighty tu take a noticte on me, haint ye, for all the top o' your darned shiny hat haint so high as the seat o' yer wagon box!" Pelatiah inwardly addressed him. "Oh! you're a gol buster, haint ye? I'll bate a cooky I c'ld heave ye ov' the top o' yer darned ol' waggin!"

All unconscious of such disparagement and of everything but the fine figure he must be making, the rustic little dandy strutted in his pride, till Lowizy reappeared with some new finery added to her attire and a useless little parasol in her hand. When he had gallantly assisted her to scale the steps of the wagon and the "boost," as Pelatiah to himself termed the feat, had been accomplished, he climbed in. Not till the fine equipage began to turn in perilous haste did Lowizy bestow a word or glance on Pelatiah. Then as she spread her parasol she looked back and said: "Mr. Gove, when the folks return, tell 'em that my maw is quite sick an' I've got to go hum—ahem—go home an' see her."

"I guess her maw haint turri'ble bad off," Pelatiah said bitterly, when a few moments later he heard her laugh ringing down the road as merry and care free as the song of the bobolinks. So sick at heart that his knees were weak, he leaned on the door-yard fence and watched them out of sight. So the stories he had read of the fickleness of women were not fictions, but simple truth, were they? It was hard to learn it by actual experience, hard to lose the simple faith that all things are as they seem, that affection may be no more than an outward show and kind words have no meaning. His honest heart was so sorely hurt that the counter-irritant of anger could not cure it now; there was no present cure for it, but he bethought him that there might be a balm for it in the sanctuary of the woods, to which he had often fled when assailed by lesser ills. He would not go to that contemptible little mountain of Lakefield, to be continually reminded there of the happy hours he had been cheated of, but to the great woods westward, deep and dark enough to hide him from the false, hateful, wicked world.

He cast the unaccustomed summer burden of his thick sheep's gray coat on the nearest plum tree of the door-yard and in the regained freedom of shirt sleeves, felt his heart somewhat lighter as he pushed toward the Slang. On a fallen tree he crossed its narrow upper channel where the border of the green marsh was gay with the purple blossoms of flags, where a lonely heron stalked in fancied seclusion, and where a bittern, perhaps his last spring's acquaintance, startled him almost off his balanced foothold, with her affrighted squawk and sudden uprising to her labored flight.

Breasting the undergrowth of the bank he was soon in the midday twilight of the ancient forest where brooded a solemnity greater than within any temple built by hands, a silence deepened rather than broken by the summer note of a chickadee, the chimes of a woodthrush and the sigh of the unfelt breeze in the tops of the great pines and hemlocks.

Pelatiah took his way along an old lumber road, where sled tracks and footprints of oxen, made in the latest of last spring's sledding, were almost overgrown with forest herbage, and every mossy cradle knoll was starred with the white flowers of dwarf cornel or glowed with the blood red drops of the partridge berry.

It made his recent wound twinge again when he came upon a patch of wintergreen, the "young-come-ups" showing the tender tints of the first unfolded leaves among the rusty and dark green leaves and plump crimson berries of the old plants. What happy moments he had thought to spend gathering the freshest and tenderest for the girl who had so cruelly forsaken him. He could not taste nor touch one now, and was sure he never could again, for even the sight of them made him sick.

On either side of the way stood old friends to weclome him—great hemlocks, maples, whose sweets only the Indians and squirrels had tasted, poplars shivering with the memory of a century's winters, towering elms and basswoods, and all the graceful birches. He saw also a few great pines which had thus far escaped the lumberman, hickories with sharded trunks and noble white oaks, all strangers to him, in the woods of Danvis; but he missed his familiars, the spruce and balsam firs, their songs and the odor of their breath. A shrewish jay came to scold him, a squirrel to scoff at him, a shy wood bird, some constant dweller in the forest's heart, flitted near and watched him with timid curiosity; a mother partridge made a fluttering pother almost at his feet, while her callow brood dispersed like a sudden spatter of fluffy yellow balls and magically disappeared.

With no purpose of reaching any particular point he wandered on, holding his way along the dim woodland aisle till it led where sunlight and blue sky shone from the outer world through the green-gold leaves and netted branches of the marsh's palisade of water maples.

Passing under these he saw the creek, the bold bluff at its mouth, and beyond a broad blue strip of the lake. When his eyes became used to the sunshine he saw figures moving beneath the bluff on the further shore, and heard voices that somehow seemed familiar. There was no mistaking Sam Lovel's voice when presently he loudly called Antoine's name, nor the Canadian's when he answered.

Pelatiah hastily mounted a huge fallen tree that reached well out into the marsh, and shouted lustily, "Hello, Sam! Antwine! whoop! Come over here. It's me, Peltier."

The figures became motionless in attention, then drew together in brief consultation, then one detached itself from the group, a paddle banged against a boat's side, a canoe drew out from the landing, came swiftly up the channel and swished into the wide marsh in front of him.

"I never was so glad tu see anybody in all this everlastin' world," said the heartsick and homesick big boy as his friend Sam stepped on shore and shook hands with him. "Of all folks I never hed no thought o' seein' you, an' me on'y shoolin' raound in the woods jest tu kill time."

"If you'd ha' come yist'd'y you 'ld hed a good chance tu kill Time, for he was a-fishin' with us. That feller, you know," he explained, answering Pelatiah's inquiring look, "'at come a-spearin' in our camp las' spring. His real name is Joe suthin'-er-nuther, but his pardner called 'im Time 'cause he favors Time in the primer an' so we du not tu git him mixed up wi' Joe Hill. He's a clever cretur', but lazier 'n a fattin' hawg an' slower 'n col' m'lasses. Wal, Peltier, haow be you gittin' along? Like your place?" Sam asked, seating himself on a log and making ready for a smoke, deferred since he left the camp landing.

"Wal, yes," Pelatiah said, slowly considering his answer, "Yes, I hev liked it, fust-rate."

"Hev liked it? You haint hed no fallin' aout wi' the folks, I hope."

"No, not no fallin' aout wi' them. Do' know haow 't I could, for they're the cleverest folks in all creation."

"Wal, that pretty gal haint gigged back on ye?"

No answer but a look of woebegone sheepishness.

"Oh, shaw, Peltier, nev' mind a gal's tantrums. You an' her'll be thicker 'n tew hands in a mitten, t' rights."

"No, sir! not never no more!" Pelatiah replied with spirit. "I won't stan' bein' fooled by nob'ddy, if they be harnsome."

"My!" said Sam, "she was harnsome as a pictur!" and then, doubtful whether he was quite loyal to Huldah in such admiration of another, qualified it by adding, "but the's them 'ats jist as harnsome."

"If she's harnsome as a pictur, she's decaitful as a snake, an' I won't stan' bein' fooled!"

"O, yes, you will, Peltier. They'll fool a feller agin an' agin till he gits so's 'at he likes bein' fooled. She's jest begun on you an' you haint got useto 't, but you will, see 'f you don't. But come, le's go over an' see the rest on 'em. They ben a talkin' an' surmisin' baout you all the mornin'. Come, I'll git you 'raound by kyow time." And Sam, leading the way to the canoe, shoved it afloat and stepped in.

Pelatiah took his place and was surprised at the little trepidation he felt on finding himself fairly embarked on the broad channel.

"Why, Peltier, you keep the tarve o' the canew lots better'n you did last spring," Sam said approvingly. "Guess you ben a practizin', haint ye?"

"Haint ben in a boat sence," Pelatiah said. "Guess it's 'cause I don't care 'f I be draounded."

"O shaw! Peltier. 'F you was tu git spilt aout you'd claw for shore an' holler like a loon. Folks 'at's got your ail is allus a wantin' tu die, but they enj'y dyin' so much 'at they haint in no hurry tu hev the job finished up. You'll wanter live forever when you git t' eatin' the fish Antwine's a cookin'. Pike an' pick'ril 'at 'ould make a man's maouth water tu see, though the's more fun for me in the ketchin' an' in the eatin'. But I du eat 'em to make a good excuse fur ketchin' more."

Pelatiah was warmly welcomed by his friends, and almost forgot his misery while he listened to the news they told of folks and affairs at Danvis. The fish were as good as freshly canght and nicely cooked fish could be. When they had eaten he was taken along the bluff to see something of the wonders and beauty of the lake, which impressed him even more than they had Solon and Joseph.

Antoine, with the air of its chief proprietor, expatiated on the immensity of its waters and its commerce, but more on the numbers, variety and excellence of its fish.

"More as t'ree 'honded tousan of it, prob'ly, an all de kan dat ever was hear of it, 'cep' whale an' dry codfeesh Ah guess. Ah'll lak dat lake, me, cause he'll gat so much feesh, an' 'cause one en' of it stoek raght in Canady! Yes, sah! wen nort' win' blow he'll breeng wave from Canady, where Ah'll was baun, w'en Ah'll was leetly boy, where Ah'll married my Ursule an' where Ah'll faght w'en Ah'll growed up for be hugly!"

They urged Pelatiah to get a day off during their stay and spend it with them, which he promised to do, if possible, even though it cost him the glories of the Fourth of July at Vergennes.

In good season to get him home by chore time, Sam embarked with him in the log canoe and paddled up stream and into the East Slang. Such a change had summer wrought here that he hardly recognized the scene of last spring's exploits. Where then the wide water stretched from shore to shore, was now a green, rushy level, divided only by a narrow channel that crept with many turns on its sluggish way to the creek as if any other

course or none at all might as well be taken. The scraggy clumps of button bushes were now green islands in the marsh and populous with gay and noisy communities of redwings. The western shore bristling with naked branches when he last had seen it, now was softly rounded with all the luxuriant leafage June could give it, and the old camp was just discernible embowered in leaves and shadows. A narrow boat-path leading to it and a clumsy log canoe drawn ashore there showed that the landing was yet in use.

Pelatiah was set on shore further up stream on the east bank at an open place to which he guided Sam, informing him that it was known as the "John Clark place" and was a famous resort for bullpout fishing in May. Here it was agreed that Sam should meet him next morning, if the hoped-for day's leave of absence were obtained, and then he went his way and was soon heard "whaying" the cows home.

On his return voyage, Sam ran in at the landing, from which he noticed that a well-trodden path led away into the woods. Though the place showed disuse and wore the changes wrought by the season, the greenness and bloom of early summer where so lately had been the brown and naked gray of early spring, there was much to remind him of the pleasant weeks he had spent there. There were whitened piles of muskrat bones, picked clean by many a big and little scavenger of the woods, cast-away stretchers and tally sticks, scales and mummied heads of fish, and Antoine's old fish poles. There were sticks of left-over firewood close by the ashes and brands of the last camp-fire. The shanty kept its form, though the slabs were losing the fresh hue of newly rifted wood. The bedding of straw had grown musty and was pierced with pale sprouts of such unthreshed kernels of grain as its latest tenantry of wood mice had spared.

While Sam sat smoking a meditative pipe, his old acquaintance, the squirrel, became aware of his presence and gave him a characteristic welcome, snickering and jeering and making such an ado that his wife and children came to learn the cause of it.

"Haint ye 'shamed to be sassin' your betters afore your young uns?" Sam addressed the bright-eyed native, "but I d'know 's I be your better, an' I'm glad to see ye fur all your sass."

Approaching footsteps drew his attention, and presently an old man came shuffling along the path bearing on his shoulder a long unwieldy contrivance of basket work. He was unmistakably Canadian, an older but less sophisticated Antoine, who still wore the baggy homespun woollen trousers, red belt and russet leather moccasins of his native land. When Sam accosted him, his startled halt was so sudden that he nearly dropped the long basket and uttered a prolonged and very emphatic "Saacré!" but, catching sight of him, seemed to consider the accident a good joke.

"Ah! Ha, ha, ha! you mek scare M'sieur! Bon jour, bon jour, M'sieur. You poot good, aujourd'hui, M'sieur! Parlez-vous Français, M'sieur? Non? Ha, ha, ha! me no parlez Anglais ver' good. Me come Canada las' printemps. Coupai le bois pour M'sieur Bartlette. Choppai de hwood. Onsten? Ha, ha, ha! Gat petit maison là, leet' haouse," pointing backward along the path and then beating his breast rapidly, "Jean Bisette, me. Me, ma femme, all 'lone 'lone. Got garçon, boy, come here long tam, me can' fan, me sorry, oh! sorry, sorry. You no see it, prob'ly, M'sieur?"

"Whaty—you—cally—you gassaw's name?" Sam asked in a tone so loud that he was confident his French must be understood.

"Hein? Oh! Oui, oui, oui! Son nom est Antoine, Antoine Bisette. You no see it, M'sieur?" he asked anxiously.

"I'll bate a cooky 'at aour Antwine's his boy," Sam said to himself, "but 'f I tol' him so an' it turned aout he wan't it 'ld be awful disappintin' tu the ol' cretur'!" Then shaking his head, added aloud, "No, do' know 's I ever did. 'F I du I'll let ye know. What on airth be you agoin' tu git in sech a dum'd basket as that?"

Evidently his question was not comprehended, and he hastened to make it plainer with louder voice and simpler phrase, "Whaty for dat baskeet?" which at last the old man understood and explained that his long basket was a fish trap.

Then he pushed off in his canoe and busied himself with setting it in a gap at the point made by two thickly set rows of stakes running obliquely across stream, and Sam went his way homeward.

Night was falling. The channel was strangely widened in the uncertain light, its marshy borders far away, vague and mysterious among the brooding shadows of the wooded shores, and the reflection of the first eastern star danced along his wake before he reached the landing.

ROWLAND E. ROBINSON.

FERRISBURGH, Vermont.

KILLING RARE BIRDS.—Here it is again! Another man killing rare birds because he has not seen them before, or doesn't happen to have them in his collection. I refer to the account of the evening grosbeak in FOREST AND STREAM. Of what use is this? Wilson and Audubon and Coues can tell all about American birds. There is nothing added to science by these men who go about with shotguns reducing the number of rare and beautiful birds as fast as they are able. There never should have been clauses in the game laws exempting so-called naturalists. It is a premium on slaughter for selfish purposes. It seems to me that the would-be naturalist who takes more pleasure in shooting and mounting a rare specimen than he would in viewing it in all its grace and freedom, as the Creator intended it, lacks something commendable, particularly in these days when the feathered world is being so rapidly and cruelly decimated. Audubon Societies are found all over the land, and their good offices nullified by licensed slaughterers. This license is abominable and should be repealed. Here is an opening for the "Audubons." If there is any possible good in this naturalistic craze, it is by no means commensurate with the evil it entails. Repeal the law.—O. O. S.

WINTER RESIDENTS AT ALBANY, N. Y.—Feb. 13.—Since the coming of cold weather till the present date the following birds, which may be considered winter residents, have been observed: Crows, ruffed grouse, white-bellied nuthatches, chickadees, various sparrows, black snow-birds, hairy and downy woodpeckers, bluejays, and a chicken hawk; also several individuals and flocks which, owing to their altitude, could not be identified.—NATURE.

Natural History.

CANADIAN BIRDS.*

IN presenting to the world his catalogue of Canadian birds, Mr. Chamberlain has performed a service which entitles him to the gratitude of all ornithologists. No one of our Canadian ornithologists is more competent than Mr. Chamberlain to undertake the labor of compiling such a list. His familiarity with the literature of Canadian birds, and his wide acquaintance with American ornithologists generally, especially qualify him for the task.

This catalogue is referred to in his preface as preliminary to a fuller and more extended work on the birds of the Dominion, and while it is not so stated, we infer from the author's remarks that the purpose of the present list is to stimulate research and to encourage investigation, rather than to greatly add to our present knowledge of the birds treated. The work is a very creditable one, and will be found a great convenience to students of North American birds. It covers about 550 species and gives, so far as possible, their geographical distribution; but in the notes on this subject the lack of extended observation within the Dominion of Canada is everywhere apparent. For its style and typographical beauty the book deserves high praise. We note one or two trifling printer's errors, which will probably annoy the author far more than they will any one else. Such are the beginning the generic name of *Gallinago gallinago*, on p. 37, with a lower-case italic letter. We do not know whether the Wm. Cowper mentioned on p. 1 is the Wm. Couper so frequently spoken of here and there throughout the work. Tannager is—to Americans at least—an unusual form of spelling of the word.

The present catalogue is, as we have said, a useful contribution to American bird literature, but we imagine that Mr. Chamberlain's work of compiling it cannot have been very satisfactory. No mechanic can make a machine without tools to work with, nor can any ornithologist, no matter how able, well informed, painstaking and industrious he may be, give the distribution of certain species of birds in vast regions which have never been traversed by an observer.

In truth, this list is more important for what is left out of it than for anything which it contains. It emphasizes more sharply than could be done in any other way, the very slight attention that has been paid to ornithology by a government which has shown so high an appreciation of the importance of other natural sciences, such as botany and geology. No one, we are convinced, appreciates as thoroughly as does the compiler of the present work the unfortunate neglect of ornithology by the Government Survey of Canada, and in his preface to the list he calls attention to the fact that in Canada the science of ornithology has not made the advance that it has in other countries, and quotes letters of eminent Americans which bear him out in this conclusion. Mr. Chamberlain's catalogue, however, tells its own story, and his notes, although he has availed himself of all the material—whether public or private—to which he had access, are often very meagre so far as they relate to the geographical distribution of the species referred to.

Mr. Chamberlain has done the best he could with the material obtainable, and until more interest shall be felt in this study by the Canadian Government, and more energy shown by Canadian ornithologists, the publication of the completed and more elaborate list, of which this is but the forerunner, must be postponed. In the Maritime Provinces and in Ontario much good ornithological work has been done. Manitoba has been represented by a trained observer, Mr. Thompson, while Mr. Fannin's observations in British Columbia are very valuable; but any one who has traveled in Canada, especially in the western portions of the Dominion, will agree with Mr. Chamberlain when he says that "the greater portion of the country—immense stretches of forest and prairie and seacoast—have received little attention from Ornithologists, while even the more settled districts have not yet been fully investigated, leaving a large amount of field work still to be done before anything like a complete account of the Birds of Canada can be produced."

It may be earnestly hoped that the ornithologists of Canada will agitate this subject until their government shall come to see the importance of making provision on their Survey for a study of Canadian birds. The foremost ornithologists of this country will certainly do all in their power to assist in bringing about any change which will lead to a more complete knowledge of North American birds.

The present list is well done, and if it shall stimulate the ornithologists of Canada to greater activity, and shall arouse the authorities to a sense of the importance of making some provision for further investigation in this department of science, its author will have accomplished a most useful—yes—a great work.

WINTER KINGFISHERS.—Constantine, Mich., Feb. 10.—Having read of Mr. Lawrence's kingfisher, of New York, in FOREST AND STREAM of Jan. 26, I think Michigan can go 15 degrees ahead. We have two (*Ceryle alcyon*) wintering here with us on the St. Jo River. I noticed one of them flitting up stream yesterday morning, the mercury standing at 15 degrees below zero, and saw one of them sitting on a tree on the bank, piping his shrill notes for his companion, with the mercury at 10 below zero, and waiting for his morning meal of minnows of which there are plenty, as our river seldom freezes. I would like to know if the kingfisher winters any further north.—A. B. GEORGE.

THE DEER'S LIVER.—Sherbrooke, Quebec.—In your issue of Jan. 26 a correspondent asks if the liver of deer is good for food, and stating that Adirondack guides do not eat it. If your correspondent will examine the next deer he kills he will fail to find any gall bladder; but he will notice that the liver is impregnated with a bitter substance, which I presume takes the place of the gall in the internal arrangements. I do not think the liver, properly cooked, is injurious; I have eaten it, but there are choicer morsels. A joke is sometimes perpetrated upon "tenderfeet," setting them to look for the gall and telling them it is good for rheumatism.—E. C. H.

SHOT.

CURSE the fool's infernal shooting!
Wonder what he tried to hit?
Perhaps he thought you were a rabbit;
He'd make money as a wit.

Yes, old fellow, you are dying.
That 7 shot at such a range,
When you got it in the forehead,
Did the business isn't strange.

Come, my beauty, cease your whining.
Whoa there, steady, mind the trail;
Death's the bird you've flushed, that's certain,
What, my pet, you wag your tail?

Pity that he couldn't spare you,
When for ten long years I've shot
O'er your head—you've seldom failed me,
Now you share our victims' lot.

Dead, yes, and your tongue will never
Lick my hand—nor bark will sound.
Do we part for aye, or shall we
Meet in Happy Hunting Ground? M. NICOLL, JR.

AFTER MISSISSIPPI DUCKS.—I.

VICKSBURG, Miss., Jan. 31.—*Editor Forest and Stream:* What are the conditions for a successful duck hunt? Well, they are several. In the first place you want your business affairs in good shape. If you get out among the birds and little matters concerning business keep occurring to your mind, you will not find the fullest and freest enjoyment. You want your rent paid and the bill boys all pacified, and complete arrangements made for the smooth transaction of your affairs during your absence. And then again if you are a married man with a family you want the approval of your movements by the domestic circle. Especially does this apply to your better half. You ought to manage in some way to get your wife to urge you to go. In this respect my companion in duck hunting stands in an enviable position. He leads an indoor life mainly, and has one of the finest looks of sickliness on him one could wish for. His wife at times gets anxious and nervous about him. She thinks exercise is what he needs, and that it should be taken in the open air. She pats him on the shoulder and says: "My husband, you are not looking well, you must get out of that store, you need a change. You want exercise. Your mind needs rest. You are breathing too much dust, and worrying too much over those accounts. You must go off on a hunt; those trips help you more than anything; do go." That is the kind of talk to put an edge on a genuine sportsman and settle the domestic part of the question.

Next comes in the weather. Some people persist in going duck hunting in pleasant weather, but they don't get any genuine sport to speak of. They hunt on warm, sunshiny days in the middle of the day. My friend Geo. H. is an ardent sportsman and fond of the field. His strong point is on quail, and if you will put him behind a good dog he will tumble them over in fine style. Time and again he has thought he would have a good duck shoot. But when the weather turns cold, the wind blows and it rains, and he is asked to go, he is prolific in excuses. No one to stand in his store, no shells loaded, a certain piece of paper to meet; why didn't I let him know sooner? Just as if I were a prophet and could foretell the weather days in advance. The truth of the matter is he does not like cold, rain and wind to duck-hunt in. He wants bright and balmy days. Well, let him continue after quail, for ducks do not circulate extensively in his kind of weather. Another gentleman hunts ducks in the middle of the day. That will do sometimes, and sometimes it won't. Ducks are in the habit of going to their feeding grounds early in the morning and returning to their roost quite late at night. Ordinarily more ducks will be bagged during the first and last hours of the day than during all the intervening time. Long before they can be seen in the morning is the whistle of their wings heard as they pass swiftly flock after flock overhead; and it is indeed late at night when the last belated flock has settled to roost. To say they will come in away after dark does not misrepresent them in the least. A successful hunter will be over his decoys at the first streak of day, and will be there again as long as there is a glimmer of light in the west.

Not very long ago a gentleman, who aspires to be a duck hunter, went to considerable trouble and some expense for a hunt. A vehicle was hired and decoys procured. For company he took along a nice young man who is susceptible to the comforts of life. They went some ten or twelve miles to a famous ducking ground. They got there and arranged for lodging and breakfast. But the next morning, I believe it was a "smothered" chicken that detained the gentlemen, they arrived at the ground a little too late for the morning flight, and during the day returned home without game. Now if a man wants to eat smothered chicken for breakfast on a duck hunt he should have a double-extra early cook. Another day this same aspirant was discovered leaving the ducking locality an hour before sunset. When asked what luck, he replied there were no ducks. Near this same locality a fellow-sportsman and myself fastened our last decoy just as the sun went down. Not a duck had been seen up to that time; but we had been there before and had learned a trick those ducks had of being a little behind time. Our skiff was pushed into the willows where we sat and kept a sharp watch over the decoys. We rowed home that evening with nine fat butterballs.

Where the ducks go or what becomes of them on warm sunshiny days, no one seems to know. On dark, cold,

rainy days they will be plentiful and shooting will be good, while during that beautiful weather which tender gentlemen choose to hunt them, they will nearly every mother's son of them be gone. Those that are to be seen are generally away out on some broad expanse of water where the glowing sun has full play; and if a gun goes out in that direction they take wing a long way off, and for all that is known, go to the north pole, for that is the last seen of them until better duck weather is had.

One thing more that is essential to success in this locality is to have the proper stage of water. During the summer and fall the Mississippi River is generally low, as also are its tributaries. The numerous bars and coves become coated with a luxurious coat of grass prolific in seed. When the rising water begins to enter these grassy places the ducks move in and take possession. Indeed, it would seem that sometimes they precede the water by a few hours and appear to wait for an opportunity to paddle in among the tangled grass and have a fine time. At least they are rarely behind time, and by keeping a record of the stage of water at which favored localities become submerged, a sportsman can often so time his visit as to promptly meet the ducks as they come in for their first meal.

But how seldom it is that a sportsman can get all the conditions right at one time for a successful hunt. Business, river, weather, Sundays (when we prefer not to be out) work in together with perplexing perversity. Nine times in ten, if indeed not ninety-nine in one hundred, some one if not more of the conditions will be wanting. But it is not without its lessons, for it teaches the sportsman patience and forbearance, and puts him to no inconsiderable watchfulness to pitch his trip at the most opportune time. Even then he will often fail in his calculations and be on the ground at the wrong time.

Twice this winter Mr. W. and I went out in anticipation of cold stormy weather, but each time the bright sun came out and warmed up the atmosphere to a wretched temperature, and what few ducks we did kill were mostly fly blown, and had to be thrown away.

Not so, however, on the 16th of last January, when a party of three of us determined to have a few days among the mallards, greenwings and butterballs. The wires gave reports of extreme cold weather over the great Northwest, and at that time its chilly breath was even being felt in the extreme Southern States. A north wind with sleet and ice prevailed as we stood around a glowing store of Warner & Searles and talked the matter over. The junior partner being off on a business trip Mr. Warner could not go, so his son Lawrence was delegated to take his place, while Mr. Peatross, a salesman in the house, was an invited guest. The party was not wholly destitute of redeeming traits, as L. was a fair trap shot and had previously shown some symptoms of developing into a good shot at game; while P., though on his first duck hunt, was full of industry and enthusiasm.

A small steam launch, the Greenwing, was at anchor in the lake one and one-half miles above the town and was to be our means of making the trip. Ordinarily she was a good little craft and had previously given us a number of delightful trips, but occasionally she would get into the tantrums and behave in a very unbecoming manner for a nice little boat, belating us at the ducking grounds and causing us to be annoyed and vexed at her capricious ways. On this trip she was not altogether innocent and once or twice put our temper to a severe test. Three constituted a full crew, consisting of pilot, engineer and fireman, though two could run the boat comfortably, by the engineer doing double duty, and in case of emergency one man could hustle around and keep the vessel under way if he was spry and the boat did not kick up much.

Tuesday afternoon the Engineer and Fireman went up to the Greenwing, and in a driving, cold wind, one got on the roof, took off the safety valve and put a funnel on the pipe, while the other passed up bucket after bucketful of water until the boiler was full. In order that air might leave the boiler as the water entered, a passage was made through the cylinder and steam chest by opening the drain cocks. Generally on previous occasions air was admitted through the whistle, but on this occasion the whistle was sealed up tight with sleet and ice. This little affair led to trouble the next morning after we had raised steam and opened the throttle to leave our anchorage. The pipe which supplies steam to the engine connects just above the boiler with the pipe leading up to the safety valve where we put in the water, and in filling up a certain quantity of water wasted down this supply pipe and entered the steam chest, which we expected the drain cocks in the steam chest and cylinder to void. But they did not do it, and the water must have frozen in them as the boiler was being filled. Suffice it to say that the rushing steam as the throttle was opened the next morning developed a bursted steam chest, when consternation overspread the countenances of the crew of three as they viewed the open rent in the casting, which was deemed to end all possibility of making the trip.

It was with no little mortification that the situation was viewed. There we were with all our traps on board, only awaiting the launch to do her part, and she had kicked up her heels and said she would not do it. Our bedding, provisions, guns and ammunition were snugly stowed away, while the two little lapstreak boats, the Boss and the Amateur, containing the oars and seventy decoys, one on either side of the Greenwing, slapped the ripples as they passed under their respective bows. The local paper the evening before had blowed us off on our trip and said in anticipation of our coming the festive mallards in mass convention assembled had made it unanimous to leave the country. And then the boys at home would have the laugh on us at the sudden termination of our trip. One would like to know in an insinuating way if ice was bigger than water; another inquire about the kind of flight there was at McKee Pocket and how many miles an hour the Greenwing would make up Steel's Bayou, while still another would walk about, smack his lips, wink to the gentleman at his elbow, and remark naïvely that those ducks we brought him had a savory smell and taste; couldn't we get him some more? In the mean time the crew of three did some tramping around and cogitating. It was hard to have to haul that "duffle" back to town. The throttle was opened again, but was closed quickly, for the steam hissed through the ragged seam in a great volume. The Engineer went to the stern of the boat, sat down, took off his hat and fanned himself, and it was not a hot day either; in fact, the ice gleamed all along the shores, and a cold wind was fanning down great dark clouds from the northwest. But the blood of the Engineer was at a high pressure and his mind was in a state of turmoil bordering on anarchy.

It was a desperate case. Again the throttle was opened and again as quickly closed. "The jig is up," said the Pilot. "We are done for," said the Fireman. The Engineer groaned. After a while he goes to the steam chest and views it dubiously. Could it be fixed temporarily? Would it be safe to try? Could it be bolted, clamped, or braced in any way?

"Boys, what is the use of giving up this hunt. We are already off, as it were. We have provisions to eat and a bed to sleep on and coal to make a fire; let's stay aboard and see if this thing can't be fixed to go to-morrow, if not to-day." Thus spoke the Engineer, whose duty it was to look after the machinery; and so it was resolved.

The decoys in the Amateur were speedily placed in the Boss, when the Fireman and Engineer got into the Amateur and with a couple of blades pointed the prow down the lake for Vicksburg, leaving the Pilot on the launch in charge.

"Is there any danger on here?" demands the Pilot as the other two paddle away.

"Not a bit," retorts the Engineer. "Keep a slow fire, and if steam gets too high put up the damper. As long as the boiler is full of water you're all right."

"Look here, boys, I don't know a thing about this machinery," comes again from the Pilot.

"It can't hurt you, keep quiet," goes back from the Amateur.

And so the Fireman and Engineer went down to town in the trim little Amateur. John B. Smith, the machinist, was consulted at his shop, and the Amateur was soon splitting the water up the lake with an ample supply of bolts and clamps. Boarding the launch, 50lbs. of steam remained, and the fire was freshened to increase the pressure. A clamp was put over the steam chest and tightly screwed up. The seam was noticed to close in a measure. Then the throttle was opened and the leak was not nearly so great. "Good," says the Fireman. "Better," says the Pilot. "Best," says the Engineer. "Boys, we will get 100lbs. pressure and try that, if she will stand that we will drop the buoy and leave here."

When 100lbs. pressure was raised the Pilot and Fireman were noticed to go around behind the boiler as the Engineer went to make the final test. The steam that hissed through the seam was a shade bluer and hissed louder, but the repairs were deemed sufficiently strong to make the fracture safe, so with light hearts again the buoy was made fast to the anchor line and thrown overboard, the Pilot blew a shrill blast of the whistle, the engine was put in motion and the Greenwing was at last under way.

Three miles brought us to West Pass, which connects Centennial Lake, lying in front of Vicksburg, with the Mississippi River, and half a mile further to the coal fleet, where we landed alongside a coal barge to take on coal for the trip. The coaling whistle was blown, but it was quite a time before any one came. In the mean while one of the large tugs usually in attendance on the coal fleet came up and rounded to with a large barge in tow. A little craft like the Greenwing is never in the way of one of these powerful vessels with its ugly, lumbering old barge in tow. Oh, no. It is get out of the way, Mrs. Greenwing, with your twin boats, or you will get smashed, and that, too, in short order. Business is business, and we can't bother with a small chap like you. The launch backs out and awaits events. The big barge is shoved up to the coal barge, a huge line is tossed over and made fast, and then the tug begins to get in her work. She backs, then goes ahead strong, then drifts, then she goes ahead again, and backs and drifts. In the meantime the whole fleet is set in motion, each individual barge in the fleet gyrates about over the water much after the manner of a full set in a square dance at the call "Promenade all." The Greenwing just simply backs out a little further until the jubilee is over. It is no new experience with the little craft. It is the usual performance served up to her when she rounds to for coal, and it is one of the greatest annoyances she is subjected to when she makes a trip. In preparing a schedule for her, it is safe to allow about two hours to take on about ten boxes of coal. This time we took on eight boxes, and when at last we were straightened up the river it was already growing late in the day; and on getting out the timepiece, it was realized that we could not reach our first shooting point that day, consequently the night and the next morning's shoot were lost to us. It was a sore disappointment, for the water was just right for McKee Pocket, and in twenty-four hours the water would be too deep, as the river was rising nearly two feet a day.

Six miles above Vicksburg we left the Mississippi River and entered Old River, and two miles above this, it being sundown, and having no signal lights aboard, we steamed over toward the east bank until the sounding rod showed about 7ft. of water, when the Chester anchor was thrown overboard and our first stop was made. The curtains were let down and fastened, when the interior of the Greenwing assumed quite a snug appearance, with a temperature from the heat of the boiler as comfortable as a parlor.

It was with no little zest that the crew set about preparing for "a good square meal." You see an early breakfast had been had and the busy day that had been before them kept all from a thought of eating. Now that things had been gotten in good shape for the trip and night had come on, the appetites returned with renewed keenness. The coffeepot was rinsed and the coal oil stove lighted. "How much coffee is wanted," is asked. The Pilot is prompt and says, "Two cups for me." "Two for me," chimes in the Fireman, and "One for me," comes from the Engineer. "Look here, boys," says the last speaker, "if we drink too much coffee not much sleeping will be be done here to-night." "I must have my two cups," says the Pilot, "always drink that at home." "Same for me," persists the Fireman. "All right, boys, five cups of coffee for the crew and one for the pot."

"One, two, three, four, five, six," counted out the Pilot as he reached under the raised curtain and dipped from the abundance in the old river. The pot goes on the stove and the wicks are turned up. The provision box is uncovered, and plates, cups, knives, forks and spoons are taken out and spread over the small area in the stern of the launch. Good bread, cold pork roast, fresh milk, sugar, warm boiled potatoes with fresh butter, salt and pepper, sausages, mango pickles, peach sweet pickles, delicious canned peaches (not factory stuff) plum preserves, cake, cold baked chicken, oyster loaf (and broiled duck if desired after the first day) were the chief articles of diet that this crew fed on during the trip. Was the coffee good? Of course it was. Did you ever hear of camp cooking that was not good? or boat cooking either for that matter. The coffee was so good that the Fireman wanted to get up and make a speech over it, but was prevented by the Engineer, who sat on his coat tail. The Engineer manifested his appreciation of it by drinking his cup and calling for another before the others were through with their first cup. This came near creating discord, for when the Pilot and Fireman called on the pot for their second cup it was not there; the Engineer was in ahead with two cups when he ordered but one.

"Hark! What's that? Listen!" *Quack, quack, quack, quack!* "Goodness, boys, if that old mallard isn't down here inspeting our outfit." The Engineer pops his head through an opening in the curtain and bespeaks the aquatic visitor in a lusty tone. "Meet us on Goose Lake to-morrow afternoon and we'll converse with you."

After supper the dishes were washed, wiped, and with the provisions stowed away. The Pilot then drew forth his briar root and loaded and soon after fired. Nothing was equal to a smoke with him, and as it was not offensive to the others, he filled up the boat. But wouldn't he have been a prime fellow to have had along in fly or mosquito time. No bars would have been needed, the atmosphere surrounding him would have been speedily vacated by all such obnoxious pests.

After a bit came bedtime. Now, the Greenwing has a bed, and don't you forget it. Up to this time a good sized black roll, 5ft. long by 2ft. thick, had been occupying space across the stern of the launch. Light boards were laid across from seats, fitting snugly on cleats placed for the purpose, then the bundle was unrolled and the 7x9 oilcloth spread on the boards. Next came a cotton mattress about 4in. thick, and then followed a single blanket for bottom sheet, and then two or three pairs of double blankets for covering, with a couple of pillows. The Pilot being guest was elected to sleep in the middle, where he could be kept good and warm. He innocently coiled down while the Fireman and Engineer grinned across his prostrate form, and he was kept warm. Every half hour he would call out to turn over. "Mr. Fireman, I am mashed; Mr. Engineer, I am squeezed until my tongue lolls out." But the Fireman had gone to sleep, and the Engineer only nudged up a little closer. You see it was a tussel between the Fireman and Engineer for cover, and the Fireman kept a good clinch on his side and the Engineer held on tight on his side. And ever and anon the Pilot would call out to turn over, and the triumvirate turned.

After a while the wind arose. First it could be heard gently through the treetops. Directly it grew stronger, until the water began to splash. The current of the old river was one way and the course of the wind was at right angles to it. That set things to contraries and a rumpus was speedily kicked up. The Engineer grew restless, and the Pilot grew restless, and the Fireman slept. The Engineer got up and retired to the twin boats, and lay down again. The wind rose a little higher and he got up again and went forward to examine the anchorage. It was good, but a little more line was let out. He lay down again, and presently again got up to look after something else. All the time the Pilot was watching him with one eye. Neither could sleep. The water slapped and slapped under the stern of the boat, and the Boss would go over and bump the Amateur, and the Amateur would come around and bump the Boss. It was music of a certain kind, but it was not of that soothing kind that puts the Pilot and Engineer to sleep. They blinked at each other and the Pilot called out again to turn over. Coffee had something to do in this wakeful affair and the Engineer was punished for that extra cup of his. About one o'clock the Pilot went off and half an hour later the Engineer followed suit in spite of the splashing and slapping of the water and the bumping of the twins. And all was well with that crew during the rest of that night.

W. L. P.

THE HUNTING RIFLE.

Editor Forest and Stream:

I read with great interest the communication from Gen. Cecil Clay upon the hunting rifle, which appeared in your impression of the 9th. Though I have not a personal acquaintance with this gentleman, I know of him—not only as a sportsman in the true acceptation of the word, but a gallant soldier of the late war, who left an arm on the field at Gettysburg, and who, notwithstanding that loss, is still one of the most successful shots and hunters of big game in the country. In view of what is stated above, his opinions touching a matter of which he is so well informed must be read with unusual interest and consideration.

In speaking upon the hunting rifle, a great deal depends upon what you want to do with it. For what our English friends call "all round" work the weapon he mentions might do, but it cannot be as effective in killing qualities as one taking a heavier charge of powder and ball.

Let me tell you something of the best "hunting rifle" of the breechloader pattern I ever saw. It began its career in the form of a 13lbs., 32in., .45-cal. Sharps of the 1874 model, double triggers and all. You remember what they were. Not very pretty to look at, but at the time—and still, perhaps—the very best single-shot breechloader that American skill had produced.

The owner of this rifle saw it could be improved, and he thought he would give it a chance. He was a Mississippian gentleman and scholar, a brilliant cavalry officer under Forrest, and rich enough to indulge himself in whatever he fancied. So, knowing I was going abroad, he said, "——, take the Crowbar" (his pet name for the rifle) "to the best man you can find on the other side and have it remodeled." And he gave me his views.

I took it to one of the most famous riflemakers in Europe, the man who makes the deer rifles used in the Scottish Highlands to perfection. I suppose there is no reason why I should not say it was Alexander Henry, of Edinburgh, and told his foreman what I wanted.

Three months thereafter you should have seen it! It was a thing of beauty, to delight the soul of the rifle lover. But its father would never have known it.

I told you it was the old octagon-barreled 13lb. Sharp. They had cut 6in. off the barrel, which left it 26in. long. It was made half octagon. All except the upper side, the

top plane was left flat, and this was handsomely matted. But little change could be made in the lock, though a lighter, more graceful hammer was put on, and the double triggers were retained. The cartridge it had taken was .45-70 or 75. It was chambered for a straight, 100gr. shell. The stock was a beautiful piece of workmanship, full pistol handle and checkered. A rib was added under the barrel and thimbles taking a cleaning rod, so it looked not unlike a fine muzzleloader. Buckles on stock and barrel completed the work. The sights were on the Lyman pattern, but the near peep could be turned down out of sight and held in a depression it just fitted, from which a spring loosened it, and there was the usual English notch back and platinum-centered front bead sights.

The bullet made for this rifle I had never seen before. It weighed with the hollow point 270grs.; solid, perhaps 10grs. more. The bore of the rifle had been thoroughly overhauled and was eased just a little, to within 3in. of the muzzle. The bullet had but one belt and cannelure, which was at the bottom of course. It had only the one small ring-like bearing to take the rifling, but was patched with a bit of the strongest 2000-thread linen, held by wrapping a silk thread strongly waxed over the folds into the groove of the cannelure, there tied and then with a sharp knife cutting away all the superfluous material, leaving the patch fitted as closely as possble.

I have never seen a breechloader that shot with such deadly accuracy as this. It recalled and equalled even the best work of Wesson, Ferris, and Billinghurst in the North, or the famous rifles made by Mills, at Harrodsburg, Ky., in ante-bellum days, the best workman south of the line.

The penetration with a solid bullet and 100grs. powder was marvellous. I have seen the bullet driven clean through a pine tree certainly 10 or 12in. thick at 20 paces distance. The shooting with the patched bullet was the best, though a two-grooved naked bullet of 300grs. which was sometimes used was very good indeed.

The fame of this rifle extended far and wide. Its owner was a wonderfully quick shot and could kill deer "on the run" with this at distances that were wonderful, almost incredible. No offer of money would tempt him. He knew he owned the most powerful hunting rifle between Memphis and the sea.

When a famous Mississippi River steamer, one of the Memphis & New Orleans floating parlors, burned two years ago, —— was aboard. He had been to New Orleans for his usual annual "settling up" at the year's close. He had taken the "Crowbar" with him to have some trifling repairs done to the lock. He had scarcely time to save himself, for it was midnight. But he got ashore alive with a tiny waif of a girl in his arms. "The Crowbar has gone to the bottom," said he, with tears almost in his eyes. "I could have saved it had it not been so far to shore. So I held up the baby and let the other go down."

And this was the end of the best hunting rifle I ever have seen. MISSISSIPPI LOWLANDS.

FEBRUARY 12.

SHOOTING ETHICS AND ACCIDENTS.

Editor Forest and Stream:

I have noticed between the FOREST AND STREAM and many other papers supposed to be conducted in the interests of natural history and of sportsmen, the difference that in this journal there is always something to set one thinking. Since the last issue came to hand, I have read among other articles, the communication which treats of duck shooting on Long Island Sound; and having formerly been familiar with those waters and their birds, I was so far interested as to attempt a rough calculation, based upon some knowledge of wildfowl shooting, but more particularly upon the data supplied by the man from Irvington-on-Hudson, who formerly owned the steam launch Dolphin, and commanded a tolerably full battery of shotguns.

It appears that from these ten barrels were fired in six days about three thousand shots at seafowl, and I should say that the results of the six days' work might in figures be expressed about as follows:

Misses and fool shots at rifle range (say)	1,000
Birds killed dead, but not recovered	400
Birds which eventually died from injuries	600
Birds badly maimed or crippled	500
Birds painfully injured only	399
Birds bagged	101
	3,000

This sort of sport may fairly be classed in the same category with that formerly practiced by the men who fired from railway trains with their repeaters into buffalo herds and bands of antelope. "Shooting was what they went for, and hitting of minor importance." (Jaffray).

In another column, I find a Florida correspondent telling of his unwillingness to shoot at two deer, when a little out of range, because he would not risk the infliction of a painful and useless wound on a noble game animal. Had that "cracker" cart been commanded and manned as was the Dolphin, there would, likely, have been just ten barrels, loaded with No. 7, discharged at the retreating venison, and one or two of the "boys" would probably have said: "I saw that last one flinch when my charge struck him. If he'd only been six rods nearer, I would have had him, sure."

I have further been thinking about that other correspondent who poked his gun through a wire fence with the muzzle directed toward his personality, but, singularly enough, missed the game and succeeded only in shattering a rock with the charge. I agree with "J. F. L." of Meriden, that if I had been "luny" enough to do such a thing, I would not care to publish the fact, unless I had fully concluded to accept permanently a commission *de lunatico*, with all the rights and privileges thereunto appertaining. Such persons ought by all means to be subjected to a wholesome degree of restraint, especially in rich alluvial districts, where one cannot always be sure of finding a stone with which to temper or modify the forward motion of the contents of his fusee.

Nevertheless, I would by no means seek to suppress the publication of such instances of lunacy as this, for they perhaps serve a useful purpose in warning the rising generation, and also some of the present, for there is, sad to say, an abiding class of old fools who can never learn to be careful with firearms.

One of these men shot himself the other day. He used a muzzleloader, and while loading, allowed it to be pointed toward his person. His was doubtless a valuable life, and in all save this he may have been a sensible man, but—through the grossest carelessness the life is lost. A breechloader is much safer than a muzzleloader—in this regard there is no comparison. I have never used a hammerless, and unless somebody gives me one out of his abundance, I probably never may. I, therefore, do not know practically if it be safer than a gun with hammers.

I think, however, that except in special cases, the muzzleloader should be tabooed.

(1) If I could not get a good, safe breechloader.

(2) If I had to walk 500 miles through a wild country, with such impedimenta only as I could carry.

(3) If I had to shoot for my life with a rifle, not at game, but at a very small mark; in either of these cases I should prefer the muzzleloader.

The first case goes without saying. In the second, with a light rifle, I should be less burdened with ammunition, and in the third, the muzzleloader is as absolutely accurate as weapon can be made, while the breechloader is sometimes from one or another cause, less trustworthy.

When I learned to shoot, away back in the forties, the man with whom I hunted always, when afield, carried his gun at full cock. This practice I adopted, for a time; but one day as I was walking along with my gun under my arm *à la* Frank Forester, the cloth of my coat sleeve caught the trigger, and the piece was discharged, the shot entering the ground a pace or two in advance, just where my dog might easily have been, but fortunately was not. From this time forth, I carried my gun only at half-cock; thus, of course, losing many fair shots before I could accustom myself to the new order of things; but in time I had overcome the difficulty, and my piece was mechanically cocked as soon as my ear had caught the first flap of the wing of a rising bird.

I have put the above thoughts on paper more especially for the benefit of the boys, of whom I was once an example; and as of the hundreds or thousands who will see, if not read, this article, not one in fifty will own a hammerless gun, it is my hope that all may remember that at best, a gun is a very dangerous implement, and, "safety" or no "safety," so educate themselves as never to be guilty of other than the most absolute care in the management thereof, and thus avoid all accidental discharges.

It may be that in the fulness of time, a gun will be produced which shall be perfectly safe for any one to handle, but I am of opinion that when this shall seem to be the case, it will be found that the "fool-killer" has made his rounds, and eliminated from our population the larger share of the gun-carriers. KELPIE.

FEB. 1, 1888.

[Reference to the original account of the fence gun accident will show that the correspondent did not "poke his gun through the fence with its muzzle pointed toward him," and this criticism of his act is misdirected.]

THE MEGANTIC CLUB DINNER.

THE first annual dinner of the Megantic Fish and Game Club was held at Young's Hotel, Boston, last Friday evening, Feb. 10. It was the first social gathering of the club, and one purpose of the evening was to give the members an opportunity to become acquainted with each other, for the membership of the Megantics is a widely scattered one. The guests of the evening were Messrs. W. H. H. Murray, W. H. Brackett, Mayor Russell, of Cambridge, and C. B. Reynolds, of the FOREST AND STREAM. The members were: Dr. Heber Bishop, Messrs. G. M. Morgan, Alexander Taylor, Jr., of New York; R. Kendall, N. Matthews, Chas. S. Hanks, Geo. B. Hartman, J. W. Ball, C. C. Maxson, E. E. Allen, Thos. Baxter, Dr. M. A. Morris, Arthur W. Robinson, H. W. Sanborn, Henry W. Robinson, E. B. Hale, Samuel Harrington, A. M. Greenwood, Geo. Heywood, Chas. A. Cowee, A. G. Whitman, Chas. J. Willis, Paul F. Folsom, Frederic L. Brown, E. A. Shaw, H. C. Litchfield, B. F. Nichols, Fred A. Cooke, L. F. Small, D. W. Edwards, Geo. F. Ellsworth, Geo. S. Forbush, Chas. W. Hinman, E. F. Sturgis, W. B. Varney, L. Dana Chapman, Chas. R. Edwards, Chas. L. Hovey, Otis H. Luke, W. F. Stevens, Jas. Means, A. T. Sisson, Geo. B. Appleton, Chas. Z. Bassett, John F. Tyler, Wm. M. Richardson, Walter D. Briggs. A. F. Fessenden, Wm. Alden, Galen Woodruff, Chas. A. Kilham, Francis V. B. Kern, David W. Noyes, W. C. Prescott, Stephen Lawrence, C. F. Quincy, W. B. Everett, Erastus Willard.

The dinner was enlivened by songs sung by a quartet of the club members, and after the menu had been discussed there were speeches by Messrs. Brackett, Taylor, Murray, Mayor Russell, and others. Mr. Murray "described the beauty of sleeping under the boughs and by the streams, away from the bustle of civilization. He said he had 'trailed' all parts of the wild country. He knew the Indian as the soul of honor, but would not trust a half-breed. He then gave a very minute description of the territory lying north of Quebec and extending to St. John Lake, and pronounced it the fisherman's paradise. The streams which traverse this vast tract of land, and the lakes which abound in every direction, were teeming with life, and trout weighing from 1 to 8lbs. could be taken as fast as the fly could be cast. He said a tour by the new railroad that had been constructed through this country was the finest on the continent. This road runs along for 200 miles without any sign of civilization, the only building to be seen being the log cabin used by the section men when building the road. Those who wanted a fortnight's fishing could take their boats with them on the train and launch them from the car door on to the lake, where the finest of sport could be enjoyed. He said that, of all sports, trapping was the finest, and that the trapper's life was the most intellectual, all things considered. A trapper who goes out brings in something as a souvenir of his trip. Beyond Lake St. John it seems as if you were in the primeval world. The soil is moist, and there is nothing that the trees can take root in. He had trailed through some sections of this country for days and never heard the peculiar cry of the owl, which was a most significant fact, as these birds were to be found in every other wilderness he had ever visited. Referring again to the Lake St. John, the speaker said that its bank were of sand and very high. He found in its waters that most peculiar of all fish, the Wannanish, so-called by the Indians. It resembles the salmon very much, and was unknown in any other part of the world. Trout could be caught in any part of the lake. There had been many stories circulated as to the wonderful depths of these waters, but at no period were they more than 100 feet deep. 'These grand fishing grounds can be reached in 46 hours,' said the speaker, 'and if you make the trip once you will never go anywhere else.'"

Dr. Bishop, who was the originator and organizer of the club, reviewed its history, and with the aid of a large map explained the location and advantages of the leased territory, where trout abound and deer and moose reward the patient hunter. The club lands consist of some 75,000 acres, with lakes and ponds and streams. The club is in a flourishing condition, and the indications are that its limit to membership will soon be reached. P.

MICHIGAN ASSOCIATION.—The following card has been sent to the Association: "Grand Rapids, Mich., Feb. 2, 1888. To the Board of Directors of the Michigan Sportsmen's Association—Gentlemen: While I frankly and feelingly acknowledge the partiality that has made me your executive officer for more than twelve years, and the compliment of a re-election at the last meeting of the association for the fourteenth time, notwithstanding my declination, I find myself unable to continue the performance of its duties, and hereby tender my resignation of the office of President of the Michigan Sportsmen's Association, to take immediate effect.—E. S. HOLMES."

CAMP SITE WANTED.—*Editor Forest and Stream:* We are a club of about twenty-five members, formed for the purpose of camping out a couple of weeks during the month of August. If any of your readers could inform us of a suitable place somewhere in New York State where a camp could be located and good fishing and shooting be had, they would oblige by addressing with full particulars, PETER JUPPE, Sun Office, New York city.

NEWPORT FISH AND GAME ASSOCIATION.—Newport, R. I., Feb. 8.—At the annual meeting of this Association the following officers were elected for 1888: President, Capt. J. P. Cotton; Vice-President, Dr. S. E. Greene; Treasurer, W. H. Hammett; Secretary, F. H. Wilks. Board of Directors, Thomas Burlington, Col. W. P. Sheffield, Jr., W. A. Armstrong, W. H. Hammett, B. M. Thurston.

THE NEW YORK GAME LAW MILL.

ALBANY, Feb. 14.—A brief glance at the situation as the Legislature found it—relative to the game laws—may be of service in understanding what it is proposed and what it may still be proposed to do this winter. It will be recalled that the game committees of 1887 were very conservative. The same fact appears to be the case this year. It will also be recalled that, after a great deal of large sized talk, no law relating to the hunting of deer was absolutely passed. As we have heretofore seen, this question is not likely to be at all lonesome this year.

The bird laws were not changed, except that amendments were made to the song bird act of 1886 so as to allow birds and eggs to be taken for scientific purposes and also to allow the shooting of sparrows, hen hawks, blackbirds and others that are objectionable. In regard to wildfowl it was provided that all kinds might be shot from boats in certain bays along the northern part of Long Island; but a bill providing that woodcock may be killed in August and prohibiting the shooting of ducks, geese and brant in April was not passed. A similar fate came to the bill allowing the shooting of quail and rabbits on Long Island during the last five weeks of every year; also to the bill making the season on Long Island from Nov. 1 to Jan. 1 for quail, grouse, hare and squirrels; from July 1 to 31 and Nov. 1 to Jan. 1 for woodcock; July 15 to May 1 for shore birds and wildfowl. Neither did the bills succeed allowing the shooting of ducks between Jan. 1 and Sept. 1; forbidding between May 1 and Sept. 1 the killing or sale of wildfowl; prohibiting the killing of quail between Jan. 1 and Nov. 1, and hares between Feb. 1 and Nov. 1.

A bill including set lines among prohibited devices did not pass; neither did the bill forbidding the use of snares in salmon waters. Other bills that were unsuccessful were those: Prohibiting the catching of black bass in the waters of Lake Erie and Niagara River between Jan. 1 and July 1, bullheads in Lake George being excepted; forbidding the catching of salmon except with rod and line, and then only between March 1 and Aug. 15; forbidding the use of pound nets in Lake Erie adjacent to Buffalo. The bill became a law giving further privileges for catching and selling salmon trout or landlocked salmon in the Upper Lakes. The Governor signed a bill providing that no person shall take any fish from the waters of the Hudson River by any net, etc., from sunset on Saturday until sunrise on the following Monday between the 15th day of March and the 15th day of June. The Governor also signed the bill repealing the act which forbade the taking of lobsters under 10in. in length.

There was the appropriation for the erection of a fish hatchery at Cold Spring Harbor for sea fish, and a further appropriation for a hatchery in the Adirondack wilderness for the purpose of stocking the mountain streams with trout and salmon. In regard to the latter it may be stated that the Adirondack region is divided by two great water sheds, from one of which the water flows into the St. Lawrence and Lake Ontario, and from the other into the Hudson River direct or into the Mohawk and its tributaries. This region is the great sanitarium of the Empire State, and future generations will bless those who builded so wisely in the enactment of laws for the preservation of its forests. The State Forestry Commission says: "As years go on and these woods are protected from spoliation the young soft timber trees will grow up and the forest assume its primitive condition. The lakes and streams teem with native brook and lake trout. That many lakes and streams have been depleted of trout, and the cause is well known to anglers in this region. Many of the causes are now removed, and we know that the inhabitants of Hamilton county will gladly aid in re-stocking and preserving its waters from further spoliation." This hatchery can supply all the waters on the south water shed, that is, the waters flowing into the Hudson and Mohawk and their tributaries. The prospects are that in a very few years not only will the Adirondacks and Catskills be well stocked with trout, but, if the increase continues in the future as it has in the past, the Hudson may be well stocked with salmon. Indeed, during the present year, the river has produced millions of shad, which have almost restored its old reputation as the home of this beautiful fish.

But one game bill has been introduced during the past week. It was introduced by Assemblyman Brownell (Feb. 6); and it amends chapter 591 of the laws of 1880 as amended by chapter 317 of the laws of 1883, relative to the appointment of fish and game protectors, so that the judgments recovered may be enforced in the same manner as if the action had been brought by an individual. The following is also added to section 1 of the law: "In case an action shall be brought as hereinbefore provided and the plaintiff therein shall fail to recover against any defendant, such defendant shall be entitled to recover against the people full costs, as is fixed by section 3251 of the code of civil procedure, together with witnesses and other fees and disbursements allowed by such code; and upon entry of judgment against the people therefor and presentation of a duly certified copy of such judgment to the county treasurer of the county where such judgment is originally docketed, the said county treasurer shall pay to such defendant of his allomney the amount of such judgment and take duplicate receipts therefor, and shall immediately transmit one of said duplicate receipts together with such certified copy of such judgment to the state treasurer, who shall upon receipt thereof pay the said amount to such county treasurer out of the general fund." This is a very important bill and it will bear watching to the end. It is said that the bill comes from the Forestry Commission.

It is expected that both game committees will take off their coats and go to work this week. If so, then look out for more results than we have been able to chronicle thus far in the present sessions of the Legislature.

Assemblyman Cromwell, of Richmond, has introduced a bill which amends section 640 of the penal code relative to the using

of dredges, etc., for the planting of oysters. It adds the words "interferes with or disturbs," so as to secure convictions that cannot be secured as the law now stands. Capt. Hunting offered the bill in any shape. But it was referred to the judiciary committee.

APPROXIMATE TRAJECTORY CURVES.

Editor Forest and Stream:

There are many no doubt who would like to determine the trajectories of their rifles, but who are deterred from doing so on account of the want of scientific instruments, definiteness of method, etc. To such I offer the following ready means of obtaining the curve of a rifle with a very considerable degree of accuracy and despatch:

If it is desired to make the test for 200yds. range, select a level piece of ground and carefully measure off the positions of the intermediate sources, which should be made of thin tissue paper pasted on narrow pine frames, about 14×18in. The target for 200yds. point should have a black stripe painted horizontally across its face.

Fasten the screens and target on posts or otherwise at their respective places, say 50yds. apart, so that the top of black line on target and the bottom of screens are in the same approximately level plane. A good field or opera glass will facilitate this operation. Erect a muzzle rest for rifle at such height that the sights will just catch the bottoms of screens and top of line on target. Elevate sights for 200yds. and begin shooting.

Measure on the intermediate screens the heights from bottom to center of bullet holes, and the distance on target above or below top of horizontal. This last representing error in elevation must be combined with screen heights in direct proportion to distance from muzzle, subtractive if above and additive if below line on target.

The average of a number of shots should be taken, but for illustration I will take the record of one shot. The fall of bullet below horizontal line is taken as 4in., and heights at screens as follows:

	50yds.	100yds.	150yds.
Screen heights	5.7in.	7.8in.	4.7in.
Adjustment of errors	1.0in.	2.0in.	3.0in.
Above line of sights	6.7in.	9.8in.	7.7in.

If it is desired to refer to a straight line from center of bullet hole in target to axis of bore, a correction must be added for height of front sight above latter, proportional to screen distances from target.

A more approximate method is suggested by the above using one screen only, and dispensing with the muzzle rest by bringing up the rifle until the sights line with bottom of screen and marks on target. Making proper correction for bullet striking above or below line, the trajectory is obtained. To show the uniform results which may be had if care is taken, I subjoin the following test made off-hand on a windy day. I hope your readers will overlook the indifferent shooting as the results by that very reason more clearly illustrate the point.

No. of Shot.	Screen at 75yds.	Target 150yds.	Corrected screen heights.
1	1.0 inch.	11.4 inch.	1+5.7=6.7 inch.
2	2.6 "	9.0 "	2.6+4.5=7.1 "
3	1.8 "	9.4 "	1.8+4.7=6.5 "
4	2.2 "	9.2 "	2.2+4.6=6.8 "
5	2.0 "	2.2 "	6.0+1.1=7.1 "
Average height at 75yds			6.8 "

It will be noted that all the shots hit below the line, and half this distance added to screen height gives corrected height. Reducing to axis of bore by adding one-half height of sight we obtain 3.8+0.3=7.1in. T. H. G.

ELIZABETH, N. J.

[Readers of the FOREST AND STREAM will remember the very complete trajectory tests made by this journal during the fall of 1885. The screen method was used, but with the most exact scientific appliances to secure satisfactory results. The report of these tests embracing nearly forty rifles we put in pamphlet form and may be secured at this office. Price, 50 cents.]

IN THE LAND OF THE MICMACS.—IV.

BIG PETER came to us in the evening, and in a confidential manner, with much show of wisdom, advised us to be afoot early next morning, as then the salmon would be almost sure to take the fly better than later in the day. "You see, ole salmon, berry knowin' as one ole fox. Sposem two, tree weeks in river, walkum up here, dodgum nets all time, hidum from spear an' big fire in canoe, him get berry cunnin'. Sartin, sposem any salmon in river here, all ole uns, pappoose salmon not berry wise, nets an' spear all catchum way b'low; sposem sun walkum up over hill, ole uns seeum more better; him walkum berry slow to fly, watchum sharp, byembye thinkum seeum 'fore, more better no touchum, him walkum off to bottom. Sposem little dark, no seeum well fly, no seeum line: thinkum all same's one him catchum at night. Well, bitum, findum berry bad," and Peter accompanied the words with a dreadful grimace supposed to represent the surprise of the fish.

In the morning we rose early, determined to test the Micmac's theory. Davey was already up, a bright fire was burning, and a few rods away the Indians were gathered around their fire. Davey was out of temper; what was wrong?

"Good morning," said James, emerging from the tent and making his way to the fire; "you're out of sorts this morning. What's wrong?"

"Ivverything what's not right, sur, not givin' ye a short answer," retorted Cookey; "there's no livin' wid 'em."

"With whom?" asked Walter, overhearing the last remark, as he pushed his way to the fire, a pair of wading boots in one hand and long stockings in the other.

"Wid thim durty scallewags beyant. They'd spile the timper of a saint," giving the fire a vicious kick intended to roll in one of the logs. "The lazy, thievin' blackguards. Ye tould me t' hev the coffee riddy airly in the mornin', so las' noight I gits m' wud un bark un kindlin' un lays it forninst the fire, un m' kittle o' wathur frum the sthream un puts it be the fire, too, to hev it handy loike; but 'ud ye b'lave it, whin I gits up this mornin' un goes t' make m' fire, not a hapurth o' wud ur whuttlin's wus t' be seen, whipped off es clane es a whustle; un m' kittle o' wathur wus spilt, un the breeks I wet las' noight hilpin' big Peter t' poke up those lazy fish o' yours, wus knocked down into the ashes un the divil was to pay entoirely. I cu'dnt blave m' oyes, surs, so I rubbed 'im a spell thinkin' they hedn't waked up properly, but it wus all too thrue. Un thin I lucked at the black spalpeens a-sittin' roun' a wee bit o' a fire no bigger nur a match, un what ud ye think? the haythens wus a-pokin' aich uther in the ribs un a-pointin' at mysilf un a-grinnin' loike monkeys at a fair. Troth I'll put up wid sich goin's on no longer. M' wurd fur it, the nix durty curmudgin what middles wid mysilf ur m' wurk, I'll twust his head off loike I would a chicken's."

"It was a cold night, cook," said Phil, apologetically; "the poor fellows had no tent nor wraps."

"Nur desarved 'em aither," rejoined he; "why, man, they're too lazy t' do anythin', barrin' aitin', un dhrinkin', un slapin', un pushin' a bit o' a boat es light es a creel o' feathers. Un at noight they pretind t' be tired, un loie down loike dogs, widout a hapurth o' wud t' burn ur bushes t' cover 'im; but faith they're smart enough t' go prowlin' roun' whin mysilf is aslape, un sthale m' mornin' fire un upset m' taypot, un shmile un grin at me loike a parcel o' Kilkinny cats, beggin' the cats' pardon. Be jabers, they' betthur moind the grin Saybacktus made the uther night."

Much of Cookey's strictures on the nature and conduct of poor Lo was too true. Faithful, hard-working though he be, when trailing on the chase or poling a canoe day after day up some rapid stream, there is no more indolent creature in existence when lying about camp or when little is to be done. An Indian cannot be his own master and prosper, for self-government means idleness and want. Under such circumstances, he takes no thought of the morrow. When it is forced on his attention it comes from the stomach, not from the head. "Sufficient for the day is the evil thereof" is a maxim that dominates his system from head to foot, and colors his life from the cradle to the grave. The night had been very cold, and Lo must have suffered a great deal before Davy's woodpile was raided. Having experienced a like sudden weather change and its unpleasant results scores of times, still he does not seem to think it will ever occur again or that any artificial heat may be necessary before morning. So he curls himself into an unrecognizable mass by drawing his knees up to his chin, and hooking it over them; and then falls asleep. In a few hours, however, the night grows chilly, and the Indian becomes a little uneasy. He grunts, turns on the other side, presses his knees more tightly against his body, hooks the chin over them more firmly than ever, clasps his shins with his arms, and tries to sleep. It's a failure. Over he goes again, grunting a little louder, and being now dimly conscious that he is awake, and seeing where the fire was when he lay down, he hitches toward it with a sense of relief, but alas! there is no warmth there now.

By this time he is clearly awake, and the thought occurs to him, as it has done a dozen times before under exactly similar conditions, what a nice thing a little extra fuel would be; how in the world it came he didn't think of it before nightfall, that he'll never be caught in such a fix again, and perhaps he'd better unfold himself and start a fire. Then he hears a loud combination of grunting and whining from one of his companions, and is conscious that he, too, is backing up toward the ash heap. Suddenly a new idea occurs to Lo. Could he not hold out a little longer? It's tough work; but then he knows that the fellow fussing at his feet, looking for the fire-place and whining sadly, is fully awake and can't stand it much longer. He may have to make the fire, or rather grope around in the darkness among the bushes to look up some wood. He thinks it's worth trying, anyhow; so he begins to snore lustily, pretending he is in a deep sleep. That will mean a good half hour's shivering for the other fellow. Well, this grim game, "I can stand it if you can," goes on a while longer, until the poor devil wallowing in the cold ashes surrenders, gets up, goes feeling around in the dark, and takes the first thing in the shape of wood he meets with. In this way Cookey's "mornin' fire" had disappeared.

In a few minutes we had dispatched our toast and coffee, and were on the way to the pool. James soon reached his favorite ledge at the head of the basin, Walter was dropping down to the mouth of the North Branch in his canoe, and Phil, whose claim was just in front of the tent, was already skipping the fly over the dark surface. The latter scored the first rise, and hooked his fish. Just then some one muttered at his elbow, "All same's me tellum, dis bes' time;" and glancing round he saw Big Peter radiant with smiles, with his broad mouth open, exposing a circle of ivory extending almost from ear to ear.

As the fish was struck the water at that point boiled, and a white flash was seen in the distance; but in a moment the reel was humming, the fish was darting with almost lightning rapidity across the pool, and the angler's nerves and muscles were tingling with the most enjoyable of all sensations. Presently it leaped into the air, and what a decided contrast its silvery sides showed to the dull morning light and dark surface of the river!

This leaping is always a sonrce of anxiety to the angler, for it is done when the greatest strain is felt on the line, and the fish seems to know that an extra rapid spurt at that moment is most likely to rid it of its strange tormentor. When, therefore, it falls back into the water, the angler is agitated by hope and fear as he reels in his line, and happy indeed is he when he finds the strain on the rod increasing and his oiled silk pointing directly into the pool. Such was Phil's experience when he found his fish "solid" after the first vault. Several runs and leaps were made in succession, but finding itself still in the clutch of its enemy, the fish began to change its tactics, and commenced that most disagreeable of all movements known as "giggering." If an angler fears the result of a sudden leap when there is a heavy strain on the line, he dreads still more the latter operation. He is always in doubt what's best to be done. Some believe it's a sign that the fish is well hooked and advise holding him hard; others regard it as evidence of being lightly hooked and recommend careful play. Whatever the reason, the wily fish often frees himself. Phil had an anxious time of it for ten or twelve minutes, when the fish darted up stream, reeling off 60 or 70yds., but finishing up with a very weak jump, and being easily led down again as line was taken in. Then began the last tactics, always a sign of exhaustion. The fish's movements are very irregular, the angler believes him tired out and eager to have the prize secured, attempts to force him shoreward, but all at once he rolls over and strikes out vigorously for deep water. This sudden plunge under a short line and strained rod frequently liberates the fish, especially if lightly hooked. Just here let me remark that during the whole of my angling career I scarcely ever heard a sportsman desire in camp any further sport than the playing of a fish; he would be satisfied with that, whereas I never saw anything but dissatisfaction shown at the pool when a fish was lost, even though it had been played off its legs and escaped at the eleventh hour. At last Phil's fish was landed, big Peter gaffing it in shallow water. It weighed 10lbs.

For three hours or more the anglers plied their sport and succeeded in killing five nice fish, besides losing several others. We all voted the Micmac's early morning fishing a success.

In less than half an hour we were seated at breakfast—one of the most enjoyable meals I ever ate amid the wilds of America. More than pleased with our luck, we felt happy to know that our long arduous journey was proving successful. The cool morning air, the delightful exercise and exposure of the last few days had toned up the nerves, sharpened and enlarged the appetite, and refreshed the whole system. The sun threw round our forest board a soft mellowed brightness which would not have deepened the tender rosy tint on an infant's cheek; the birds were singing their varied songs from treetop, bush and grassy cover; the hills and mountain peaks were yet sleeping beneath wraps and mantles of mist, out of which the morning sun had chased every trace of sombre night und changed it to a fleecy whiteness; great giant arms of fog were reaching up wooded ravines, rifts and gulches, marking the descent of mountain streams, clear, cold and pure, fresh and sparkling from nature's fountains. And above all rose the roar of the falls, filling the air and our souls with its inspiring music.

And so we sat around our woodland board. Fresh salmon, hot and steaming, fried potatoes, warm rolls, canned corn, bread, butter, tea, etc. There was no hurry now, no anxiety to pry into the unknown resources of the dark pool, no uncertainty with respect to accidents ahead, or about finding suitable camping ground, or being made wretched by a storm. All this was over. Here we were free, our own masters, situated comfortably for several days. And so that meal was discussed as only jubilant sportsmen could discuss it. Davey was in ecstacies over the compliments paid to his skill in cookery, though he began to entertain fears that our meals were becoming too Micmac in time and volume. Indeed he declared the Indians were "larnin' us fast, in faith we were apt scholars."

As we were about finishing breakfast, an animated discussion was observed going on among the red men, and it was easy to see good-natured simple-minded Sebatis was the subject of it. Presently the latter was seen to take up a small bundle and disappear among the bushes. We then called the Indians and gave them directions about splitting, salting and otherwise preparing the salmon for smoking next day; but Sâk shook his head in a solemn way, muttering something about rain.

"Why do you think it will rain?" queried James, of the dark weather prophet, who stood gazing at a few faint clouds in the east.

"Keelooleet singum rain, no smokem salmon morrow; hearum now?"

Perched on one of the topmost branches of a dead spruce sat Tom Peabody, whistling away in a half-hearted manner, for his song was lacking both in energy and length.

"Sartin keelooleet al'ays tellum Injun when one big rain," said Sâk. "Sposum big rain putty soon, song berry short; sposem sing more, rain two t'ree days; sposem singum all song, good time campum, Injun dry all time, same's in wigwam."

"How is he singing now?" asked one of the party.

"Jes' hearum," replied Sâk, looking earnestly at the bird, just then beginning to sing. "See? he no sayum all song, '*Kee-kee-keelooleet*,' that all him sayum; more better him sayum '*keelooleet*' two t'ree times, sartin then no rain."

"But, Sâk, how does that little beggar find out about the weather?" inquired Walter, eager to hear the whole of their superstitious belief concerning this feathered Wiggins of the Micmacs.

"Ah," replied he, shaking his head solemnly, "keelooleet one berry wise bird. Sposem sleep, keepum one eye open. Then wakum up one hour, singum in night. Shuttum other eye, watchum all same. Singum at end one more hour. Doum same all night. Some Injun callum hour-bird—jes same's one watch, for him tellum Injun time of night. Him gettum up berry early morning, flyum berry high on tree, hoppum more high, byemby gettum to top. Lookum roun'; eyeum moon an' stars an' sky, watchum clouds berry sharp, smellum air an' wind, then tellum Injun what like to-day an' to-morrow an' one day more go to be. Keelooleet him all same doum now."

"Never mind keelooleet, Sâk, split and salt the salmon to-day," interposed James.

"Berry good, brudder, me doum all same, but rain soakum to-morrow. Keelooleet no lie to Injun," and Sâk and party went off to do as directed.

We were leisurely reclining in front of the tent, with Davey a few yards away putting his dishes in trim and talking incessantly, when all at once he stopped as if transfixed, gazed in the direction of the Indian camp-fire, and exclaimed, "Glory, gintlemin, what in the wurruld is this?" and a cup fell from his hand and broke to pieces unnoticed. Springing to our feet we beheld an object approaching, the very sight of which provoked roars of laughter. It was poor, unsophisticated Sebatis, decked in his half-burnt garments already alluded to. One leg of the pants was gone from the thigh down, the other from below the knee, showing his dark, copper-colored limbs as naked as when he was born. Around his waist was a great girdle of swarthy nakedness where the shirt had lost its lower half, while one sleeve was gone clear to the elbow. Just then we heard some noise in the direction of the bank, only a rod or two away, on the face of which the rest of the red men were cleaning the fish, hidden from view by a fringe of low, thick bushes; and on turning our attention thither discovered several dark, grinning faces peering through the leafy cover.

As Sebatis came up with head bent, looking very sober indeed, James managed to borrow breath enough from the laugh to inquire, "What does this mean, Sebatis?"

Throwing down a blue bundle which he carried in his hand, and which we now saw contained the pants, shirt and linder we had given him the night of his encounter with Davey, he replied, "Me no wantum, brudder, dese good all same for Sebatis," running his dark, bony hand over the surviving fag ends of the late accident and smoothing down their crisp edges.

"Troth un ye won't ba makin' a baste uv yersilf roun' here wid yer bare shanks, un arms and durty body, a makin' honest Christyuns wake at the stummick wid the

soight uv ye. It's hard enough, it is, ba jabers, to sthand ye all whin ye luk loike min; so m' harty buck, ef yer goin' to cut up any uv yer haythen thricks, begone wid ye t'ye wangwun, ur whatever the divil ye calls, down sthrame. We'll ate un slape betthur widout ye," and Cookey emphasized his somewhat hasty and angry words by pointing down the river in the direction of the Indian's home.

"Come, come, Davey," interposed Walter, "don't blame the poor fellow so; something's wrong; we must find out what it means. Why don't you keep the clothes, Sebatis?"

Again the thin muscular hand was passed slowly over the remnants, the eyes following, when at last he muttered, "Ugh, these live me gettum wigwam, den sposem squaw makum more long."

"But good gracious," said James with much feeling, "you're half naked, you'll perish at night; besides, the flies will eat you up."

"O, bitum-no-seeums no likum me," raising his head with a faint smile.

"Begorra, un wise they air shure, fur uvry mother's son uv 'em ud be pisoned," put in Cookey with a wise shake of the head and cunning wink.

"See here, Sebatis, take this and put them on," urged Walter, pressing the bundle upon him. "We gave them to you, they are of no use to us."

"Aye, ye simple galoot, ef ye hed es much brains undher that black tap uv yers es dirt on yer shanks ye'd do as the gintlemin has tould ye; so take up yer duds un begone, afore we gits sick luckin' at the likes uv ye."

Cookey's comical gestures and bluff manner began now to amuse us quite as much as the semi-barbarous aspect of the Indian; so we not only ceased reproving, but rather encouraged him to go on, believing it would prove the more effective logic.

"Yes, Davey, you're right, he must dress himself. It's not pleasant to see so much nudity of that complexion; so make him put them on," whispered Phil, anxious for some fun.

"Now, luck ahere, sur," roared Cookey, stepping up to the Indian and waving his hand toward us as he proceeded, "These is gintlemin, what's not used t' seein' craythurs goin' roun' wid their legs un arms widout a hapurth uv coverin' on em, stickin' out loike burnt poles greased wid soap, un their bodies luckin' es ef they hed the black measels un yaller jaundwise fur a year in some dhry countherie loike Africa, where they couldn't git a dhrap uv wathur t' clane 'emsilfs wid. No, sur, ye'll run ur drown ef ye doan't put on thim rags at once," almost shouted he, taking the bundle from Walter and forcing it upon the Micmac.

"Me no wantum, me no money buyum," protested Sebatis, stepping backward.

"O, ho," echoed James, "What does this mean, boys? Have the others put up this trick on the simple fellow by persuading him we were going to charge for the suit? It looks like it. Sebatis, who told you we wanted money for them?"

"Injun al'ays payum money for clothes," replied he.

"Moind yersilf, sur," said Cookey in a commanding voice, observing the evasion, "the gintlemin hes axed ye a fair quistyun, so give 'im a civil answer. Dik Sâk ur Sân ur ony uther tell ye Misthur Miller ud sharge ye fur the rags?"

"Louis, Sân an' udders tellum me all same. Me thinkum all same, too; berry good dese," fingering the clothes in Davey's hand. The conversation of the red men alluded to above, and the grinning visages peering from out the cover, told the same story, they had got up a cheap show for us at simple Sebatis's expense.

"Tut, tut, man," put in Walter, "they're making a fool of you. Take the clothes and dress; we want no money; never will ask any, they are yours."

"All same's me buyum?" queried he, with a look of renewed interest, laying his hand upon the bundle and looking up, "all same's me payum money for 'em?"

"Yis, ye crack-brained looney, uv coorse. How long des it take t' git un idee inte yer thick head? Troth ye run more t' hair un durt nur t' common sinse."

"Sposem me buyum at store, payum money, Mose Blink givum the piece paper sayum all right, Injun payum. Givum me paper now all same?" turning and addressing James.

"Of course, my good fellow," returned the latter, taking out his note book and writing a receipt, which he then tore out and handed to the Micmac. The latter looked at it a while, then folding it up, received the bundle from Davey, and marched off with smiles chasing one another all over his face. Cookey watched him in silence until he had disappeared in the bushes, then turning to us he remarked: "Be jabers, the same's no looney, moind ye; he's loike a scorched cat, betthur nor he lucks."

In whatever way this custom of always getting a receipt and feeling safe in its possession originated, it is quite general even in the most trivial matters, and recalls an old story which many of my readers have no doubt heard, but will pardon its rehearsal for the pleasure of others.

An old Indian by the name of Sacobé had stolen ten dollars from a trader; but succeeding well in the hunt and feeling a little remorse at the recollection of the deed, he afterward came, and, acknowledging the crime, paid the amount. The trader was delighted, the more so since he had not been able to fasten suspicion on any one. Presently old Sacobé surprised him by asking for a receipt.

"What do you want a receipt for? You owed me ten dollars and paid it, did you not?"

"Yes, brudder," replied the Indian.

"Well, you don't owe me. I don't owe you, what's the use of a receipt?" urged the trader.

"Me wantum receipt all same," soberly replied Sacobé.

"But what good will a receipt do you?" insisted the trader.

"Well," returned the Indian, "sposem you die, byemby sposem Injun die. Me goum to big gate and knockum," accompanying the words with a smart rapping on the counter. 'Who dere?' sayum Se Peter from inside, 'who wantum in?' 'Injun,' me say. 'What Injun?' 'Sacobé.' 'Sacobé from Taboointac?' askum Se Peter. 'All same,' me say. 'O, Sacobé! You one bad Injun. You stealum ten dollars.' 'But, Se Peter, me payum agin.' 'Showum receipt,' sayum him, lookum through peep-hole. What Injun do then, eh? See? Me havum to go down an' huntum all over hell to gettum receipt."

Newcastle, N. B., Jan. 28. Chiktek.

PAST AND FUTURE.

I.

AND this is the trout brook where, as a happy, light-hearted, careless boy, we fished twenty-five years ago. Its waters are limpid and pure as of yore, and the round white pebbles glisten and shine on its clear, sandy bottom, just as they did then; while its bubbling, rippling, laughing waters are carrying the same old story to the blue waters of the river that flows at the foot of yonder meadow. But the trout with their beautiful carmine-spotted sides, with which it once was literally alive, where are they? Alas! of all those thousands not a fingerling remains. There at the foot of yonder steep hill, with its smooth white body half extended over the deep, clear pool which it shades, is the silver birch, behind which we have hid for many an hour and watched the speckled trout disport themselves in play. Many a big fellow have we seen on a warm summer day lying on the white bottom of that pool, lazily moving his fins back and forth, and thinking of who knows what? Ah! those were great days. It makes us sad sometimes when we think of them, for they can never come again. Not only have the trout disappeared, but the boy is no longer the same. What a pity it is that we cannot appreciate our youth better while we are enjoying it.

Many and many an hour we sat on our hard bench in the little white schoolhouse, and drowsed over our spelling book until the teacher's bell proclaimed that school for that day was over. Then we hurried home, and soon with pole in hand were on the banks of the stream we loved, fast filling the tow string used in lieu of a basket. The string filled, we hurried home with no lagging feet, so we could have them cooked for supper. How good they tasted after they were rolled in corn meal and fried in pure sweet butter. We have had our legs under the mahogany of a good many celebrated cafés and restaurants in our time, but we never tasted any trout that quite equalled those.

There was no weighing in mind the merits of the various hooks, Sproat, Aberdeen, Limerick or Kirby; we used the first we could get and they always answered. We spent no time in talking fine spun theories about the good points of twisted or braided linen, or silk or sea grass lines. We frequently used a chalk line. At that time we had never heard of an artificial fly, and for a rod we thought that nothing could beat a good straight black alder pole. Yet we always caught lots of fish, because we knew where to fish, and a little something about the nature of what we were fishing for. I am not much of a believer in that old story about the boy with his rude tackle and the city chap with his fine outfit; and one of the writers in "Fishing with the Fly," by Orvis, says it is a lie. It is not if the boy understood his business and the city fellow didn't. I sometimes think that I knew better what tackle I required when a boy than I do now. This tackle question is getting down to a fine point. Go to one manufacturer and he will tell you that the six-strip hexagonal bamboo is the thing. Go to another in just as good repute and he will tell you that he has been making rods since Adam was a little boy, and the hexagonal rod is a second-rate affair, but the round rod is just what you need, and you won't be able to rest nights unless you buy one. Another celebrated firm will say that lancewood and bamboo are all right in their way, but if you want a No. 1 rod, you must have it made of Bethabara wood. Then when you come to reels; but I forbear—if you had a fairly good idea what you want when you start out, you will be all at sea before you can come to any definite conclusion.

I have fished a good deal and have used both the round and the hexagonal bamboo rods, and I could never see any difference in their actions, but perhaps my touch is not delicate enough. The most killing rod I ever owned was made of hickory. It was too heavy and it warped badly, but you could depend upon it; when you gave a big laker the butt you need never shake in your boots for fear it would break; everything else might go to flinders, but the rod would still be there. If I am fishing where I can take good care of my tackle I prefer a split bamboo to any other rod, but for roughing it with a general all-round rain or shine rod, give me lancewood. I have never used a rod made of Bethabara wood, but intend to try one in the spring, and if it proves as good as the makers claim I think we will have hit on the best rod at last.

I sometimes think that the ideal angler of the future will be a man who will never go fishing at all, but will have a large room entirely devoted to tackle of various kinds. Handsome cases of satinwood and ebony lined with the costliest of velvets, and having plate glass doors in front, will be ranged along one side of the room, filled with rods of various woods all mounted in solid gold. No rods exceeding 6oz. in weight will find a resting place there. Salmon rods will not be allowed because of their great length. Beautiful reels of gold and aluminum, with ruby jewels and diamond studded handles will rest on their soft cushions. Lines, flies and leaders of the most expensive kind will also occupy their proper places. Where the angler is a man of very great wealth, he will have an aquarium of alabaster, 60ft. long, 30ft. wide and 10ft. deep, built flush with the floor in one part of the room; in this he will keep his trout. None under 3lbs. in weight will be allowed in that water, on the surface of which will float his cedar boat, lined with sandal wood, and inlaid with mother of pearl, and from which, urged on by his friends who may be present, he will do his fishing. But I am speaking of the ideal angler of the future who may be in moderate circumstances (worth say $2,000,000) and who ignores the natural trout entirely. He will send out invitations, exquisite examples of the engraver's art, which will read something like this: "Mr. J. Pauraway Jones, ideal angler, asks the pleasure of your company on Thursday evening next, June 14, 19—, at 9 P. M., to witness an exhibition of his skill as a fly-fisherman." We can imagine J. Pauraway in his gorgeous fishing hall, every seat being filled with admiring friends of both sexes. The ladies, wearing six-story hats so as to shut off all the view they possibly can from the unfortunates behind them, occupy the front seats.

Mr. Jones will commence as follows: "Ladies and gentlemen, that superb fish, *Salmo fontinalis*, is almost extinct and can only be found in a few of our most secluded lakes and inaccessible streams. Places that are only open to the rough and ready fisherman with his corduroy clothing and heavy brogan shoes, and which cannot on any account be visited by an ideal angler—of which guild [ahem] I deem myself a worthy member [in his dress of silk velvet coat and knee breeches, silk stockings and low-cut patent-leather shoes]. Now I like to enjoy the sensation of fishing, so I have fitted up this hall with all the implements of the art as you can readily perceive; in addition I have procured at great expense one of Mr. Sellaman's wonderful electric trout. Johnson [to his flunky] produce the fish. This fish is superior in many respects to the genuine trout itself. It can be caught many times and can be played until the motor that moves it is run down. Its triple back-action leap for liberty is superior to any move that the real trout can make, and above all, it is played on the floor where every motion is in plain view. It can only be used by anglers who are perfect in the art of casting the fly, for in order to have it take the fly the lure must be cast fairly in the mouth of the fish—which as you see is wide open with the head inclined backward at an angle of 45°—this starts the electric current, and the fish grabs the fly like a flash. Now one of the tests required of all candidates for admission to the American Association of Ideal Anglers, is that they be able to make three successive casts inside of a 2in. ring at 60ft.; so we are all able to fish for the electric trout. Johnson, hand me my 5oz. novel combination rod, made of the best part of ten different woods, and have the music strike up."

Here the melody of twelve guitars and mandolins, played on by as many beautiful women, floats out on the perfumed air. Mr. J. Pauraway Jones steps into his rosewood boat, lined with red plush, and mounted on wheels so as to be moved easily, commences to cast. At the second attempt the fly is landed fairly in the trout's mouth, and the fun begins. The fish, alive with the genius of man, dashes now to the right, now to the left, sulks on the bottom—beg pardon—on the floor, gnashes his teeth until the sound causes the ladies to give some faint shrieks of dismay, makes huge leaps in the air, and finally gives the triple back-action leap. But in vain. J. Pauraway is equal to the occasion, with firmly compressed mouth, dilated nostrils, and flashing eye, he plays the fish, giving the butt when required, letting the tip of his rod drop whenever the fish makes his leaps, reeling up whenever the trout seems to act tired, taking advantage of all points as anglers, both ideal and common, should. Finally the struggles of the fish almost cease, and J. Pauraway Jones begins to reel him in, Johnson standing near with his landing net, meshes of fine silk, hoop of 18-karat gold and handle of enamel, ready to land him. The fish is within reach; Johnson is just putting the net under him; a look of triumph is on J. Pauraway's face, when a whirr of machinery is heard, the trout dashes under the boat and out at the door; the leader is broken; Johnson faints, the strings of the musical instruments break with a loud snap, and ——. This is what we sometimes think angling is coming to. I like to see fine tackle, but these hair-splitting theories in regard to it disgust us. Veritas.

Orl City, Pa.

THE LARGE TROUT RECORD.

IN Dr. Bean's article upon the Sunapee trout, in your issue of Jan. 26, occurs the following:

"In Forest and Stream of June 23, 1887, 'The Large Trout Record' is reviewed by Geo. Shepard Page, A. N. Cheney and 'Special.' I do not believe that all of the large trout referred to in that record were *fontinalis*, but I cannot prove that they were not, because I have not seen any of the specimens."

From the context I judge that Dr. Bean's doubts arise more particularly in regard to the species of the Maine trout, than regarding the species of the Adirondack trout mentioned by me; but my friend Mr. H. H. Thompson, secretary of the State Fish Commission, is also a doubter, and is more specific in his doubt. He says:

"A friend of mine, a high authority in matters piscatorial, persists in hurling big fish at my head. He says that a trout (*S. fontinalis*), was picked up on Loon Lake, Franklin county, this State, on the fifth of June last, which weighed 6½lbs. Query: Was there ever a trout of this species caught or found in this State to equal or exceed this weight? My correspondent does not say that he saw this fish, and I should fail to sustain my repute as a doubting Thomas in the matter of extraordinary fish weights reported for the press, were I not to presume that his personal inspection would have developed a lake trout (*S. namaycush*), commonly misnamed in northern New York, a salmon trout."

The fish mentioned by me in Forest and Stream, June 23, and the fish referred to as above by Mr. Thompson, are identical. My information in regard to the trout came from Mr. Edward A. Morrison, of New York city, and to-day he has very kindly furnished me with further information, which I quote from his letter:

"When the fish was brought into the hotel I was so struck with its size that I suggested to Mr. Chase, the landlord, that he should send it to Mr. Miner, at Saranac Lake, to be mounted; this was done, and the fish is now in a glass case in the Loon Lake Hotel. There are no lake trout in Loon Lake, except such as were put in as fry within a period of three years. The trout was seen by a great many guides and fishermen, and there was no question raised as to its being anything else than an extraordinary specimen of common brook trout. I have fished for many years in Adirondack waters, and while I have no scientific knowledge of the structure of fish, yet, as far as I can judge, the fish was the common brook trout. I did not measure the trout, but it was done in my presence, and the figures given your uncle are the correct ones, viz.: 6½lbs. weight, 23in. long, 13in. girth. As the fish is, however, in existence, the question can be positively settled as to its species."

I have followed quite a number of distinguished fish into their retirement from public gaze to obtain knowledge of their pedigrees, birth-marks, personal habits, idiosyncrasies and moral characters, before and after death, as certified by interested friends and administrators; and I have found too frequently that the private life and shrinking qualities of these large fish have tended to impair the usefulness of their executors in the public office of sealers of weights and measures. The experience that I have gained in this kind of hunting causes me to be a trifle careful about putting the weight of a big fish in a newspaper as a target for the fishermen of North and South America, Europe, Asia and Africa to cast at for authenticity and reliability, but I sent the record of the 6½lbs. trout to Forest and Stream with the utmost confidence that when in the natural course of

things proof would be demanded, proof would be forthcoming. I based my confidence upon the fact that the trout must be either a *namaycush* or a *fontinalis*, for even scientists have found no other trout in the North Woods' waters; and all the guides in the woods, except possibly a few that have gone in from the towns and are found about the large hotels, can tell the difference.

I little expected, however, that Mr. Morrison would be loaded for bear and say, "There is the fish; examine it." Just at present the Loon Lake House (F. W. Chase, proprietor, P. O. Loon Lake, Franklin county, N. Y.) is not as accessible as it might be, for even the walking on snow shoes is not the best, but the trout will probably remain to be interviewed personally or by letter.

In hunting up the record of big fish I have discovered one other thing, and although it is a trifle, I will mention it, as it is not universally known. Because a man's window box or kitchen garden does not grow a certain article, it is not always safe to say it does not exist, for an adjoining precinct, county, State or continent may produce it. In fact, it might have been growing all the time over the other side of the fence, just out of eye sight of the owner of the kitchen garden. A. N. CHENEY.

GLENS FALLS, N. Y.

SUNAPEE LAKE.

SOUTH SUDBURY, Mass., Jan. 28.—*Editor Forest and Stream:* In your issue of Jan. 25 I notice an inquiry by "Swirl" in regard to the fishing in Sunapee Lake. I was there with my family last summer, and I found the fishing first-class. We went in the latter part of June, and came away about Aug. 1. I had heard and read in FOREST AND STREAM so much about the newly discovered trout, that I caught the fever and felt that I never should be happy until I had brought at least one of them to net. The natural consequence was that as soon as I could get away we packed up and started for the lake. We went into Boston, boarded a B. & L. train for Concord, then changed to the Concord & Claremont road for Newbury, a town at the south end of the lake, where we took the steamboat for Blodgett's Landing, our objective point; and I was on the lake fishing at 3 o'clock that afternoon. There are a number of good hotels on the lake and the boat stops at or near most of them. The hotel at Blodgett's is perhaps not first-class in all its appointments, but the charges are very reasonable and the fare excellent; and it is near one of the best fishing grounds on the lake. Boats can be had at fifty cents a day. The fishing is in from 40 to 80ft. of water, although early in the season they take them trolling with spoon or shiner; and I am told that sometimes at that season the fish will rise to a fly. In deep-water fishing (which is all that I had) shiners or worms are used for bait. The trout I do not think are quite as gamy as a Rangeley fish, but take a five-pounder in 50 or 60ft. of water on a light rod and you will find some sport before you boat him. The largest trout I caught weighed an ounce or two over 5lbs. The last day I was there I caught four, the smallest weighing 1¼lbs., the largest 3¼lbs., and all of them fought for their life. Aside from the fishing it is a very pleasant place, and everybody seems to want you to have a good time, at least that was our experience, and as I look into the fire burning on the hearth and think of our last summer's trip, I can feel the same old fever creeping into my blood that comes sooner or later every year. C. F. G.

THE ALLEGANY COUNTY, N. Y., Board of Supervisors have passed an ordinance prohibiting fishing in Angelica and Black Creek and their outlets and tributaries, also Caneadea Creek, its tributaries and outlets. This law is to continue in force for three years.

WE have had left with us for examination and trial a steel fishing rod manufactured by the Horton Manufacturing Co., of Bristol, Conn. From handling the rod in our office we believe that it is practical, and will fill a want in the line of fishing rods, for while being light in weight and having apparently the requisite of a good casting rod, it is also very strong, and when not in use can be contracted by telescoping into a very small and convenient form for carrying. We say that we believe it is practical, but of course only a thorough trial when the fishing season opens will suffice to fully demonstrate its strong and weak points (if it has any weak points). The manufacturers state that these rods in a crude form were in use all last season by expert fishermen and with the best of results.

Fishculture.

REPORT OF THE U. S. FISH COMMISSION.

(Concluded from Page 51.)

A VERY interesting report on the thermometers in use by the Fish Commission, is made by Dr. J. H. Kidder, and illustrations are given of the various instruments used, and the apparatus for testing their accuracy. In the earlier operations of the Commission its thermometers were used as they came from the makers, without previous comparison with the standards, and instrumental errors were reported from time to time, which tended to discredit some of the observations, and to weaken the inferences deduced from them. In the autumn of 1883 the duty of comparing all the thermometers used by the Commission was assigned to Dr. Kidder, who noted their errors before issuing them.

Capt. J. W. Collins makes a report, illustrated with ten full-page plates of vessels, fishing tackle, etc., on the discovery and investigation of fishing grounds, made by the Fish Commission steamer Albatross during a cruise along the Atlantic coast and in the Gulf of Mexico, with notes on the Gulf fisheries. An interesting account of fishing for red snapper, off Cape San Blas, is given. The fish were taken in twenty-seven fathoms of water, and at first salt mackerel were used as bait, but it proved to be too tender, and porgie was substituted with better results. Some of the fish taken weighed 15lbs. The distribution of red snappers in this region is not what might be expected, and though fares of this fish may be taken on this ground, it is evident that they occupy only a very limited area on it. The investigations made between Tampa and Key West are probably the most important of any on the cruise. The region lying between Tampa and the Tortugas, outside of a depth of twenty fathoms, has never been resorted to by fishing smacks, and it is doubtful if any one knew that red snappers could be taken on the ground passed over by the Albatross. That they are more generally distributed here, in depths of twenty-six or twenty-seven fathoms, and far more abundant than on the grounds visited by the snapper fishermen of Pensacola, seems clearly established by the result of the researches made. This fish, which was almost unknown in New York markets a dozen years ago, is now a great favorite, and, as it is thought that the old grounds are more or less depleted, the importance of this discovery can scarcely be overestimated. Capt. Collins describes the sponge fisheries of Key West, the grounds, vessels and boats, apparatus, methods of fishing, the disposition of the catch, and the financial results of sponge fishing. He also devotes considerable space to the smack fishery at Key West, and describes the species of fish caught, how taken, etc. The turtle fishery at Key West, although of comparatively less importance than some of the other fisheries, employs five or six sloops and schooners, of six to ten tons each, five men usually constituting a crew. The turtles are sought for in the channels between the keys that are their favorite haunts. It is the habit of the turtle to feed in these channels, moving in and out with the flow of the tide. The turtles are taken in nets, similar to a gill-net, which are put out at night across the "turtle sets" so as to intercept the animals as they move in and out through the channels. The smaller turtles, ranging from 6 to 16lbs., are used to supply the local demand, at about ten cents per pound, while those between 16 and 200lbs. are shipped to New York, but it does not pay to ship large ones. Those sold to New York buyers bring from six to eight cents per pound, while those above 200lbs., like the smaller ones, are consumed at home. They are worth about three cents per pound before killing, but bring fifteen cents in the market.

Other interesting papers appear in the appendices, as: The Manufacture of Klipfish, translated from the Danish; Pearls and Mother-of-pearl at Tahiti and the Tuamotu Archipelago, by G. Bouchon-Brandely; On the Development of the Cetacean, together with a Consideration of the Probable Homologies of the Flukes of Cetaceans and Sirenians, illustrated by three full-page plates and twenty-two figures, by John A. Ryder; On the Development of Osseous Fishes, including Marine and Fresh-water forms, by John A. Ryder, illustrated by thirty full-page plates and 174 figures. Mr. Sidney I. Smith makes a report on the decapod crustacæ of the Albatross dredgings off the east coast of the United States, during the summer and autumn of 1884, with twenty plates, containing 112 figures. Prof. H. E. Webster and James E. Benedict make a report on the chætopod annelids from Eastport, Me., collected in 1880 by the zoölogical expedition of Union College, with eight plates and 117 figures. Messrs. John Murray and A. Renard are quoted from a paper read before the Royal Society at Edinburgh, on the Nomenclature, Origin, and Distribution of Deep-Sea Deposits.

Prof. David Starr Jordan contributes a catalogue of the fishes known to inhabit the waters of North America, north of the Tropic of Cancer, with notes on the species discovered in 1883-84, with index. The final article is one on patents, issued by the United States during the years 1882, 1883 and 1884, relating to fish and the methods, products, and applications of the fisheries, by Robert G. Dreyenforth, Assistant Commissioner of Patents, U. S. Patent Office; we have given an extended notice of that part of this paper which relates to angling patents, in FOREST AND STREAM, Vol. XXIX., p. 310.

The reports of the Commission keep up their high standard and cover so much ground in the different departments of fishculture, fisheries, ichthyology, embryology and general natural history that they are indespensable to a student in any of these branches.

MASSACHUSETTS LOBSTERS.

A PETITION has been sent to the Massachusetts Legislature as follows:

The undersigned petitioners, citizens of nearly forty cities and towns in this commonwealth, and known as the Massachusetts Fish and Game Protective Association, respectfully represent that to those who have made the subject a matter of close observation and study, there is apparent an undoubted and alarming approach of the destruction of that valuable food crustacean, the lobster, on the coast of this commonwealth. Persistent and close fishing by a constantly increasing number of fishermen has made such inroads in our supply that it is decreasing very rapidly, and under the present existing conditions the time is not far dintant when it will be practically of no value. Prompt and decisive measures should be taken at once to avert the evil by protecting the lobster during a portion of the year at the most critical period of egg-bearing, and if this is done the fishery may undoubtedly be saved to us. New Hampshire has by law established an annual close season from Aug. 25 to Sept. 15. Maine, also alive to the necessity of endeavoring to prevent the destruction of the lobster fishing, has established a close season extending from Aug. 1 to Sept. 15, during which period it is illegal to take, kill or have in possession any lobsters, and Canada also is taking measures for similar action.

In view of these facts, we respectfully petition for legislative action giving us a law providing for a close season, which shall protect our lobsters during a few weeks at least of the egg-bearing period.

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION,
(By Edward A. Samuels, Pres., A. W. Robinson, Sec.).

THE MISSION OF THE MENHADEN.

Editor Forest and Stream:

"It is not hard to surmise the menhaden's place in nature; swarming our waters in countless myriads, swimming in closely packed, unwieldy masses, helpless as flocks of sheep near to the surface and at the mercy of every enemy, destitute of means of defense and offense their mission is unmistakably to be eaten."

"In estimating the importance of the menhaden to the United States it should be borne in mind that its absence from our waters would probably reduce all our other seafisheries to at least one-fourth their present extent."

These are truths that cannot be controverted with any degree of success. They fix themselves indelibly in the minds of those who have given serious thought to the relation the menhaden bear to our food fishes. They are recorded results of profound study by the highest authority.

Any diversion then of the menhaden from their legitimate mission may well become a subject of concern to those who desire the preservation of our Atlantic food fisheries from exhaustion.

From Monomoy to the capes of Delaware, in every fishing village and on every fishing ground, the lament has gone forth for years, that the food fishes are decreasing. This cry comes from the thousands of hook and line fishermen who follow fishing for a livelihood, and the size of whose fare measures their ability to supply the necessities of life for their families and themselves. It comes also from the thousands of sojourners who repair to the coast for brief seasons of recreation, recuperation or respite from their accustomed vocations. The cry is all but unanimous, and wherever there is an interval there may be found the trap, pound or fyke or else the smoking chimney of the menhaden oil factory. It is with the last named industry this paper has to deal.

Menhaden form a considerable portion of the diet of our chief food fishes, and as a bait fish they stand at the head. They are in constant demand by man as an aid in capturing food fishes, and in constant demand by the food fishes themselves, as a means of sustenance. To deprive either man or fish of this natural and wisely-ordered means to legitimate ends is to pervert a wise provision of Providence. This is done by the menhaden oil men through the use of the purse net and the steamer. With these appliances they disturb and turn into an artificial channel the great schools of menhaden that would otherwise play an important part, directly and indirectly, in preserving the supply of food fishes. This active pursuit and wholesale capture either scatters or annihilates the schools, and menhaden are now a scarce article along the shores and in the inlets of the southern New England and the Jersey coasts. It is in these localities that their scarcity is most seriously felt by the hand-line fishermen and those who angle with rod and reel and to remedy which evil action should be taken by competent authority.

The oil men defend their operations by these two statements, among others, which no one denies:

First—The number of menhaden captured by man is infinitesimal in comparison with the numbers devoured by predaceous fishes, by whales, porpoises, etc.

Second—They do not, as has been alleged, capture many edible fishes in netting schools of menhaden; on the contrary, they claim that they do not get enough to feed their gangs.

The question is not one of comparison. The capture of food fishes in their nets may be small. The proposition is this: Of the numbers of menhaden that escape the pursuit of their enemies in the water, the oil men secure so large a percentage that they deprive their fellow men, as well as the food fishes, of their rightful share. These oil men thus thrive at the expense of their unfortunate hook and line brethren. It is not desirable that the important industry of the oil men should be interdicted or become the object of unjust discrimination. Let their operations be fostered by the Government, but at the same time so limited by just enactments that all men who by right are entitled to equal benefit from the menhaden run, may profit by its enjoyment. Any legislation with this object in view would be fair to all. Opposition thereto would be unreasonable.

ARTHUR MARTIN.

WASHINGTON, D. C., Feb. 11.

PROGRESS IN BRITISH COLUMBIA.

NEW WESTMINSTER, B. C., Feb. 1.—*Editor Forest and Stream:* During the month of October, 1883, acting under instructions from the Department of Marine and Fisheries, I, in company with the late Inspector of Fisheries, Mr. Anderson, set about securing a suitable site for a salmon hatchery. After carefully examining the different points along the Fraser River, we finally decided on the location on which the present hatchery was erected. Building operations were commenced in March, 1884, and in September of that year the building was completed.

The success which has attended our operations since has justified the selection then made. All the conditions necessary to successful propagation of salmon are found here. The water which supplies the hatchery flows from a small stream of pure, limpid water, the temperature of which, during the hottest portion of the summer, never rises above 50deg. Fahrenheit. It is within easy access of New Westminster, being only five miles up the Fraser, and everything in the way of supplies can be readily and easily transported there. The dimensions of the hatchery are as follows: 110ft. long, 40ft. wide and two stories in height. The capacity is 10,000,000 ova. The ground floor alone is used for hatchery purposes, the top flat being used as a mess house, care-taker's dwelling, and for storing nets and other implements in connection with the hatchery. The following is a statement of the operations carried on during the past four years:

1885.—This year 1,800,000 fry were hatched out and deposited in the various streams and lakes adjacent and tributary to the Fraser. The ova from which this number of fry was obtained were secured on Harrison River, a stream of considerable volume and a great resort of salmon during the spawning season, where the clear water and gravelly bottom offer the very conditions sought by these fish at this period. Harrison River is situated about fifty miles distant and north of the hatchery, and flows into the Fraser River. The ova were laid in during the months of September and October, 1884, and were hatched out during February and March, 1885.

1886.—Early in September, 1885, salmon commenced spawning on Harrison River, and from that time till the latter end of October we were busy capturing and stripping the fish. The number of parent fish captured was 4,568, of which 2,551 were females and the remainder males. From these fish 4,462,000 eggs were obtained, which yielded 2,625,000 fry. As in the previous year, the fry were hatched out during the months of February and March, and deposited in the different streams.

From the reports of the various wardens on the rivers in which fry was deposited last season, I am assured that the fry are doing very well.

1887.—This year has proved the most successful we have yet experienced. Out of 7,316,000 ova laid in during the fall of 1886, we obtained 4,414,000 fry, which was divided as follows: 3,405,000 "suckeyes" and 1,000,000 "quinnat" or spring salmon. The returns for the season of 1887-88 are not complete as yet. I will have much pleasure in sending them to you when the fry has been distributed.

Since the hatchery has been in operation there has been nearly 10,000,000 fry deposited in the various streams and lakes. The fishing industry is one of the most valuable of the Province, and the importance of thus restocking its waters cannot be over-estimated.

In conclusion I may state that the Fraser River hatchery is the largest of its kind in America, and the quantity of salmon fry annually hatched out therefrom exceeds that of any other hatchery on the continent.

THOS. MOWAT, Inspector of Fisheries, B. C.

THEY GO FOR THE BRUSH—Richard Ashworth, the well-known Cheyenne society light and Big Horn stockman, is the proud and fortunate owner of two pure-blooded and true-bred Scotch staghounds. These splendid animals Mr. Ashworth personally selected from their native kennel, beneath the mists of Ben Nevis during a recent visit to Scotland, and has domiciled them on his Grey Bull cattle ranch. Scotch staghounds in Wyoming are a success, and these great, sturdy, tawny and magnificent brutes revel in the pure, bracing air sweeping down from the snow-capped summits of the lofty Rockies, and daily and fleetly cover miles and miles of upland prairie land. And woe to the wild denizen of the prairie, the forest and the mountain, for the daily runs of Mr. Ashworth's staghounds are as eminently practical as they are thoroughly enjoyed. The hounds combine duty and pleasure in a most marked degree, and the antelope, the deer, the wolf and the jack rabbit are all promptly and joyfully captured. These dogs have developed a peculiar and most amusing method in dealing with the common coyote wolf. For this cowardly and despicable animal to throw himself in sight is to invite certain capture; but the gallant hounds disdain their base quarry too much to take its worthless life; they merely bite its tail off close to the rump, or pull it out by the roots—as the incidents of the case may be—and having thus set their mark on Mr. Coyote, let him go. The trophy of the chase so obtained the hounds invariably carry home with them, and to such an extent has this contemptuous depredation on the coyote race been carried on, that Mr. Ashworth's ranch fairly bristles with wolfish caudal appendages, and bobtail coyotes are the rule on the ranges.—*Lauder (Mont.) Mountaineer.*

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy, Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Feb. 13 to 17.—First show Fort Schuyler Kennel Club, Utica, N. Y. E. J. Spencer, Sec.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

Feb. 28 to March 2.—Show of Philadelphia Kennel Club. W. H. Child, Sec.

March 27 to 30.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5853.**

CLUB SINS AND A. K. C. JUSTICE.

Editor Forest and Stream:

A friend writes me that it is not just to arraign the A.K.C. or other clubs for wrongs they have done, and yet refrain from giving detailed specifications, and as the whole purport of my arraignment of such bodies was to show that the distrust exhibitors have for individual clubs and their association as the A. K. C. had a foundation in fact and was reasonable, I proceed to give you such as I can clearly recall details of, for it must be remembered that there are many such cases that I cannot recall with sufficient distinctness to base formal charges on.

The pug Joe was entered at Pittsburgh show of 1883 priced at $15; Dr. Cryer immediately claimed him, but the secretary defeated his claim by saying that the dog had already been claimed, and it was subsequently proven that the secretary claimed the dog for his owner, who took the dog away from the show with him. This was clearly defrauding Dr. Cryer of his plain rights.

The "pointer judging" at New York is next in order. At the New York show of 1884, Mr. E. C. Sterling judged pointers and gave the brace prize to Meteor (owned by a Col. Hughes) and Vanity, then owned entirely by Mr. Munson, which divided ownership was well known to Mr. Sterling, and he had certainly owned Vanity shortly before the judging, and owned her again very soon after. This scandalous proceeding raised a great storm, and was the spring from whence came the famous "pointer protest," a protest against the judging signed by many of the most reputable pointer men in the country, which protest was met by the winners in the game about in Boss Tweed's style, "What are you going to do about it?" The Westminster Kennel Club practically took the ground that nobody had any business to question their acts, and certain parties characterized Mr. Mason's action in getting up the protest as "an outrage." Just think of it being an "outrage" for any one to protest against what was most open to suspicion of fraudulent judging! Then remember, that just after the war over this question had subsided, the W. K. C., aided by the "constructing" Major Taylor, got up the American Kennel Club, after swamping the independent breeders and exhibitors who met at the Colonade Hotel in Philadelphia to form an independent club. Did not the independents have good cause to link the judging with the formation of an association carried out by the very club that condoned, if it did not actually approve of, the previous wrong?

Next comes "construction." The old rule had been that one win in the open class qualified for the champion class, and considerable discussion had been going on in the *A.K.R.* and elsewhere over the propriety of requiring three wins to qualify. On Oct. 22, 1884, the A. K. C. passed the following Rule 8:

"A dog to compete in the champion class must have won three prizes at shows given by members of this association."

Now on Jan. 24, 1885, three months after the enunciation of the rule, there was a meeting of the executive committee of the A. K. C. held at Cincinnati. At this meeting the Westminster, New Haven and New England clubs were without representation of any kind, and the report of the meeting stated that the Cincinnati, Montreal, Baltimore, Cleveland, Illinois, Kentucky and St. Louis clubs "were represented either in person or by proxy." No names were mentioned except those of Major Taylor and W. B. Shattuc, and there is every reason to believe that these two constituted the meeting. This meeting enacted the following:

"All dogs of whatsoever breed that have won a first prize at the bench shows of any organization now recognized as a member of the American Kennel Club should be entered in the champion class. . . ."

Major Taylor had previously delivered his dictum in the kennel press, that the proper "construction" to be put on Rule 8 was this wise conclusion of the "meeting," and from this arose the Major's brevet of "Constructor." This "construction" was ultimately repudiated by all the clubs in the country, except Cincinnati, and perhaps Chicago, at the "special prize" show. Now study this episode of construction; compare the original rule with the "construction" put on it; remember that the meeting was called at very short notice (two days, if I remember aright), and what conclusion can you come to but that it was done with invidious purpose? Yet this same A. K. C. re-elected this same Major Taylor as its president in four or five months after this shameless episode!

Next comes the "mastiff puppy" case. Unfortunately, I cannot find the numbers of FOREST AND STREAM with the whole history of this case, so I can only say generally that a litter of several puppies entered *as a litter*, paying $5 for the whole lot, were allowed to compete in a class for puppies with those that had each paid $3, and if my memory is correct, one of this litter won. I well remember that Mr. J. A. S. Gregg assailed the allowing of these dogs to compete, and that it was attempted to shut him up on the old story of "we don't care for you," which failed disastrously. There can be no argument on the question as to whether it is just to allow several dogs who have only paid $5 entrance *as a lot* to compete with dogs that paid $3 each.

Then there is the "Chicago special." A gentleman of Chicago gave the club his check for $15 as a special for spaniels, to be judged under the American Spaniel Club's standard, which prize was won by Mr. J. Otis Fellows, but the check itself was used by an officer of the club for club expenses and the money was not paid Mr. Fellows until after the whole story had been made public and formal charge submitted to the A. K. C. On no pretense whatever can it be justified that a man's money may be taken for a special purpose and then diverted to incidental expenses of the club.

The bogus medals are too new a story to need repetition, and for personal reasons I prefer not to enlarge on the subject.

Now remember that all these scandals were the acts of clubs against exhibitors, that two of them were regularly brought before the A. K. C., committees appointed to investigate; that complete reports were made, clearly showing the truth of the charges, and both were tabled! Now do you think if an exhibitor should be charged by the W. K. C. or the N. J. K. C. with swindling them, and the charge fully proven, that the matter would be tabled? Well, if you do, I pity your infantile simplicity. Somebody will say "What are you dragging up these old things for? They are dead and buried. All associations make mistakes at first. The A. K. C. has got past all that and is now on the right course," etc. All very pretty, but simple soul, do you think you can catch us like birds by putting that salt on our tails? The exhibitor will believe your professions when you give him only one act of justice; once show that you care the one-tenth for him that you do for your fellow ringsters, and I dare you to quote the instance where you have done this. Pittsburgh has the name of being the most thoroughly ring-ruled city in America, and at the same time one of the very best governed cities. The A. K. C. rules only in a ring, and never does anything right if it can do it wrong, so we get both ring government, and misgovernment, much more than our patience will stand up under.

Now I am not saying that the A. K. C. should be extinguished, or even that it would be best to do so. It is here, and if it can only be brought to a realizing sense of its proper sphere it will do as well as anything else likely to be gotten up, but it must learn that there are limits to the long suffering of the unfortunate exhibitor. Until all hope of reformation vanishes, the best thing to be done is to keep on hammering at the A. K. C., if its skull lasts long enough. Listen to what Mr. G. Edward Osborne, an A. K. C. officer, said in your issue of Aug. 20, 1885: "Mistakes have been made and I have yet to see a new association of any kind that is perfect; but we must stay and try and win the confidence and respect of the public, and when that is done we will be amply repaid for the worry and trouble we are now going through."

But has the A. K. C. even tried to gain "the respect and confidence of the public?" Has it not constantly legislated for itself and itself alone? and has it not succeeded in losing the little respect the public had for it? And finally, as to mine ancient foe and always friend Osborne, didn't he really tire beyond endurance at the dissipation of every one of his hopes for the A. K. C. and quit the ship in disgust? I have not asked him about this, but I will wager a rotten apple against a frozen potato (as large a bet as should be made about anything concerning the A. K. C.) that my guess is correct. W. WADE.

HULTON, Pa., Feb. 10.

BARRING OF BEAUFORT.

NEW YORK, Feb. 11.—*Editor Forest and Stream:* In a letter published in your issue of Feb. 9, signed Chas. H. Mason, the following misleading paragraph appears:

"A month ago I received a letter asking me to name my lowest price for Beaufort. I did not put a price on him. Ten days ago I received another letter, but from a different quarter, and as usual the writer wanted to know my bottom price. Again did I refuse to put a price on the dog, and on Sunday I entered him in the New York show.

"On Monday evening Mr. Percy C. Ohl (whose office is at No. 44 Broadway, with that of the W. K. C. and the A. K. C.; and who acts as agent for the W. K. C. in dog transactions) called on me to ascertain if I would sell the dog. I named a figure, but he did not think his customer would go beyond $500. The sale of course did not take place; and on Tuesday I received my entry back from the W. K. C. It is marked, 'Declined by order of the committee.' The committee is F. R. Hitchcock, C. du Bois Wagstaff and T. H. Terry; but a gentleman who recently called at the office says, 'Hitchcock seems to run the whole business.'"

I say misleading from the fact that while I did call on the writer of the letter referred to regarding the purchasing of his dog, that neither Mr. Hitchcock nor any person connected with the Westminster Kennel Club, directly or indirectly, was interested, concerned or even knew of my intention. PERCY C. OHL.

Editor Forest and Stream:

As I do not approve of the rejection of champion Beaufort I have sent this letter to Mr. Hitchcock and send you a copy.—C. J. PESHALL. "Baltimore, Feb. 9, 1888.—Frank Hitchcock, Esq., Sec't'y W. K. C.—Dear Sir: Being informed that your club have declined to receive, and that you have returned the entry of the pointer champion Beaufort, permit me to say that I do not believe any club that is a member of the A.K. C. can decline the entry of a dog (if the rules governing the entry are complied with) unless the dog or his owner is disqualified as provided for in the rules, that all entries should be accepted and then they become subject to protest, and the party making the entry, if not satisfied, may appeal. Rule 7, when construed with the other rule, was intended to cover such a case of admission of dogs from a diseased kennel, or in case more dogs were entered than could be accommodated. As I do not approve of the rejection of champion Beaufort I will say that the entry of champion Nick of Naso is withdrawn, and he will not compete for the champion prize offered by your club. Very respectfully, C. J. PESHALL."

NEW YORK DOG SHOW.

NEW YORK, Feb. 8.—*Editor Forest and Stream:* Entries will foot up close to 1,150, the largest on record. In point of numbers the strongest classes are those for pointers, there being nearly 150 entries. Fox-terriers come next with over 120, English setters 85, Irish 56, black and tan 43. There are 45 mastiffs and 113 St. Bernards, etc.

JAS. MORTIMER, Supt.

Editor Forest and Stream:

Will exhibitors at the forthcoming W. K. C. show be able to purchase a little lunch in the building, or is it too small to accommodate a refreshment stand? In the latter case I will bring my lunch along with me. EXHIBITOR.

ST. BERNARD IMPORTATION.—The Chequasset Kennels, Lancaster, Mass., have just received two valuable additions to their stock in Lady Newcastle (champion Plinlimmon—Bangle II.), and Neige (Baron of Cardiff—champion Pleona). Lady Newcastle is a tall, graceful, ten months old puppy, orange with perfect white markings and black facings, and a good flat long coat. Neige, in his sixth month, is all legs and wings just now, a puppy of huge bone, noble characteristic head, in color white with orange patches and good even blaze with black facings. He bids fair to make a very large dog of the grandest quality. With these came a six months old pug dog puppy from the kennels of R. T. Linton, Edinburgh, Scotland.

THE FOX-TERRIER RESULT.—It has recently been announced in a number of English and American papers that the well known fox-terrier dog, champion Result, owned by Mr. A. H. Clarke, Nottingham, Eng., had been sold to be sent to this country. Such is not the case, however; a large price has been offered for him, but his owner refused to part with him.

THE ST. BERNARD CLUB.

ARLINGTON, N. J., Feb. 13.—*Editor Forest and Stream:* The St. Bernard Club, which is to be organized on February 21, the first day of the W. K. Club Show, will, without a doubt, prove a success. In addition to the call, issued through the press in November last, a large number of circulars have been sent out, in respose to which over 50 applications for membership have come in so far. All those interested in the breed, who have not received a circular of invitation, are hereby cordially invited to attend the meeting at 8 P. M., at Madison Square Garden, or to write to the undersigned for an application blank. I inclose the circular call. K. E. HOPF.

To the Breeders and Fanciers of St. Bernards in the United States and Canada:

The undersigned beg to invite you to attend a meeting to be held on the first day of the Westminster Kennel Club Show, on Tuesday, February 21, at 8 P. M., at Madison Square Garden, New York, for the purpose of organizing a St. Bernard Club, for the election of officers, etc.

We desire to see as many as possible present; the day selected is especially favorable, the day following being Washington's Birthday. This will enable those at a distance to attend the meeting without too much loss of time.

The object of the proposed club is the improvement of this noble breed of dogs and the encouragement of the breeding of first-class specimens. There is no reason why we should not be able to compete successfully with our English cousins and with the Swiss; but in order to do this, such inducements are necessary as can only be offered by a specialty club.

Our aim is to establish a club on such a basis that will make it possible to all lovers of the breed to join; it is intended to represent neither a clique nor a ring; but it is to be a National Club in the broadest sense of the word.

We believe that there is no breed of non-sporting dogs that is more worthy of the support of dog-lovers than the St. Bernard, and we trust that all those interested in the breed will assist us in our endeavors by becoming members of the proposed club.

We inclose an application blank for membership, which kindly return to K. E. Hopf, Arlington, New Jersey, who has consented to attend to the correspondence until further notice.

ANNA H. WHITNEY, Chequasset Kennels, Lancaster, Mass.
E. R. HEARN, Hermitage Kennels, Passaic, N. J.
R. J. SAWYER, Menominee, Mich.
E. H. MOORE, Melrose, Mass.
ROBT. L. STEVENS, Castle Point, Hoboken, N. J.
W. J. EHRICH, New York.
DR. W. YOUNG, New York.
K. E. HOPF, Hospice Kennels, Arlington, N. J.

BOSTON DOG SHOW.

WE have received the premium list of the fourth annual dog show of the New England Kennel Club to be held at Boston, April 3 to 6. The list is the most attractive in appearance and liberal in classification and amount of premiums that has appeared this year. Following is the card of the committee to exhibitors:

"The New England Kennel Club, in presenting to your inspection the premium list for its fourth annual bench show (to be held in Boston, April 3, 4, 5, and 6, 1888), desires to cordially thank breeders and owners for the support given to previous shows.

"After carefully ascertaining the views of exhibitors, the premium list has been arranged to admit of even more liberal classification than heretofore. The cash prizes offered aggregate several hundred dollars more than the sum awarded last year. In addition to the prizes in regular classes, the club offers a number of kennel prizes ($25.00 each); also the club silver medal for stud dogs; and there will be numerous special prizes of value and honor.

"Special attention is called to the accompanying rules under which the show will be held. The rules are in substance the same as formulated by the American Kennel Club, with the following exception: Rule No. 2 of the American Kennel Club, which provides for compulsory registration in the club stud book, and exacts an additional fee of fifty cents from each entry, will *not* be enforced by this club. The New England Kennel Club is in hearty accord with the beneficent purposes of the American Kennel Club, but does not feel justified in putting upon exhibitors the additional tax called for by Rule 2. Entries will be received of dogs registered or unregistered, the accompanying rules to be complied with.

"The New England Kennel Club will be glad to offer to any of the various specialty clubs the use of rooms in the show building for the purpose of holding meetings, etc.

"In conclusion we invite the support of all interested in the development and welfare of our friend, the dog."

The special prizes are numerous and many of them are more valuable than are usually offered. Among them are four of $100 each in cash for the fox-terriers alone, and one or more are offered for every breed. In competing for kennel prizes the dogs must be owned by one exhibitor. When one class only is made for a breed it will be divided by sex when five of each sex are entered. Entries in the puppy classes may be removed after 10 P. M. the first day of the show, provided the class has been judged. Following is the list of the judges so far as announced: St. Bernards and pugs, Miss Anna H. Whitney, Lancaster, Mass. Mastiffs, Great Danes, Newfoundlands, deerhounds, greyhounds, dachshunde, spaniels, poodles and Italian greyhounds, Chas. H. Mason, New York. English and Gordon setters and pointers, Dr. Wm. Jarvis, Claremont, N. H. Irish setters, Wm. Dunphy, Peekskill, N. Y. Foxhounds, beagles, and Basset hounds, N. Elmore, Granby, Conn. Bulldogs, bull, Scotch, Irish, Bedlington, Dandie Dinmont, Skye, Yorkshire, black and tan and toy terriers and toy spaniels, Edward Lever, Philadelphia, Pa. Round-headed bull and terriers, J. P. Barnard, Jr., Boston. Entries should be addressed to Bench Show Committee, 6 Hamilton Place, Boston, Mass.

DALTON DOG SHOW.

DALTON, Mass., Feb. 11.—*Editor Forest and Stream:* The dog show of the Dalton Kennel Club was held on Wednesday, Thursday and Friday of this week in connection with the Berkshire County Poultry and Pet Stock Association. There were nearly eighty entries and most of them were present. The quality in many of the classes was exceedingly good, and in this respect would not suffer in comparison with some of the larger shows. Rule 3 was not enforced, but many a coon dog was shown and their appearance indicated that they were thoroughbred, and their records while "afield" would warrant them a pedigree that would grace any stud book. Felch's breed from "North of Africa" was also large. E. K. Sperry, of Hartford, Conn., assisted in getting the show in running order and attended to many of the details. He also judged all classes in the most satisfactory manner. Whenever a discontented one appeared the judge would explain so as to leave them with the feeling that justice had been done. Mr. Hinckly, of Lee, made a fine display of collies and pugs, and they were much admired. Most of them were for exhibition only. Following is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, C. W. Goodrich's Caution; 2d, Wm. Booth's Prince. Very high com., M. A. Goodell's Buff. High com., C. W. Goodrich's Caution, Jr. *Bitches:* 1st, M. A. Goodell's Bell; 2d, C. A. Booth's Fan.

ST. BERNARDS.—*Dogs:* 1st, C. W. Goodrich's Nardo; 2d, Wm Frieley's Jack. Very high com., M. A. Goodrich's Jumbo. High com., H. Chamberlain's Don. *Bitches:* 1st, C. W. Goodrich's Juno; 2d, A. K. Cleveland's Fan. Very high com., H. Chamberlain's Mag.

NEWFOUNDLAND.—1st, R. Marshall's Jumbo; 2d, A. Crandall's Bill.

POINTERS.—*Dogs:* 1st, C. E. Parker's Don; 2d, A. E. Sargent's Sport. Very high com., E. Morse's Fred. *Bitches:* 1st, E. Morse's Leda; 2d, A. Momey's Bell. *Puppies:* 1st, A. E. Sargent's Dash.

ENGLISH SETTERS.—*Dogs:* 1st, E. A. Pears's Dash; 2d, J. Lovejoy's Gem. Very high com., B. Strong's Bow. High com., C. Snow's Spot. Com., E. Marcy's Rover. *Bitches:* 1st, J. A. Warner's Daisy; 2d, M. Clarisy's Madge.

IRISH SETTERS.—*Dogs:* 1st, P. Clarisy's Jack; 2d, Warner and Hamilton's Red. *Bitches:* 1st, Warner and Hamilton's Fluff.

COLLIES.—*Dogs:* 1st, J. A. Hinckley's Scott; 2d, W. B. Barton's Gaffa. Very high com., A. Johnson's Rover. High com., M. A. Goodell's Snip. Com., F. B. Hayes's Shep. *Bitches:* 1st, M. A. Goodell's Fanny; 2d, Warner and Hamilton's Beauty. *Puppies:* 1st and special, Warner and Hamilton's Buttercup; 2d, W. H. Owen's Robbin.

BEAGLES.—*Dogs:* 1st, M. J. Beers's Jim Elmore; 2d, B. F. Newell's Sport. *Bitches:* 1st, B. F. Newell's Dot.

FOX-TERRIERS.—1st, F. Chaffee's Fly; 2d, George Hayes's Chub.

BULL-TERRIERS.—*Dogs:* 1st, W. Weston's Prince; 2d, J. Jandro's Jack. Very high com. and com., M. A. Goodell's Duke and Tam. *Bitches:* 1st, J. Jandro's Fanuie; 2d, R. Tucker's Vic.

PUGS.—*Dogs:* 1st and 2d, B. F. Newell's Yum Yum and Jim. Very high com., Warner & Hamilton's Trust. High com., W. B. Clark's Pet. *Bitches:* 1st, W. B. Clark's Faunie; 2d, B. F. Newell's unnamed.

COON DOGS.—1st, A. M. Spencer's Dick; 2d, J. E. Brown's Ring. Very high com., Thos. Baldwin's Fido. High com., R. Munson's Tige. Com., Geo. Bennett's Spot. K.

ENGLISH DOG CHAT.

AT the late Brussels show several well-known English dog men bought a breed of dogs called "Schipperke," scarcely known hitherto in England, a small black variety with upright standing ears, and should be born without a tail. Although not handsome in looks, the Schipperke is a most intelligent "little cuss," and has already found many admirers in our kennel circles, the importers having pushed the breed in such a manner that they can now find a ready market for their tykes.

The Royal Aquarium is one of the best adapted and most centrally located buildings in London for special club shows, and was this year chosen for the fourteenth annual fixture of the bulldog show, which was the best ever held, both as regards quantity and quality. The management from beginning to end was simply perfect, and reflects the highest credit on all concerned, especially on the Hon. Secretary, Mr. Pybus Sellon, who also compiled the catalogue, in which are inserted for the benefit of novices a description of the bulldog points and the pedigrees in full. Mr. Shirley, the President of the Kennel Club, judged the 203 exhibits (the largest entry on record), and his decisions gave general satisfaction.

There have been disruptions in the St. Bernard Club, ending in the resignation from the committee of the club of one of the vice-presidents, Mr. H. Inman Betterton, a well-known and successful breeder of St. Bernards, and of Mr. J. F. Smith, another shining light in St. Bernard circles. It appears that the Swiss St. Bernard Club during the Zürich show in June, held a congress and invited the English club to send a delegate to discuss the points of the breed so as to bring about uniformity of standard. For some cause the invitation was not even acknowledged, and Mr. Betterton, who had gone over to Zürich to judge, was present at the congress in a private capacity, and subscribed to the standard of points drawn up there. On his return home Mr. Betterton sent in his resignation from the committee of the St. Bernard Club, as he considered their treatment of the Swiss Society discourteous. Mr. Betterton has done much for the breed he is interested in, and to him it is principally due that the smooth-coated St. Bernards in this country are looking up again. In the beginning of the year Mr. Betterton was elected to fill a vacancy on the committee of the Kennel Club, caused by the resignation of Mr. R. Leigh Pemberton.

Newcastle had a show in the summer which paid the promoters so well that there is every reason to expect an annual fixture at "Coal-town"on-Tyne. The Kennel Club's show in commemoration of the Queen's jubilee was a decided success, and the management reflects great credit on the K. C. committee, also upon Mr. Aspinall, their energetic secretary. Ryde show was a frost this year and attracted but few entries. Brighton held its annual fixture during the season in November, a departure from former years, when it took place in the pleasant month of June, when this queen of watering places is seen at its best. This show has become so very popular since it was resuscitated in 1885, that in spite of the lateness of the season and its close proximity to the Birmingham meeting, an entry close upon one thousand was brought together, representing the best kennels in England. The financial result, however, was most disastrous. A wonderful young bloodhound, Invincible, owned and bred by that veteran fancier, Mr. Edwin Nicholls, came out at this show, and in spite of his being only about eight months old he carried everything before him. His appearance caused a great sensation, and it is deeply to be regretted by all lovers of the breed that this young hound caught a distemper and died after a short illness, inflicting a severe loss on his owner, whose kennels have contributed a great number of famous dogs to the death roll of this year.

Birmingham had fewer entries in 1887 than in some of the preceding years, and there is no doubt this is owing to the fact that the committee of what used to be in former years the best dog show in England will not conform to the requirements of modern times. Exhibitors do not care to show their dogs unless they are judged in public. Under existing circumstances the exhibits are hauled up between the benches, where there is not sufficient room to swing a cat; keepers, with whom the dogs are nervous, take them off the benches, the consequence is that hardly a dog, old stagers excepted, perhaps, shows himself to advantage, and there have been several instances where good dogs have been quite overlooked, *i. e.*, not even taken off the bench.

The St. Bernard Club held a show confined entirely to that breed, and it was certainly a success, as far as entries and quality were concerned, whether the gate money was over good is doubtful, as the *locale* chosen, although in one of the most fashionable quarters of London, was too far from the "Hurly Burly." One of the pleasing events in connection with the show was the presentation of a £140 piano to the club's honorary secretary, Mr. Herbert G. Sweet, who has given much time and attention to the interests of the club and who is deservedly popular. Anent St. Bernards, Mr. Sydney W. Smith, who paid £350 for a pup, Baron Cardiff, which won everything at the Jubilee show, the only time exhibited, lost his new purchase from distemper. The well-known champion Valentine and champion Bayard have also gone the way of all dog flesh.

The next Kennel Club show will be held in February, and much to every exhibitor's satisfaction the *venue* will be the Agricultural Hall, a building centrally located and much easier of access than the Crystal Palace.

Preparations are now being made to insure the success of the great terrier show at the Royal Aquarium in March, and a large general show is to be held during the same month at the People's Palace in the East End of London. Two of the judges have already been appointed, Mr. Krehl and Mr. James W. Berrie. MORIO.

THE WORCESTER FUR COMPANY.

WORCESTER, Mass., Feb. 3.—*Editor Forest and Stream:* While the second annual hunt of this ancient organization was not equal to that of a year ago it was by no means a failure, and the banquet at the Bay State House in the evening was a most decided success. The weather on the day previous was quite mild, and the guests from a distance began to arrive with their dogs early in the afternoon. In the evening the party gathered at Lisha's, and soon after 7 o'clock the store was packed "like sardines in a box." Everybody was happy, and the general remark was "the cold snap has broken, only give us another as good as to-day and we will be satisfied." It certainly promised to be even bettter, and no one expected to get up next morning and find the thermometer dangling around zero, but there it was and we must make the best of it, for it was too late to think of postponement. The morning had one redeeming feature for a fox hunt, it was breathlessly still, and on going out into the frosty air one could hardly realize at first the piercing cold.

Seven o'clock was the time set for the meet at Heywood Farm, and soon after six the road thither was lined with sleighs filled with jolly hunters and their restless hounds. The party was about one-third larger than that of a year ago, and although there was no actual count I think it safe to say there were fully seventy-five men and nearly, or quite, fifty dogs. The arrangements were so well perfected that very little time was taken in distributing the party, and the reporters who had driven out to "write up the meet" had scarcely time to get out their pencils when they found themselves standing alone by the roadside.

After the first hour it became apparent that the hunt could be little else than a wallowing match. The snow was about 18in. deep and very cold and dry; besides it was about a week old and consequently the fox tracks were very numerous and of all ages. The rest of the story is quickly told. So far as known some five or six foxes were started, two were burrowed, one killed, and another wounded. There was none of that intense excitement which attended last year's chase, there could be none; it was simply impossible for the dogs to drive a fox at a lively rate of speed. The party, however, were good natured and happy. The day was bright and sunny and as all were warmly clad there was very little suffering from the cold weather.

Mr. Albert L. Shelden, of East Thompson, Conn., was the lucky man who killed the only fox captured. He is an old-time fox hunter and was the guest of John R. Thayer, Esq. By three in the afternoon a good many of both men and dogs had had enough and began to assemble at the place of meeting, where an hour was pleasantly passed in talking over the events of the day, after which they took to their sleighs and drove to the city to enjoy a social evening at the banquet.

The first annual dinner of the Fur Company was regarded as an experiment, and some of the members had grave fears for the success of this part of the entertainment. The committee had ordered fifty covers laid, and when the party had filed into the private banquet hall it was found that fifty-two were present. The extra two were quickly provided for and the hungry sportsmen proceeded to enjoy the most excellent dinner, and probably there never was a party blessed with better appetites. After the cloth was removed and cigars lighted, President Kinney rapped to order and opened the post-prandial exercises. His remarks were in a very happy vein, describing the hunt as a most successful affair, "for," said he, "fifty men going out and killing one fox is just equal to one man's going hunting fifty times to kill one fox, and that, I believe, is about the average luck of a fox hunter."

In presenting the first speaker, ex-Alderman Thayer, President Kinney remarked that this gentleman had probably shot at and wounded more foxes than any man in the Fur Company. Mr. Thayer was in his happiest mood, his speech abounding in humorous rejoinders to Mr. Kinney's remarks, and giving an exhaustive history of the Fur Company, which he said was a credit to the city, being composed of as representative a body of intellectual, honest, law-abiding and truthful men as could be found anywhere. He was followed by E. S. Knowles, Dr. S. P. Westbrook, of East Douglas; Mr. Bill, of Paxton; Uncle Nathan Harrington, Jerome Marble and others, the speaking lasting till 11 o'clock. Too much cannot be said in praise of the banquet, and the faultless manner in which it was served by Douglass & Brown of the Bay State House.

E. SPRAGUE KNOWLES.

NIGHTS WITH THE COONS.

II.—IN A CONNECTICUT SWAMP.

THOSE who have never participated in a coon hunt have missed a phase of hunting that for keen enjoyment it is hard to excel.

The requirements for a successful hunt are a good dog, a jovial crowd, a lantern, an axe, a gun and plenty of coons. For the benefit of those who never went I give my experience on a recent hunt in southern Connecticut. Our party consisted of four hunters and a dog. Perhaps, as the dog was the prime factor in the hunt, I should have said one dog and four hunters. Our start was made at seven o'clock in the evening on a warm cloudy night in the middle of November. After penetrating the woods for about half a mile the dog was turned loose, and we sat down about a fire to await developments. Be the season ever so warm, who ever saw the time that a fire did not add to the cheerfulness of a night in the woods. We had just comfortably settled down for a smoke when the stillness was broken by the baying of the dog. In a moment all was excitement about the fire, and all were listening for the dog to "bark up." After a run of a few minutes, his baying changed to a continuous barking, and we all knew that our coon was treed. Then there was a grand stampede for the dog. By those who have never tried to run through a swamp on a dark night by the light of one feeble lantern this will not be appreciated, but many of my readers have been there and know how it is themselves. First you are knee deep in mud and water; then you will bark your shins on a log. Next a grape vine will take you under the chin and you will sit down suddenly to rest. After floundering through the swamp for a quarter of a mile we came to the dog barking at the base of a large white oak. By building a fire at the foot of the tree we succeeded in getting light enough to reveal two dark objects in the top. The gun was now brought into use, and after firing a couple of charges at one of them, it came down, struck the ground, and proved to be a good-sized coon. Although badly wounded it had life enough left to give the dog quite a fight.

After dispatching the first coon, our attention was called to number two. It required three charges to dislodge the game, for shooting in the dark is rather uncertain work, and a coon requires more killing than a cat ever thought of.

After bagging these our dog was again sent out, and another fire built, we all sat down to listen for his cry. This time we had a longer wait, but were finally rewarded by hearing our dog on track again. This coon had no notion of going up a tree to be shot, and so he took to the water. But it was of no use, for old Major was too good a coon dog to be fooled that way, and he soon had him out of the pond and up a tree, from which we dislodged him with a charge of shot.

Our party thought that three coons were all they wanted to carry, so we started for home, much to the apparent disgust of the dog. He followed until nearly home, and then disappeared. After a light lunch we went to bed for a good sound sleep, for we were all about tired out. After a short night's rest we were called to an early breakfast. Before eating I stepped out the door to get a little exercise, when I heard the dog barking in the swamp about a mile from the house. Saying nothing to the rest of the party, I secured my gun and started for the dog. On reaching the swamp I was rewarded by finding two coons on one tree, which I killed with my right and left barrel respectively. This made five coons for our night's hunt—a total weight of 70lbs. The largest, weighing 19lbs., was the largest killed this year in this section. All who like to hunt and have never been cooning, I advise to try it at the earliest opportunity. C. A. L.

WINTHROP, Conn., Nov. 21, 1887.

DEATH FROM DISTEMPER.—The Pittsburgh Kennels have been unfortunate in losing by death seven puppies that they intended to win with in the Derby this year. Three of them were pointers and four setters. They have also lost Waterford, winner of third at the Eastern Field Trials Derby last year. All died from distemper.

HIGH PRICE FOR A COLLIE.—At the recent Liverpool, Eng., dog show, the collie dog Caractacus, aged 10 months, was entered for sale at £100. He was claimed at the price by several fanciers, and to decide the question he was put up at auction, and sold to Mr. A. H. Megson at the long price of £350 ($1,750.)

EASTERN FIELD TRIALS CLUB.—There will be a meeting of the Board of Governors of the Eastern Field Trials Club at Madison Square Garden on Wednesday, Feb. 22, at 8:30 P. M. A full attendance is requested.

TROY DOG SHOW.—The Rensselaer Kennel Club of Troy, N. Y., intend holding a dog show in that city March 20, 21 and 22. The address of the secretary is A. M. Ide, Troy, N. Y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Nip T. and Tuck T. By Ernest C. Tarr, Lynn, Mass., for white, black and tan beagle bitches, whelped Jan. 4, 1888, by Kino (A.K.R. 5037) out of Lady J. (Flute Ringwood—Vine).

Nixie. By Ernest Bellatty, Lynn, Mass., for black, white and tan beagle dog, whelped Jan. 4, 1888, by Kino (A.K.R. 5037) out of Lady J. (Flute Ringwood—Vine).

Trixie. By David A. Williams, Lynn, Mass., for white, black and tan beagle bitch, whelped Jan. 4, 1888, by Kino (A.K.R. 5037) out of Lady J. (Flute Ringwood—Vine).

Blink Bonny. By McEwen & Gibson, Byron, Ont., for sable collie bitch, whelped Aug. 10, 1886, by Red Gauntlet, E. 15,620 (champion Charlemagne—Hasty) out of Popsie (champion Chieftain—Lassie).

Aggie II. By Samuel S. McCuen, New Orleans, La., for black and white English setter bitch, whelped June 20, 1886, by champion Dick (A.K.R. 2051) out of Lottie (American Dan—Lina).

Leo McC. and May McC. By Samuel S. McCuen, New Orleans, La., for lemon and white English setter dog and black and white bitch, whelped Sept. 20, 1887, by Laverack champion Dick (A.K.R. 2051) out of Zylpha (Count Noble—Sanborn's Nellie).

Teddy. Edward A. Hibbs, Philadelphia, Pa., for red Irish setter dog, whelped July 17, 1887, by Sarsfield (Garryowen—Currer Bell II.) out of Noreen IV. (champion Elcho—champion Noreen).

NAMES CHANGED.

Kruger's Nellie to Lady J. By Ernest C. Tarr, Lynn., Mass., for white, black and tan English beagle bitch, whelped July 15, 1886, by Flute Ringwood (Ringwood—Trinket) out of Vine (Dandy—Freckle).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Floss—Beaufort. S. T. Hammond & Wm. M. Williams's (Springfield, Mass.) pointer bitch Floss (Indicott's Van—Blitzen) to C. H. Mason's champion Beaufort (A.K.R. 694), Feb. 7.

Cute—Duke. L. Gardner's (Mount Vernon, N. Y. (pointer bitch Cute (A.K.R. 2632) to B. H. Whiteley's Duke (Glendale—Spotless), Jan. 27.

Merry—Bendigo. McEwen & Gibson's (Byron, Ont., collie bitch Merry (Scotson—Madge) to Hempstead Farm Co.'s Bendigo (The Squire—Bertha), Dec. 5.

Lady Pluto—Doc. Geo. H. Whitehead's (Trenton, N. J.) cocker spaniel bitch Lady Pluto (champion Obo II.—Blackie III.) to American Cocker Kennels' Doc (A.K.R. 3795), Feb. 3.

Mollie K.—Ino. E. C. Tarr's (Lynn, Mass.) English setter bitch Mollie K. to F. Kellum's Ino (Dash III.—Zou), Dec. 25.

Lilly—Till. Quorndon Kennels' (Washington, D. C.) collie bitch imported Lilly to their imported Till (Glen—Lily), Feb. 1.

Belle Randolph—Naso of Kippen. H. L. Rice's (Quincy, Mass.) pointer bitch Belle Randolph (Duke of Westminster's Sam—Juno III.) to Westminster Kennel Club's Naso of Kippen, Nov. 17.

Sis—Count. W. Bright's (Lexington, Ky.) bull-terrier bitch Sis to Frank F. Dole's champion Count (Marquis—Kit), Feb. 11.

Nell—Baron. D. S. Gamble's (New Haven, Conn.) bull-terrier bitch Nell to Frank F. Dole's Baron (Dutch—Lucy), Feb. 9.

Vixen—Wacouta Nap. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Vixen (A.K.R. 2019) to their champion Wacouta Nap (A.K.R. 5435), Feb. 4.

Lady Clare—Minting. G. & H. B. Cromwell's (New York) mastiff bitch Lady Clare (Beau—Lady Isabel) to E. H. Moore's Minting (Maximilian—Cambrian Princess), Jan. 15.

Bess—Minting. E. H. Moore's (Melrose, Mass.) mastiff bitch Bess (A.K. R. 2977) to his Minting (Maximilian—Cambrian Princess), Feb. 6.

Madge—Ilfred Caution. C. H. Pratt's (Norwood, Mass.) mastiff bitch Madge to E. H. Moore's Ilfred Caution, Feb. 7.

Clytie—Boss. F. H. Osgood's (Springfield, Mass.) mastiff bitch Clytie (Keno, A.K.R. 1766—Onyx, A.K.R. 1769) to J. L. Winchell's Boss (A.K.R. 2218), Jan. 4.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Merry. McEwen & Gibson's (Byron, Ont.) collie bitch Merry (Scotson—Madge), Feb. 4, five (two dogs), by Hempstead Farm Co.'s Bendigo (The Squire—Bertha).

Bonnie Knowe. McEwen & Gibson's (Byron, Ont.) collie bitch Bonnie Knowe (Red Gauntlet—Brenda), Jan. 2, six (two dogs), by Chestnut Hill Kennels' champion Scotilla (champion Dublin Scot—champion Flurry II.)

Belle Randolph. H. L. Rice's (Quincy, Mass.) pointer bitch Belle Randolph (Duke of Westminster's Sam—Juno III.): Jan. 19, seven (five dogs), by Westminster Kennel Club's Naso of Kippen.

Lady J. Ernest C. Tarr's (Lynn, Mass.) beagle bitch Lady J. (Flute Ringwood—Vine), Jan. 4, five (one dog), by A. C. Krueger's Kino (A.K.R. 5037).

Zylpha. Samuel S. McCuen's (New Orleans, La.) English setter bitch Zylpha (Count Noble—Sanborn's Nellie), Sept. 30, seven (one dog), by his Laverack champion Dick (A.K.R. 2051).

Ilford Comedy. Wacouta Kennels' mastiff bitch Ilford Comedy (Orlando, E. 12,823—Idalia), Jan. 31, ten (four dogs), by R. Cook's Ilford Chancellor (Ilford Caution—Brenda Secunda).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Frankie. Fawn mastiff bitch, whelped July 20, 1887, by Ilford Caution out of Bess, by E. H. Moore, Melrose, Mass., to Geo. W. Freeman, St. Paul, Minn.

Lady Prince. Orange and white St. Bernard bitch, whelped July 14, 1887, by Merchant Prince out of Sequa, by E. H. Moore, Melrose, Mass., to F. A. Shaw, Boston, Mass.

Apollo—Miranda whelp. Orange and white St. Bernard bitch, whelped Sept. 9, 1887, by Apollo out of Miranda, by E. H. Moore, Melrose, Mass., to H. S. Pitkin, Hartford, Conn.

Sir Edward. Fawn mastiff dog, whelped Aug. 23, 1887, by Ilford Caution out of Countess, by E. H. Moore, Melrose, Mass., to A. N. Rea, New York.

Wacouta Warrior. Fawn mastiff dog, whelped Sept. 26, 1887 (A.K.R. 5645), by Wacouta Kennels, St. Paul, Minn., to J. G. Pyle, same place.

Mollie K. Black, white and ticked English setter bitch, whelped July 15, 1886, by Ernest C. Tarr, Lynn, Mass., to John Hilton, New Bedford, Mass.

Blink Bonny. Sable collie bitch, whelped Aug. 10, 1886, by Red Gauntlet out of Popsie, by McEwen & Gibson, Byron, Ont., to J. D. Carpenter, Bozeman, Montana.

Trixie. White, black and tan beagle bitch, whelped Jan. 4, 1888, by Kino out of Lady J., by Ernest C. Tarr, Lynn, Mass., to David A. Williams, same place.

Nixie. Black, white and tan beagle dog, whelped Jan. 4, 1888, by Kino out of Lady J., by Ernest C. Tarr, Lynn, Mass., to Ernest Bellatty, same place.

Rob. White, black and tan beagle dog, whelped April 25, 1884, by Prince out of Spider, by W. E. Deane, Somerset, Mass., to Frank D. Hallett, Winsted, Conn.

Little Duchess. Black, white and tan beagle bitch, whelped July 8, 1882 by Racer (A.K.R. 450) out of Dally, by W. E. Deane, Somerset, Mass., to Frank D. Hallett, Winsted, Conn.

Scotilla—Bonnie Knowe whelp. Sable collie dog, whelped Jan. 2, 1888, by McEwen & Gibson, Byron, Ont., to J. D. Shotwell, Rahway, N. J.

Dublin Scot—Madge whelp. Black and tan collie bitch, whelped Aug. 4, 1887, by McEwen & Gibson, Byron, Ont., to W. S. Powers, St. Louis, Mo.

Merchant Prince—Bernie V, whelps. Orange and white St. Bernards, whelped July 19, 1887, by E. H. Moore, Melrose, Mass., a bitch each to Robert Potts, Providence, R. I.; Coughuria Medicine Co., Eau Claire, Wis., and J. J. Conner, Philadelphia, Pa.

DEATHS.

Brush. Red Irish setter dog, whelped April 20, 1879 (Elcho—Rose), owned by J. A. J. Sprague, Chicago, Ill., Jan. 30, killed by cars.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

A. E., Syracuse.—Ans. Give 5 drops Fowler's solution of arsenic morning and evening in the food.

H. W., New York.—I have a setter pup about 4mos. old, that has had very severe fits the past two or three days. What can be the cause and remedy? In years gone by have had pups trumbled same way but they have out-grown them. Ans. Look for worms. Give 30grs. of powdered areca nut made into a large pill with lard, having first purgedwith castor oil.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

SHOOT AT FRANKLIN, OHIO.

FRANKLIN, O., Feb. 8.—I take pleasure in inclosing to you the result and score of the first big live and clay bird shoot held in this vicinity. To-morrow night we organize a shooting club of about 60 members. We intend to give another shoot in May open to all comers, and from this on we expect to have a weekly club shoot open to all.

The shooting opened on Tuesday, the 7th, and was wound up to-day. All American clay birds were thrown from 5 new model American traps, 18yds. rise. Most all shooters using L. and R. and Hazard powder, and the L. C. Smith hammerless guns. Match given under the supervision of the local champion, Wm. T. Glassford. The first day's record stood:

First match, 10 single birds:

Goldrick	9	Girton	7
Cider	7	Strobel	8
Glassford	5	Jessup	9
Winston	8	Soth	7
Scott	8	Emerson	5
Clare	7	Webb	5

Second match, 10 clay-birds:

Goldrick	7	Girton	6
Cider	8	Glassford	9
Winston	8	Blackford	8
Jessup	6	Strobel	6
Webb	6	Holiday	5
Scott	7		

Third match, 10 single clay-birds:

Winston	6	Girton	6
Goldrick	9	Blackford	7
Jessup	6	Thomas	8
Scott	6	Claire	8
Cider	9	Strobel	7
Glassford	9	Soth	5

Fourth match, 10 single clay-birds:

Goldrick	8	Winston	10
Strobel	8	Soth	7
Jessup	8	Ralston	8
Scott	5	Claire	5
Glassford	10	Emerson	7
Roots	8	Blackford	9
Cider	10	Holiday	7
Girton	7	Hamilton	5
Thomas	8	Heikes	8

Fifth match, 10 single clay birds:

Cider	7	Stroble	9
Ralston	10	Claire	5
Jessup	7	Blackford	7
Goldrick	7	Taylor	10
Glassford	8	Emerson	5
Winston	8	Heikes	8
Roots	8	Holiday	7
Girton	7	Hamilton	8
Scott	6		

Sixth match, 5 live birds, $5 entry. Prizes, one-half, 30 and 20 per cent.; 21yds. rise:

Heikes	5	Taylor	4
Girton	4	Goldrick	4
Stroble	3	Thomas	3
Roots	3	Jessup	3
Glassford	3	Cider	3
Croll	4	Claire	3
Winston	4	Webb	4

Heikes first money; second shot off in next match.

Seventh match, 7 live birds, $5 entry. Prizes, one-half, 20 and 30 per cent.:

Winston	5	Roots	5
Goldrick	5	Girton	6
Thomas	6	Jessup	6
Taylor	5	Stroble	7
Heikes	7	Cider	7
Blackford	6	Croll	7
Glassford	6	Soth	5
Claire	6	Webb	6

First divided.

Eighth match, 10 clay birds, single rise:

Heikes	7	Glassford	8
Murphy	9	Jessup	10
Winston	9	Girton	10
Goldrick	9	Soth	8
Taylor	9	Claire	5

The tie for the second prize was shot off between

Winston.....1111111011111111—14 Taylor.....1111101111010—12

Goldrick.....1111111101111—13

Second Day.—First match, 10 clay birds:

Heikes	9	Cider	9
Winston	9	Henry	5
Taylor	8	Hamilton	5
Girton	8	Stroble	7
Glassford	9	Jessup	7

Second match, 10 clay birds:

Heikes	7	Girton	6
Blackford	5	Taylor	9
Cider	7	Hamilton	7
Winston	8	Webb	6
Jessup	7	Weidner	3
Glassford	7	Stroble	6

Third match, 10 clay birds:

Taylor	8	Girton	7
Cider	9	Stroble	9
Jessup	7	Ralston	8
Heikes	8	Hamilton	6
Winston	9	Stewart	6
Glassford	9	Pzor	10

Pzor first, Cider second, Taylor third.

Fourth match, 3 pair clay-birds:

Heikes	10 00	10—2	Girton 11 10 10—4
Winston	10 11	11—5	Pzor 11 00 11—4
Murphy	10 10	10—4	Blackford 11 11 01—5
Jessup	00 10	11—8	Ralston 11 11 01—5
Glassford	11 10	01—4	Webb 00 10 11—3
Taylor	11 10	11—5	

Fifth match, 10 clay birds:

Heikes	8	Blackford	8
Taylor	9	Glassford	9
Rallston	9	Pzor	7
Girton	10	Cider	7
Winston	3	Stroble	6

Sixth match, 10 clay birds:

Heikes	10	Glassford	7
Cider	7	Rallston	9
Jessup	7	Winston	8
Taylor	10	Stroble	9
Croll	6	Pzor	8
Girton	4		

Seventh match, 10 clay birds:

Heikes	6	Jessup	7
Cider	7	Pzor	7
Glassford	6	Hamilton	6
Webb	4	Girton	8
Taylor	10	Stroble	8

Eighth match, 3 pair live birds. tame pigeons, 21yds. rise:

Heikes	00 11	00—2	Girton 11 10 10—4
Winston	01 00	10—2	Cider 00 00 11—2
Glassford	00 01	01—2	Stroble 00 10 01—2
Jessup	10 10	00—2	Pzor 11 10 10—4
Webb	00 00	01—1	Weidner 00 00 00—0

WELLINGTON, Feb. 11.—The snow storm to-day did not prevent a large attendance at the weekly shoot of the Wellington Club, and some good scores were made considering the weather conditions. In the merchandise match Beaudry was first with 17, Bill, Melcher, Swift, Bond, Baxter and Hanson second with 16; Chase, Edwards and Snow third with 15; Phelps, Grimes and Forrest fourth with 14; Bert fifth with 13, Brown, C. B. Sanborn and McCoy sixth with 12; Bradstreet, Schaefer, Scott, Moore and Nichols seventh with 11, and Grew and Hart eighth with 10 each. The club will hold an all-day tournament next Tuesday, beginning at 10 A. M. The Climax diamond badge, now held by J. T. Hall, will be contested for.

TRAP AT CINCINNATI.

WHILE this city and vicinity boast a number of trap shots who rank among the best in the land, as elsewhere the number of good double-bird shots is limited to the few. As a natural consequence the double-bird match, on the 7th inst, on the grounds of the Price's Hill Gun Club between Ed Taylor and W. E. Limberg ("Wick") excited more than a little interest among the local shooters. The race was one which called upon everything each man was capable of doing from the start to the finish, and even as the match drew to a close it was still a question as to who would be the victor.

Taylor won, but it was by a single bird, and though this was sufficient, it will be seen that he could not claim his position till the match was completed. Wick, the loser, claims to be the amateur champion double clay-bird shot of Ohio, and claims his place even though he suffered defeat, and it is possible the two gentlemen will soon engage in another similar match, as Wick claims his successful opponent Taylor to be a resident of Buffalo, N. Y. The weather was unfavorable, a northwest wind blowing, which made the splendid scores a little smaller than they would have been under different circumstances. Up to the sixtieth pair Wick led, but at that point he became slightly rattled, owing, it is supposed, to his knowledge of Taylor's previous record, he as president of the Audubon Club of Buffalo, N. Y., for a number of years having defeated the best shots there and in Canada. Judging the match on merit, the gentlemen are about equal, and in the event of another it will certainly be a difficult thing to name the winner. At present each is confident of a slight superiority over the other, but the occasion itself is the only thing that can decide.

Wick, who has for the last year been acknowledged the best double-bird shot about here, acknowledges his defeat liberally, but his backers are willing to match him against Joe H. for $100 to $75 that he can beat that gentlemen any match he may name, double birds of course preferred. Taylor in this match used a 10-gauge L. C. Smith hammerless, and Wick a 10-gauge 13lb. Parkert both used the same loaded cartridge, 4drs. Laflin & Rand powder and 1¼oz. No. 8 chilled shot. The match was at 50 American clay birds, each man 16yds. rise, for $25 a side, National Gun Association rules governing. The score:

Wick.	Taylor.
00 11 10 11 00 11 00 00 11 11—12	11 10 11 11 10 11 10 01 10 00—18
11 11 00 11 11 11 10 11 11 01—16	10 11 10 10 11 10 11 10 01 11—14
10 11 11 10 11 11 11 11 11 11—18	11 11 10 11 11 10 11 10 11 11—17
10 10 10 11 10 11 11 10 11 11—15	00 11 11 01 11 10 11 01 11 10—14
10 00 10 11 11 10 10 10 11 10—12—73	00 11 11 11 11 11 10 11 10 11—16—74

Match 45 minutes. Straight runs: Wick, 6 pair; Taylor 5. Judges: For Wick, J. Winston, of Covington, Ky.; for Taylor, Ed Shott, of Cincinnati. Scorer, Chas. F. Weil, Detroit, Mich. Trapper, Kelley.

Two days after the Columbia Gun Club, whose grounds are situated about six miles east of the city proper, gave an all-day's sweepstake shoot at live birds, which, considering the disagreeably cold weather, was quite largely attended, between three and four hundred spectators presenting themselves, and several matches having as high as twenty entries. The birds used proved an excellent lot, "duffers" being in the minority and straight-aways and right quarterers having the call. Besides the local shooters that participated there were present Ralla Heikes, of Dayton, O., who is matched to shoot a 100 live bird match for $250 a side at Dayton, March 3; Sobel, of Hamilton; Boleman, of Cleves; Girton, of Franklin, and Webb, of Dayton, who is matched for $50 a side, to meet Wick, of this city, in a match at 50 pair at Dayton the same day of the Heikes—Bandle match. The shooting was under Hurlingham rules, barring weight and gauge of guns; birds sprung from ground traps, 30yds. rise, with 80yds. boundary.

Match No. 1, 5 live birds:

A Bandle	11112—5	W Bing	00101—2
R Heikes	12222—5	Wick	12211—5
F Ferris	00261—2	Webb	00201—2
Girton	10010—2	Strobel	12210—4
C C Mason	10110—3	Arnold	00001—1
E Shott	02110—3	Richman	10021—3
Geo Murphy	01100—2	F C Cole	00111—3

Ties on 5 divided. Mason and Shott after killing 4 straight in the shoot-off divided third.

Match No. 2, same conditions, 5 live birds:

Bandle	21221—5	Jordan	11120—4
Heikes	11122—5	Strobel	00111—3
Shott	10112—4	Cole	21101—4
Johnson	20200—2	Bing	11010—3
Wick	21222—5	Webb	01110—3
Girton	11011—4	Murphy	01111—4
Mason	11111—5	Richard	01121—4

Bandle and Wick in the shoot-off divided first, Girton won second and Strobel third.

Match No, 3, same conditions:

Bandle	21211—5	Bing	01110—3
Heikes	12111—5	Richmond	01011—3
Wick	11111—5	Strobel	00202—2
Jordan	21011—4	Webb	10120—3
Girton	01111—4	Shott	12111—5
Johnson	10111—4	Mason	11011—4
Cole	01110—3	Murphy	11011—4

First divided; Mason in the shoot off won second and Cole third.

Match No. 4, same conditions:

Bandle	11111—5	Johnson	22221—4
Heikes	02221—4	Murphy	10201—3
Wick	22121—5	Richard	21120—4
Shott	10102—3	Chubb	20200—2
Schuzman	01110—3	C W McPhee	20111—4
E Taylor	12102—4	Strobel	11112—5
Bing	11120—4	Webb	02220—3
Mason	10110—3	Arnold	00010—1
Girton	11111—5	Taylor (No. 2)	00100—1
Cole	02011—3	T Goldrick	01221—4
Jordan	11021—4		

Ties divided.

Match No. 5, conditions same, 5 live birds:

Bandle	12012—4	E Taylor	01111—4
Heikes	01111—4	Schatzman	01201—3
Wick	00111—3	Girton	02111—4
Cole	11111—5	Strobel	01211—4
Mason	11001—4	Honing	00001—1
Coleman	06001—2	Murphy	10221—4
Shott	11200—3	Webb	10112—4
Bing	00212—3	McPhee	12111—5
Henry	12101—4	Richard	11101—4

Ties divided.

C. G. NEWSBOY.

DOMINION TRAP NEWS.

A NUMBER of Peoria blackbird sweepstake contests were shot at Mr. Wm. McDowall's grounds, Toronto, on Saturday afternoon, Feb. 4. The weather was fine with the exception of a little rain, and the shooting all round was very good. The following were the scores of the sweepstakes that were shot. First sweepstake shooting, 20 birds each, 18yds. rise:

McClure	19	Alexander	16
Felstead	19	Clarke	15
Wakefield	19	Rice	12
Humphry	17	McDowall	12
Charles	16		

Tie on 19 divided, 17 took the second, 16 the third and 15 the fourth.

Second sweepstake, at 10 birds; straight shooting:

Hinton	9	Alexander	9
McDowall	9	Charles	8
Felstead	9	Clayton	8
Clarke	9	Humphry	8
McClure	9	Bayles	7
Wakefield	9		

The nines divided the first, second, third and fourth prizes.

Third sweepstake, at six birds:

Wakefield	6	McDowall	5
McClure	6	Felstead	5
Clarke	6	Wright	5

The sixes divided all the prizes.

The Toronto Gun Club annual shoot did not take place on the 4th at Woodbine as intended. Sparrows were to have been the target, but Constable Whiteside, the officer of the Humane Society, was on the spot, and took down all the names of the intending shooters, who then becoming alarmed refused to go on with the competition.

The Goderich Gun Club has elected the following officers: President, E. R. Watson; Vice-President, J. Nesbit; Secretary-Treasurer, R. P. Wilkinson; Executive Committee, F. J. T. Naftel, W. Ellerd and S. J. Rud, with the officers; Inspector, Wm. Rutson. The Goderich Club is ready to meet any gun club in the country at flying inanimate targets, not live birds.

The members of the St. Hubert Gun Club, of Ottawa, are enthusiastic in their endeavors to popularize the sport of the gun. Their latest effort has been a remarkably successful one, and the way the arrangements were made might serve as a model to some

purpose. The conditions were that 60 birds were to be shot at on three successive Saturdays, 20 birds each day, the use of both barrels allowed, birds hit with the second barrel to count half. Last Saturday, Feb. 4, was the final shoot. Out of a possible 160 birds, 139 were broken: R. G. Dalton 15, J. C. Tache 9½, P. Thompson 17½, J. Delaurier 19, Geo. White 17, A. W. Throop 15, Ed. White 17½, S. White 18½.

At the annual meeting of the St. Hubert Gun Club the following officers were elected: President, N. Thompson; First Vice, E. E. Lemieux; Second Vice, Geo. White; Treasurer, J. Delaurier; Secretary, L. N. Fortier; Field Captain, A. Throop; Curator, Ed. White; Managing Committee, R. W. Stevens, Alexander Jacques, J. C. Tache, L. A. Derosier and R. G. Dalton. Arrangements for the annual match and tournament and fixing the date was placed in the hands of the managing committee, who are to communicate with the Montreal Club, so as not to have dates clash.

On the 8th a team from the Guelph Gun Club visited Toronto and shot a friendly match with a team from the Toronto Gun Club at the West Toronto grounds. The match was 10 live pigeons each, 26yds. rise. The score was as follows:

Toronto.		Guelph.	
Geo Briggs	1000111101— 6	Edwards	1000011000— 3
W Bugg	0100011111— 6	Sleeman	1111001111— 8
F Martin	0111100100— 5	Shattuck	1110111111— 8
A Purse	0111110111— 8	Walker	1011001100— 5
W Pearson	1100101100— 5	Cull	0110011111— 7
J Warden	0111111101— 8	Nayper	1111011111— 9
J Townsend	1100100111— 6	Thompson	1111100101— 7
D Blac	1111011100— 7	Johnson	0110010011— 5
G Pearsall	1101111010— 7	Holliday	0010110110— 5
D Black	1111111111—10—68	Quinn	0111100110— 6—63

In the evening the members of the Toronto Gun Club held their annual dinner at the club rooms, King street east, when about 100 sat down to a plentifully supplied tables. Mr. George Pearsall, president of the Toronto Gun Club, occupied the chair, and among those present were Aldermen Maughan and Smith, of Guelph G. C.; Judge Chadwick, of Guelph; S. W. Downey, ex-president of the Toronto G. C.; Robt. Wilson, ex-president of the Toronto G.C.; J. Hallowell, of Guelph; ex-Alderman P. G. Close and J. Dill, of Toronto; J. R. Humphreys, president of the Owl G. C., and other gentlemen prominent for their love of the trigger.

The regular monthly meeting of the West Toronto Gun Club was held on Feb. 8. There was a good attendance of members. The annual meeting of the club takes place next month, after which the club will be reorganized and put on a more solid basis.

THE LONG BRANCH SHOOT.

THE present week is bringing remarkably fine weather for midwinter outdoor sport at the trap and the Daly Tournament at Long Branch has succeeded in bringing a score of good shooters to the score. On Monday last the handicappers met, closed the entry list with 23 names on it and proceeded to assign the order of shooting by lot and the handicap distance according to the shooter's previous record. The list stood as follows:

Yds.		Yds.	
27	Geo Cubberly, Long Branch.	28	L B Campbell, Little Silver.
25	Annie Oakley, New York.	28	J R Malone, Baltimore, Md.
28	Wm Lever, Newark.	31	F Erb, Jr, Lafayette, Ind.
27	W D Campbell, Long Branch.	28	H Bulzer, Flatbush, L I.
28	E D Miller, New York.	31	WmGraham, Champ. of Eng.
28	Jas Thompson, Yonkers.	25	J Van Dyke, Long Branch.
26	Wm C Price, Long Branch.	28	H S Seigler, New York.
31	H C White, Red Bank.	31	J R Stice, Jacksonville, Ill.
28	"Capt Jones," New York.	28	J A Williar, Baltimore, Md.
28	Frank Glass, Pine Bank.	25	Phillip Daly, jr, Long Branch.
29	C S Wertsner, Baltimore.	31	C W Budd, DesMoines, Iowa.
23	Frank Kleintz, Philadelphia.		

Feb. 14.—The Phil Daly pigeon shooting handicap at Long Branch began to-day on the grounds adjoining the club house. The birds, as a whole, were good, for although slow to take wing, they were very fast and strong when they did get up. The shooting was nearly entirely confined to professionals. The prizes are three purses, of $1,000, $300 and $200, to the winner, second and third. The entrance was $75 each, to shoot at 50 birds, at the rises fixed by the handicappers, Messrs. Fred Quimby, Henry White, Frank Heyer and Japhia Van Dyke.

The shooting began at noon, and, as a whole, proved very good, for when "time" was called at 5.25 P. M., twenty rounds having been shot, six of the twenty-three shooters, viz., Cubberly, W. Zeigler, Wertsner, Graham, Van Dyke and Stice, had clean scores of 20 killed. Among the shooters is Miss Annie Oakley, who attracted considerable attention, her score being 16 killed. Of the men Graham and Stice's shooting was about the best. The number of birds killed by each is as follows:

Cubberly	20	L B Campbell	16
Miss Oakley	16	J R Malone	16
Wm Lever	18	F Erb, Jr	17
W D Campbell	16	H Balzer	19
E D Miller	17	W C Graha.m	20
J Thompson	15	J Van Dyke	20
W C Price	18	H Zeigler	18
H C White	15	J R Stice	20
Capt Jones	17	J A Williar	15
W Zeigler	20	P Daly, Jr	13
C W Wertsner	20	C W Budd	18
F Kleintz	18		

Referee, Al Heritage; scorer, Andrew Coleman. Time of shoot, 5 hours and 25 minutes.

CLEVELAND, Feb. 9.—Twenty-five Peoria blackbirds, thrown from five traps at 18yds. rise, were the conditions Captain Wheal selected for the regular badge shoot of the Cleveland Gun Club to-day. They are the conditions which will govern the approaching East End-Cleveland match, and they were used by way of practice. It was colder at the Cleveland club grounds than any previous club day this winter, but fourteen Clevelanders were there for the shoot and five visitors, four of them East End members, turned out to take a hand in the sport. C. A. Calhoon broke 21 birds out of 25 and won the first badge of the club. The B class shooting was of a high order and abounded in fine scores. W. A. "Bassett" and W. Tamblyn each broke 19 birds and tied for the B class badge. In the shoot-off Tamblyn won, breaking 3 out of 5, while "Bassett" received but 2. Aside from Calhoon's shooting W. Tamblyn's score was the best of the day. His new "L. C. Smith" was a terror to the blackbirds. Secretary Kilby, of the East End Club, was among the visiting shooters. He got a good aim on 6 of his 25 birds. F. Chamberlin, the young son of F. L. Chamberlin, who has often given proof of his skill with the trigger at local club shoots, overtopped all the visitors' scores. The individual scores of the shoot follows:

A Class.

C A Calhoon	1101101111110111111110111—21

MIDDLESEX GUN CLUB.—Plainfield, N. J., Feb. 13.—At the annual meeting of the Board of Directors of the Middlesex Gun Club the following named were elected to serve the ensuing year: President, E. H. Robinson; Vice-President, S. G. Smith; Secretary, G. W. Watson; Recording Secretary, W. F. Force; Treasurer, Hon. G. P. Suydam. The Board consists of the following: E. H. Robinson, S. G. Smith, G. W. Watson, W. F. Force, G. P. Suydam, W. Reed, Quimby, Thos. H. Keller, J. H. Force, Richard Stevens, A. W. Worden, Andrew Futhkins, John D. Voorhees, M. W. Mulford. It was resolved to hold a grand shooting tournament on the club's grounds at Dunellen Feb. 22. A classified sweepstake match at 25 birds each, $32.50 entrance fee (which includes birds) will be a feature of the day. The club guarantees a $800 purse. It is expected that some of the "big guns" who will contest for the big prizes at Long Branch this week will be present.

NEWARK, N. J.—The West Newark Gun Club shot its semi-monthly match on Monday with the following result at 25 buts, 18yds. rise: Carl Von Lengerke, 23; G. Deisler, 21; F. Hilfers, 20; F. Compton, 21; J. Adelman, 18; M. Adelman, 18; B. Ulrich, 20; M. Ulbricht, 9.

CARTERET GUN CLUB.—The fourth shoot for the Carteret Gun Club's $150 winter cup was the fixture on Feb. 8 at the Bergen Point grounds. The conditions and results of the day's shooting are as follows:

Bergen Point, N. J., Feb. 8.—Fourh shoot for the Carteret Gun Club's winter cup; entrance, $5 each; duplicate entries allowed; to shoot at 10 birds; handicap rise and boundaries; 2 misses out; ties miss and out; 10 entries required and the cup to be won twice before becoming personal property:

First Chance.

"Kemp"	1111110111— 9	"Gladwin"	1111011110 — 7
"Williams"	1111111111—10	Simpkins	1011110 — 5
W H Sands	0110 — 2		

Second Chance.

"Kemp"	0110 — 2	"Gladwin"	1101110 — 5
"Williams"	0111110 — 5	Simpkins	111010 — 4
W H Sands	1111110111— 9		

The first shoot for the cup took place on Jan. 18 and was won by C. Floyd-Jones on his first score, with 10 straight. The second contest occurred on Jan. 25 and was won by W. H. Sands on his second score with 10 straight. Upon this occasion Sands tied with "Langton," and in the shoot off the former killed 7 straight. The third event came off on Feb. 1, "Williams" winning on his second score, tieing Sands on 10 birds straight, and in the shoot-off killed 4 straight, Sands missing his fourth bird. "Williams", as a result of to-day's shooting, has two chances for the cup—one for his first score and one on his second. Simpkins shot for himself, for "Williams" and for "Gladwin." There is some dispute whether the substitution can hold good, and a protest will be lodged with the club board of managers.

BROOKLYN, Feb. 9.—The second regular monthly shoot of the Unknown Gun Club took place to-day at Dexter's Park, Jamaica plank road. There was a large attendance of prominent Long Island wing shots and their friends. Some good shooting was done although the scores do not compare with some other gun clubs on account of the Unknown allowing but one barrel for the bird and insisting that the gun shall be held below the elbow until the bird is on the wing. Several of the marksmen lost their birds by using the second barrel. Twenty-five members went to the traps to shoot for the club badge and extra prizes. H. Cahill, 22yds., killed all his birds and won the badge, with first money. H. Paulsen 25yds., and C. Plate, 25yds., killed 6 out of 7 and divided second money. C. Plate, 25yds., won the badge and first money in last month's unfinished shoot, killing 6 birds out of 7. John Rathjen, 28yds., took second money:

After tieing on 3 Martin and Harnott divided third.

NEW YORK STATE SHOOT.—Auburn, N. Y., Feb. 7.—The Auburn Gun Club, at a regular meeting recently held, elected the following officers for the ensuing year: G. B. Wright, Jr., Pres. T. R. Garrett, Vice-Pres. S. T. Rathbun, Treas. Chas. E. Kerr, Secty. The club has commenced work in preparation for the State shoot which is to be held here next year. The club promises the best shoot ever held, and will spare neither time nor expense in order to give entire satisfaction to all attending. The several committees having charge of the arrangements are all in good working order, and the affair is rapidly assuming proportions that will astonish the shooters of New York State.—CHARLES E. KERR.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

THE PRESENT TENDENCIES OF CANOE RACING

THE discussion that has for some time past been carried on in our columns makes it evident that some, at least, are not satisfied with the present condition of canoe racing within the A. C. A. The complaints have covered a wide field, and some have been without good foundation, but it is desirable that all should be carefully considered and if necessary the evil be remedied. The great object of the American Canoe Association is to unite canoeists, but scarcely secondary to this is the encouragement of cruising and the development of the cruising canoe to its highest perfection. To this latter end canoe racing has been fostered from the first by the Association, and the value of racing as a means of improvement in rig and model is generally conceded. It is from the racing men as a class that the improvements have come; from Vaux, Gibson, Oliver, Whitlock, Barney, Jones, Tyson, Bailey, Butler, Wackerhagen, Richards, Edgar, and the rest, most of them cruisers as well as racers. These are the men who spend money every year on new and better canoes, whose continued search for faster craft has been the main stimulus under which the builders have improved so greatly within the last few years, whose constant researches and experiments, the unsuccessful as well as the others, have added so much to the store of knowledge now at the disposal of all canoeists. The racing, too, is the feature which most interests outsiders and attracts favorable attention to the Association and to canoeing; while as a special attraction at the meets it is appreciated by all; the dreamiest cruiser would find the camp a very different matter without the race week.

It is not enough that the A. C. A. must permit racing, it must be actively built up and encouraged; but in doing this it is not to be expected that canoeists will escape from the serious difficulties that have attended all forms of sport and competition from the earliest times. The great problem in all racing is to make the sport interesting and popular, to induce men to take part and to work for the prize; and yet at the same time to prevent such a rapid and unhealthy development as will introduce racing machines, lead a few men to give all their time and labor to securing every prize, and shut out the great majority from the benefits that always follow from a general and open competition. Such a fate has befallen rowing, such has been the final result of fifty years of yacht racing in England, and such is to-day the condition of canoe racing there. American canoeists cannot afford to overlook these examples, however secure they may feel to-day, for it is never possible to say with certainty what a season's racing may lead to next year. While changes in the rules are to be discouraged as far as possible, the results of each year's racing should be carefully studied with a view to strengthening weak places as they appear, and to heading off dangerous innovations.

The young Association may well be proud of the rules and system which it has created for the government of its racing, especially when they are compared with the condition of chaos, confusion and disorder which is the chief characteristic of American yachting after an existence of fifty years, a condition which yachtsmen as a body seem very well contented to jog along under. The best test of the rules is the fleet which has grown up under them, and as far as model and dimensions are concerned there is little fault to be found with the fleet as a body, even from a purely cruising standpoint. The list of canoes taking part in the races at the last meet, given in the FOREST AND STREAM of Sept. 1, may be taken as a very fair representative, while of the cruising boats that did not race none were smaller or less powerful than the average racers. There is now in the racing fleet a safe proportion of boats about 15×30 of good depth and full models, and in the cruising fleet the boats are fully as large, and generally well rigged and fitted out for cruising; while the tendency that existed until very recently toward big and tubby canoes with heavy boards and ballast has almost entirely disappeared. The outlook on the whole is satisfactory, especily for the cruisers.

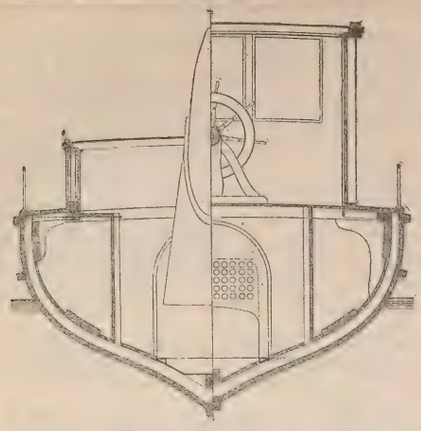
One very curious fact has been brought out of late, something we believe without precedent in yacht racing as well as canoeing, and entirely unforeseen by the framers of the rules. The limits for paddling races were of course for a minimum beam, as the tendency would be to cut down beam and size, but in the rules governing sailing races certain maximum limits of beam, length and depth were laid down, with the confident expectation that they would be built up to, as has always been the case in yachting under similar conditions. The result has been, however, that men have refused to avail themselves of the size freely given by the rule. Where a man is allowed 31½in. beam and 16in. depth for a length of 15ft. he prefers to take but 28in. beam and a proportionately less depth, while receiving no allowance for what he gives up. The limits of Class A are length 16ft., beam 28in., while in Class B the choice is offered of 16×30, 15×31½ or 14×33, these being the leading sizes. It was intended that the two classes should race apart, and this was at first done, but as the rules did not prohibit it, the Class A boats, mostly 15×28, went into the Class B races, and won them to an extent which has since practically thrown the two classes into one. The reason for this is simple, though not at first foreseen; the canoes are mostly sailed with little or no ballast, relying almost entirely on the weight of the man on the weather deck to hold them up, and this weight is proportionately greater in the 28 than in the 33in. boat.

While the general results are by no means unsatisfactory, there are some special features of the racing which demand attention. One of these is the success of the very small canoes, boats of light displacement and little internal accommodation. Taking any set of dimensions allowed by the rule, it is possible, if the incentive exists, to build in compliance with the rules as to beam and depth, and yet to cut the boat away to a mere shell. Whether or no this has yet been done has been freely discussed of late in our columns, and opinions are still divided, but if it is fully proved to be true, it can and should be provided for by additional rules. The question of a non-lowering rig has also been discussed in the same connection. There is no doubt that the boats and rigs alluded to are very fast, but even if it appears that they are undesirable we believe that a modification of the objectionable features would follow the introduction of the "one rig" rule mentioned further on.

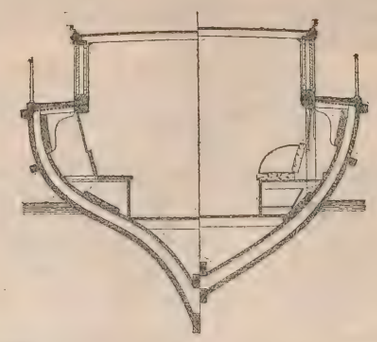
While we believe that as yet no great fault can be found with the dimensions and models of the hulls, there are evident certain developments that are in every way undesirable in the racing, though the evils are small as yet. The greatest existing of these is the size and position of the centerboard. Up to the time when the folding board was introduced, the well of the canoe was kept clear and unobstructed, and every man could sleep in his boat. In some cases the dagger board was used, placed far forward; in some the two-board plan was followed, and in others the single-plate board was placed as far forward as possible, the balance of sail being adjusted to suit. The problem was a very difficult one, but still the canoeist hesitated to give up his room in the boat for the sake of a little better performance in racing. The folding board broke the ice with the plea that it did not cut up the well, that sleeping was still possible, and though it was an undeniable nuisance in the boat, the canoeist was willing to put up with it. The next step was the discovery that the folding board was too slow for racing, so out it came, and in its place a high trunk was fastened, with a plate board. Once admitted to where it never belonged, the best part of the boat, the board and trunk commenced to grow until the canoeist, whether he wished or not, was forced to get out of the boat and stay on deck. This did not matter when sailing, for he sat there anyhow, but he could neither sleep on board, carry a companion in comfort, or even have room for himself when cruising. We know now a canoe where the man, if he sits below, must have the trunk jammed well up against his body, and in one at the meet last year the board was not only in the middle of the well, but it reached far above the top of the coaming, probably 6in., a sharp, rough piece of metal that in the case of a misstep or slip might injure a man very seriously.

Another invention that has thus far been seen in a few canoes, but is likely to be largely used this season, is the sliding seat, by which the canoeist may run a board out to windward and sit on it, completely outside his canoe. Of course he can carry more sail, if he does not capsize; but this sort of sailing is so clearly pernicious that no argument against it is needed. Having given up the well to the centerboard it has occurred to an ingenious canoeist that there is no use for retaining the semblance of a well, and last year several canoes were built with cockpits barely long enough to sit in, while the bulkheads were placed at each end of the cockpit. Of course sleeping or cruising was not possible, but this made no difference, as the owners had other canoes for cruising and built these merely to sail in. This season the matter is apt to be carried to its legitimate conclusion, and we hear of a new racer lately built with a cockpit but 14in. wide, or so small that a man cannot sit in it; while another new racer shortly to be commenced will be completely decked, with only a hole for the feet. Given one or two successful canoes of this kind, and it is not difficult to predict the coming boat, a mahogany log, little sheer, long and narrow, decked completely, a big board amidships, a light standing rig, and the crew perched on the weather end of a transverse plank. This is a pretty sort of cruising canoe, and with its advent we might say farewell to canoe racing. As yet, except the board, the worst of these features have not come into actual use, but some have been tried and others are now threatened; so that it is not a moment too soon to look at the danger.

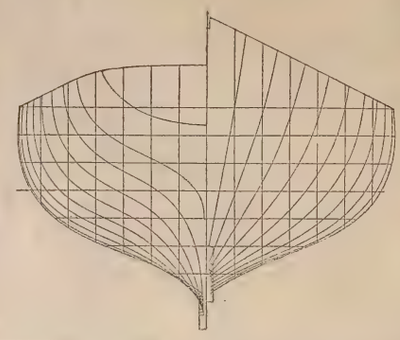
Before discussing any remedies it will be well to define the difference between cruising and racing canoes, a task by no means easy, for there will always will be some small points that are more or less involved. The cruising canoe which the Association desires to encourage should be a boat within the dimensions given in the rules, of sufficient displacement to float easily her crew of one, with sails, gear, tent, cooking outfit and stores for a week. She must be of a good model, and capable of safely navigating certain waters for which her size is appropriate, either large bays and sounds or shoal and narrow rivers, as the case may be. She must, as a prime requisite, have room for the crew to sit comfortably below by day, and to sleep at full length by night, as well as to stow his impedimenta of all kinds. Her rig and fittings must be as safe and simple as possible. Such boats are found in abundance in both classes, Dot, Sea Bee, Lassie, Snake, Notus, Delight, Nirvana, Guenn, Mona, Turtle, Mac, and scores more that are equally well known. Some of them are fitted with folding boards, but in all other respects they are wholesome and genuine cruisers. But these boats are all recognized racers. Certainly they are, but how do they change; merely by the substitution of legitimate racing furniture for the simpler and rougher cruising rig and gear. Larger sails, perhaps a heavier board or some ballast, a drop rudder, and a special preparation and polishing of hull and board. This is the legitimate conversion of the cruiser into the racer, all the good qualities of the former carefully preserved, but special racing gear shipped for the occasion, with extra labor and care in preparation.



Now comes the machine racer, he takes the same hull, closes up the cockpit permanently, fills the entire center of his boat with a huge board projecting above deck, cuts away every cruising convenience to save weight, puts on his sliding seat and fixed rig, and is ready to race the cruising boat. What are legitimate racing appliances? It is often hard to say, but this will illustrate the point: The man who by skill and care reduces the weight of his spars, increases the efficiency of his sails, and simplifies his reefing gear is doing a real service both to racing and cruising; but the man who decks his racing canoe entirely over, is debasing and lowering the sport he professes to admire.



For whom shall the races and rules be arranged, for the cruiser, the racer or the mug-hunter? We have heard the cruiser's plea in the past when on committees, and it has come out again in the present discussion; he says mildly, "I have no big sails nor drop rudder, my centerboard is rusty, and I forgot to varnish my canoe in the spring, but I am coming to the meet and I want some races that I can hope to win." We have no sympathy with this gentleman, the A. C. A. can do nothing for him if he will not help himself, and from what we know of him we do not think he will. An effort was made some time since, in the days of large sails and much ballast, to allow men with good canoes but only cruising sails and ballast to enter, and the 75ft. limit race, as well as the race with limited displacement, were instituted. The result is well known, and to-day with the small rigs and light canoes now in use, the attempt to make a race for poorly rigged boats would be still more absurd.



It is not possible to give prizes for slow boats or poor rigs, the best only deserve to win, the only point being to decide where the machine comes in to drive out the legitimate racer. The racing man may be defined as one who is ready to work and think in order to make his boat go faster, who will stop at nothing to improve her speed so long as her essential cruising qualities are not interfered with. He is apt, if he can afford it, to have a fleet of boats from different builders, he will spend money on sails and fittings and he will work hard to win, but for the most part his pet canoe, the fastest of his fleet, is ready at any time for a cruise with small rig. The mug hunter fortunately has not yet turned up in the sailing racers at the meet, and we hope his name has not yet been sent in for membership, but when he comes it will be in a light, hollow shell, decked over fore and aft, with purely racing sails and fittings as a permanent part of his boat. The racing men thus far have been mostly cruisers as well, and though the close competition in the sailing races has tempted some to introduce features that, while not specifically interdicted, are not in accord with the best interests of canoe racing, we believe there are none who would object to restrictions that were shown to be for the general good.

Looking at the unsettled state of canoeing at the time when the first rules were made, as well as the very great changes both in models and methods of sailing that have since taken place, no one can say that the work of the A. C. A. has been a failure, or even that it has not proved fully as successful as one could have hoped. It is clear, however, that the work cannot stop, the process of trial and rejection must still continue, and the rules must be changed as the conditions of racing alter. In view of the facts recounted above we offer for consideration and discussion the following suggestions:

First, as to rules and limits: Canoes to be eligible to the regular record race of the A. C. A., must have a well large enough for

the crew to sleep in without interference by bulkheads or centerboard; the opening of this well shall be not less than 5ft. long and 18in. (or 17in.) wide in the clear. Deck seats shall not project beyond the side of the canoe. Centerboards, when housed, must not project below the keel nor above the deck or coaming. The limit as to well and cockpit will affect very few boats now except some with trunks in the well, and if the opening is large enough and sleeping space guaranteed, save for the board, these existing boats might be exempted. The object of course is to preserve the cruiser, who must have an open well and good sleeping room, from being handicapped against a racing boat with little or no well, that cannot fill even if capsized. If this is done the man who has now a board between his knees may be allowed to retain it there; but it would seem to be time that men went seriously at the centerboard problem and solved it instead of dodging it as they have of late. The double board offers one solution and there are doubtless others if men will look for them. At any rate in anything deserving the name of a canoe there should be room to sleep and to paddle in comfort. As to housing the boards, it too can be done and is done so often that there is no reason why the clumsy and unmechanical arrangements seen of late should be permitted. The intention of the clause is to limit the upper edge of the board to the surface of the deck, where the trunk is below the deck, and to the upper edge of the coaming where the latter projects over the trunk.

Looking now at the race programme, the much discussed "75ft. limit" race might as well go.

A proposition lately made in our columns by Com. Gibson has not yet met with the attention which it deserved, in fact it appears that canoeists generally do not fully understand it. It was to the effect that the sails which a canoe carries in one race must be on board, though not necessarily set, in all the races. Perhaps we are going further than Com. Gibson intended, but we offer this suggestion, to include all racing furniture used in paddling as well as sailing races; thus in paddling races the canoe will carry her board or boards, deck seat, sails and masts, and in the sailing races she will carry her racing paddle and paddling seat. If a man wants to sit on a soap box to paddle, as many do, why let him; but he must carry it while sailing as well. If he wants a mast 16ft. above deck and as big as a tree, and a centerboard of 60lbs., well and good, but they must be on board when he paddles. Each man would be obliged to set apart the furniture he intends to use for racing, spars, sails, rudder, tiller, board, hatches, paddle, seat and any other gear, and to carry all this in every race. It would not be the intention to prevent a man from replacing a broken paddle or rudder, but to compel him to carry practically all his racing gear in his boat, and not to have a couple of extra chests on shore. This plan would bear hard on some men in the first year. We remember going from New York to Clayton once in company with a canoeist and a chest as big as a Saratoga that contained nothing but his ballast and small racing fittings, not sails. It may be urged that the result would be a small, light racing boat, with very small sails and simple rig, easy to paddle; but here comes in the former clause, if the man must provide for good sleeping space, and a board in addition, he is not able to cut away his model to a serious extent. There is another matter that might well be discussed in connection with these proposed changes, the creation of a larger class, but we have given plenty of food for thought to canoeists for the present, and the larger canoes can well wait until the questions above have been fully discussed. We invite the opinions of all our readers, but must request them to be as brief as possible, and to confine their letters strictly to the subjects under discussion.

THE ATLANTIC DIVISION MEET.

VICE-COM. STANTON has appointed Messrs. W. P. Stephens, N. Y. C. C., Wm. Whitlock, Brooklyn C. C., and H. M. Carpenter, Sing Sing C. C. as a committee on camp site for the first division meet of the Atlantic Division. The date and place have not yet been decided on, but the former will necessarily be some time in July, giving time for those who wish to visit the A. C. A. meet in the following month. The only location thus far brought to the notice of the committee is on Lloyd's Neck, either on Oyster Bay or Lloyd's Harbor, a part of Huntington Bay. The committee will be glad to receive suggestions of other available points, especially those nearer New York, and will investigate all eligible locations suggested, but in order to save useless labor, those making suggestions are requested to inform themselves fully as to the advantages of the sites they propose, and to give all the information possible to the committee. The site must offer a dry and more or less shaded camp ground of several acres area, with a good spring or other fresh water supply. It must be reached by boat or by rail from New York, there must be good sailing and paddling courses, and the beach must offer some facilities for landing canoes. Those knowing such locations will confer a favor by notifying the chairman of the committee, W. P. Stephens, 39 Park Row, New York. Any suggestions as to date will also be welcome. The owners of the proposed site at Lloyd's Neck state that the best time to be sure of avoiding musquitoes is in the first part of July.

HEADQUARTERS ATLANTIC DIVISION, A. C. A., Feb. 14, 1888.

To the Members of the A. C. A., Atlantic Division:

GENTLEMEN—You will please take notice that the following named gentlemen have been appointed the Regatta Committee of the Atlantic Division, the first named being chairman, namely, H. C. Ward, Brooklyn C. C., 15 New street, New York city; L. B. Palmer, Ianthe C. C.; E. H. Platt, N. Y. C. C. The following named gentlemen have been appointed the committee on the meet and camp site, the first named being chairman, namely, W. P. Stephens, N. Y. C. C., 40 Park Row, New York; Wm. Whitlock, Brooklyn C. C.; H. M. Carpenter, Shattemuc C. C. The latter committee is requested to make its report to the Vice-Commodore on or before the 15th day of March, in order that the committee on transportation, to be hereafter appointed, may have sufficient time before the meet to make arrangements with railroad and steamboat companies. Respectfully,

HENRY STANTON,
Vice-Commodore Atlantic Division.

"CANOE HANDLING." The indications are that the present will be a most active season in canoeing, especially in the matter of new recruits. We are constantly in receipt of questions from novices and beginners as to the most desirable model of canoe, the best methods of use, the way to form a canoe club, where to find a model constitution, etc.? The answers to these questions have at times been given in our pages, but they all will be found in that indispensable handbook of canoeing, "Canoe Handling," by C. B. Vaux. The writer, one of the first American canoeists and connected prominently with the A. C. A. since its birth, is an authority on all that pertains to racing, cruising and club matters, and in "Canoe Handling" he has anticipated and answered those questions which every novice is sure to ask.

COM. GIBSON.—Not contented with becoming an American citizen, Com. Gibson has lately become a resident of New York city, the occasion for the change being the selection from a number of competitors of his designs for a large building in Wall street, which he will superintend during construction. Though the Turtles will miss him, New York canoeists will rejoice in such an addition to their numbers.

PRIZES FOR PADDLING RACES.

THE paddle always puts new life into me, even in February, and the "Paddle" in last week's FOREST AND STREAM did the business this time. The regatta committee of the A. C. A., of which I am chairman, have as yet published nothing as to their doings and deliberations, but have not been idle, let it be understood. Mr. Butler and myself talked the matter of paddling prizes over a month ago and arrived at some conclusions, but did not polish up details sufficiently to publish the results. It was thought advisable to arrange for such a prize as "Paddle" suggests—two prizes—one for a paddling champion, one for the winner of the combined race. Heretofore there have been no apparent differences between cheaply won prizes and those hardly fought for, with one exception, the sailing trophy. We propose to have four honor men each year—sailing champion, paddling champion, and two cruising (if you like) champions—the winners of the record and the combined race. The paddling championship will not, however, be decided in Class I. canoes. The cups suggested by "Paddle" therefore fit into our scheme, and will be gladly received and provided for on the programme, the details of which I hope soon may be made public. We propose to present to each cup or trophy winner a flag bearing the year (1888, etc.) in which the cup is won, to be winner's property, and to be hoisted over his tent at future meets, if he wishes, to bear testimony to his work of the past. These flags will in future be made of the same color and design as those of 1888, but bearing different dates—if our suggestions are approved. More anon.

C. BOWYER VAUX.

THE SPRING MEET.—Nothing has yet been suggested in regard to the usual local or spring meet of the canoeists of the Hudson River, which has been held for the past four years. There is no body or committee having power to arrange for these meets, but they have been entirely informal, some place being suggested through the FOREST AND STREAM. Such suggestions for the coming season are now in order and we will be glad to hear from all interested. The meets heretofore have been held on the Hudson River, but it might be well this time to go below New York, say on Staten Island, where different water can be found. Such a meet would also have the advantage of the attendance of a new set of men, and coming when it does, too soon to conflict with the Division meet in July, it would serve as an introduction to the latter. The regular date has always been Decoration Day, which this year comes on Wednesday.

CLEVELAND C. C.—The annual meeting of the club took place Feb. 2, the election of officers resulting as follows: J. D. Cox, Jr., Captain; A. H. Van Gorder, Mate; O. A. Root, Purser.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

LARCHMONT Y. C.

THE annual meeting of this prosperous club was held on Feb. 8, at Delmonico's, the following officers being elected: Commodore, Girard C. W. Lowrey; Vice-Commodore, Henry W. Eaton; Rear Commodore, Chas. A. Stevenson; Secretary, Wm. G. Scott; Treasurer, Eugene L. Bushe; Measurer, Frank E. Towle; Trustees, Wm. S. Alley, Augustin Monroe, Wm. Murray, Girard C. W. Lowrey, E. L. Bushe. Twenty members were elected, filling the limit of membership, 500. New courses were adopted, all visible from the new club house. The alterations in the house will be completed by the beginning of the season. The main hall is of large size, with fine open fire-place and stairs leading to the second floor, where is the library and ladies' parlors, the third floor being used for servants' quarters. On the east side of the house an extension 180x70ft. will contain the kitchens, wine cellars, main dining rooms and twenty-eight bedrooms for members. The handsome stables now on the property will contain the billiard hall, locker room, storeroom and workshop, and quarters for men servants. Near the billiard hall are the bath houses and a fine beach, while lawn tennis courts will be laid out on the west. From the main house an iron bridge will lead to a large landing stage, a second stage for ice and stores being placed at another point. When installed in its new quarters the club will be the best housed in the country, if not in the world. Regatta Com., H. B. Willard, E. J. Greacon and F. M. Scath. The revised constitution and rules, including the new classification, have been adopted.

THE NAVAL RESERVE.—A very interesting meeting of the New York branch of the U. S. Naval Institute was held on Feb. 10 at the house of the Seawanhaka C. Y. C. to listen to a paper by Capt. A. P. Cooke, U. S. N., on "Our Naval Reserve and the Necessity of its Organization." After the reading the paper was generally discussed by the audience, which included Rear Admiral Rhind, U. S. N.; Capt. Eaben, U. S. N.; Lieut. Commander Harford, U. S. N.; Col. Heywood, U. S. M. C.; Capt. Muse, U. S. M. C.; Lieut. Clover, Lieut. Hunker, Lieut Strong, Lieut. Cowles, Lieut. Tremain, Commander Hooker and a number of yachtsmen.

MORE GIFTS FOR GEN. PAINE AND MR. BURGESS.—The Atlantic Y. C. have just presented to Gen. Paine a handsome group in bronze, and to Mr. Burgess a cup containing fifty $20 gold pieces.

SAPPHIRE.—This name has been selected for Mr. Stetson's new yacht.

STEAM YACHTING.

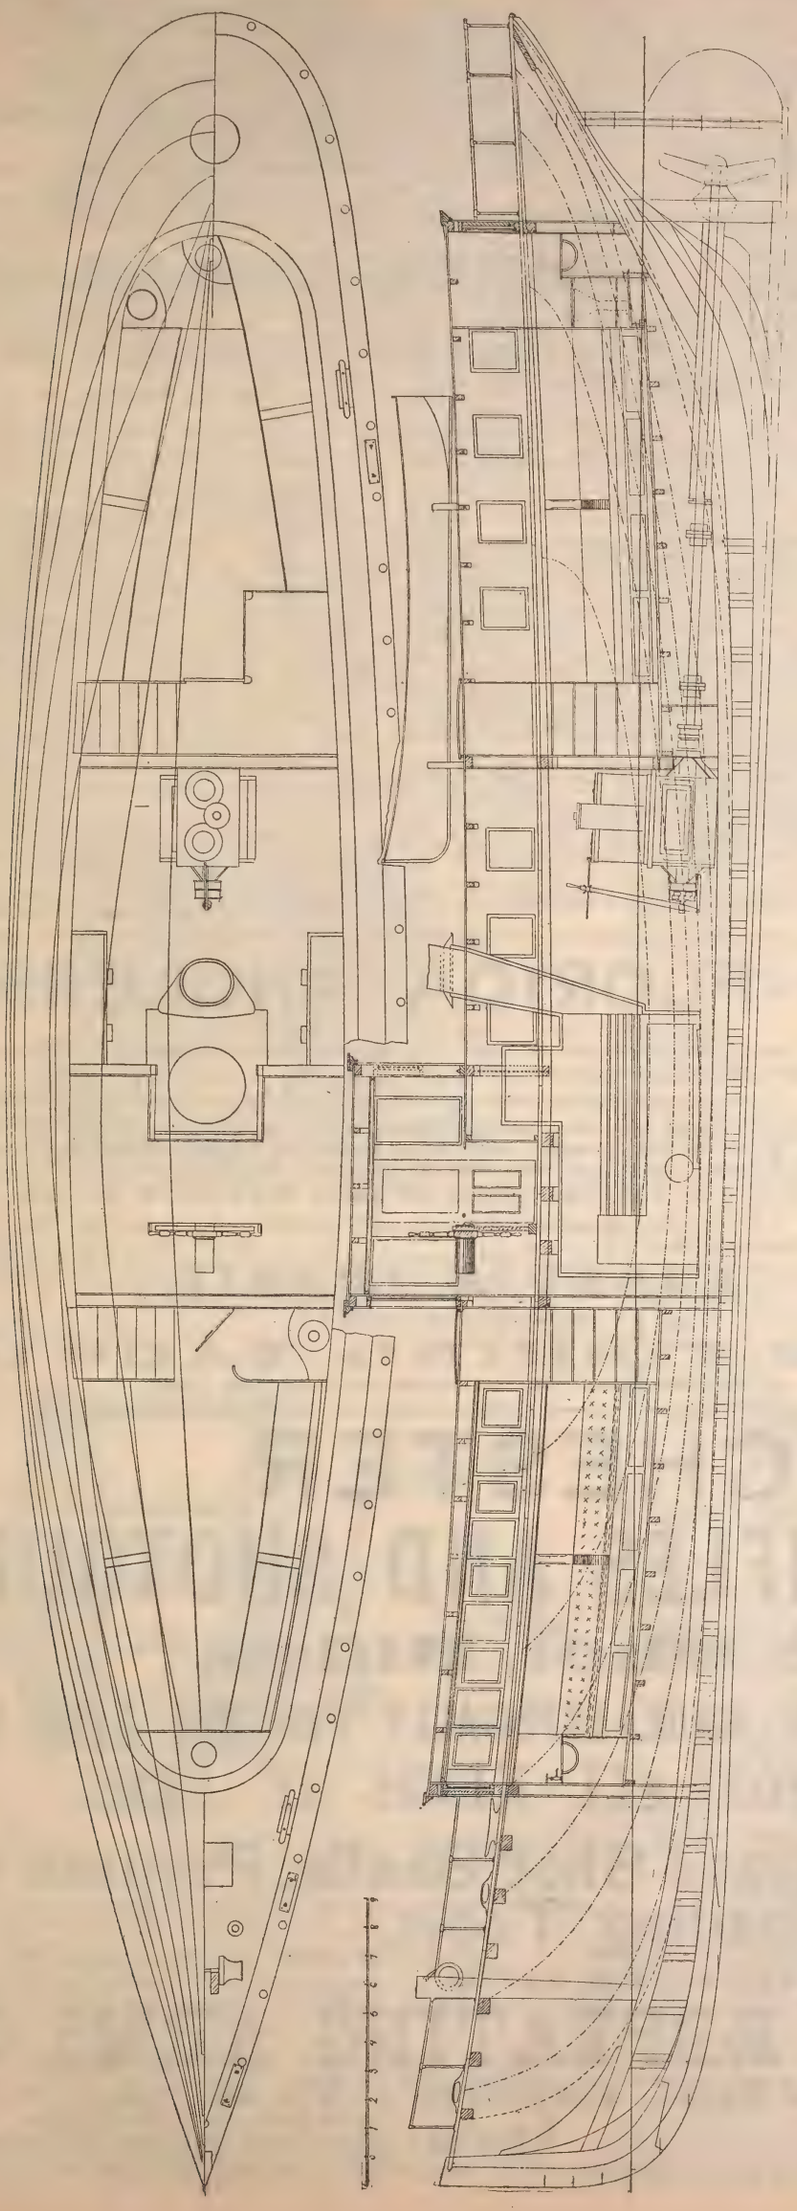
THE STEAM YACHT LUCERNE.

THE accompanying drawings show a useful class of steam yacht that is apt to be popular in this country for a long time, in spite of the increasing demand for high speeds and steel and composite hulls. While the man who wants to be carried home from business to his villa on the water must have a Stiletto or a Now Then, there are still many purposes for which the wooden yacht of moderate cost and speed is in demand, for hunting, fishing and exploring parties, for ordinary pleasure use in summer; while that fact that these boats can be built by ordinary good mechanics and without an expensively equipped shipyard, is certain to keep them in use in spite of improvements in speed and light construction. The Lucerne was built for work rather than pleasure use, but at the same time she is well fitted for gunning and hunting parties in the Southern sounds, and many other purposes. She was designed and superintended by Mr. Henry J. Gielow, Assistant Engineer for the use of the Engineer's Department of the U. S. A., to be used in surveying and inspecting the river and harbor works along the coasts of Virginia and the Carolinas, the requirements being moderate cost, to meet an appropriation, moderate draft, and good sea-going qualities. She was built by E. J. Codd, of Baltimore, Md., the wood work being done by McCosker & Co., of that city. The leading dimensions are: Length over all, 75ft.; l.w.l., 69ft. 3in.; beam, 14ft.; draft, 5ft. 6in. The displacement is 40 tons.

The specifications are as follows, the details of construction being shown in the drawings. The keel is of the best quality of white oak, siding 6in., molding 6in. at center and 14 and 10in. at stem and stern respectively. The frames are of white oak, double, siding 3in., molding 5in. in the throats of the floors and 3in. at the planksheer. They are spaced 2½in. from center to center; the spaces between frames in the central portion of the vessel, for a distance of 25ft., are filled in solid with floors extending 3ft. from center line to either side. The stem is of white oak, a natural crook, siding 6in. The sternpost is of the same material, siding 6in., except at center of shaft, where it is 10in. The keelson is of yellow pine in two lengths, siding and molding 6in. Her bilge strakes are of yellow pine in two strakes, siding 9in. and molding 3in. The clamps are of yellow pine in two strakes, each 3 by 9in. Deck planks are of the best quality of white pine, long and free from all defects. The planksheer is of yellow pine sprung around the sides in long lengths, and without being too much "grain cut;" it is 9in. wide and 2½in. thick. The outside planking is of yellow pine of the best quality in long lengths, having a uniform thickness of 2in. She is thoroughly copper fastened to 6in. above loadline, and from there up with galvanized iron.

The cabins are finished in cherry and ash. The upholstering is in crimson silk plush. By lowering the backs of the seats they are converted into berths, and the cabins are subdivided into compartments at night by means of curtains. The forward cabins are for the use of the engineer, officers, the crew being placed aft. The galley is also aft, opposite the after companion. The berths are made up by dropping the backs of the seats and swinging up to the deck the hinged panel, shown in the sections. The space behind the seats is used for stowing the bedding by day. The construction is such as to allow four deck beams uncut across the center of the boat over the boiler, greatly strengthening the hull. The pilot-house is nearly amidship, in the center of the cabin trunk. The engine is a 10×10 Westinghouse, with two single-acting cylinders, 50 horse-power. The boiler is the ordinary return tubular, but differs from the locomotive type in having the waterlegs on each side of the firebox extending the full length of the boiler, including the back connection. The bridge wall at the back of the firebox is a 12in. tube, connecting the two waterlegs. The length is 9ft., height 4ft. 10½in., width 4ft., with 50 2½in. tubes, 7ft. long. The grate surface is 16sq.ft. and the heating surface 300sq.ft. The working pressure is 130lbs., but the designed speed, 10 miles, is obtained with 95lbs. of steam and 287 revolutions. The screw is two-bladed, 48in. diameter, and 45 to 51in. pitch, the steel shaft being 2¾in. diameter. Under full pressure, 120lbs., a measured distance of 4⅛ miles has been run at a speed of 12⅛ miles. The height of stack above grate is 20ft. 6in. The handrail shown has been raised to the height of the cabin top, 30in. all around the boat.

A NEW STEAM YACHT.—Mr. Burgess has an order from New York for a steam yacht of the same size as Mr. Stetson's—130ft. over all, 115ft. l.w.l., 19ft. beam, 8ft. 6in. draft. She will be built of steel by the Atlantic Works at East Boston.



A WINTER CRUISE IN THE SOUTH.

WHEN we last came to anchor we had just arrived at Newberne, N. C., in the yacht Monarch after a quick run. Our route back lay to a certain extent over our course down, but as we had arranged to take ample time in returning to get a fair idea of the country, and avoided covering the same ground (or water) any more than was necessary, taking the western shore going south and the eastern in returning, we had better opportunities for observation than on our way south.

Newberne we found a town of 7,000 inhabitants, 5,000 black and 2,000 white. One captain described it to me as a "finished" town, the citizens not thinking it necessary to do any more work upon it. As a consequence its wharves are decaying, its few manufacturing establishments have a seedy look, the stores were small and poorly stocked, and the dwelling houses sadly needed paint. There were of course exceptions, as there are to all rules. A large sawmill with an excellent plant was in active operation on the banks of the Neuse River in the upper part of the town. The Hotel Albert, recently constructed, had all the modern improvements even to gas, and next door a new bank building was going on, small, but of the modern design. The churches wore a singularly prosperous look. This I noticed in all the towns we passed through, indicating a healthy religious feeling among the people, and one large dwelling situated about three squares from the sawmill in the best part of the town, was of modern design and brilliant with many-colored paint, but this exhausts the list.

The people we found friendly, as we expected, and little courtesies were tendered constantly. The postmaster sent aboard all the Northern papers he could find, the editor of the *Daily Journal* went out of his way to show us the few features of interest in the town, the custom house officials sent us all the official printed matter at their command relating to the waters we would pass through, and the officers of the revenue cutter made time pass quickly; but these are only samples.

The composition of the population makes it somewhat difficult to keep the political control in the hands of the whites, but with the help of the State Legislature the trouble has been surmounted. Two of the wards are almost entirely inhabited by the blacks, while three are as entirely white; the three white wards, therefore, are given the privilege of electing to city councils what are called alternates, who have practically all the powers of the councilmen proper. These three wards, therefore, having double representation and a safe working majority on all questions, it only remained to make all city officials appointive by councils to have everything work smoothly, so this was of course done. The sole exception is the City Solicitor, who is an elective officer, and

STEAM YACHT "LUCERNE."—DESIGNED BY HENRY J. GIELOW.

of course black. The present incumbent is, I am informed, a very able and learned man, and has the good will of both elements.

While the morality of this mode of retaining the political control is open to discussion, any one who sees the darky in his own haunts will sympathize entirely with the white side of the subject. Laziness, shiftlessness, dirt and ignorance are his chief characteristics. Wretchedly obsequient and with no manliness about him, he is a creature to be kept at a distance, although this is the fault mainly of his past condition and of the lack of opportunities to better it, as the few bright examples among them show.

They are the dupes of the smart men of both classes. I heard of one darky preacher who is quite well thought of and is a well educated man in many ways, who started a church to which he holds title in his own name, who requires each attendant at the church to pay him ten cents per week; in case of failure they are read out of church in short order. He has a large congregation and is well fixed financially.

The darky will work only when he has to. After cotton picking when he comes to town with a little money, the walls of the town will be placarded with bills of darky excursions by steamer and rail, and while his money lasts he crowds the steamers till the decks are awash and the cars until the sides are ready to burst, brass bands of course in plenty. When his money is gone you can hire him for the balance of the year for two dollars a week and board himself. His board is composed of cornmeal and yams to eat, and a hut in Hayti to sleep in: his raiment is the cast off garments of the wites.

Hayti is the town across the Trent River. When in 8862 the Union forces captured Newberne, they made it a rendezvous for the fugitive slaves attracted by their armies, these came in such numbers that the point of land was seized by some process of law or no law, and they were allowed to erect huts upon it. There they and their many descendants are to-day; no white man is in the town; they have city officials of every degree, and an office for every man, but, so I believe, there are no salaries attached, the glory seems to be all that is necessary. This settlement is worth a trip of a hundred miles to see.

As we sailed up the river it required a watchful eye to keep clear of the stakes, which were driven as thick as poles in a Massachusetts bean patch. Along the water front of both Newberne and Hayti, on the Trent River side, was to be seen their complement, miles upon miles of gill-nets. We were informed that in the fish season just commencing the river would be full of nets of all kinds from the mouth to thirty miles above the town, and that a train load of fresh fish would leave the town daily for the North. The first shad of the season were already in the market. The largest number of these nets are owned by a few men who own hundreds each, and who let them out to the darkies on shares, the fish are brought to market in small schooners of from 30 to 50ft. in length, whose crews also work on shares.

These schooners are worth a passing mention, they are of every type of build and rig, some few are smart-looking and are kept in good condition, when this is the case it is usually the owner who sails her, and he will be found to be a bright and thrifty example of his race. The rule, however, is an ugly hull of uncertain age, spars gaping from the heat of many summers, rigging hardly worth mentioning, and sails—but here my pen is unequal to the task—imagine, if you can, a suit of sails twenty years in service, with holes of all sizes, too many to count, and patched with cloth of every age and texture, and all black as a collier's mizen, but you can't imagine anything to equal it—a photograph could give no conception of them. These are the craft owned by whites and let to darkies to run on shares. They sneak along from cove to cove and put into harbor if anything stronger than a three-knot breeze blows; unless corn meal and yams were cheap indeed, no such craft would be possible.

The steam river craft are just a shade better; they are stern wheelers and flat-bottomed, drawing from 12 to 18in. loaded, their motive power is an ordinary horizontal engine with the fly wheel replaced by a sprocket wheel, which connects with a similar wheel on the stern wheel shaft with a detachable link chain. Two of the steamers are more pretentious and sport two engines and resemble somewhat a Lilliputian Ohio River sternwheeler. Another endeavors to work along with a miniature propeller wheel. One day when a strong N.E. wind was blowing into the dock we saw her work two hours trying to back out, which she finally accomplished only by the aid of poles and warp lines.

The revenue cutter on duty in the sounds is the Stevens, named after her builder, of Hoboken, N. J. When she was first built she was a monitor and was called Naugatuck. Stevens presented her to the government; she had many features new to the naval world at that time, among others a disappearing gun in the bow, the forerunner of the most modern type of armament. At the close of the war, having had very hard usage and no longer being useful for her original purpose, she was housed over and converted into a revenue cutter. She is very slow, her speed being but little over 7 knots and is so tender that she has to remain in harbor in heavy weather. Her commanding officer is Capt. Hand, a man who must from his nature have friends all over his station, we also met Lieut. Jarvis and Chief Engineer Tierney, who aided in making our visit pleasant and who afterward visited the yacht.

Saturday morning while the three-masted schooner Edna A. Pogue was making sail she gathered sternway and took bottom on the flats, but got off after some trouble, but went on again hard on Quarantine Point, 3 miles down the river. The cutter got under way and went down and pulled her off. And again the last view we had of the cutter the following Thursday morning was off Pimlico Point, when she was making her way toward a Sound steamer which was hard aground off the point. This work is the most important of all the cutter's duties and if they did nothing else they would well repay the shipping industry for the meager appropriations granted them.

Our stay in Newberne was rendered unpleasant by the northeaster blowing all the time we were there, accompanied by intermittent squalls of rain so that we could see but little of the surrounding country. We made sail Monday, Jan. 16, at 2:30 P. M., wind N.E., stormy, thermometer 42 and falling. This would give us a head wind after passing Wilkinson's Point, but gave half sheet for the 13-mile run down to Beard's Creek, in which we made harbor at 4:30; the channel into the creek is but 50yds. wide and has 8ft. of water, has a shoal with 3ft. of water on either side. As it is not buoyed, but has stakes sticking up all over without any apparent method, we had some difficulty getting in, the wind being ahead, so we dropped our board to make our draft 6ft, and used it as a "Dutch lead line," going about whenever it touched bottom. O! my brethren, a cutter is a wonderful craft; a fast sloop is a joy; an able cruiser is a *multum in parvo*, etc., etc. But give me the boat which will work to windward and go about without her centerboard, and will work herself off a shoal with her sails. In all the numerous times I have had the Monarch on the bottom, she has never failed to come off with no more trouble than running her kedge, and the aid of her sails, and that without serious loss of time.

We lay in Beard's Creek for a change of wind, which did not come until Thursday morning, so after getting permission from the owner of the land, we spent our time in thinning out a flock of bluebills and dippers which had disturbed our peace of mind by insolently circling around the yacht just out of gunshot. We set our stools off a point midway between their feeding grounds, concealing one boat on the point; then taking the light gig we started them up first one way and then the other, they passing the stools each way. They did not learn sufficient to get into the open until we had half of each bunch. Meanwhile a few hundred henbills were paddling up and down, and had to be scared away to keep them from pecking the paint off the stools; queer ducks, with as much sense as mules. During our stay several of the small schooners before described came in for harbor, although the wind was fair for them. We had many amusing interviews with them. One dusky individual, who had his wife along and was running cordwood on the usual share plan, gravely asked me if I knew General Grant and if he was going to be President again.

Thursday, Jan. 19 at 9:30 A. M. made sail, wind N. fresh, thermometer 38°. There was ice in a bucket left on deck over night, the first we had seen since we started. Passed Wilkinson's Point at 10:15, found the pile beacon down and nothing to mark the dangerous shoal making off from the point. We were informed it had been run down by a schooner some months before; it has been unmarked ever since. Shortly after we passed a large sawmill that bore some resemblance to a small town, so many were the buildings connected with it. It is at the mouth of Smith and Kershaw's creeks, splendid harbors for any craft which use these waters. The river here is three miles wide and has from 4 to 6 fathoms of water. At the mouth the river widens to over five miles and has good water all the way across. There is a clean sweep from Hatteras Inlet to Wilkinson's Point, about sixty miles, broken only by Bluff and Brant Island shoals, so that when the wind is northeast a dangerous swell runs up the river. One captain told me he had seen the swell 15ft. high off Wilkinson's Point. There are, however, plenty of harbors on both sides, and after rounding Wilkinson's Point, the water is landlocked. It also begins to shoal until there is only 9ft. in the channel close to Newberne. I have seen but few more pleasant rivers to navigate than the Neuse. Straight, wide and deep are its characteristics, and always free from ice.

We passed Neuse River Light at noon. Here the cutter Stevens passed us, bound out to assist a steamer aground near Pimlico Point. She saluted us and we dipped our colors. It was like parting from old friends.

There is a lighthouse at Pamlico Point, but the light has been abandoned. This light is an important one, and the only mark left for the point is a ship's lamp mounted on a buoy. It is visible three or four miles only, and is of but small value. The old lighthouse was condemned on complaint mainly of the keeper. It stands on a marsh, which is overflowed at high tides. The foundations are brick piers, and will in all probability last for years, although it is certainly not a pleasant place to live in. As the case now stands, instead of drawing $500 as lighthouse keeper, he draws a nominal salary as caretaker, and the public loses the use of the light. The problem that arises in my mind is, if the house is still safe enough for the keeper to live in, why is it not safe enough to display a light from? Fortunately, an appropriation will probably be made by this Congress for a new lighthouse. One of the sources of income of the lightkeeper is a diamond-back terrapin pound. They are quite plentiful about the point, and he captures them and keeps them in the pound until the market is ready for them. One of his last sales netted him $100.

We crossed Brant Island Shoal, passing through the slue at 2:30 changed course to E.N.E., from East Bluff Bay, where we dropped anchor at 5:45, having made 50 knots in 8¼ hours on the wind.

A peculiarity of Pamlico Sound quickly noticed in an examination of the chart is the long fingerlike shoals making out from the western shore. Long Point Shoal is over 5 miles long, Gibbs's Shoal 3 miles, Gull Shoal nearly 5 miles, White Bluff Shoal extends all the way across the Sound over 25 miles, but there is from 7 to 11ft. of water over the greater part of it. Brant Island Shoal is a particularly bad one; it runs from Pamlico Point to Brant Island Light nearly 15 miles; about 10 miles from the point is the slue, which carries 7ft. to 9ft. of water, according to the tide, there is a buoy in the best of it, but 200yds. to the west of it there is but 2½ft. of water, and worst of all there is no sea buoy to make and no bearings to take to make it, unless Brant Island Light be made, when it may as well be rounded; as the slue is 5 miles inside the point of the shoal it is evident that it is an important buoy. It is out of sight of land except from the masthead.

Again, the buoy is in such a condition that to a stranger it is almost indistinguishable, the paint is almost gone, so that you must be within a boat's length to tell the colors, and its bottom is so foul with a 3in. coat of mud, weeds and barnacles, that it is sunk much deeper than it should be. This complaint applies to all the buoys in the lower Sound that we passed. In going down we made the inner and outer middle buoys and going up the upper middle, yet had it not been for close steering, and consequently knowing where we were, we should have not recognized either.

At East Bluff Bay we met the first of the pound nets again, this is near the lower edge of Hyde county; they are prohibited further down. We were given as a reason that some smart people had built, some years ago, a monster pound net in the bight below Cape Lookout, which is but a short distance below Beaufort, and as the schools of fish came up the coast and followed the cove, they were captured by millions; whereupon the smart fishermen waxed rich exceedingly, but this did not suit the other fishermen who were despoiled of what they considered their rightful share of the fish, and so they petitioned the Legislature to prohibit pound nets, which they did in several counties.

The sharpie, as used in Virginia, New Jersey and Connecticut, is rapidly being domesticated along the beach from Hatteras Inlet to Beaufort, but nowhere else; it is the usual flat-bottomed boat with two leg-o'-mutton sails, the foresail the larger, and with a small club at the tack, which is extended by a horizontal spreet or boom; it is a handy rig on the wind, speedy, and has a good reputation for short work, the main point is to have a good man at the foresail sheet, as she does not luff promptly in squalls.

On the western shore the clinker-built boat is in use almost exclusively, it is about 21ft. on keel, 5ft. beam, and 2 to 2½ft. draft, rigged with a jib set flying to stem head, a spreet, lug mainsail, the tack of which trims to the stern plank, and sometimes a very peculiar topsail is carried. It is set with a short topmast to which the topsail is laced, and this topmast is sent up alongside the mast and lashed there. When set so far it almost resembles a pennant set on a staff. When this topsail is carried a slightly longer main spreet is carried, this spreet is now lowered until it engages with a becket in the clew of the topsail, when being again set up it sets both the topsail and mainsail at the same time.

On the beach formerly only the dugout canoe was used, but now the sharpie is displacing it, but it is slow work and it tears the heart of the Tarheel to give up his favorite. CHAS. L. WORK.

ENGLISH MISINFORMATION.—*Editor Forest and Stream:* As usual, the London *Field* shows itself very poorly informed about centerboards. In its issue of Feb. 4 the *Field* says: "It is now universally admitted that a centerboard is a very powerful engine, and that it is only under some exceptional conditions that a deep keel vessel can successfully compete with it." Now this may be "universally admitted" in England, where they do not keep posted, but it is not only not admitted in America, but the very contrary has been demonstrated by the sailing of many cutters in American waters, notably by the Pappoose and other good keel designs, including even keel catboats. The trouble with the English is that they are trying to blame the board for their defeat in the international races instead of charging it up to bad design, the Thistle being notoriously deficient in lateral resistance, a fault which is independent of keel or board altogether. If our English cousins do not not look into the matter any deeper than the *Field* and its odd lot of correspondents seem to have done, they will fail with the centerboard just as they have with the keel, through fundamental errors of design. The *Field* owes it to the English public to keep the latter more accurately informed concerning the comparative results obtained with keel and board in America. But then the chief object of an English newspaper seems to be to avoid publishing news and keep its readers in the dark as to what the rest of the world has found out.—AMERICAN.

CORINTHIAN COOKERY.—As a rule the amateur sailor does not take kindly to cooking, regarding it as a necessary evil, instead of something to do well and be proud of. Anything is good enough, and the result is generally very unsatisfactory. Cooking is not such a difficult matter, but the way to learn is not to leave all until one is forced to begin in a small galley and with few utensils, but to practice at home where conveniences, and perhaps an obliging sister or cousin as instructor, may be found. The ordinary cook books are little help to yachtsmen and campers, but in "Canoe and Camp Cookery" they will find many easily prepared and palatable dishes that are adapted to the larder and limited facilities of the yacht's galley, or the open cockpit of the single-hander. The author, "Seneca," has not only that pride in his work that is found in every true "Cordon Bleu," but he is an old camper and cruiser as well, and the dishes he describes can be prepared anywhere, without a large market and a hotel kitchen to fall back on.

A NEW CUTTER FOR THE LAKES.—At Charlevoix, Mich., a cutter is now building for Mr. G. E. Stockbridge, of Kalamazoo, Mich., for use on Lake Michigan and Lake Huron. She will be 47ft. over all, 37ft. l.w.l., 9ft.3in. beam, and about 7ft. draft, with a 6½ ton iron keel and 3¾ tons of inside ballast, cast to fit. The headroom under flush deck will be 6ft. The interior will be fitted after the plans of the Surf, in "Small Yachts." The yacht will be tried first under yawl rig. The builders are the Messrs. Campbell.

CRUISING.—Gitana, schr., left Nassau on Feb. 2 for Havana, and on the same day Yampa, schr., arrived, sailing on the 3d for Martinque.

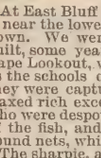
SEAWANHAKA C. Y. C.—The fifth lecture of the course will be delivered by Lieut. E. K. Moore, U. S. N., on Feb. 18 at 8:30 P. M., the subject being "Chronometers; History, Construction, Care and Use."

DAUNTLESS, schr., Vice-Com. Colt, is at Poillon's being rebuilt.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

G. L. E., Racine, Wis.—Kindly give me the address of Mr. E. Hurtzig, patentee of the reversible reel-seat, as mentioned in FOREST AND STREAM of last week's issue? Ans. Emil Hurtzig, 351 West 123d street, New York city. It is not patented and will not be patented.



J. F. D., New York.—Is the fish, known as frostfish or tomcod different from the codfish, and if so how does it differ? Ans. The fishes differ in the bones of the cranium, the number of rays in the second dorsal fin, and the tomcod has its vent under the first dorsal, while in the cod it is under the second dorsal fin. The tomcod seldom exceeds a pound in weight, it comes into harbors and even brackish waters to spawn and its eggs sink at a density of 1.023, while the cod does not spawn in brackish water, and its eggs float at that density.

H. W., New York.—C. S. Brunner in last issue of FOREST AND STREAM writes of the "butcher bird": "It is about 9in. long and 13in. in extent and of a dull slate color in general appearance." Is this not (it sounds like it) the same bird that I ran across in big-game hunting in the North last fall which my guides called "moose bird"? I was at times greatly bothered by the so-called "moose bird," who would come in to camp and steal every edible which it could get hold of, but soap it seemed to prefer above all things. Ans. Not the same bird. The moose bird is a jay (*Perisoreus canadensis*), while the butcher bird is a shrike (*Collyris*). They belong to different groups.

S. S. N., Watkins, N. Y.—1. Can you tell me why it is that the bullets of the large sporting and military rifles fit the barrels so much more loosely than the .22 and .32 and .38 long and short. 2. It seems to me that a .22, .32, or .38 calibre, fitted with open hunting sights, does finer work up to 100yds. than rifles using the large sporting or military cartridges; am I right? 3. Was using a .38-55 the other day, with factory ammunition, and had to set up the rear sight two notches to make it shoot up level at 75ft., was this the thing for a new and high priced gun? Ans. 1. There is less chance for a change of form in the bullet when upset. 2. You will find many who think with you that smaller calibres and smaller charges get better work at low ranges. 3. It is almost invariably necessary with a new rifle to re-mark the sights. The factory ammunition may have been under-loaded.

CALGARY.—A young friend of mine shot an hawk or falcon the other day. He had shot a prairie chicken, and the hawk picked it up and forfeited its life. The bird was 2½in. in length, stretch of wings 3ft. 11½in. Plumage a rich slaty gray above, lighter below, tail 12 feathers. I have seen these birds a few times in this country during winter months, and shot one a couple of years ago. I take it to be the gyrfalcon. It is a fine bird and looks well mounted. Would you, if you can, from the meagre description, give me the name of the bird? Also the exact color of bill of drake ruddy duck when in its best plumage? Ans. It is impossible from this description to absolutely identify the bird. It may be a gyrfalcon or a lanier falcon. More details are required before pronouncing on the species or even the genus. If it had a toothed bill and sharp pointed wings it was probably a true falcon. The bill of the male ruddy duck is grayish blue.

FOR SALE AT THIS OFFICE.

TO FLORIDA ANGLERS.

Keeping fully abreast with the times, we have the last few seasons given particular attention to the manufacture and introduction of tackle specially adapted to the needs of Florida anglers.

We have an unusually fine assortment of the following goods, used and recommended by expert Florida anglers

Pearl Florida Spinners, Mottled Pearl Baits, Pearl Squids for Spanish Mackerel, Pearl Mullet, Florida Bass Flies, Tackle for Channel Bass, Red Snappers, Sheepshead, Salt Water Trout, Etc., Etc. Also New and Special Tackle for TARPON, including our famous Tarpon Line.

If your dealer does not keep our goods in stock, or will not order them for you, send us 10 cents for our 120-page illustrated catalogue.

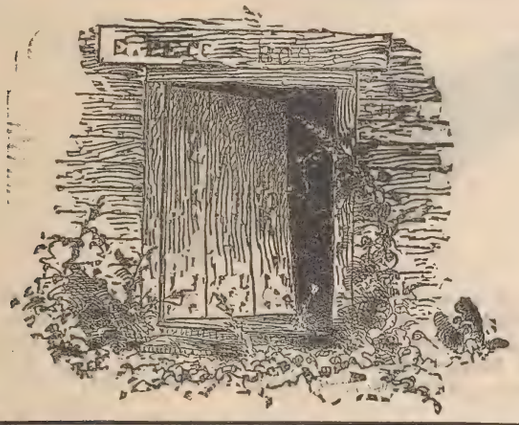
UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.



In response to the many requests from those who read the chapters of "Uncle Lisha's Shop" in the FOREST AND STREAM, they have been collected into book form, and are now ready.

CONTENTS:

I. The School Meeting in District 13.
II. Uncle Lisha's Spring Gun.
III. In Uncle Lisha's Shop.
IV. Concerning Owls.

DOG TRAINING:

BY

S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

For sale at this office. Price $1.00.

AUDUBON'S Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Aududon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

LIST OF BIRDS REPRESENTED:

Black Vulture and Head of Deer	$12 00	Chimney Swift	$4 00	Bohemian Waxwing	$6 00
Redtail Hawk	10 00	Carolina Parroquet	10 00	Purple Martin	5 00

Forest and Stream Publishing Co., 39 Park Row, New York.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

DOUBLE ENAMEL RODS.

Enclose stamp for circular to E. M. Edwards, Hancock, Del Co., N. Y., patentee and manufacturer of Double Enamel Split Bamboo Rods, patented Nov. 9, 1885. A fine assortment on hand, also to order. Every Rod guaranteed to outwear any two single enamel rods.

"SHOOTING."

The only English journal devoted exclusively to sport with gun and rifle is *Shooting*, edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.

The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

Few Americans ever heard the names of ur best English gunmakers.

Price of *Shooting*, postpaid, $3.25 per annum.

Send post office order to the Publisher, 182, Strand, London, England.

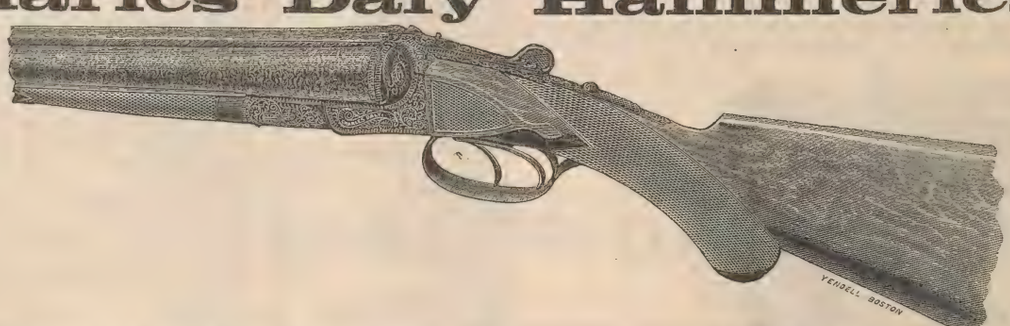
A New Magazine.

SEND FOR PROSPECTUS.

The first number of the Androscoggin Lakes Monthly will be issued on Thursday, March 15, and each month thereafter. The magazine (100 pages) will be especially devoted to matters of interest connected with the lake region. Special illustrated articles by able writers each month. All persons who have visited, or are about to visit the Androscoggin Lakes, will find the Monthly valuable reading for them. Subscription with premium, $2.00 per year. Address

JAMAICA PUB. CO., Jamaica Plain, Mass.

CHARLES DALY 3-BARREL.



The success of this gun introduced last year has exceeded our expectations. The maker's name is a guarantee of perfection in workmanship and every other desirable quality in a gun. The rifle barrel is rifled on a new system, which gives perfect results. The barrels are put together (a difficult thing in a three-barrel gun) with perfect accuracy. IT IS A GREAT CONVENIENCE TO ALWAYS HAVE A RIFLE WITH YOU. THE EXTRA WEIGHT IS NEXT TO NOTHING.

12-Gauge are made with rifle barrel, .32 W. C. F., .32 Marlin, .38 Marlin, .40 Ballard, .45 Government. Price, 85.00
10-Gauge " " " " " .38 Marlin, .40 Ballard, .45 Government. - - - - " 95.00

THE SHOT BARRELS ARE FINE DAMASCUS.

Charles Daly Hammerless.

As an evidence of the worth and increasing popularity of this "Best of the Hammerless," the sales this spring have been nearly double those of any former spring season. Alongside of any other make, costing 50 per cent. more, they excel in every respect. Especially in the remarkable close hitting and consequent solidity and lasting quality, and long-distance shooting. Here is a letter from one of the best shots in the South, who, like hundreds of others, believes the Daly is the ONLY gun:

CHICAGO, April 28, 1887.

F. P. TAYLER, ESQ.—DEAR SIR: The Hammerless Diamond Daly ordered herewith is to be the same weight, drop and trigger pull as my old gun purchased of you in the spring of 1881. The old hammer gun and I will never part company if it can be avoided, and I only hope the new one will prove as good in every respect. I do not expect to get a better one, because I do not think a better one can be made. This gun has been shot in the field and at the trap during the past seven years more than falls to the lot of half a dozen ordinary guns, and it is still solid and good for many years more hard shooting. It carried off the $500 Diamond Badge, representing the State championship of Illinois in 1885, when, owing to a gale of wind and strong birds, very close, hard shooting was required to stop a bird within bounds. In this contest many of the guns (57) on the grounds did not do justice to the men who held them. Now, I want as fine a gun as you can turn out. If it is too pretty to shoot with I have the old one to fall back on. I can only say in conclusion that I am wedded to the Daly gun, and intend to own one as long as I can carry it.

Very truly yours,
GEO. T. FARMER.

SELF-COCKING.

Automatic Ejecting.

This new Revolver is now ready for delivery. It is almost a fac-simile of the celebrated SMITH & WESSON, and is guaranteed equal in quality and finish to **any pistol in the World.** At present will be made only for the .38-caliber S. & W. cartridge. .32-caliber to follow.

CANVAS CANOES;

AND

HOW TO BUILD THEM.

By PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 8in.×27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.

FOREST AND STREAM PUBLISHING CO.,

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actua canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. Th upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channe outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scen is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an édition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Flight
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

ANSWERS TO CORRESPONDENTS.

RULE SEVEN AND ITS APPLICATION.

A RULE of the American Kennel Club, Rule 7, provides that the authorities of any show may reserve to themselves the right of declining any entries they may see fit. When the adoption of this rule was discussed at the meeting of the club, the Boston delegate sought to amend it in such a way that the authorities should be required to give a reason for declining any entries they might reject. Thereupon Elliott Smith, representing the Westminster Kennel Club, said that there were certain persons, not necessary to be named, whom it would be awkward for the members of his club to come into contact with as exhibitors, and on this ground he asked the meeting, as a favor to his club, to adopt the rule as worded. This was done. It was generally understood at the time that the individuals against whom the rule was designed were Messrs. James Watson and Charles H. Mason. Neither of these gentlemen could be barred on the pretext that he had ever been "guilty of misconduct of any kind in connection with dogs, dog shows or field trials;" the Westminster Kennel Club's grievance against the two was not that they had ever committed any wrong in these respects; no one could lay finger on any such offense. It was, on the contrary, because they had been independent enough to expose and criticise the crookedness, trickery and fraud of others, that Messrs. Watson and Mason were to be shut out from Westminster Club shows. With the first opportunity, the Westminster Kennel Club demonstrated the correctness of the theory as to whom the rule was intended for. Mr. Chas. H. Mason sent to the club an entry of his dog Beaufort. The entry was held by the committee until after a dog dealer, whose desk is in the club's office, had made an effort to buy the dog and failed. Then the entry was declined. The owner of the dog has suggested that the reason for barring Beaufort was that F. R. Hitchcock, the club secretary and active member of the bench show committee, was the owner of a dog, Tammany, entered in the same class which he desired to protect from Beaufort's competition. The choice of motives is not great. Whether the thing was done to serve personal ends, to feed individual malice, or to gratify club spite, is all one. The barring of Beaufort was petty, mean and childish in the extreme. It makes of fair play a by-word. The action and its attendant features are contemptible and disgraceful.

Whether the rule in itself be good or bad, the event has demonstrated that its application in individual cases may be unjust and scandalous to a degree. The Westminster Kennel Club sought and obtained from the American Kennel Club special authorization to do this thing; but if dog shows are to be governed by the principles of ordinary respectability it is self-evident that neither should the Westminster Kennel Club nor any other club be authorized to repeat the scandal. The Rule 7 ought to be amended before it is twenty-four hours older.

STARVING INDIANS.

DISHEARTENING reports of suffering and death among the Canadian Indians come to us from the far Northwest. These cover a wide extent of territory and include the Athabasca, Peace River and Mackenzie River districts of the Northwest Territories. If the reports are authentic, the Canadian Government is on the way to gain a reputation in regard to its treatment of the Indians as unenviable as that which the United States deservedly enjoys. Mr. S. Cunningham, member of the Northwest Council from Edmonton, who has recently returned from the neighborhood of the Slave Lakes, and the Rev. Mr. W. Spendlove, a missionary for many years resident in the Mackenzie River country, are quoted as having stated that the condition of the Indians in the region referred to is most deplorable. The country is very sparsely inhabited, there being, it is said, only about 6,000 people in an area of 700,000 square miles, and these are all Indians or half-breeds. After the Riel rebellion their arms, horses and cattle were taken away from many of these people, who were thus deprived of all chance to earn a livelihood by ordinary means. Besides this, the barren-ground caribou, which in ordinary season form the main dependence of the inhabitants of these desolate wastes, have for two years been very scarce, and it has been impossible for them to kill game enough to keep body and soul together.

Instances are reported from Peace River where Indians who have died of starvation have been eaten by their companions. Mr. Cunningham, who is a Cree half-breed, we know to be a man of unusual intelligence, and competent to speak of the condition of affairs in the region he has visited, while Mr. Spendlove's experience of nine years in the Mackenzie River country gives weight to his testimony. If these gentlemen are correctly reported the condition of these British Indians is almost hopeless. Great indignation is said to be felt in the Northwest at the neglect of the Dominion Government to take some steps to relieve their destitution, of which it has been repeatedly advised.

THE MENHADEN QUESTION.

THE dispute as to the amount of injury done to the fisheries by the capture of menhaden for oil and guano, bids fair to become perennial. Up to this time the question has been confined to the men engaged in the menhaden business, and the men who fish in other ways, by hook or net, but now it seems that the menhaden fishers have a reinforcement from the commercial fishermen of Massachusetts, because the latter fear that the bill now before Congress will interfere with the capture of menhaden for bait. If this construction has a sound basis the bill should be amended at once, for the capture of bait should be preserved to all fishermen who use an inferior fish to catch a better one. So far we approve of the letter of Capt. Babson to the Cape Ann *Advertiser*, published in another column.

We also agree with Capt. Babson that the bluefish is a destructive animal, which consumes more than it is worth, just as the fresh-water pike does, but we do not believe that the "taking of menhaden by the use of the purse seine has not the slightest effect on the great body of fish." This is asking too much of the credulity of mankind, no matter who says so. Man upsets the balance whenever he steps in with his superior intelligence and destructive agencies, whether it is among the birds, the beasts or the fishes. If the menhaden just held their own before the introduction of the purse-net and the oil and guano factory, they must drop behind with this reenforcement to their enemies. The menhaden fishers have been fond of quoting a saying of Huxley's, that man was not a factor in the destruction of seafishes, but the fact is that Huxley was examining the herring fisheries of Great Britain at the time he said this, and the deadly purse-net and menhaden steamer were not known there. They also quote Baird and Goode as indorsing Huxley in this statement, but they omit McDonald, an assistant to the two latter, who expresses doubts as to this theory. (Report U. S. Fish Commission for 1874, pp. 226-231.)

It is true that McDonald does not express himself as in favor of too much restriction of the purse-net fishing for menhaden, yet it is clear that he believes that the menhaden spawn in the Chesapeake and that by the middle of May the fish were "lean and impoverished."

The restriction of the capture of menhaden to the season beginning with July would, we believe, result in an increase of this fish, and therefore be a benefit not only to the food fishes but to the menhaden men also, who would then find the fish not only plentiful but fat. In our last issue Mr. Arthur Martin covered the ground, but the fact is that the menhaden men, like most fishermen, want no restrictions on their business, they want the last fish and want it now, no matter what may be the future consequences.

The idea that man is not a factor in the destruction of sea fish is a false one, in the present day. The coast fishes are not found far out at sea, but within a few miles of shore where the destructive engines of man can reach them. The same idea once prevailed in regard to the impossibility of exhausting the supply of whales, but they are nearly extinct and no doubt would have been entirely so but for the introduction of petroleum as a substitute for their oil. The claim that our food fishes do not feed upon the menhaden is as false as it is absurd, for if they did not feed upon them, then they would not be desirable bait.

SNAP SHOTS.

SENATOR VEST'S bill, providing for the care of the Yellowstone National Park, has just been reported favorably by Senator Manderson with a number of amendments which are said by friends of the Park to be satisfactory. It is to be hoped that Senators Vest and Manderson, who have done so much earnest work for the Park, will urge immediate action on the measure. A similar bill having passed the Senate at the last session of Congress with only eight votes against it, there seems no reason to doubt that this one would go through if it were only brought to a vote. If, however, the bill is to be held much longer in the Senate, there is little prospect that it will get to the House in time to be acted on by that body. If, however, as is hoped, it shall find in the House an able and energetic champion, we may look to see the long-needed measure for the protection of the people's pleasure ground become a law.

A short time ago the National Rod and Reel Association took up the question of the influence of the menhaden fisheries upon the supply of food fish. The President of the Association declared it to be the most important question which had ever been brought before it, and appointed a committee to investigate the subject. The committee met, the menhaden men sent several representatives to the meeting, and Mr. E. G. Blackford's secretary took stenographic notes of what was said, and there the matter seems to have dropped. No report of that meeting has been published, that we are aware of, and no further action has been taken.

The United States Senate has passed, by a two-thirds majority, the Bill for the Promotion of Mendicancy, which will give away $77,000,000 of the public money. It has also given favorable consideration to other bills looking toward the distribution among various cities of the Union of $26,000,000 more for public buildings. It will, therefore, no doubt be in order, when the question of an appropriation for the care of the National Park comes up, for Congress to plead that no money can be had for this purpose. A hundred millions or so are not worth thinking about when votes are in question, but when the interests of the people are to be cared for then money must be saved. The ways of the politician are well enough known, but the logic by which he justifies these ways to his own conscience—if he has any—is truly inscrutable.

THE ROCK CLIMBERS.

IX.—FACING A BLIZZARD.

No man's conscience is likely to trouble him much when he is constantly occupied in mountain climbing. After he has rolled his blanket about him and settled his pillow comfortably under his head, made sure that there are no sticks or stones under him, which manifest an unpleasant disposition to pry into his ribs or to try the thickness of the flesh that covers his hip bones, and ascertained that there are no open spaces about his neck into which the cold airs of the night may creep, he quickly falls asleep. He has no time to make plans for the morrow, or to review what he has done during the day. Sleep is what he wants, and the mountaineer usually gets it.

Appekunny and Yo rested well on their last night at Red Eagle Lake, but when in the gray dawn of the morning the latter put his face out from beneath the piece of canvas, which was a pack cover by day and a protector against the weather by night, he received a chilling baptism which thoroughly awakened him. Three or four inches of snow lay on the canvas, and a mass of this, falling down on to the face of the half-awakened man, told its own unpleasant story. The wind was howling down the valley, bearing on its rushing wings thick clouds of snow, which hid everything but the trees immediately about the camp. Even the horses, though so near at hand, were concealed from view, and at the rate which the snow was falling it seemed likely that it might be a foot or two deep before nightfall. This was very unpleasant, but grumbling about it would do no good, and the sooner they got away the better it would be for them. Dressing under such circumstances does not take long, and presently the fire had been kindled, and despite the wind and the snow, was burning bravely. While breakfast was being prepared, the horses were looked for. It was feared that they might have drifted before the storm, and, as the snow was falling so rapidly as to quickly obliterate any tracks that they might have made, the hunting them up, if they had wandered, would have been a work of some little time. Fortunately they were all found in a sheltered corner of the park, busily engaged in pawing away the snow to get at the grass beneath it, and were soon brought close to camp and tied there. Then ropes, blankets and saddles were resurrected from beneath their snowy covering and brought close to the fire to thaw out and dry.

The pack saddle which they were using was one of the old Government kind, long since discarded by the army, and perfectly worthless for any purpose except that of fire wood. Every man who has packed much in the mountains knows the article and its exasperating characteristics. It is almost flat where it rests on the animal's back, and if only a moderate amount of blanket be put under it, will make a mule's back sore in a day's march, while if enough blanket is used to properly protect the back, the saddle is sure to roll. Then, as if this fault were not enough to utterly condemn it, it has rings before and behind for the attachment of the swing ropes, and these rings are fastened to the wood by staples, which pull out on the smallest provocation. Some of the trials of that day's march were due to the faults of the saddle, but by no means all.

Breakfast over, the packs were made up, and Splittongue saddled. The side packs were put on and the swings tied, but as the center pack, which consisted of meat in a blood-besmeared sack, was being lifted on, the little mule dodged, twisted, and in a moment, avoiding the attempts of the men to seize the rope, was bucking and galloping across the little park, pursued by the invectives of the careless packers, who, since they had no blinds for the mule, ought of course to have tied the animal to a tree. The men followed and caught Splittongue standing under a tree a couple of hundred yards away. The saddle had turned, so that one of the side packs was under her belly and the other was on top of her back. Returning to the fire, the packing was successfully completed, but not in a satisfactory way, for the pack cover was stiff with ice and snow, and the lash rope was frozen, so that it was impossible to get a good pull on it.

However, at length a start was made, and the little train moved off across the snow-covered park. After going half a mile they crossed the creek, but the trail, scarcely visible at the best of times, and now completely hidden by the snow, was missed, and they struck too far up the hill. For the next four hours they were struggling through the down timber, which was nowhere really bad, that is to say actually impassable, but was so thick that they had to walk and lead their horses. The snow was sometimes quite deep, and at others only two or three inches covered the ground, but each twig, bush and tree bore its load of soft white powder, which, as horse or rider brushed against it, descended in a thick shower that penetrated everywhere. It was very cold, and the men's gloves, wet from pulling the icy ropes, were frozen so stiff that it was hard to bend the fingers in them. In the depths of the forest no wind was felt, though the bending treetops and the moaning of the gale showed that the storm had not abated. The snow kept falling in fine thick flakes, and it was impossible to see even the face of Red Eagle Mountain, along whose base they were traveling.

They moved along very slowly. Sometimes Appekunny would be in the lead, and close behind him followed the pack mule and the loose horse, while Yo, leading Caribou, would bring up the rear. Then a place would be found where the fallen timber, piled four or five feet high, absolutely barred further progress, and the leader would call back, "We can't get through here," at which announcement Yo would turn off and begin to search for a path along which the horses could advance. Appekunny would turn the loose animals about so that they would follow the horse which was now in the lead, and they would slowly advance in a new direction.

Often for some little distance the logs would be piled so high that the animals were obliged to jump them, and after one series of these jumps it was found that the pack was tilted dangerously forward over the mule's neck. Examination showed that the staple of the ring in front of the saddle, through which the swing rope passed, had pulled out, and it was necessary to take off the pack and re-arrange the swing rope by passing it through the saddle. The pack cover, rigid and unyielding, stood up like a board when it was taken off, and the lash rope was frozen stiff as a bar of iron. Under such circumstances it was hard work re-packing, but the load was put on, and stayed there for the rest of the day without another pull. In and out, and around and over the fallen logs they passed, horses and men, plentifully besprinkled with snow from the overloaded branches, as white as their surroundings, wading laboriously through the ever-deepening snow. Once the mule took it into her head to bolt away from the train, and had to be pursued by one of the men for a quarter of a mile and led back, and again, the leader got into a miry spot in crossing a little gully, and they were forced to make quite a long detour to avoid this. Gradually the timber became more open, the fallen logs fewer, they passed through several open parks, and at length before them appeared an opening, through which they saw the creek, and a moment later found themselves on the Kootenay trail. This was easily followed, and they hurried along as fast as possible.

The walking was hard, partly because the snow was deep and partly because it balled up on the men's feet. Moreover, as they approached the edge of the timber they became exposed to the severity of the bitter wind that was blowing so furiously. They were tired, too, from so much wading through the snow and so much stepping over high logs, and every now and then would try riding, but it was too cold for that and they were soon glad to jump off and walk.

At length they crossed the creek and turned down the valley. Here, though still under the lee of the hills they began to realize how cold it was. Neither of the men wore an overcoat, and though warmly clad, the wind seemed to penetrate to their very marrow. Feet, hands, ears and faces suffered most severely, however, and only brisk walking, beating and rubbing sufficed to keep up the circulation in these parts. And still the snow fell in thick blinding *poudre* and the gale howled among the treetops. Riding again for awhile, they waded through the muddy swampy valley of a side creek, whose waters, fed by warm springs, had not yet stiffened, even in this severe cold, and then climbed the last hill, which brought them out on the upland, about six miles, as they thought, from camp, and where the wind had full sweep to work its fury on the chilled men and animals.

Steadily they tramped onward, bent forward to face the storm. Yo was in the lead, following the trail, which even in the knee deep snow was most of the time visible. On him fell the task of breaking the road in which the animals behind traveled. Once or twice the loose beasts refused to face the storm, and turning off to one side sought shelter from its force under the lee of a little grove of trees, but it was no time for stopping, and they were quickly driven back and set in motion in the right direction. Even where the trail was utterly obscured by the snow, it was easy to follow it by the "feel," for as soon as it was departed from the soft grass could be felt under the feet, while the trail itself was hard, smooth and bare of vegetation.

With feet wet, gloves frozen and bodies chilled, the men were uncomfortable enough and anxious to push on as rapidly as possible, for should night overtake them before the Inlet was crossed there would be no alternative but to camp in the snow, and they greatly preferred the warmth and shelter of their comfortable tent to the possibilities of a night spent on the uplands in a howling blizzard. It was getting late, and every moment's delay increased the danger of another night out, for their progress through the deep snow and in the teeth of this storm was painfully slow.

And now a new cause of delay arose. Appekunny for some time had been losing sensation in his feet, and at length called out to his companion that he feared they were freezing. It seemed that the only thing to do was to stop and thaw out these members, and at the next grove of aspens which they passed the animals were caught and tied up; then the snow was scraped away, some dry twigs collected, a fire was built, and Appekunny was relieved of his shoes. He had been unnecessarily alarmed, for the feet looked all right, and after a vigorous rubbing and warming and the substitution of dry socks for his wet and frozen ones, the animals were turned loose, and, partially thawed out, they started once more.

Out into the storm, away from the shelter of the trees they plowed their slow way, and the fury of the blasts struck them with its icy breath more fiercely than before, while the air was filled with the thick powder which concealed even the dark spruces bordering the narrow way on either hand. Now and then, whirling close to them, at one moment blotted out by the white snow wreaths and then suddenly starting into view again, came flocks of the tiny gray-crowned finches, birds which in fair weather are not seen except among the highest peaks, where there are only cold gray rocks and far-reaching stretches of ice and snow. Hither and thither they flew, for a moment alighting by the tall weeds that still held their heads above the snow, and then darting away again. Suddenly vanishing and as suddenly reappearing, they seemed like true spirits of the storm, wayward and unrestful as the gusts that seemed to bring them and to sweep them away.

The weary march through the ever deepening snow continued. Each moment it grew colder and colder, the wind blew harder and the snow flew more thickly. Presently during a slight lull in the storm a glimpse was caught of the upper lake, and it was seen that they were only two or three miles from camp. With renewed vigor they pushed on and at length descended the steep hill, through the spruces and came out on the Inlet flat. Now they were almost at home, and yet how long the ride across the open level flat was to the tired half-frozen men. By this time they had mounted, and were trying to urge the animals forward at a better pace, but these were as tired as their riders and would not hurry, but plodded onward at the same slow pace. Indeed it was impossible to ride fast, for the flat was covered with snow and ice and the bare-footed animals slipped and sprawled if they attempted to quicken their pace.

After they had reached the flat it seemed as if they would never come to the Inlet; after the Inlet had been crossed it seemed as if camp would never come in sight. But all things come to an end, and at length they rounded the timber near Mad Bear Creek and saw the familiar spot, and presently the white tent showed through the falling snow. The dogs had run ahead, and by their barking had notified the Rhymer and Jack of the arrival, and in a moment more two shadowy figures had stepped out of the tent and were seen through the flying snow watching their approach. The thick smoke which curled up from the fire indicated that cooking was going on, and Yo called back to Appekunny the word "Dinner," and the stiffened faces of the two gradually changed their set expressions and slowly creased themselves into responsive grins.

Arrived at the tent the animals were quickly tied up, and the men hurried inside with their guns. These having been deposited out of the storm Yo went out and helped the Rhymer and Jack unpack and unsaddle, and when he entered the tent a few moments later, Appekunny said: "Lord, did you have the sand to go out and unsaddle?"

"Well," said Yo, "I thought I couldn't be much colder than I have been for the last six hours."

Darkness was closing over the lake when they reached the camp, but half an hour later, when warm and with dry clothing, they were enjoying their delicious supper, they laughed at the hardships of the day's march and pronounced their excursion an unqualified success.

Yo.

We are constantly in receipt of requests from readers of Forest and Stream asking us for the names and addresses of various correspondents who prefer to sign their contributions to these columns with a pseudonym rather than their names in full. We have again and again advised our readers that it is impossible for us to make public such matters. If a writer desires to conceal his identity in this way, and we publish his contribution, we bind ourselves by the very act of publication to respect his desire to remain unknown. On the other hand, we are always willing to forward to any writer a communication sent him in our care, provided postage to prepay the letter accompanies it. Readers who desire to open correspondence with writers in Forest and Stream should, therefore, address the writer by his signature in the paper and forward their letter, accompanied by a stamped envelope, to this office. It will then be sent to the person addressed, who will reply or not as may seem good to him.

The Booneville, N. Y., Sportsmen's Club is discussing the feasibility of restocking the Adirondacks with moose. There should be no difficulty in such a project, provided that for every moose put out a score or two of mongrel hounds are added to the Booneville contingent.

Yesterday, Washington's Birthday, was celebrated in Vergennes, Vt., with a public entertainment, at which were given readings from "Uncle Lisha's Shop."

The Sportsman Tourist.

AFTER MISSISSIPPI DUCKS.—II.

R-R-R-R-R—R—R—R—goes the little Seth Thomas alarm clock. What a vexation that thing is. It arouses one from a sound slumber, grates on the ear harshly and irritates by its prolonged clatter. Long before it stops an ordinary mortal has lost all sense of sleep and is exasperated to the verge of profanity. The Fireman, however, slept on. As a sleeper, he is a young man promising great possibilities. Young hurricanes, earthquakes, the falling of the stars, the frantic squalls of a colicy baby—none of these would disturb him during a night's repose. He was rolled and shaken, and yelled at, and finally yielded a grunt. At last he became conscious, when he complained of not having slept well.

"Goodness, what do you call sleep?" exclaimed the Pilot. "From 8 P. M. to 5 A. M. you have been at it, while I have been mashed all night and have not slept a wink. I wish I could sleep like you."

The Fireman rolls over, draws up the blankets and courts silence. He wants more sleep, but another shaking and some tramping on him by the Pilot who is on a search for clothes causes him to get up at last.

The bed is rolled up in the rubber and pushed back to the stern, the bed plank taken up and pushed under the roll of bedding and room made for eating. Except excellent coffee a cold meal is partaken of, and by good daylight the Greenwing is under way, making good time through Old River. As she proceeds the river broadens, the current diminishes, and better speed is attained. Gaining confidence in the clamp over the bursted steam chest, steam is allowed to a attain a pressure of something over 100lbs., and the little launch splits the water at a lively rate.

Two miles ahead the towhead looms up and just east of that is McKee Pocket. Already the water is fairly sprinkled with ducks and Engineer and Fireman are in the bow on either side of the Pilot, while all are interestedly watching the movements of the birds. A loaded gun is at hand, but the game is wild and takes wing out of range. Last winter, over this same water, with Mr. Warner as pilot, with the present Fireman and Engineer, fine sport was had shooting from the launch. The water was black with ducks which kept constantly flying up in great masses out of range ahead. Stragglers, however, would loiter in front and along the west shore until within gunshot, when the three guns would combine on them. Generally it was poor shooting, and many ducks were crippled and had to be chased either with the launch or the canoe. But it was exciting sport, and in an hour or two about forty ducks were bagged in this way.

Just to the left of where the Greenwing now makes her way, on the main shore later in the day on that hunt, two blinds were made and decoys put out. Here a fine evening and morning shoot was had, about 100 mallards falling to bag.

This time, however, the Greenwing went on without such opportunity for sport. The ducks were wild and not near so plentiful. McKee Pocket was passed. It, too, had afforded many an hour's grand sport, but the water was deemed too high for a successful shoot now.

Two miles to the mouth of Yazoo River, and two up the Yazoo, brings us to the mouth of Steel's Bayou. Up this we turn and continue. Here, again, more ducks are seen. They get up and fly ahead. After a bit one lingers a little too long and the Fireman cuts him down as the bird takes flight. He is only winged, however, and the Engineer and Amateur give chase and bag him. He is a beautiful greenhead and graces the Amateur in a becoming manner.

"Now hasn't the Greenwing been doing nicely with her patchwork, boys?"

"Of course she has," chorus the Fireman and Pilot.

Wshe-e-e-e-e-e-e—. Well, it don't do to brag. Something had let loose on the forward side of the boiler. The Pilot and Fireman were lost to view in volumes of hissing steam, but they could be heard around. Shortly the fuss of the steam is stopped. The Fireman had been prompt and closed a couple of valves which open into a glass water gauge. It was nothing new this bursting of a glass water gauge. It is an old trick of the Greenwing's. When she can't do anything else she bursts a water gauge. It gives diversion and stirs up the crew. In order that she may have plenty of fun in this way she is provided with two, one fore and one aft of the boiler, and a few loose ones are stowed in the locker to replace bursted ones. It tickles a new man on the trip—stirs up his blood as it were, and gives him something to enliven his nerves and talk about when he goes home. On this particular occasion the Pilot being a new man, was stirred up, enlivened, etc., and during the rumpus, if the steam could have suddenly been blown away, this particular Pilot might have been seen to hastily climb over his wheel and nervously to clutch the jack staff. But when the steam cleared as it did gradually, the Pilot was at his post with a resolve in his expression to stay there if he perished in the act. He played the heroic well, but in an unguarded moment he gave it away and turned the laugh on himself.

Three miles up Steel's Bayou to the Right Fork, which we take. Here we meet shoal water and the speed is reduced one-half. Half a mile further and the mouth of Goose Lake is reached. Until the water rises more, this is as far as can be gone up the Right Fork. It was yet four miles to Burgess Lake, which is one of the best ducking grounds in the whole country. To-morrow the water would be high enough to let us up there. In the meantime the Greenwing must cast anchor here.

Two of the crew paddle a mile into Goose Lake, select a place for a blind, leave half of the decoys and go back. Later the Pilot and Fireman take the Boss, go into Goose Lake, put out these decoys and make a blind, leaving the Engineer with the Amateur to explore for a location, who announces his intention to paddle to Burgess Lake if possible.

"Well, you will get the ducks if you go up there," remarks the Pilot as the Boss is pulled away for Goose Lake. But for some time the Engineer has been eying dubiously an ominous glitter in the bend of the Right Fork above him. It is ice, but is it too thick for his thin canoe. He would see.

Gently is the bow pushed into it, which at first yields freely, then resists, and finally cracks stubbornly and harshly before the Amateur, menacing its safety. It won't do to push a boat in that kind of stuff. The ice is thin but hard and sharp, and cuts keenly at the surface line. A standing position shows the ice to extend from bank to bank as far up as the eye could reach. The trip can't be made. By to-morrow it may thaw, when all can go with the launch. The Engineer then determines to explore Steel's Bayou, which, having a current, had not frozen. The outriggers having been put on, he sits down to the oars and begins to stroke vigorously. He turns one bend and checks up; he meditates. What good can he do in Steel's Bayou? The water is too high there for good shooting. He will go back to the ice, and with ammunition enough for an evening's shoot, he will foot it to Burgess Lake. He can't give that up just yet. Had he ever had a poor shoot up there? No, he hadn't. It was just a "Jim Dandy" place and he would go there, or blow out a glass gauge cock or something else desperate in the attempt. The ice is reached again, and the canoe dragged on shore. Sixty shells are pocketed and a bundle of 2 doz. sticks, sharpened at one end and copper-wired at the other, are taken to put out dead ducks for decoys. A 9½-lb. gun, 60 rounds of ammunition, 2 doz. decoy sticks, and heavy clothing made a heavy load. The Engineer climbed the icy bank and began to break sleet in the direction of Burgess. Presently again he slowed up and stopped. Could he go to Burgess with that load, and return probably with a heavier load of game without being broken down? No he couldn't. It wouldn't be wise. Well, then, what could he do? Why, he would go into Goose Lake and make a blind and put out his decoys half a mile or more beyond the other boys.

How many ducks did we get on Goose Lake that afternoon? Well, we had some fun anyway. Didn't the ducks find out we were there though with plenty of ammunition to salute them as they went by.

That was Wednesday. The wind remained in the north and the temperature continued to lower. That night the Right Fork froze deeper and harder and all of Goose Lake sealed over, except near the mouth where the current was sufficiently active to prevent it. We were forced to Steel's Bayou as the only available location. To add to our discomfiture the weather got miserably bright, and not a cloud intervened to take away the glare. The decoys looked like ghosts of ducks, and the chaps which they assumed to imitate would generally flap their wings lustily for an additional height and increased speed. No luck to brag of that day, though a few tumbled to the loud call of the breechloaders.

Friday morning was again rather bright and Steel's Bayou was again tried. The Engineer's location was utterly ruined by a tent which some hunters from Vicksburg had pitched the night before within sight of his decoys. A noisy axe and a column of blue smoke in that locality put the birds high and turned them square over the tall timber. It was no use. The Engineer did not get a shot, and, in disgust, took up his decoys to seek another location. None to suit him was found, however, and according to previous understanding he went aboard the launch, raised steam, blew the whistle, took up—excuse me—weighed anchor, opened the throttle, took the wheel, and steamed down the Right Fork to Steel's Bayou. Here the Fireman and Pilot were met, having taken up decoys at the sound of the whistle, and were taken aboard, and the Greenwing's nose pointed homeward. Not that she was going directly home, that depended. If game could be found on the way, the anchor was to be tumbled overboard again. There was not enough game aboard to satisfy all parties. The Fireman said if we went in port now the Greenwing would have the lowest score she had ever taken. Couldn't a few more ducks be had? All agreed to increase the score if possible.

Going down Steel's Bayou another duck was crippled at long range. The engine was stopped and the Engineer gave chase in the Amateur. The duck swam ashore and got in some brush. While searching for it, something let loose on the Greenwing again. The interior suddenly became enveloped in steam. That blasted water gauge again, thought the Engineer, the Fireman will soon attend to that. A little twist of a couple of valves would fix it. The Fireman was a little slow this time—the steam kept coming. The crew was in obscurity—what could they be doing? Things began to rattle on the Greenwing. Evidently some one was moving about. Loud and excited conversation is heard, and the steam continues to hiss with increased violence. What the devil's up? The Engineer gets interested, leaves his search, leaps into the Amateur and pulls for the Greenwing vigorously. The safety-valve joins her music to that of the interior. She's got some pressure now, is guessed. Next chimes in the shrill whistle. That fellow is demoralized, and wants help. Well, isn't the Engineer straining himself to get there? Away goes the safety-valve again while the whistle takes breath, but only for an instant, when it shrieks out again—first one then the other, and sometimes both at once, while the interior goes bravely on. Loud and excited talking is indulged in by the invisible Fireman and Pilot. Finally the Engineer gets alongside, finds one of the valves to the glass gauge still open, closes it and stops the internal racket. A glance over the boat revealed an interesting sight. On the larboard to the string leading to the safety-valve hung the Fireman, and on the starboard to the whistle string hung the Pilot. Each was just there with an expression indicating a determination to stay on until the end came. They had the boat beautifully frescoed with steam; she was as white as a bride in full dress.

"What did you blow those things off for, boys?" asked the Engineer.

"To let out the steam," both replied.

"Why didn't you close the other valve. Mr. Fireman?"

"I did try, but she would not close."

"Guess, my boy, you was a little rattled that time. When that gauge bursts again close both valves quickly and you have the trouble stopped."

"I did try to close both valves," repeated the Fireman positively.

This time the gauge had not burst, but the packing at the upper end had blown out, which was soon remedied by putting in new packing. No harm had been done, and the alarm that had been created among the crew soon gave place to jests and merriment. The Fireman wanted to know of the Pilot what was the tensile strength of the whistle cord?

"One hundred and forty pounds, equal to my own weight or more; what is the strength of the safety-valve string, Mr. Fireman?"

"One hundred and fifty pounds, sir."

"Mr. Engineer, what is the highest speed ever attained by the Amateur, and when was it made?"

"Fifteen miles an hour, sir, and just a few moments ago."

"Now, boys, don't let's give this away in town," and it was agreed; but when we got down there, it could not be kept. And when the Pilot would go forward to serve a customer the Fireman would toot toot him off, when the Pilot would turn and greet the Fireman with a prolonged sh-e-e-e-e—in imitation of escaping steam through the safety-valve. And finally the Engineer was beguiled into a rehearsal of the whole affair, which is now known as the fresco on Steel's Bayou.

On reaching McKee Pocket we steamed over to the upper side, threw over the anchor and paddled to the narrow neck of land extending between it and Old River, got out and walked at the water's edge for several hundred yards. A few ducks were flushed out of range. The prospect was not over encouraging, but it was believed a few ducks could be brought to bag here. The weather had become cloudy with threatening rain, so the launch was taken below the towhead and partially up into the Pocket. That afternoon a few ducks were killed but not enough to excessively elate the crew.

Next morning, an hour before daybreak, when the alarm sang out, rain was heard to patter on the roof of the little launch in a musical way to an old duck hunter. If ducks can be had at all, it is on such days that they will come in without their usual caution and suspicion. Besides, the decoys have a natural appearance and there is generally sufficient breeze to keep them in graceful motion. It was with no little pleasure that the Engineer lay there and listened to the falling drops, for while there were not many ducks about the Pocket, some would be sure to tumble to the report of his gun. The Pilot and Fireman, however, did not readily catch on. That rain was a cold one they said. "All the better," edges in Engineer. "And our decoys are in a poor location, for they are tied back in the willows where they can't well be seen."

"Put them out in the open water."

"And the rising water is ten or twelve inches deep in our blind by this time."

"Move the whole caboodle to a better place, then, it won't take long."

"Ugh!—ugh!" comes from the depths of the blankets as the Fireman and Pilot cuddle down apparently for another snooze. Didn't the Engineer pity those two young sportsmen. Hadn't they gone to no end of trouble to prepare for this hunt, and been put to some expense? Hadn't they wanted weather of the right kind for days, and now that they had it, to want to remain aboard and sleep? Why, anybody can sleep, and sleep every day in the year and at home without extra expense or trouble. Did they aspire to be duck hunters and forego such weather as this? Where was the Engineer's old companion who gloried in such opportunities for sport? Business had detained him, and no doubt at that moment he was indulging in the luxury of a soft warm bed, but uneasy must have been his rest could he have been conscious of the situation that morning at the Pocket. Recollections of another sportsman come crowding up, of one who took in keenly every vestige of enjoyment to be had in an outing of this kind, and grumbling over no hardships to be met with. And here, before the Engineer, lay a couple of gentlemen who would lose such an opportunity on so trifling a pretext. Failing to find language adequate to the case, the Engineer did the next best thing that offered. He got up and tramped over the bed in a promiscuous and careless manner until things begin to stir, and then to finish the work thus partly done, the Pilot was sat on while a pair of rubber boots were kicked on over the body of the Fireman. This put life on the interior of the Greenwing, and in due time the Boss was being energetically paddled for the submerged blind on the west side of the Pocket, while the Amateur was as lustily being pulled for a clump of bushes on the opposite shore.

After reaching a ducking ground the most important thing to do is to get a good location. To do this often calls for the exercise of the best judgment of the sportsman, and even then he will frequently find, after spending an hour or more in putting out decoys and making a good blind, that he will be badly located, and the ducks instead of flying or settling in that particular locality prefer a spot some hundreds of yards or so from there. In determining upon a location it is generally best not to be in too much haste. If there is a flight, an hour spent in watching will not be amiss. Notice from which direction mainly the ducks come, the course they take in circling, the feeding locality, and the place where the most lighting is done. In a strong wind the ducks will always decoy against it—bear that in mind. In selecting for a blind recollect also that your decoys ought to be in open water where they can be seen by incoming ducks at a long distance, so they can determine on that spot in time to check up a little before reaching there, otherwise they will do a shade too much circling and some sharp-eyed old fellow spy the danger. Avoid, if possible, making a blind in such a position that the game in their flight will get you between them and the setting or rising sun. Things in a blind loom up rather conspicuously in such a position. And above all, remember you are bigger than a duck, that a duck has a much sharper eye than you, and that there are frequently a score of them scanning your layout. Let your blind be as natural to the surroundings as possible. If it is a mass of brush out on a naked bar, just as well take up and quit. You will be sailed over and around and by out of reach until you are identified, and some wise chap will say, *Quack! quack!* in sharp discordant notes, and the flock gives you an exhibition of some movements that soon puts it in the dim distance. And after taking your location, if it is not the proper one, relocate as speedily as possible, and don't be chagrined, for the best judge in such matters will often have to do likewise.

It was something like this that put us out at McKee Pocket. The evening before had been almost destitute of flight, and the Pocket being in the shape of three-quarters of a circle with no breaks in the growth for "fly-bys" added to the difficulty. The Pilot and Fireman stood on the ground at the water's edge in high willows, with a stretch of open water thirty or forty yards wide and two or three hundred yards long not far in front of them, with a narrow ribbon of willows between that and the main body of the pond. Apparently it was a good location, but during the morning shoot it was demonstrated that a couple of hundred or so yards further down, the grass seed was a little sweeter than up there, but the boys failed to relocate and fought it out at the old stand.

On the side the Engineer located, the ground was entirely submerged. The best locality he could discover was a thick cluster of ragged bushes. These he climbed into. A few ducks came around the previous afternoon, but the shooting from that stand was not first-class. Now and then a duck would light in the rear where a shot could not be had and sass the "bushwhacker" in a provoking way. So during the morning a more favorable place was speedily looked up, where position was taken in the Amateur at one edge of a heavy growth of timber and under a thick cover of overreaching branches. The twenty mallard decoys had been put out thirty yards or more in front in a natural haphazard manner. A light rain prevailed to deaden the reflection, and a sufficient breeze existed to set the decoys in motion.

And sure enough there was a flight, not such as one sometimes gets, but sufficient to keep the sportsman eagerly on the watch. Yonder come a pair, will they turn this way? Yes, indeed! See them set their wings and push in toward the decoys. Now they circle and come in the rear, and pass to the left. Here they come again, closer this time, but still too far for a shot. Away they go to the far shore. Back again in a minute, closer this time. Look out, Mr. Sportsman, keep rigid as an old log or you are detected. Ah, they veer and go over behind again where the rush of their wings can be heard for a moment only. Here they come once more, against the wind this time, straight for the decoys—this is your chance, be sharp—quick—bang, bang. Eh! old fellow, miss with the first barrel, kill with the other, what's that for? "Bushes in the way and the duck twisted on me." The bird is retrieved. In ten or fifteen minutes the chattering of an old drake's bill is heard. Soon with his flock he is seen. They circle two or three times, get a hint that something is wrong, and with whistling wings hurry away.

So all the forenoon interest in the flight is kept up, even now and then a fine old mallard falling to the guns. So that when the Boss and Amateur are paddled down to the Greenwing the score is brought above the lowest she had ever gone home with. When tied together in pairs and hung up to advantage in the stern of the launch they make quite a creditable display, and number forty table ducks—all mallards but four—three snipe and three fish ducks.

At two o'clock on Saturday the anchor was weighed and a final start for home made. It was down stream this time, and in less than two hours the shrill whistle was blowing the signal of return.

"Can you pick up that buoy?" was asked of the Pilot as a small white block of wood loomed up on the surface of the water a few hundred yards away.

"Pick up that buoy! Of course I can! I can split it," indignantly retorted the Pilot. The Engineer and Fireman smiled slightly, for there was a smart cross wind, and the Greenwing is deep astern and light draft at the bow, and when slowed up she is easily sheered.

"Hold on! Stop her! Back her!" comes in quick succession from the Pilot who has not yet fully learned the signals for the bell. And by that time the wheel was directly over the buoy, and to have put it in motion would have endangered the line attached to the buoy. So the wind is waited on to get us away a bit. Presently the launch is pushed ahead, and the Pilot takes a circuit for the buoy, but he is too close and makes a complete circle with the buoy as a center. He then makes a trip out toward the middle of Lake Centennial, rounds to, makes a straight course for the buoy again. When near the buoy the Greenwing gets demoralized and wobbles about much after the manner of a drunkard in a public thoroughfare, and the buoy is missed by ten feet or more. In the meantime a few skiffs have moved away from that part of the lake to give the Pilot ample sway. What was that the Pilot said on viewing his next failure? "Jam the jam buoy?"

"Well, jam her, Mr. Pilot—split it." And the next time the Greenwing was backed straight away, and the Pilot made a final bulge for the white block, making this time a nice allowance for windage, when the elusive buoy came alongside and was taken aboard and the line made fast to the post in the bow of the Greenwing.

As we moved away from her, after having sent all the traps ashore, it was remarked that the Greenwing looked as innocent as a sucking lamb, as though she had never kicked up any deviltry in all her days. But surely she was a gay deceiver, having more pranks at her command than a festive plantation mule. Ta, ta, Mrs. Greenwing, may you long flourish even with your capricious ways.

Vicksburg, Miss., Jan. 31. W. L. P.

Natural History.

THE AMERICAN CERVIDÆ.

BY R. W. SHUFELDT.

TEN years ago when Judge Caton published his excellent and useful volume on "The Antelope and Deer of America," that careful observer treated of eight species of deer, which he took to be all the then representatives of this group in our fauna.

It will be seen in the U. S. National Museum List, which I published in my last contribution to this journal, on the Peccary, that ten species of deer are there considered to belong to the North American fauna; these are arrayed in four genera, while Caton retained his eight species in two genera, or all in the genus *Cervus*, except the barren-ground caribou, which was placed apart in the genus *Rangifer*.

Now *Cervus alces* of Caton, "the Moose," has come to be *Alces machlis* of the above named List; the name for the "Elk" remains the same in both, *i. e.*, *Cervus canadensis*. Next we arrive at a point of difference in these two authorities, which owing to the lack of literature and specimens I am, at the present time, unable to make clear, and I trust some of the readers of Forest and Stream, more fortunately situated in these respects than I am, will throw some light upon the subject. I place the authorities and species opposite each other for comparison.

Caton.	U. S. National Museum.
Cervus tarandus, Woodland Caribou.	*Rangifer tarandus*, Reindeer.
.....	*Rangifer tarandus caribou*, Woodland Caribou.

On page 326 of his work, Judge Caton gives it as his opinion that "the Reindeer and our Woodland Caribou are specifically identical," in which case *R. tarandus* and *R. t. caribou* in the List of the U. S. National Museum, would be equal to his *Cervus tarandus*, an explanation which may be the correct one. Further investigation upon this subject seems to be desirable.

The "Mule Deer" of Caton (*Cervus macrotis*) is the same animal as the *Cariacus macrotis* of the List I published, as is the "Black-tailed Deer" (*Cervus columbianus*) of the first named authority, the *Cariacus columbianus* of the U. S. National Museum. Again the "Common Deer" of Caton (*Cervus virginianus*) is the "Virginia Deer" of my "List" or *Cariacus virginianus*. *Rangifer grœnlandicus*, the "Barren-ground Caribou" of Caton, is the *R. tarandus grœnlandicus* of the U. S. National Museum "List," but the former author describes the *Cervus acapulcensis*, the Acapulco deer, which I take to be the *Cariacus toltecus* or Yucatan deer of the U. S. Museum "List," and if it be not this species I am at a loss to make an agreement in the case. Judge Caton describes no species which corresponds with the "Black-faced Brocket" (*Cariacus rufinus*) of the above-named List, a species ranging from Mexico to Ecuador. This then appears to be the difference between the two authorities in question, for Judge Caton does not take into consideration the *C. rufinus*, and believes the reindeer and woodland caribou to be identical species, thus reducing his list of deer to *eight*, while *ten* species are enumerated by Mr. True in his "List" of the U. S. National Museum; and, as I have already remarked, it does not lie within my power to decide upon this difference at the present writing.

In order to secure fitting illustrative figures of the *Cervidæ* for the contribution in hand, I overhauled all my sketches, cuts, engravings and pictures, but have failed to find anything better, nay, nothing so good for my purpose as the unpretentious yet truthful representations of these highly interesting animals in Caton's work upon their natural history. The elk alone formed an exception to my choice, and its figure was chosen from a woodcut in my possession, the author being unknown to me. I copied all of Judge Caton's figures, and present them herewith, grouped in one plate, and a handsome representation they are for us of the family in the United States.

Restricted as the space of necessity must be in an article like the present, I can, of course, do little more than notice some of the leading characters and habits of these species now under consideration, and to such an essay I must limit myself. No American naturalist, sportsman, lover of the forests, and the manly pursuits of the chase, will be without a copy in his library of Caton's "Antelope and Deer of America;" while the back numbers of Forest and Stream offer a perfect mine of information upon the natural history of our *Cervidæ*, chapters which one never wearies of reading.

Seven or eight years ago, at a time when I hunted a good deal through central Wyoming, and in the mountain ranges there found and killed deer, as well as saw many, many others shot by my companions, every one spoke of killing "black-tail," and I never heard the name "mule deer" applied to any variety in that region. Yet that is the very heart of the range of the true type of the mule deer (*C. macrotis*), and the black-tail is not to be found there. These two forms seem to have been originally confused by those veteran explorers, Lewis and Clarke, and in the minds of many I am satisfied that the matter is as yet by no means cleared up. Even old hunters have often asked me, whether I would know a mule deer if I shot one, speaking of the animal in a somewhat doubtful way, as were it some rare hybrid, while perhaps they may have just slain one.

Speaking of the mule deer, Caton tells us that "west of the Rocky Mountains this deer is met with almost everywhere, though much more abundantly in some places than others. In the Coast Range of northern California they are almost entirely replaced by the Columbian black-tailed deer, while in the Coast Range of southern California scarcely any other deer is met with. Here, however, a very distinct variety of this deer occurs, differing in important particulars from those found east of the Sierras, as will be more particularly explained hereafter. In all of Oregon, in Washington Territory, and in British Columbia, this deer is met with, though much less abundant than the true black-tailed deer, or even the Virginia deer. This deer occupies about thirty degrees of latitude, from Cape St. Lucas on the south into British Columbia on the north." By comparing Figures 1 and 4 of the present paper it will at once be seen how different appearing animals these two deer are; and there is no mistaking the huge ears of *C. macrotis*, and the large, pencil-like tassel which finishes off its tail, as compared with the very different form of these appendages as they are found to exist in the true black-tail.

We often hear the mule deer spoken of as a clumsy, uncouth creature, or even a homely brute, but the writer, who has as yet failed to find an ugly object in the entire realm of living nature, from a swan to a snapping turtle, must declare that such sentiments are entirely lost upon him, for of the thousand and one lovely scenes the forests of my country have yielded me, none for the moment appeared more charming than when my eyes were first feasted by the sight of nine mule deer, bucks, does and kids, that I suddenly aroused from their siesta in a sunny, rocky gorge in the heart of the Big Horn Mountains. A few bounds and the entire big-eared party turn and face the intruder, standing sidewise, but heads turned so as to look directly at you; what could be more tempting to one bent upon their destruction, for there are their foreheads and shoulders, both deliberately exposed. Your wicked rifle speaks out its sharp report; down goes the biggest buck in the bunch, while all the others by a series of bounds soon reach the hill-crest beyond you, where, apparently somewhat fatigued by the sudden exercise, they again offer another shot. This deer is not much of a runner, and as in other members of its tribe, its eyesight is not of the keenest, though hearing and smell are both acute.

Strange to say the true black-tail deer (*C. columbianus*) is restricted to a very limited range, lying within the temperate zone and confined to a narrow strip of country on the Pacific slope of the Rockies; and, so far as I know, the species does not occur beyond this. It has never been my good fortune to see this deer in its native haunts, but we are told that "the bifurcated antler and the bounding gait observed in the mule deer are found also to be characteristics of this deer, but they are strictly confined to these two species; nor is it easy to conceive why this laborious and fatiguing gait has not in the course of time given place to the more easy and enduring running pace of the Virginia deer, which inhabits the same country." (Caton.)

Passing next to the common or Virginia deer we meet with a species that enjoys a wider geographical range than any other representative of the family in the entire world. It is found in every State and Territory of the Union and may be taken north and south from Canada to Panama. No kind of country seems to come amiss to it; I have shot them in the dense pines that clothe the sides of the Rocky Mountains; and again on the level prairie, fifty miles from the nearest butte; and finally, when standing up to my knees in a waste of marsh land and my game in its very midst. Wonderfully beautiful in form and graceful in action, this species is by far the most engaging of its kind, and in countries where it has been much hunted, requires the best talent of the sportsman to successfully hunt it down. Owing to its wide range and the varying influences of the climate, conditions and food to which it is submitted, fairly well marked varieties may be picked out coming from the extreme limits of its domain; but naturalists have failed thus far to draw constant characters to distinguish these apart, and in reality they are seen to intergrade in all directions. Further study, however, and careful comparison of a sufficient series of specimens will undoubtedly reveal the fact that at least two, or perhaps three, "good species" are now in existence.

One who has carefully examined the antlers of the three above mentioned deer would have no difficulty in distinguishing them, and their most evident individual peculiarities are by no means badly shown in the figures illustrating this paper. The males alone of these species possess normally these appendages, and they all have their seasonal shed for them, the parts passing through the well-known metamorphoses in being reproduced afterward. All three of the species have both the tarsal and metatarsal glands, and in all the lacrymal sinus is present in front of the eyes. Space will not admit of my dwelling upon the description of these last two named and interesting structures here. The black-tail and Virginia deer are of about the same size for both sexes, while the mule deer is larger than either of these species; the does of any of the three, I believe, can have as many as three fawns at a birth. This, however, is rare, and one or twins is the rule in by far the vast majority of cases.

At one time in the history of this country the elk or wapiti (*C. canadensis*) had a range of habitat which extended from ocean to ocean across the continent, and from the Canadas, where they were abundant, down into old Mexico and southern California. It will be seen from the "List" which was published in my Peccary paper, that the U. S. National Museum still quotes "Virginia" as its habitat. I am not familiar with the exact authority for this report, and am unable to say in what part of Virginia elk may yet be successfully hunted. They are still quite abundant along the crest of the Rockies and the outlying ranges, as well as in California. I have seen them in the Laramie range of hills in Wyoming all the way from a single old buck leisurely browsing along through the pine forests of those mountains in August to a herd composed of seven or eight hundred head spread out on the freezing snow in a park in the same range. It has been my fortune, too, to have killed a grand old buck of this species and a doe which stood beside him at one shot. Moreover, on another instance, when mounted on rather a vicious Sioux pony, it was my fortune to become "tangled up" in a herd of some one hundred and fifty head, when I was obliged to kill seven of them with my revolver and rifle before I could again successfully extricate myself and horse from such a forest of horns and great crowding and plunging brutes. Never have I slain, however, a single animal that was not afterward utilized, and my disgust has known no bounds when I have seen the bodies of these elegant creatures rotting in a September sun on the mountain sides of the Big Horns, wantonly shot down by a party of "tourists." Our wapiti are upon a rapid road that leads to complete extinction, and the sight of a big herd of these animals, powerful in build, grand in proportions and carriage, plowing through the snow over their range in their wilderness home, is ere long to be a thing of the past. During the rutting season the fearful whistle-like scream of an old buck of this species may be plainly heard for over a mile, and when sounded near to one, the roar of an African lion could not be more appalling, especially if either be uttered in the stillness of night as one hugs his small camp-fire in the very heart of the wilderness. There is but one scream that I know anything about that can compare with it. I refer to the voices of a troop of howling monkeys as I have heard them in the vast forests of southern Mexico.

Elk and their habits are best studied when the animals are kept confined in a state of semi-domestication in large private parks, and in this respect no one in this country has enjoyed the opportunities of Judge Caton, who has owned as many as fifty and more of these animals at one time. This author writes that "during the rutting season the monarch of the herd drives off the other bucks and gathers the does into a band, which he appropriates to himself as much as possible. The other bucks hover around in his vicinity, generally keeping together, and annoying the chief by their unwelcome presence, and occasionally stealing away a part of his harem, for the does will slip away from his tyranical rule whenever they get a chance. He is grossly ungallant in his selfishness, driving a doe from any choice bit she may find, with as little ceremony or affection as he would a buck. He has evidently no idea of love or affection, and is only pleased to act the tyrant and seek his own gratification, perfectly regardless of the feelings of others. Still there are degrees in this regard among different individuals." Elk will subsist upon almost any kind of vegetation and keep in good condition, and the does are seen to be very fond of their fawns, vigorously defending them in times of threatened danger. In this species only the males grow antlers, which are of huge proportions; the lacrymal sinus is present and naked; there are no tarsal glands, and the metatarsal ones are well up on the limbs, while the interdigital glands seem to be absent in the feet.

In common with our wapiti the moose (*A. machlis*) is now rapidly becoming extinct, and not many generations can go by before this species, the largest of all our *Cervidæ*, will be known as one of the huge, curious forms of the past. From a wide range extending across the

United States from the Carolinas northward to the subpolar regions, this animal has been driven by the advancing civilization of the white men to a restricted habitat in certain mountainous districts north of the Territories, in Maine, portions of the Dominion of Canada and elsewhere.

The forms of the male and female moose are so well known in these days to the general reader, that I will not attempt to describe them here; an old buck usually stands higher at the withers than a full grown horse, and may weigh as much as 1,200lbs. In Montana they say the animal attains a greater size than it does in Maine and the Northeast, but this statement still demands authoritative confirmation. The moose will eat almost any kind of vegetation he may come across in his haunts, from dry moss to all kinds of leaves of trees, weeds, and many other plants.

Able pens of both sportsmen and naturalists of this country and the continent of Europe have preserved to us many a tempting picture of the charms of a good moose hunt; and indeed there are few or no sports afield that can compare with it, as it demands all the talent and endurance which the hunter may command for its successful pursuit. During the breeding season, which occurs some time in October, the moose pair off, somewhat after the manner of the roe deer of Europe, although in the moose the arrangement is entered into only for the season, while in the roe deer it is a life-long contract. Usually the female bears but one fawn, but may deliver triplets; she carries about nine months, and is very solicitous of her young after their birth. How different are these sexual relations with the unbridled passions of the insatiable elk, that ponderous old cervine Turk of the tribe, described above.

Often in the summer these animals come to the solitary lakes in the forests and stand sometimes neck-deep in the water, and thus escape the insect pests, as gnats and mosquitoes, which worry them to an exasperating degree at this season. Only the males possess the great palmated antlers, and have "the bell," that peculiar glandular and hair-covered appendage, hanging beneath the lower jaw back of the chin. Caton says that the females may also possess one of these curious structures, and he believes them to be the more vigorous individuals of that sex. The moose lives to a great age, and does not attain its growth until fourteen or fifteen years of age. Its peculiar gait when pursued, and its habit of occasionally falling are well known to us all. As to this latter trait another writer tells me that "It is probably owing to this occurrence that the elk [moose] was believed by the ancient and the vulgar to have frequent attacks of epilepsy, and to be obliged to smell its hoof before it could recover; hence the Teutonic name of *Elend—miserable*—and the reputation, especially of the forehoofs, as a specific against the disease." In Sweden the moose, or the elk as it is called throughout its European range, has been domesticated with some measure of success, and made to draw the sledge, much in the same way as the reindeer does. *Alces* is without the metatarsal gland, and the tarsal glands, although present, are very small. There is a small area between the nostrils devoid of hair, and the muzzle is broad and flabby. The animal is higher at the withers than at the hips, but this is due to long scapulæ, and is well seen in its most exaggerated instance in the giraffe.

Taking all authorities into consideration it seems to be pretty well decided by the majority, that we have in our fauna two caribous, viz., the barren-ground caribou (*R. t. grœnlandicus*) and the woodland caribou (*R. t. caribou*); these species are shown in Figures 6, 7 and 10, of the illustrations to this paper.

Rangifer tarandus is the true reindeer common to the boreal regions of both hemispheres. The accounts of the two species of caribou seem to be very insufficient, and in many cases not a little mixed up. My friend Mr. L. M. Turner, of the U. S. National Museum, has spent a couple of years upon the range of these animals, and I look for his report of their natural history with great interest. I have for dissection two fœtal woodland caribou sent me by this distinguished observer and naturalist, and I only await certain necessary facilities to complete my observations upon them.

The barren-ground caribou has a range, so far as I can learn, from the Atlantic Ocean to the Makenzie River on the west, while northward it passes to the Arctic regions and southward sometimes to the borders of the Great Lakes. On the other hand, the woodland caribou seems at present to be restricted to New Brunswick, Nova Scotia, northern Maine (?), and as far north as the southern regions of the Hudson Bay districts. So the ranges of these two species overlap at certain times, the barren-ground caribou being migratory, yet the species seem to have kept absolutely distinct. Both of these species shed their antlers as do other deer, but they differ in that the females also possess small antlers, while the greatest amount of variation in form of these cornute appendages is observable in both species, though never to an extent sufficient to deceive the observing naturalist. The barren-ground caribou is not more than half the size of the woodland variety, yet the antlers of the former are much the larger of the two species. It is known that the vision in both caribous is very poor, while the animals appear, too, to be stupid in many particulars, and easily captured and killed by their hunters. In traveling over the snow the woodland caribou spreads out its functional toes, and even the lateral rudimentary digits come into play, the "spread" form as a whole a very efficient cervine snowshoe. Did the ancestors of these animals in early geologic ages possess five toes on each foot? Science stands surely in need of exhaustive accounts upon the entire natural history and morphology of both of these interesting species of American reindeer, accounts which it is earnestly to be hoped will soon be forthcoming.

Indeed, these remarks apply equally well to all of our species of *Cervidæ*, and science will be very grateful for any *accurate* observations upon the habits in a state of nature of any of them. Careful comparisons of the Virginia deer from widely separate areas of its wide range, are much to be desired; the habits of the mule deer and black-tail have been by no means exhausted, while above all a careful revision of much of the anatomy of any of these types will by no means come amiss. My object and my pains in compiling the present contribution will be fully met and repaid should it prove to be the means of giving to science another single fact of any character heretofore unknown, from any competent observer. Our deer have many interesting congeners in various quarters of the world, as the Musk Deer; the *Hydropotes inermis*, a deer without antlers, and long upper canine teeth; the more remotely connected Chevrotains, forms standing between the true deers and the pigs; and finally, a host of typical deer with forms and histories most interesting. Fossil deer go to show that in the earliest types these animals had no antlers, but as we pass through the forms found in the Middle Miocene, the Upper Miocene, the Upper Pliocene, they pass successively from the Lower Miocene, where the species were all without antlers, to those which had simple ones, to those with two branches, and then to those which had three branches, and finally, in the Upper Pliocene, where they occur with perfect growths of this kind as in modern types. The fossil Irish Elk (*Cervus megaceros*), an enormous cervine form from the lake deposits of Ireland, is one of the most interesting extinct species which has rewarded the explorations of the paleontologists.

Birds and Bonnets in Michigan.—*Editor Forest and Stream:* In the report of the Michigan Association, in No. 2 of the current volume, Mr. T. E. Shepherd is represented as saying that "the association should turn its attention to the protection of song birds, which are nearly exterminated, owing to the demands of fashion." I can account for the appearance of this sweeping assertion only on the supposition that Mr. Shepherd was incorrectly reported. There is no truth in the statment. I have been a constant resident of Michigan for forty-five years, have traveled extensively in the State, and am well acquainted with the situation in many widely separated localities, and I know from personal observation that in and around some of the interior villages there has been a large increase of song birds, both in the number of species and the number of individuals. I have never known a bird killed in obedience to the demands of fashion, nor have I ever known of a person buying, or offering to buy, bird skins for ornamentation of milliners' work. Boys, and sometimes older persons, shoot song birds from pure wantonness, or for the sake of shooting something, and need to be restrained by the application of law.—M. L. Leach (Traverse City, Mich.).

Dover, Del., Feb. 15—The thermometer registered 60° here yesterday. Bluebirds and robins left their retreats and the town resounded with their carols.—Del. A. Ware.

PILGRIMAGE OF THE SAGINAW CROWD.

I.

IT IS usually expected that some member of a party which takes two or three weeks' outing shall be the scribe and chronicler, and report to the Forest and Stream the doings and incidents of the trip. Now, this time, I propose to make the other boys turn in and do their share; in other words, kind of act as an editor of the case, which will give readers an opportunity to compare the styles of the different authors, and they will be at liberty in the future to call upon which ever one they consider slings the raciest pen and puts the most hairbreadth escapes and blood-curdling scenes with a realistic effect into his part of the narrative.

It is the old Dakota goose party that I am about to stir up. The readers of the Forest and Stream will remember that it has been the custom of a certain eight boon companions to each year take the good car City of Saginaw, which belongs to the Saginaw Hunting Club, and make a pilgrimage to some far off land, for the sole and only purpose of having a thoroughly good time. This good time, of course, consisted of as much shooting as we could get, breathing in the pure air of the western prairies to the end that our doctor's bills might be less, and last but not the least of the enjoyment was the planning for months beforehand what we should take and where we should go, what we would do after we got there, and when we would start, and the getting together every few nights in the last weeks just before going to make our plans, and talk over the good times we had the year before and were going to have this year. And it did not end here, for after our return there was the same old enthusiasm manifested when any two of the party got together, and one would recall an extra long shot that so-and-so made, or what a delightful time we had the day we went down to the McGuire farm, or the time the undersigned left his gun at the car and did not discover it until the decoys were all placed and the geese coming up through the fog of the early morning, and how the team was despatched to the station near by to telegraph back to the car to one of the lazy ones who failed to get up in the morning to go with us, to hire some one to bring the gun with all speed, as it promised to be a great day and he did not want to get left, and how at last the gun did arrive; how the other boys had had their big shoot, and finally the day was ended up with a score of 165 geese, all we could carry in the wagon, and we drove back to the good old car in the dusk of evening, wet, cold and shivering, but happy, and how good the hot lemonade tasted that the City Official had brewed for our coming, knowing by the storm that had raged all the afternoon that we would need something of the kind to cheer up our spirits. Oh, well, I say this part of the trip is not to be despised. Then the comparing of notes and I don't know, after all, but that anticipation is half of the enjoyment of a sportsman's life.

But this time, instead of to Dakota, the trip was to the Indian Territory. We wanted to go to Dakota and were homesick for the spot that for four successive years had been our paradise, but the new game laws prohibited bringing home to our friends any of the game we might kill, and as there were very few inhabitants in the locality where we did most of our shooting, it was impossible to give our birds away or make proper use of them, and of course we did not want to kill anything we could not use. Therefore when Ed proposed that we go to the Territory and visit their cattle ranch we acquiesced. The Saginaw Cattle Company have 200,000 acres of land fenced in in the Sac and Fox Reservation, and we were very glad to go and see how the cattle looked, and besides, we had reports of plenty of birds. In looking over the old crowd two or three faces were missing. There was the General, whom we had not heard from since we were salmon fishing in the summer, and Bob wrote us that rheumatism prevented his going. "Whisky Bill," of Dakota fame, was somewhere in Kentucky buying fast horses, so they had narrowed down to Ed, the City Official, "Genial George" and Brooks or "Section 37," as he is familiarly called, and the Doctor, together with the writer of this chronicle, whom the boys nicknamed "Buzzard Bill," and undoubtedly the cause of the name will come out later on. So it came to pass that the F. & P. M. train, leaving Saginaw at 8:30 the evening of Oct. 11 bore us toward Chicago. All were present and accounted for with the exception of the Doctor, who was to meet us in Chicago in the morning. Our connection with the Wabash was very close, and the Grand Trunk is noted for being late. We had arranged, however, with the traveling passenger agent to hold his train for us if necessary, but somehow or other this did not pan out. It is always thus. You arrange for your transportation with the traveling passenger agent, and he of course guarantees everything, and is to be on hand to see about your transfer, provided you are going in a private car, or is going to hold the train for you if you are not and it should be necessary to do this in order to make connections, but in all my trips I have never yet had a thing come out just as they agreed. This was no exception, and when we reached the outskirts of Chicago and began crossing the numerous tracks going into the city, waiting for trains here and there, we saw that we were hopelessly late and something must be done. Telegraphing in we found that the Wabash train had not waited for us, but that we could possibly catch it by getting off at some junction outside of the city. This we did and our heavy baggage was unloaded, but we were in a peck of trouble to know what we were to do about our transportation, as we merely had orders for tourists' tickets, which would be issued us at Chicago. We were going to check it through some way as we were not to blame and did not want to be delayed an entire twenty-four hours. Soon the train came rumbling into the station. Somehow the conductor knew about us and was expecting us. The Doctor's cheery face was seen from one of the windows, the dogs were hastily put on board and away we went.

Nothing of importance occurred that day. The dogs were given their exercise at Decatur while the baggage was being transferred from one car to another, and we were there provided with the proper tickets. We had taken precaution to telegraph ahead for our sleeping berths at St. Louis, and it proved to be a very wise one, as it was the day of the Harvest excursion, besides St. Louis always has some kind of convention and the town was full of strangers, and when we reached the Union Depot, such a hurrying, scurrying and crowding was never seen. Bells were clanging, women rushing to and fro, dragging helpless children by arms that seemed ready to pull out of the sockets; porters bustled around, stowing away the passengers in the different sleeping cars, and all making ready for the far West. Or those who had been to the land of the setting sun were once more leaving for the cultured East. Around the window of the sleeping car agent was a solid jam of people, twenty deep. There is no rule nor system about the different ones taking turns, merely a crush, so that the strongest man rushed in and stood a better show than the poor helpless females with two or three children, who really needed a comfortable lower berth, but nine times out of ten had to take the leavings. Our three sections were waiting for us, and George and Ed had to transfer the dogs and put them to bed for the night, and we were all aboard for the Indian Territory and the West. Here comes in a little something about the peculiarities of baggagemen in making their charges for dogs' transportation. With most railroads there is no charge made for dogs, but it is expected that a gratuity be given the baggageman. Some demand it as a right, while others with more gentlemanly instincts are perfectly willing to "leave it to you, sir," and almost always get a better fee by so doing. The Grand Trunk baggageman roasted us unmercifully, and when we struck the 'Frisco line they tried to make us believe that dogs were charged half a cent per mile, and began figuring up quite an expense bill on our three. We profited by former experience, however, and got through without much of a robbing. Our sleeper was a new one of the latest pattern, and the night was most comfortably passed.

On awakening the next morning we made the acquaintance of a fellow traveler, who was a thorough old Southern gentleman in the first place, but had acquired the active instincts of the Western land speculator and boomer as well. Slightly helpless from some accident or deformity, he was going accompanied by his servant to the new town of Monet, as he expressed it, to "sell out the town." In other words, with the usual enthusiasm created by a brass band and lots of "hoorah," an auction was to be held there that day to dispose of village lots. In due course of time the train pulled into the future metropolis. The brass bands were there and so were the village lots, and about as far as the eye could reach there seemed to be lots more lots of the same kind as those that were marked with stakes at each corner, with the exception of price. Those without the mystic talisman of the boundary stakes could undoubtedly be secured at the rate of about $5 or $6 per acre. But the staked ones, right where the city building was to be, and here where the court house was sure to go up, and there where a dry goods store larger than Field's was to be erected, in those places, of course, land was bound to boom and must be worth several hundred dollars per foot. The depot was new and the surroundings neat and clean, and after getting a good substantial breakfast we exercised the dogs a little by letting them run across some of the city property (and we had a faint suspicion that they started up a rabbit on one of the lots laid out for a public square). As we gave a shrill whistle, and they obediently came in to be tied up, a long, lank individual of the thoroughly Missourian type, witnessing their obedience, rammed his hands down into his pockets a little further, if such a

thing were possible, from his teeth ejected about a quart of tobacco juice, and said, "Stranger, them thar dogs 'pear to me to be right bidable." We acquiesced, as we supposed he meant "obedient."

The conductor shouts "all aboard," and we are once more moving westward, and our next changing place is Vanita, within the limits of the Indian Territory. From the time we had arrived at the depot in Saginaw up to the present time we had heard rumors and stories about how hunters had been fired out of the Territory, and that the Secretary of the Interior had given orders to allow no hunting, and to confiscate all guns and paraphernalia belonging to the hunters found in the sacred limits. While we supposed this applied to market-hunters, or those who made a business of it, and were confident that we would not be molested as we were going as much on a visiting trip to our friends at the cattle ranch as anything, still some of the boys at times felt uncomfortable and imagined that each stranger looking at us was some government marshall who had nothing to do but spot us. Poor Brooks had brought along some of his cherished medicine in a little flask that was not larger than a good sized hen's egg, inadvertently taking it out of his pocket, happened to catch the eye of a new passenger and immediatety surmised that he had broken the law by bringing whisky into the Territory and was bound to be snaked off the train at the next station. So with a very "pale at the gills" expression, he quietly sneaked to the door, and the next minute returned and in a hoarse whisper informed me that he had thrown it away, so that they could not find any medicine on his person. We all breathed easier and thought that our lives were saved by his forethought.

Between Monet and Vanita no finer looking ground for quail can be found in the world. Numerous cornfields, with hillsides wooded with scrub oak, little marshes fringed with clumps of heavy weeds, made a most tempting outlook for a sportsman, and we wished for the old car and an extra week's time, that we might devote ourselves to the quail, which we were certain were in abundance here. We rumbled into Vanita and were notified to change cars for Red Fork, our train going no further. Vanita consists of about half a dozen houses and a good deal of dirt and discomfort. The dirt we discovered in mine pie and sandwiches we had purchased at the stereotyped railroad eating house. Mose always had a good appetite and was able to eat them, but Bob and Nip have a good deal of common sense and joined us in flatly refusing to partake of the repast, and the consequence was that we went hungry until we had supper with the quiet Mrs. M. at Red Fork. A wheezy old engine with half a dozen freight cars attached, the rear one having three or four old benches stowed in it, was the train that took us Coward our journey's end, but the lovely landscape and a perfect day made up for the discomforts of the ride. Probably the finest land in the world, from an agriculturist's standpoint, is to be found in this same Indian Territory. It is neither a wooded nor prairie country, but a mixture of both, and withal is well watered. The larger streams are muddy and sluggish, but any number of small running brooks are to be found in the part of the Territory that we went through, some 150 miles of it. Soon we began to see herds of cattle looking in prime condition, when a sudden vigorous tooting of the engine caused all heads to be stuck out of the windows and door, and we saw the cause was that a large beef critter had disregarded the right of way of the railroad company, and was now lying with a broken leg in the ditch alongside. Our hearts were moved with pity for his suffering, as the day was hot and we were told that he would not be killed, but left there to die a lingering death. It seems there is some legal point involved, and if the owner or any one should kill him or make use of the meat, or even if they did not make such use of it, the railroad company would not be liable for damages, and the consequence was that, the almighty dollar being paramount, the dumb brute had to slowly die, suffering untold tortures from the heat and flies before death came to relieve him. This illustrates that there is something wrong with humanity that one of these days we hope will be rectified. We crossed the Arkansas River along late in the afternoon, having passed numerous Indian villages of squalid and dirty appearance, but still the most civilized of any we had seen, going through the farmed town of Bushy Head, across the Verdigris River, the waters of which are of a dark green color. We noticed at numerous stations great piles of walnut logs which the Indians had cut and sold to traders holding permits from the Government to trade in the Territory. The train whistled for Red Fork.

Each year after one of our blow-outs, the boys always say, "Now some one ought to write this thing up and have it published, and while it may afford some pleasure to others to read it, it will afford us a great deal in going over and recalling to our minds the events that have taken place in previous years." But it has always been put off, and only odds and ends of the trip have been published from time to time in FOREST AND STREAM. This year I made an agreement with the crowd that if each one would contribute I would get the thing together and we would see what we could do. Consequently I wrote to the different ones, and I am glad to say they have stuck to their bargain and helped me out. The following is from the shores of Lake Superior from the Doctor, and we must therefore excuse him. He writes:

MARQUETTE, Mich., Dec. 1, 1887.—*My Dear Sir:* In answer to your letter of the 28th ult. While thanking you for your kindness, allow me to offer as my excuse the fact that it was my virgin trip, and that I am not accustomed to write for the public print, so that I feel that the old campaigners would be better fitted for chronicling the events. [It should be stated that the Doctor did not care much for shooting, and the closing part of his letter is thereby explained, and will throw no discredit on some of the large stories the boys may hereafter tell.] As I had no more shooting than one duck while afloat, and a rattlesnake without waiting for him to rise while ashore, I shall have to be classed as a pot-hunter, and the severest contest I had was with the Red Fork fleas. With many kind regards to yourself and the boys, I remain, Yours truly—THE DOCTER.

The next to respond was Genial George. The subjoined recital is his account of what befel us after our arrival at Red Fork. BUZZARD BILL.

On Thursday, Oct. 13, at about three o'clock in the afternoon, our train drew into the station at Red Fork, in the Indian Territory. The town is situated a short distance below the junction of the Arkansas and Cimarron or Red Fork rivers. The Cimarron is so named from its color, which especially in times of high water is a deep brick-red. The water of the Cimarron, as is the case with some other streams in the Territory, is brackish and unpalatable.

The town of Red Fork is but a small hamlet, consisting of a few scattering houses, a post-office, two or three stores, a blacksmith shop, etc., but no saloon, the sale of liquor or the bringing of it into the Territory being strictly prohibited by Government regulations. The stores carry on the most important and extensive business in this place, as they furnish supplies to the cattle ranches, and also to the Indians, some coming a hundred miles or more for their groceries.

A portion of our party made headquarters at the store opposite the station house, and we were surprised at the large, varied and well assorted stock on hand, consisting of almost everything required in house-keeping, except furniture. We found the proprietor of the store a very hospitable and pleasant gentleman, who made us feel at home at once, he insisted on our carrying trunks and baggage into the wing of his store, which we converted into a dressing and storage room, and in which we also tied our dogs for the night. After safely disposing of our effects, we began looking about for a place to sleep in and for meals. The proprietor tendered the use of a large bed-room over the store, which would accommodate three of us, and which was accepted with thanks. We then set forth to find a place for the remainder, and were directed to the house of a Mrs. M. Upon inquiry we found she had a room, and could furnish our meals, so stepping into the back yard and on a bench near the well we made an elaborate toilet, by the light of a kerosene lamp, and re-entered the house.

Many of us had in our travels met with persons of great and exceptionally marked conversational powers, and some of us even thought we could talk pretty well ourselves, but Mrs. M. soon convinced us that we had all been laboring under a delusion, for from the moment we entered her house until the time of our leaving her talk did not cease for a moment. She gave us her whole history from childhood, that of her husband, a description of the Indians and their habits, and all the gossip of the town for years past. We were all thoroughly subdued, and even the Doctor, who could usually hold his own, was hardly able to edge in a word. We ate our suppers to the running fire of her conversation, and the three who were to sleep at the store hurried away, leaving the Doctor, Jack and myself listening sadly to some unfinished recital. At the store they retired at once, being thoroughly tired out, and slept soundly until awakened long before daylight, at about four o'clock, by the barking of our dogs and the shouts of our trio who had been left at the house. After letting us in, Ed wished to know why they had been routed out at that too early hour. Our answer was that it had been done in self-defense; for after they had left us we retired to the sitting room, where our beds were to be made, and Mrs. M. had immediately dropped in on us and continued her conversation for about three hours more, until we were all completely used up. The Doctor at last, during a lull, was enabled to get in a few words, and said, "Now, Mrs. M., if you will kindly retire for a few moments we will go to bed and will then be pleased to have you return and talk us to sleep." To our great joy the hint was taken, and we were not again disturbed until after three o'clock in the morning, when we heard Mrs. M. getting things ready for the early breakfast and busily talking to herself for lack of other audience. Being fearful of another attack we arose, and quietly dressing, slipped out of the house and came down to the store. Under the circumstances Ed readily forgave us for the early call.

While waiting for breakfast we employed our time in getting into our hunting clothes and carrying our trunks and baggage out to the platform in the rear of the store ready to be loaded on the wagon. Breakfast finished and the dogs fed, we bade good-by to Mrs. M. and returned to the store, where we found awaiting us a double wagon for the baggage and two two-seated "democrat" wagons for ourselves and the dogs. Everything was quickly loaded, and at 6 o'clock we commenced our journey of fifty miles across the reservation of the Creeks to the ranch of the Saginaw Cattle Co., situated in the reservation of the Sacs and Foxes. The country through which we passed consisted of beautiful, fertile plains and wooded hills, interspersed with numerous streams and well suited to the raising of stock and ordinary farm crops. Occasionally we passed a house or a cluster of houses and barns where some Indian had settled and fenced in a farm, and in most cases not only were the buildings comfortable, but the crops also seemed to have been properly cared for and were abundant. As we continued, however, the houses became further and further apart, and during the last half of the distance not a place of abode was seen from the road, except one or two hunters' tents or camps.

On coming out of one of the plains and ascending a hill we came upon our first game, a covey of quail feeding in the road and in the grass along its side. A halt was called and all was excitement, getting the guns out of their cases, and hunting out ammunition belts and boxes from the bottom of the wagons. Giving word to the drivers to hold the dogs, a careful advance was begun, but just before getting within reasonable range, the dogs were, by some carelessness, let loose, and being very rank for want of work, they made a dash into the covey, scattering it in every direction. However, each man let go his right and left, and a few birds fell. No attempt was made to mark down the others, and only two or three shots were had. Upon gathering up the birds we found that we had secured only seven out of a flock of about twenty, but of course some allowances must be made for the excitement incident to coming upon the game totally unprepared, and also for the action of the dogs. We again started up our teams, but took the precaution to have our guns and ammunition ready for action.

No more game was seen, however, for several miles. At last Brown, being on the lookout, called our attention to a large yellowish-red animal about a quarter of a mile ahead of us and to the left of the road, which was evidently intending to cross the road to a deep wooded draw on the right. He would make a few jumps over the tall dead grass and then stand and look toward the wagon. We soon made up our minds that it was a wolf; and Billy taking his long-range Bullard rifle got out into a small ravine on our right and ran swiftly forward under cover of its banks to intercept the wolf. We remained quiet in the wagon for some time, expecting each minute to hear the crack of the rifle, but all was still. Finally we saw Billy come out on the road ahead of us and about where the wolf crossed. We drove up to him in anything but a good humor, for it seems that he had succeeded twice in getting into position when he had a good sure shot, and each time the rifle snapped so that the wolf escaped unharmed. Upon taking the lock off the rifle, arriving at camp, it was found that for some cause the spring had become weakened and required tempering.

At noon we arrived at Salt Creek, where, after driving down one very steep bank, which made the full application of the brakes necessary, and ascending on the other side into a beautiful clump of trees, we unhitched and fed and watered the horses, the stream being salt only in name; and after taking a lunch we rested for an hour, and again continued our journey through a succession of hills and valleys, and over and across water courses, some dry and others of running water, until just before dark we crossed the stream called the Tiger, which we knew to be only about three miles from the ranch. The country about the Tiger was the wildest we had seen in the Territory, the woods being densely thick, the banks very high and rocky, and, as we afterward found, with plenty of game along its borders. Ascending from the bed of the Tiger to the top of the hill, we followed the road along an elevated plain until we came to a fence which divides the Sacs and Fox and the Creek reservations, passing through the gate and down the road for a quarter of a mile we arrived at the ranch of the Saginaw Cattle Co., where we were welcomed by the inmates, as well as by the baying of two or three "deep-mouthed" hounds. Our baggage wagon did not arrive until the following morning, having broken down while crossing the Tiger.

What we did after our arrival at these "Happy Hunting Grounds" will be given by another member of the party.

GEORGE.

A MICHIGAN BRUTUS.

Editor Forest and Stream:

Not every day comes it about that we have the privilege of recording an instance of such Roman justice as was last Saturday dealt out by one of our Deputy Wardens to an offender against the statutes of the State of Michigan, made and provided against the killing of game outside the proper season.

The warden at this place is Jesse A. Cary, and it happens that he has a son-in-law named George Dawson, a young man of good repute, and on the most friendly terms with his father-in-law, with whom he is now living, having but recently returned from a long absence in a far country.

Now it came to pass that this young man, albeit aware of the existence of a game law of some sort, had no definite idea concerning the nature thereof, and still less regarding the extent of the racket which has been stirred up of late in this regard; and seeing the other morning a flock of winter ducks disporting themselves in the open water near our village, the said Dawson shouldered his muzzleloader and went forth to slay, returning shortly with two trophies of his deadly aim dependent from his belt.

No concealment was attempted or thought necessary, and the shooter bearing the ducks strode manfully up the street and into the house, under the very nose of the astonished deputy game warden, who chanced to be at that moment sunning himself upon his piazza.

To say that the official was disgusted does but faintly express the state of his feelings. Repeatedly of late had he been importuned to find some loophole in the law by virtue of which some of those very ducks might be taken in and roasted, and still had he set like a flint his frowning face in sternest opposition to any infraction of the statutes.

I think, nay, I am quite sure, that he gave audible expression to his feeling within hearing of the culprit, having done which he went to the nearest justice of the peace and quorum and swore out a warrant for the arrest of the offender.

The justice is a clever old Scotchman, and before the trial I stepped in to see him, and suggested that under the circumstances and considering the inexperience of the fowler, he might do well to exercise his discretionary power, and let him off as easily as possible. "Ay," said he, "I'll joost do't for this time. The boy wasna that culpable after a', an' it's his first offense."

So the Deputy Warden proceeded in due form to confront his son with the majesty of the law, and marched him down to the office of the J. P. It was short work, the plea was "Guilty," the fine five dollars and costs, which out of compassion were made nominal, and the bill was paid, $5.50 in all. Justice was vindicated, and the parties to the suit shook the snow from their moccasins and departed.

"Ah," said the venerable justice, as he shoved into the roaring stove a few more maple blocks, "he's gotten off easy-like for this time, but it's aneuch—yes, it's aneuch; for the bit duckies werena worth two shillings, an' they've cost him for ilk ane o' them twa dollars an' seventy-five cents. But the neist time I'll joost slap the haill fifty dollar fine a tap o' thir job, an' ye'll a' mind that."

KELPIE.

CENTRAL LAKE, Mich., Feb. 13.

A REMINISCENCE OF THE LATE PROF. LINDEN.—He was an ardent sportsman, spending many happy hours with dog and gun. I well remember being out with the professor on one occasion in the month of September on a partridge hunt in the Conewango Valley. The day was all the heart could wish, and the dogs were anxious and worked well. We started a large brood of young birds out of range and marked them down. After consultation the professor was to go in one side of the cover and I was to take the other. I did so, and before proceeding far my dog showed game and the birds flushed. After showing through the cover, and bagging six birds, I was surprised not to hear the report of the professor's gun, as I had marked a number of birds going in his direction. I became somewhat alarmed and concluded to investigate. After searching through the woods for some time I found the professor, and to my disgust his gun lay on the ground with note-book and pencil beside him, and knife in hand dissecting a villainous looking lizard. Many and many a happy day have I spent with the professor in just such amusement, always ending in the same characteristic manner.—CAPT. TOM COLLINS.

WILDFOWL SHOOTING OVER THE LINE.

Editor Forest and Stream:

I desire through your paper to draw the attention of American sportsmen and all who are interested in the proper preservation of game to a few points which must have escaped them; more especially do I appeal to the lovers of rod and gun in northern New York, for the grievance exists in their districts. The Legislature of the Province of Ontario in the winter of 1886 passed a law abolishing spring shooting of ducks, geese, etc., the law not to come into effect until the spring of 1887. Just previous to its coming into force at the annual meeting of the Legislature in 1887, a determined attempt was made by opponents of the bill to prevent its being enacted. The member for Essex, whose county adjoins the renowned ducking grounds of St. Clair Flats, stated that he would be satisfied if his county were exempt from its effects. The Government, however, saw things in a different light and sustained the bill; and their wisdom, even in the one year of its enactment, has been justified. The law was strictly enforced on this side of the St. Lawrence River, and it is no fault of our government that its best effects, as regards local shooting, have proved to be partly a failure. The boundary between Canada and the United States consists in an imaginary line drawn through the center of the St. Lawrence River, and the market shooters of Grenadier Island and vicinity, knowing that they would be prohibited and fined if shooting at their old haunts, would simply cross over the boundary line to some American point or island, set their decoys and blaze away. Of course American sportsmen assisted them, there being no law to the contrary. What is the use of Canadians endeavoring to enforce the laws in a case of this kind? Even supposing that they could suppress their own friends, who is to prevent the American market shooters if the American government does not do so? If the sportsmen of New York State are not alive to their own interests and do not unite and put an end to this work it will be the means of rendering our law a dead letter, in this district at least, besides visiting the inevitable punishment which a selfish act always incurs. Let them petition the State government to abolish spring shooting and use their influence to have it become law and keep step with the movement in which all right-thinking sportsmen concur, viz.: the abolition of spring shooting. CANADIAN.

BROCKVILLE, Ont., Feb. 13.

MAINE LARGE GAME.

Editor Forest and Stream:

My companion, J. W., and myself, have just returned from a three months' hunt in the vicinity of Moosehead Lake, Maine. Deer and caribou were very plenty, and partridges were to be had for the killing. I killed a large buck caribou with very fine antlers on Nov. 18, and a fine doe Dec. 2. There was hardly a meal but that we had partridge, caribou steak or venison to eat. Deer were very shy and I only had a chance to shoot at one, which I missed. The open time has been poor for hunting this fall on account of the snow storms, winding up with rain, making a crust. During the three months we were in the woods I saw eight deer and twelve caribou. We had a fine time. Luck was against my "pard" this time; he did not kill any large game. Beaver, otter, sable, fisher and foxes were around, but not plenty. Lynx and jack rabbits were thick.

I have just bought one of Judge Caton's books about the "Deer of America," and he thinks caribou yard in the winter; which is a great mistake, for I have hunted and been with them a great deal and I never saw a yard nor heard of it before; but for all that his book is a fine work and should be in every hunter's hand. Judge Caton says his time for studying caribou has been limited. Now if he and I are living next September, and he will come to my home in Danbury, I will go with him to the home of the woodland caribou, within thirty hours' ride of Danbury, where we can study the habits of caribou, deer and moose all he pleases, and if he does not have a fine time then I will miss my guess. R. D. K.

DANBURY, Conn.

TROUBLE IN WISCONSIN.—La Crosse, Jan. 25.—The men in one of Atlee's camps, in Wood county, are boiling over with rage at a party of hunters from Pittsville, and will not rest easy until they have been made to feel all the severity of the game laws. Since the snow has been so deep and crusted, the deer have gathered in the roads and choppings, and one herd of six or eight became finally so tame that they would hardly get out of the road to let a team pass. It is a fact, the men say, that after falling a tree the animals would browse in the tops of it while the butt was being sawed into logs. The men would have no more thought of shooting these deer than their own cattle. A few days ago a party of "hunters" from Pittsville visited the camp, killed every one of them and took the carcasses to Pittsville. The camp foreman at once wrote to R. Fahey, of this city, who got the letter last evening. He telegraphed to Game Warden White, of Alma, and will accompany him to Pittsville to see that the offenders are prosecuted to the extent of the law. The case is as clear as it can be, for every one of them is known, and a dozen witnesses will swear to the transaction.

AUXILIARY RIFLE BARRELS.—"Hock-o-Mock" and I differ greatly in our experience with auxiliary rifle barrels. My gun is 12-gauge 32in. barrels; cost at wholesale $80. The rifle barrel was put in by a gunsmith in Grand Rapids, Mich., and cost $20. It is chambered for a .40-50-260, bottle-necked Winchester shell. I also load with round bullets, filling up the shells with wads the same as W. D. Zimmerman speaks of doing with his .32 Maynard. Now with this auxiliary rifle I am able to kill woodchucks at 100yds., with "neatness and dispatch," and I have done good target work at 150yds. The cross fire of "Hock-o-Mock's" gun is evidence of poor workmanship in its construction. I use my rifle in either the right or left barrel; if in the right, I knock the back sight a little to the right, and if in the left, I knock it to the left. Ordinarily I use common open sights, but have a peep sight attached to the stock just back of the action lever, which I find excellent for target work. That Zimmerman should prefer Capt. Clay's peep sight to the Lyman is to me a little queer.—DENEMITE.

GULF HAMMOCK, Levy County, Fla., Feb. 13.—When the thermometer stands at 12° above zero, as reported by the New York papers of Friday last, and your readers, toasting their shins by the fire, talk of what was done last summer, it may be of interest to them to know what was done by Capt. C. B. Wingate, the genial proprietor of Gulf Hammock House, and the writer, on that day. With the temperature at 75°, we started for Ten-mile Creek, where we took a boat and went up the stream three miles, shooting a "gater" and catching three channel bass. Then the fun began. In trolling with a phantom minnow, we made a catch of fifty black bass, in two hours' fishing; we had several 4lb. fish in the lot. A few days previous I caught thirty-two bass in the upper Wacasassa, which can be reached with a boat from the house. Otter Creek furnishes just as fine fishing, and it is not unusual to get a six-pounder here. Is not this a piscatorial paradise?—J. LEVERETT PIERCE.

A NEW YORK STATE SHOOT PRIZE.—Temple, Tex., Feb. 15.—*Editor Forest and Stream:* I have in my possession a 10-gauge, doublebarreled Parker gun, 10½lbs., 36in. It was brought here by a man from California named Denny. I would like to know something of its previous history. Perhaps you or some of your readers may be able to furnish the desired information. On the right hand side of the stock it has a gold plate or shield, on which is inscribed: "Prize for best average, N. Y. S. Sportsman's Convention, Syracuse, New York, June 21, 1877. Won by Horace Silsby."—C. T. S., M.D.

FLORIDA QUAIL.—Mr. Russell N. Pepper, of West Springfield, Mass., who is spending the winter at San Mateo, Fla., writes of the quail shooting here: "This is the worst country to hunt in that I ever saw, for although the quail are quite plenty, they are well educated and keep near the swamps, so that they can at the first alarm dash into the thicket where one can do nothing with them. By a great deal of perseverance one party here bagged several hundred pigeons, quail and snipe. But the price of ammunition has advanced since we came."

BOX BOATS ON BUSH RIVER.—Red Bank, N. J., Feb 18.—*Editor Forest and Stream:* The last news from Annapolis, Md. regarding fish and fowl is before me. There is a bill pending to allow the use of box boats in Bush River, Md. Wake up, you prominent members of ducking clubs on that grand river, and see that you use your influence to defeat the measure. The bill has been presented by Hon. Walter Preston, of Abingdon, Harford county, Md.—GEO. H. WILD.

GAME AT SAULT DE STE. MARIE.—Vast numbers of ducks winter here in the open rapids and are shot in considerable numbers. They are called "fish duck," and are similar in size and shape to the wood duck. Ruffed grouse and spruce grouse fairly swarmed in the woods in this vicinity last fall; I never heard of them being so plentiful anywhere.—E. H. B. (Sault de Ste. Marie, Mich., Feb. 14).

LONG ISLAND BLACK DUCKS.—Sheepshead Bay, L. I., Feb. 16.—I went out after black ducks this morning and bagged two. This is considered good shooting for this part of the country, that is, good day shooting. Sunday and night shooting is rapidly driving the birds away. Is there no way to stop these unlawful practices?—A. W. B.

WHERE FOXES SWARM.

Editor Forest and Stream:

I receive your excellent publication through a sporting friend who has "done up" Maine and in the fall spends a week with me in the northwestern part of Massachusetts, in Franklin county, twenty-five miles east of Hoosac Tunnel, hunting partridge, gray squirrels, woodcock and rabbits, of which there is an excellent supply for a crack shot. But if that Fur Club, of Worcester, of which an old friend, Mr. Kinney, is now president, have such a great hunt every fall for foxes and get one or two only and think they have an immense time, would come up into the Leyden and Colerain Hills, where foxes just swarm, they would never omit a trip again.

If any one doubts the statement, here is a little recreation the boys take up here before and after school. Prior to the middle of last December, one young man under twenty years of age had taken thirty-four fox skins. Any two or three fair hunters with a good pack of hounds can get a dozen handsome foxes in a two or three days' hunt, and this is only fifty miles in a bee line northwest from Worcester. Last winter hounds hunted them alone day after day, and despite the statement that hounds seldom run down a fox, they did catch them sometimes, for I was out with a small party one day and from a hilltop looked way down into the ravine below and saw a fox playing with two hounds on the ice of the river, and soon one made for him and evidently broke his leg, and the remainder of the work was short, for when we arrived on the spot the fox lay dead unharmed except the lacerated leg, and the faithful dogs were standing guard over him waiting for some one to come and claim ownership.

During the year several of these hounds have either died, been sold and taken away, or else are kept at home, for there is but little hunting this season either by hounds or men. The snow is three or four feet deep and the foxes have it all their own way. A huntsman friend of mine, while driving a logging team recently up one of the high hills back three or four miles from here, was followed for several rods in the sled track by a large handsome fox, but having no shooter with him the man simply endured the aggravation as best he could under the circumstances. There are doubtless from two hundred to three hundred foxes within a radius of ten miles of this place. If you want to try them come on; but you will need snowshoes now. Another year in the early winter would be better. BAY STATE FELLER.

P. S.—Unlike "Swirl" I cannot "swap lies."

CAROLINA RESORT WANTED.

WASHINGTON, D. C., Feb. 12.—*Editor Forest and Stream:* Several of us have recently formed an amateur sportsman's club. We are all very much in love with the rod and gun, and we find the FOREST AND STREAM indispensable. Next fall we want to go on a trip into the mountains and swamps of North Carolina. We have a copy of "Hallock's Sportsman's Gazetteer," which highly recommends Buncombe and the adjoining counties, also Craven county for such game as bear, deer, wildcats and many other varieties of smaller game. We want to find out whether the large game is still abundant in these counties. We wish to go into the heart of the forests, where we will find plenty of hard work, with game enough to supply our larder. We want to go where there are wildcats, bears and deer, and if possible we will go into either North or South Carolina. I assure you that any information which any of your correspondents can give us on this subject will be thankfully received by four amateurs. G. F. P.

THE ALBANY GAME LAW MILL.

[*Correspondence of Forest and Stream.*]

ALBANY, Feb. 14.—The Finance Committee of the Senate has given a hearing upon Assemblyman Curtis and Senator Sloan's bill from the Comptroller's office allowing the Land Board to dispose of lands obtained on the sales of Loan Commissioners, which now technically belong to the Forest Preserve. It cannot yet be discovered just what the committee will do with the bill; but it is thought that it will be reported favorably.

It seems that a number of parties have been in the habit of fishing in the waters of Mill Creek, in Hamilton county, so as to get the benefit of the fish supplied by the Adirondack fish hatchery. A bill introduced by Senator Foley amends the hatchery law of 1887, so as to protect the waters of the creek from such fishermen.

A bill introduced by Assemblyman Tallmadge seeks to protect the natural beds of oysters within Kings county by keeping away from them steam dredges that may be brought by outsiders.

It is said that there is a very good chance of passing Assemblyman Cromwell's bill to stop the stealing of oysters. This bill amends section 640 of the penal code (relating to the planting of oysters) so as to add the words "interferes with or disturbs." If this amendment becomes a law it will be much easier to secure convictions than it is at present.

Assemblyman Haggerty has introduced a bill which allows dumping anywhere within a radius of 20 miles from City Hall. This includes not only the East River but many places along the Sound; and it absolutely nullifies the present law which declares that all dumping must be into the Atlantic Ocean. It is claimed anything may be dumped under this bill. Therefore Capt. Hunting tried to have the bill taken from the committee on trades and manufactures and referred to the committee on commerce and navigation; but did not succeed. The opponents of the bill think that it stands altogether too good a chance of passing. Those who do not look with favor upon this chance in the law ought at once to communicate with their friends in the Legislature. Capt. Hunting declares that "it is a contractor's bill."

Assemblyman Hadley has introduced a bill which extends the deer season for 15 days. The bill permits deer killing from Aug. 15 to Nov. 15, and deer hounding from Sept. 1 to Oct. 5. It is likely that all the bills relating to deer hunting will be combined with this bill, and the result will be the passage of a bill which has the features of Mr. Hadley's bill noted above.

It is said that some time next week there will be a large gathering of distinguished sportsmen and game protectors in Albany, to be heard on the Roosevelt code that has been introduced in the Senate by Mr. Langbein. As yet this code has made very little impression upon the Senators and members. Indeed they scarcely appear to know that it is here. If, therefore, any one has any influence that he wishes to exert among them, now is the time to move, for he will find them decidedly callous. It is a very amusing thing to on-lookers, who know a thing or two about sportsmen's affairs, to hear the great talk of the Senators and members on the game laws, not one in ten of the speakers having the least knowledge of what he is talking about; and being, in many cases, entirely ignorant of guns and dogs.

Sea and River Fishing.

Angling Talks. By Geo. Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Anglers' Book. By Thad. Norris. Price $5.50.

FISHING IN THE POTOMAC.

THERE is excellent fishing in the Potomac and there is no fishing in the Potomac, just according to where you go and what you fish with. Up at the falls and above there is fine black bass fishing. You can get there those gamy beauties weighing 4, 5, or even—it is said—6lbs. You will not get enough of them to make the sport seem monotonous and tiresome, but the man who would not be satisfied with two or three such prizes in a day of patient endeavor with rod and reel has no business to go fishing and is no better than the constitutional grumbler who growled when he went to Heaven, because he thought his halo didn't fit him. There may be places in the land where there are more black bass than here, but few that are prettier or that offer greater temptations to the city man who can afford to pay five dollars a pound for the fish he catches.

To go fishing properly at Washington you make up a jolly party and drive out to the falls. You can go by rail, but there is no adequate black bass style about that. But from the falls at least as far down as Acquia Creek there is little, if any, more sport for the angler than there is in the Dead Sea or Salt Lake or the alkaline pools of the Winnemucca Valley. And it is strange that it should be so—at first sight. George Washington, who we all know could not tell a lie, because he said he couldn't, wrote concerning the Potomac in his day that it was "a river well stocked with various kinds of fish at all seasons of the year, and in the spring with shad, herring, bass, carp, sturgeon, etc., in great abundance."

It is true that they do still catch many very large and deliciously flavored Potomac shad in the spring and early summer. I have eaten the famous Delaware shad and the North River shad and the Connecticut River shad, each of which has its enthusiastic encomiasts, and I cannot help thinking that the Potomac shad is better than either of those others. It is so good that I actually imagine it has fewer bones than they. But wild horses shall not drag from me even a modified commendation of the greasy, bony abomination that they call the Potomac herring. I know that a depraved taste for this execrable fish exists in Washington, where it is even put upon the hotel *menus*, but I affirm that the Potomac herring is nothing but what is variously known along the coast as the mossbunker, alewife, menhaden or bonyfish. The minute differences, if any do exist really, between *Brevoortia tyrannus*, *Clupea æstivalis* and *Clupea vernalis* are too insignificant to be taken into account, when it is a question of eating either of them. Vast numbers of these so-called Potomac herrings are caught (11,000,000 in the season of 1880) and very properly converted into oil and guano I say "very properly," because that is what should be done with them if they are caught at all; but they ought to be let alone, to serve their legitimate use as food for edible fishes that might, if they were abundant and the way left reasonably open, come up after them. A good many sturgeon too are caught in the Potomac during the summer, but they are rank, oily, coarse-grained fishes, only acceptable as an alternative from starvation. Those three kinds of fish all have to be taken with nets, the use of which in this river I shall have something to say about further on.

As for the bass, I wish that George Washington had been a little more explicit in specifying the sort of bass he meant. If black bass were in his mind's eye, I am quite satisfied that the disturbance occasioned by the Revolutionary war caused them all to retreat up to the falls, and no member of their family has ventured below since that time—voluntarily and when in his right mind. Striped bass—for which the local name is "rockfish"—do come up occasionally from the Chesapeake

Bay as far as Alexandria. That this is so there is one living witness, the Rev. Mr. Dinwiddie—a Presbyterian minister formerly located in that town—who is an angler of such phenomenal skill, or luck, that the colored people suspected him of "conj'rin' de fish," and are shy of him. He has repeatedly caught off the end of Agnew's wharf, "rockfish" that weighed 2 or 2½lbs. each, while scores and perhaps hundreds of able-bodied and experienced fishermen, using corresponding tackle and like bait, fishing at exactly the same depth and equally careful to abstain from swearing, have not even had a nibble. Doubtless there was a Dinwiddie in George Washington's day—for the family, I understand, is quite an old one in Virginia—who was also a mighty fisher before the Lord and caught striped bass enough to encourage G. W. in making that statement. And perhaps those caught by the Dinwiddie of to-day are but the astral bodies of those taken by his ancestor, materialized to keep up the family reputation for veracity.

I wish that G. W. had not said anything about the carp, for I would like to retain my confidence that he couldn't—we all know what. The fact is that I have not been able to find anybody who ever saw a carp caught in the Potomac, or had even heard, as a legend, of one having been taken here, prior to the escape of some young carp from the Fish Commissioners' hatchery and breeding ponds some three or four seasons ago. The stream is one in which it seems they should thrive, but there is exceedingly little evidence that they have done so. A few have been taken in the river and several in the old canal near the river; but not enough, all together, to encourage any sane man to go carp fishing in the Potomac.

I can do something toward giving precision to G. W.'s glittering generality about "various kinds of fish" and "etc." There are white and yellow perch, of which specimens are occasionally caught weighing as much as seven or even eight ounces each, but generally running from half an ounce to an ounce and a quarter. There are sand smelts, minnows, "cats" and "pizen cats"—the former "cats" white and the latter yellow and no more poisonous than the others, though not such good eating—and the "cats" seldom weigh more than a pound, generally only about half so much. In the pound-nets, red mullet—a kind of discolored sucker, even more bony than the pseudo herring, and unfit to eat—are caught occasionally. In a couple of creeks entering the river not far from the Mount Vernon estate, trolling with a spoon will sometimes yield a few rather nice pickerel. Thirty or forty miles down the river one can catch "spots," "taylors" and "tobacco-boxes," all very small but tolerable panfish, in the taking of which no real angler can find any sport. There you have the list.

All but the eels. They must not be forgotten. I decline accepting the eel as a fish, or in any other way so far as I am personally concerned, but as he is the most multitudinous and abundant thing in the Potomac, it will hardly do to pass him by unmentioned. Only the man who has caught an eel and seen the restless, writhing, coiling, slippery, unseizable devil tangling up his best line into a thousand hard knots, daubing his tackle with its gluey slime and swallowing his hook far beyond the reach of the largest "disgorger," knows how to adequately hate an eel. I am told that some of the Potomac eels are quite large, but have seen none thicker than a small cigar and from 12in. to 14in. long. Mr. Lambert, Deputy Collector of the Port at Alexandria—yes, they have a custom house there, though for no reason that I can see, other than that it has always been their custom—waxes eloquent when he talks of the numbers, size and ferocity of the Potomac eels. The falling off of the shad fishing in late years he ascribes to the eels. He says that they attack the shad caught in the gill nets, bore into their bodies to get the toothsome roes, and eat them out so that only heads and empty skins are left hanging in the meshes of the nets. Gunners who pursue the nefarious practice of shooting birds on their roosts, or while sleeping on the water at night in the swamp opposite Alexandria, complain that the eels completely destroy the dead birds before they can see to pick them up in the morning. It is affirmed that Snyder, who keeps a wet goods store near the Alexandria ferry, one evening sank a barrel eel trap in the dock before his place and the next morning found it jammed so full of eels that he just nailed a board over the hole in the top and shipped the whole thing off to the Philadelphia market.

That mention of Philadelphia reminds me that the Quaker City has, for years past, drawn large quantities of her celebrated "Wissahickon catfish" from Hunting Creek, a tributary of the Potomac, that enters the river just below Alexandria. But even the catfish appear to be growing scarcer. "Dey aint no mo' like dey used to wuz," is the common refrain of the darkies, who are the most inveterate anglers for them. Seining has made even the catfish scarce. But if only one fish per month were caught the enthusiasm of the colored population for the sport would hardly be diminished. Their season is over now for this year, but go out on the Hunting Creek bridge any summer evening and you will see the "coons" almost elbow to elbow its entire length, their bare feet swinging over the water, and a myriad of lines dangling among what seem to be the reflections of trunks in the stream. There are sometimes almost as many women as men. Behind them stands a long row of battered tin cans holding worms, these convenient receptacles having almost entirely superceded the old way of carrying bait in the mouth. At long intervals an agitated voice proclaims that "Thomas Jefferson done got a bite!" or "Miss 'Linda Lee cotch a cat, fo' shuah!" and a thrill of excitement runs along the line. The eel is welcomed there. He is grub. And all through the long hot summer days colored men make fishing an excuse for sleeping in the sun on the piers, while their lines drift with the tide. They don't really expect to catch anything, but are reluctant to admit the fact, even to themselves. "Do you ever catch fish here?" you ask one of them. "Yes, indeedy, sah." "When did you catch one?" "Boy ketch one hyah dis mawnin; he done gone home now." "But when did *you* catch one!" "Well—de week 'fo' las', or de week 'fo' dat; I don' jes' rightly 'member, sah." Their best hauls of "cats" are made by seining, or when they wade through the long eel grass on the flats above the lighthouse at low tide and scoop up the stranded fish and eels to be found there.

Two causes seemed to have worked together for the destruction of the fishing in the Potomac River. The first and doubtless the greatest is the wickedly general use of nets. There are, of course, laws prescribing the use of small meshed gill-nets and restraining the employment of "pound" and "fyke" nets and kindred other evil contrivances. But those laws, not being enforced, are worthless. The entire season, from early April until late November, both sides of the channel are lined with stationed nets of various sorts, in the channel itself deep gill-nets are floating, and, wherever there is a shore permitting the practice, huge seines are hauled that sweep from vast areas of the river everything that lives and swims. It is simply wonderful that any fish ever get up the stream as far as Alexandria. Surely none ever get back to the bay.

There is a law forbidding shad fishing within the limits of the old District of Columbia—which formerly took in Alexandria—the southern boundary of which is at Lighthouse Point, the intention being to provide for the shad a natural spawning ground in this reach of the Potomac. But all last summer the water was dotted with shad fishers, in front of Alexandria and even above the town, fully two miles north of the boundary prescribed, and nobody interfered with them. And what a host of those fishers there were. Great numbers of men who labor at various other avocations during the rest of the year, in the shad season abandon everything else, bring out their murderous gill-nets and plunge with frenzied eagerness into the general butchery. For a time, shad are surprisingly cheap. The wholesale dealers pay from $12 to $18 per hundred for superb fish. As fine roe-shad as were ever seen in New York are sold at a quarter dollar each at retail. Everybody eats them as if possessed by a fury for their extermination. They are packed in ice and sent away by thousands, and great quantities are salted down, like plebian mackerel, for winter use. If any shad gets through to the spawning ground further up the river, I fancy that it dies there of loneliness and is eaten by the eels, as the spawn certainly is. Is it any wonder that year by year the Potomac shad supply diminishes? or questionable that it will continue to do so until there is a reform, for a few seasons at least, in the manner of fishing here?

I spoke of another cause of the decline of fishing in the Potomac. That is the great change since Washington's time in the quality of the water. Tradition affirms that this was once a pellucid river, in which the black bass would have found a home suited to his taste. But now it is a mass of mud thin enough to move with the tide, but seldom, if ever, so clear that one can see to the bottom of a glass of it. Excellent bricks have been made of it; not, of course, of the most diluted portion near the top, but from where it thickens somewhat down below. It is at least as bad as the Missouri. Most other muddy streams settle sometimes, but its uliginous tide never clears. It is unreasonable to expect to find anything better than mud cats and eels as the constant inhabitants of such a river. And not alone is its turbidity a disqualifying condition for its being the home of game fishes, but it is shoaling so that deep water is no longer to be found in it, except in its contracted channel; and on the shallowly covered mud flats the only food to be found is such as suits only the baser sorts of fish, the dirty and fool sorts that allow themselves to be stranded and picked up by "coons" at low tide. The shoaling has been going on for years with increasing rapidity. The arm of the Potomac upon which the Navy Yard is located, when viewed at high tide from the main channel, seems to be a fine sheet of water. So it is, a sheet—and hardly anything more. There is a channel in it, available for light draft navy vessels still, but the only safe time for a stranger to attempt going through in an ordinary rowboat is at low tide, when the tortuous thread of water deep enough for his passage will be clearly outlined along the northern edge of the great meadow of waving eel grass. But men yet in the prime of life remember when large schooners, heavily laden, used to tack to and fro across where that meadow now lies, and sail far up beyond the Navy Yard to Bladensburgh, which was then quite a port. Now, there is no more water at Bladensburgh than the people in the neighborhood should use for mitigation of the quality of whisky sold there—to say nothing of washing. In front of Washington the main channel is so narrow that an ordinary river steamboat lies clear across it, and turning without getting aground is a very delicate operation.

It will not be strange if, in a few years hence, Washington is left "high and dry," as Bladensburgh now is, and all her business requiring water transportation is transferred further down stream, probably to Alexandria. The Government engineers engaged in walling and filling the Potomac flats expect that the contraction of the stream effected by their operations will give it a stronger current, capable of scouring out and keeping clear this portion of the channel. They may be right. It is to be hoped that they are. But the unexpected is that which happens in dealing with water courses, much as engineers fancy they know about them, and what new flats and bars the Potomac may take it into its thick head to create, in retaliation for their restriction of its liberty remains to be seen.

The cause of the present condition of affairs is still operative. It is in the denuding the hills and valleys of their natural forest covering. In the days when Bladensburgh was a port, the thickly wooded hill slopes constituting most of the water-shed of the Potomac were nature's reservoirs of the rains and melted snows, storing them, holding them back and giving them forth gradually, by seepage under the mantle of forest leaves and through the earth to the tiny crystal rivulets and clear brooks that filled the river's bed with a pellucid current. But now the water that falls on the bare, unsheltered tilled land rushes down the hillsides in torrents, carrying with it vast quantities of the light, loose soil. There is where the Potomac mud comes from.

I don't pretent to offer any suggestion for amelioration or reformation of the existing state of affairs. That is not my business. I have simply given my findings upon the question, why there is no decent fishing in the Potomac.

J. H. CONNELLY.

PAINTING OF A BLACK BASS.—We recently had the pleasure of seeing a very spirited painting of a black bass of 5½lbs. weight. The fish was a small-mouth and was caught last summer in Back Bay, Lake Champlain, by Mr. E. A. Olds, of 100 Fulton street, New York city. Mr. Olds had a correct drawing made at the time, and the painting was made by R. LeB. Goodwin, a famous painter of game birds. It is represented as leaping from the water with the fly in its mouth.

FLOATING FLIES.

THE art of fishing with the dry fly is one but little known or practiced in this country, but will, no doubt, be found valuable on many of our well-fished streams, where the trout are quite familiar with the wiles of the angler and are critical as to the imitation insect offered, as well as to the manner in which it is placed before them. A book* on this mode of fishing, which goes into the subject in full and in a thorough manner, has been published. The hand-colored plates of flies are exquisitely done and the cuts showing how they are made are excellent.

We do not personally know any angler in America who uses the dry fly, but no doubt many will try it during the coming season. The late Reuben Wood learned something of it from R. B. Marston, Esq., editor of the *Fishing Gazette*, while in England a few years ago. The flies used are, as a rule, smaller than those which the majority of Adirondack and Maine anglers prefer, being about the size of those which the educated trout of Caledonia Creek will accept, and they are not allowed to sink in the water. The drying is done by waving the fly to and fro in the air after each cast, a process that requires some time, but it is claimed that it is successful where other forms of casting fail.

The author says: "One word of advice, however, to our North Country and Scotch friends: When you find in one of the streams you frequent that your trout from being over-fished are becoming more educated, and consequently more shy, do not be too wedded to your old notions to try the advice of a 'Southson,' and see if a single floating fly, fished upstream, will not be effectual in basketing some of your otherwise unattainable fish."

The book is an octavo of 130 pages, handsomely printed on large paper, and is a welcome addition to the literature of angling. That fishing with the dry fly is well worth a trial in this country we are certain. A firm in San Francisco, Kewell Bros., late of London, advertise "Boyton" floating flies as "new to the States," but we do not remember to have seen them mentioned by our Eastern tackle dealers.

*"Floating Flies and How to Dress Them." A treatise on the most modern methods of dressing artificial flies for trout and grayling, with full illustrated directions, and containing ninety hand-colored engravings of the most killing patterns, together with a few hints to dry-fly fishermen. By Frederic M. Halford. New York: Scribner & Welford, 743 and 745 Broadway. 1886.

PICKEREL THROUGH THE ICE.

ALTHOUGH I am not much of an angler, I take an interest in general piscatorial matters, and therefore, while reading my last week's FOREST AND STREAM I noticed the article written under the above caption. I was amused at the weight given of "the big five" pickerel taken; so much so in fact, that I read the article to a nephew who is visiting me from Jefferson county, and who has been president of the Fish and Game Club of the town of Theresa, where he resides, and is well posted on the species of the pike family in question. I asked him how large pickerel he had known to be caught through the ice in any of the small lakes lying in that town. He said that Alf O'Niel caught one weighing 18lbs., A. E. Carpenter one of 21lbs., and another of 22½lbs. was caught by a party whose name he could not recall. I remember seeing in the Theresa *Sentinel* of about a year ago, mention made of the last fish. Of course these fish are exceptions to those generally caught, but to show how fast they increase in weight I will mention that five years ago this coming March there were placed in Indian River at Theresa 200 pickerel, none of which weighed over 2lbs., and they were the only fish of the species ever put in that stream. In July, 1885, two years and two months after, one was caught weighing 10lbs. 6oz. I was at Theresa in August of the same year, and it was nothing unusual to see a 6 or 8lbs. pickerel taken, and Mr. Evans informs me that during the past season Mr. W. A. Fisher, the genial ticket agent of the Rome, Watertown & Ogdensburgh Railroad, caught one weighing 16lbs. 3oz. Supposing this to be one of the original fish placed in the river, it shows an increase of 14lbs. in four and a half years. Where is the stream that can beat this record? All pickerel weighing not over 3lbs. are put back in the water; also many that are much heavier. Mr. Evans informs me that another party and he caught 30 in two days the past season, and put back all but 3, as they did not need them.

But pickerel are not the only species of the pike family caught in the river and adjoining lakes. In the room where I am now writing hangs the head of a 30lbs. mascalonge (*Esox nobilior*) caught in Red Lake by my sons when only seventeen and fourteen years of age. They also caught others weighing from 5 to 18lbs. each, the same season. Mr. Evans tells me that in Millsite Lake he took thirteen black bass that weighed 39lbs., an average of 3lbs. each. Here is another record for some one to beat. But I find that "pickerel through the ice" have quite disappeared in this screed, and as I am not much of an angler, I will leave my lines for some one else to take up.

LOCKPORT, N. Y., Feb. 13. J. L. DAVISON.

[Our Massachusetts correspondent no doubt referred to *Esox reticulatus* as "pickerel," a fish seldom exceeding six pounds. Mr. Davison writes of the lake pike, *Esox lucius*, which is also called "pickerel," and grows to a weight of forty pounds, or more. Anglers have not separated these species in their vocabulary, hence the misapprehension as to species, which often occurs. "Pickerel" really means a small pike.]

FLY-FISHING FOR SHAD.—Hartford, Conn., Feb. 13.—Can you give me any information as to when, where and how to kill shad with a fly in the Connecticut River near here? Or can you refer me to some brother angler in Hartford who "knows it all?"—MAC. [Shad are taken with a fly from the middle of May to the first of August. They are taken at Willimanset and just below the bridge at Holyoke. Use red-ibis, brown and ginger hackles. The man who knows more about fly-fishing for shad than any one else is Mr. Thomas Chalmers, Holyoke, Mass., and he will be glad to post you.]

THE FLY FISHERS' CLUB.—The third annual report of the Fly-Fishers' Club, of London, shows it to be vigorous, and on a good financial basis. At the end of 1887 there was a balance on hand of over £166, clear of all liabilities, an increase of £50 over the previous year. The annual dinner will take place on March 7.

SUNAPEE LAKE.

Editor Forest and Stream:

If your inquirer signing himself "Swirl," of Worcester, Mass., will take the trouble to quiz Col. Hopkins, district attorney of that city, he can get all the information he desires without a fee (probably), as the Colonel has pulled five or six of those lake trout that weighed in total 30lbs. For the information of others, Sunapee Lake lies—see Pathfinder railroad map—west of Concord, N. H., on the Concord & Claremont Railroad. In the summer round trip tickets are sold from Boston at about $5. Leave railroad at Newbury and take steamer for Sunapee. From New York go via N. Y., N. H. & H. to Springfield, thence to Brattleboro, Claremont junction and Sunapee station. The town and lake lies three miles from the railroad station. For camping there is abundant opportunity anywhere along shore, the lake being about six miles long and somewhere about a mile wide or less. There are country stores in Sunapee (a small town), also hotels at Sunapee, Sunapee Mountain and Newbury. There is plenty of bass fishing there, and every season there are lucky parties who bring in these lake trout, which are usually caught in very deep water—still-fishing I think. Boats can be hired at Sunapee landing. Mr. George Bartlett, manufacturer of hames, is a very courteous, reliable, Christian gentleman, not interested in booming hotels, and without consulting him I say that I am sure any reasonable inquiry (with stamps) will be kindly answered by him; address simply as above, Sunapee, N. H.

BAY STATE FELLER.

FLY-TYING AND ANGLING DEVICES.

Editor Forest and Stream:

The main purpose in writing this is to introduce to anglers a new device in fly-tying, which many may prefer. This is a method of concealing the hook, and as it is explained by an old fly-tyer, it will no doubt be of interest to many of your readers. The tying of flies is a pleasant and profitable way of spending the long evenings of winter and the beginner will need some advice about the modes of gathering material for his work, as this will have to be picked up or bought. Poultry shows are good places to collect chance feathers and hackles, the latter being the neck, rump and tail feathers of the cock. Reject the softer ones, but any feather too soft to wind alone can be wound back on a cock's hackle. The thread must be strong and fine and well-coated with shoemaker's wax, and the hooks should be turned up and flattened at the end. A few good flies are necessary for patterns, and large flies are better than small ones for the beginner to practice on. Use washed silk for the brighter colors, and having arranged the materials to our satisfaction we will proceed to tie in a white moth.

Grasp the hook between the thumb and forefinger, opposite the point, and, with waxed thread, take five or six turns around the hook up to the head; then back hard and close up, finishing opposite the point with four half hitches. Now tie in a piece of white embroidery silk, or cotton twine, and wind the thread out of the way to the head of the hook and fasten temporarily; wind the silk down the hook nearly to the barb, leaving small spaces between, and wind back in the same manner. Now, try to work the silk down the hook as far as possible with your finger nail, if it comes hard you have wound it too tight and it should be unwound and tried again. Tinsel and gut can be wound on, but I would not advise the use of feathers.*

Wind firmly from the starting point to where you tie in the hackle, tie in the hackle with the tinsel, or gut, with four half hitches, if a larger body is required tie in silk or cotton and wind over it, take a half turn around the hook with the hackle, hold it in place with your finger to prevent overlapping, bring it around wide near the point, remove the finger and pull firmly down to the hook; replace the finger, using the same precautions against overlapping, bring it over to the opposite side, repeat the operation nearly to the head of the hook and secure it well. Now take a strip of white feather and fold it once or twice, stroke the fibres together and lay it on the hook. Add another strip of feather if two wings are wanted, which is seldom the case, take two or three turns around the head of the fly and finish with four half hitches and a little varnish or warm wax over the head and fastening; trim off neatly about the head, and if necessary use a pin to set aright stray hackles.

The fly is now ready for the sliding loop (see FOREST AND STREAM of July 14, 1887), provided it resembles the description, especially in the head, which should be large. In using one or two small feathers for wings, strip off the fluffy part, break down the stem between the thumb and finger nail, and tie in without folding. A hackle can be tied opposite the point and wrapped up to the head, or tied in anywhere between these two places. Wind in peacock herl, tinsel and hackle, in the order named; the tail is tied in first, the butts of the herls are tied together and wrapped close toward the head, and if one hackle is not sufficient tie in another where you left off. A large hackle can be trimmed off and tied on a small hook; do not cut across the fibre, but work the scissors alongside as much as possible, but avoid this if the proper sized hackle can be obtained. Do all the work with your fingers, if possible, otherwise a small vise will be useful. For all practical purposes flies tied after these directions will be found to give a great range of choice, barring salmon fishing. I have caught a number of fish with this device, including some black bass, and even a turtle. The body, hackle and wing can be varied to suit the angler's fancy.

Always use two flies except in cases where your tackle might be endangered in playing two fish at the same time. My reason for this is based on a discovery which I made in this way: In raising the fly from the water I noticed the wing and hackle close, but they expanded the instant that the fly dropped back to its former position. The stretcher fly soon sinks, and in doing so helps to buoy up the upper fly, which is easily kept on the surface and can be raised and lowered at pleasure.

I have given the sliding loop a most thorough trial since writing the last article, and I have no reason to regret anything I have said in its favor. If the loop works hard, from any cause, pull on the knotted end, working it a trifle back and forth. I have done with snelled hooks, for all kinds of fishing, and I would advise anglers to follow my example. For bait-fishing you can put in six or seven half hitches of gut, if you prefer it to the sliding loop, and this makes the hook a fixture, unless you use short snells.

Every angler should learn how to repair broken tackle, and Norris's "American Angler's Book" will give the information required. If not too badly fractured a broken tip, neatly spliced, may be made as good as new. With plenty of waxed thread, matches and a good knife, the skillful angler is prepared for most any emergency, and in writing this I have merely endeavored to lend a helping hand to all brothers of the angle, whether they use bait or cast the graceful fly.

ARTIST.

RAHWAY, N. J., Feb. 16.

*A sample and drawings show that the hook is covered to the barb, and that when the hook enters the jaw of a fish the winding is shoved back.

THE POETRY OF ANGLING.

AH! who can number the bewildering joys
That cluster round the angler's pursuit!
He follows his rare sport 'mid lovely scenes,
Where nature spreads her foliage and her fruit;
He hastens forth when first the pearly light
Of morning flushes all the fields of air;
When first in hazy mounts and tufted wood
The sunbeams glitter with effulgence rare,
When all the valleys with their flowery plain,
When all the forests with their foliage green,
Twinkle with dew drops, that the rosy beam
Kindles like diamonds on the brow of queen.

The Angler tracks the windings of the stream,
He knows its leapings in the white cascade,
Knows how it bubbles in the rapids swift,
How it sleeps tranquil in each woodland shade;
Knows all the solitudes of its green sides,
Knows all the glitter of its shallow tides.
He can greet Nature in her spring-time dress,
When she trips gleeful thro' the blooming grove;
He can salute in her deep wilderness,
As thro' her flowery haunts he loves to rove;
There where the eddies o'er the pebbles spout,
He casts his humming line and luring flies,
'Mid the swift ripples takes the springing trout
Or salmon, where o'er river tides they rise.
Then in brown autumn-time he seeks the scene
Where the salt billows chafe the ocean shore,
And from a rock engarlanded with weed,
Casts the long line where angry currents pour;
Takes the strip'd bass in his convulsive leaps,
Or shapely bluefish swimming heedless by,
Or weakfish glittering in the middle deeps,
Or blackfish that in low abysses lie.

In all these seasons of the rolling year,
The angler moves amid enchanting scenes.
Where wreaths of flowers on bush and tree are hung,
Ivies and woodbines twine their bowery greens,
Roses and lilies charm with rare perfume,
Great orchards droop with wealth of golden globes,
Daisies and clovers in the meadows bloom,
And every floweret flaunts its color'd robes.
Song bids salute him with the dawning light,
The bobolink, robin and the minstrel thrush;
They chant their carols all the summer day,
While chirps the whippoorwill in evening hush;
All the blithe sights of Nature cheer his eyes,
All Nature's voices charm with glad surprise.

GREENPORT, Long Island. ISAAC MCLELLAN.

SUNAPEE TROUT.

CHARLESTOWN, N. H., Feb. 18.—*Editor Forest and Stream:* When it was first decided by Dr. Bean that the new trout of Sunapee Lake was an *oquassa* I stated through your columns that there was good reason for finding this variety of trout in that lake, as a plant of bluebacks was made in it in 1878 or '79 by Commissioner Powers and myself from eggs obtained by us from Commissioner Stanley, of Maine, hatched at the State hatchery at Plymouth, and the young fry carried to the lake.

I afterward suggested through your columns that the much greater size to which these fish had attained in Sunapee over that of the original in Androscoggin Lakes might be due to the ample amount of smelt food, which they had obtained in the waters of Sunapee and which, with the change of water and other causes had increased the size and weight of the landlocked salmon, planted about the same time from the Grand Lake Stream standard, of from 2 to 3lbs. to one from 12 to 16lbs. as now found in Sunapee.

These, however, were merely thrown out as suggestions, and my attention has again been called to the matter by Dr. Bean's letter in FOREST AND STREAM of Jan. 26, in which he makes the suggestion that the bluebacks, as known in the Androscoggin Lakes, are merely the immature form of *Salvelinus oquassa*, of which the new trout of Sunapee may be the fuller growth, and suggests that "the origin of the Sunapee trout may be tracked to some early introduction of the bluebacks into New Hampshire." This is improbable, if not impossible, unless the plant made by Dr. Fletcher in 1869 should turn out to have been of this species. In regard to that plant the inclosed letter from Mr. Gould gives all the information I can obtain:

"Father and myself in '69, I think, placed 45 fish in the little brook that runs into Sunapee Lake at Newbury. They were very small, just old enough to transport. N. S. Batchelder got them in Maine. I understood and said they were landlocked salmon. Afterward Dr. Fletcher said they were not salmon, but were trout taken from St. Johns River. I never knew, or if I did I have forgotten, his proofs. We had no eggs, but the young fry. Whether Batchelder got the eggs and hatched them here, or brought the fry from there, I don't remember; perhaps I never knew. Batchelder is now dead, has been for several years. Considering how small the plant was, I cannot conceive that the 'new trout' of Sunapee could have come from it. But, of course, I know nothing. The above are all the facts in our knowledge. Yours, FRED H. GOULD."

Now, unless these trout above described were also of the *oquassa* variety, it is not probable that any such trout were ever introduced before the plant made by Mr. Powers and myself.

The question is a puzzling one, and the dilemma has several horns. First, either this new trout which Dr. Quakenbos and myself have called *Salvelinus sunapee* two years since, and for which we claim priority of nomenclature, has always been an inhabitant of the lake, and has remained undiscovered during a hundred years of steady fishing; or second, it is as Dr. Beau suggests, the matured form of the blueback; or third, it is as Dr. Quackenbos suggests, a "hybrid," sprung from the conjunction of the native trout with some of the new varieties which have been introduced.

With regard to the first theory, while I doubt its probability, I will admit it is not impossible, for my friend Mr. Powers tells me that the "old-timers" now find it very difficult to distinguish between the two varieties, which it seems to me can hardly be the case if the varieties are so distinct as to require a new name for one of them. The second theory will agree very well with my suggestion of increased growth due to a more abundant supply of food, and the third, of hybridization, seems highly probable from the great variety of shapes and colorization which, I am told, characterizes the newly-discovered species. I have as yet seen but one living specimen of the fish, and *Plumbeus* would have been a far more fitting name for him than *Aureolus*. When at Sunapee Harbor last November on business which did not give me time to go to the spawning beds, I saw Mr. Hodge with a couple of exquisite oil portraits of two of these fish, one for the Governor of the State and one for some other gentleman whose name I now forget. Neither of these fish had the least claim to the title of *Aureolus*, but were simply very handsome dark trout, much like the trout of Lower Diamond Pond, which, I think, I have already stated in your columns to be, in my opinion, also of the blueback variety. I have never seen one of these trout in that pond over ½lb. in weight, nor either any very small ones, they having a very uniform average of from 3 to 4oz. They are blue-backed, tail slightly forked, carmine spots very small and vivid, and more cylindrical than the brook trout, and have the deep red flesh which characterizes the trout of the Androscoggin water shed. I have never captured a trout in the Upper Diamond Pond, but Dr. Prime can tell you all about them if needed.

I have never seen any description of the color of the flesh of this new variety, and do not know if it is a red or a white trout, but if an *oquassa*, it ought to be a red one, although the general coloring of the trout of the Connecticut watershed is white or pale yellow.

I consider this question still an open one, and believe that some experiments on hybridization should be made to assist in determining it, as I learn from Dr. Quakenbos that the male trout of the lake have been seen in attendance on the female salmon at spawning time, and as the Howietown experiments show the possibility of fertile hybridization.

Some three or four years since, before the discovery of this variety on the spawning beds, Mr. Powers informed me of the discovery of a new "white trout" in the lake, the origin of which he attributed to the plant referred to in Mr. Gould's letter. I hope to be able to catch some of these fish myself the following summer, and make a close comparison between the two varieties in the lake.

SAML. WEBBER.

THE COLOR OF TROUT FLESH.

Editor Forest and Stream:

I would like to ask some one who has been interested enough in the subject to study it, are the red-meated trout in Diamond Ponds and other places of the same species as the trout in the same ponds that have white flesh? In other words, would the spawn of a red-fleshed trout invariably produce fish whose flesh would be red, in whatever stream or pond they might be placed? There is a slight difference between the fish. One who is accustomed to catching them can tell at a glance whether it is a white or a red fish that he has landed, the red fish being heavier in proportion, showing darker colors, with smaller fins and a shorter tail. Generally the white trout is found in one part of the pond, as for instance on the sides and in shoal water, while the other is only found in deep water. They are frequently found in the same stream, but very seldom or never together. Are they a different species or has different food and habits given their flesh a different color, and their outline a different shape?

C. D. C.

NORTHUMBERLAND, N. H.

[The difference in color of flesh is mainly due to food, but the color of the bottom also affects the general hue. A trout which feeds upon small fish is usually stouter in proportion to its length, and is of a redder color than one which feeds entirely upon insects and their larvæ. A diet of crustaceans also produces a deeper color. Trout fed upon liver are usually light in color.]

THE SAULT DE STE. MARIE BRIDGE.—Feb. 14.—Since the completion of the International R. R. bridge at this place, which crosses the Ste. Marie River just at the point where it breaks into one of the most beautiful rapids in the world, several attempts have been made to catch the great brook trout, which abound in the falls, by hand line. But local Game Warden Moore "nabbed" two fellows and had them fined, which has put a stop to the game on the American side at least. By mutual agreement the Canadian warden watches the five north spans of the bridge, and the American warden the five southern spans. It is said that an Indian spy acts as proxy for the Canadian warden, and that he drops a line in frequently; however, Mr. Moore keeps a watchful eye on our side and says that the male trout of the largest size could be easily taken from the bridge at this time of the year with baited hook. I heard it whispered yesterday that a certain hotelkeeper here bought several pounds of trout which were speared through the ice, near Sugar Island, six miles below the falls. This is a shame, for every summer many anglers spend weeks here casting the fly. I never saw so many large brook trout anywhere east of the Rocky Mountains as were taken here last summer. It was an every day occurrence to see four or five strings of brook trout, with some half dozen in each string that would run from 2½lbs. to 4lbs. each, and many are brought down from Lake Superior to the fish market here which are taken in gill and other nets, that weigh 3lbs. or 4lbs. each.—E. H. B. (Sault de Ste. Marie, Mich.).

Fisheulture.

MASSACHUSETTS LOBSTERS.

THE following report sent to Commissioner Brackett was because of date not incorporated in the report of the Commission, but it deserves special attention by reason of the repeated suggestion that the Atlantic States should adopt uniform lobster regulations:

BOSTON, Dec. 17, 1887.—E. A. Brackett, Esq., Chairman of the Board of Inland Fisheries, State of Massachusetts—Dear Sir: With regard to the lobster the conditions remain nearly the same as at the time of my last report, perhaps slightly more favorable toward protection, owing to a closer attention in some districts to the enforcement of the laws by a few of your deputies; still, more decided and energetic steps must be taken, and soon, or it will be too late. Maine has a close season from Aug. 15 to Oct. 1 of each year, and the Dominion Government Fishery Commissioners have recommended to their government a close season of three consecutive years in their Provinces. Massachusetts really should have a close season of at least two years consecutive in order to give the lobster an opportunity for necessary increase, and afterward a close seasou similar to that of Maine, with a thorough enforcement of present laws regulating the taking, would undoubtedly preserve them from utter extinction on our coast. Again, I say, something must be done and soon, or it will be too late. The draft for supplying the beach houses and seaside hotel use in the summer is something enormous, little or no attempt being made to conform to the laws regarding length or sex by these parties. Again, the wanton destruction by the fishermen during the shedding season is simply outrageous, they even feeding them to hogs and poultry and using them largely for bait for other fishing. One club of gentlemen fishermen the past summer were induced to empty their cars containing over 1,200 small lobsters at one time.

The case which went to the Supreme Court on law was decided in favor of the State. All the other cases appealed were decided in favor of the State and defendants paid fines and costs, viz.: W. A. Barber, D. McDonald, W. James, A. B. Cleverly, A. F. Pope, I. Mariano, A. Ferrara, W. S. Trefethen.

I would again call your attention to my suggestion of last year regarding a consultation of Commissioners of the New England States to formulate uniform laws and a concerted action for their enforcement.

Smacks from Rhode Island and Connecticut are continually in our waters in Vineyard Sound receiving and carrying away to their own and the New York markets lobsters that are much below statute length, in fact they buy all that are offered boldly, and openly defy us.

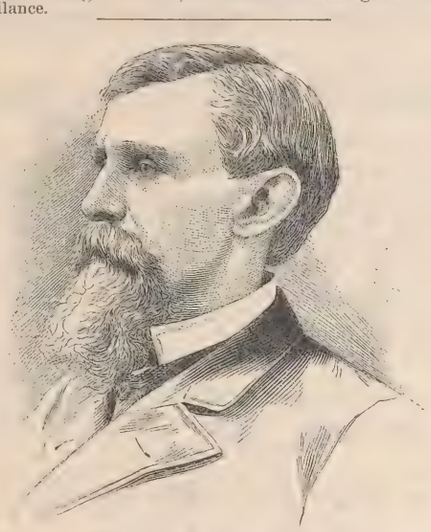
The value of our sea and coast fisheries is of great importance, and the full time of a special commissioner, such as Maine has, would be occupied in their protection. Yours very truly, F. R. SHATTUCK, Deputy Fish Com. of Mass.

THE MENHADEN QUESTION.

THE *Cape Ann Advertiser* prints the following, from the pen of Capt. Fitz J. Babson, under the heading of "Outlaws and Criminals." We comment on the letter elsewhere. Capt. Babson says:

The strength of sin is the law, and whatever consciousness the fishermen may have of the innocence of his calling, there is a determination on the part of some of our national law makers to make him a criminal anyhow. There has been introduced into Congress a bill that imposes a fine of one thousand dollars and forfeiture of vessel, seines, nets, traps, or pounds, or boats which may take or capture a menhaden anywhere within three miles of the coast of the United States. Any person who establishes a weir or trap net, or sets gill nets, or any vessel daring to cast her seine without ascertaining that there is no menhaden in the vicinity, is liable to this penalty. One stray menhaden entering a pound or getting wrecked in a gill net, makes the owners not only liable to this penalty, but will have it enforced against them, as one-fourth of the penalty goes to the informer. Any fishing vessel that takes menhaden for bait is also liable, and any person who shall convert any fish caught within three miles of the shore into guano or into fertilizers is also liable to the penalty.

Now, with Canada refusing us either bait or supplies, with the Newfoundland bait bill refusing her own people the right to sell bait; the United States is asked to outbid them both in the destruction of her own fisheries.



Why is this? Simply because on the coast of New Jersey, which is being occupied by summer residents, they believe the taking of menhaden is depriving the bluefish of their food, and the sport of trolling for them may be lessened. Now, what are the facts? The evidence of practical fishermen, the full and conclusive statements of various members of the United States Fish Commission, who have been detailed for months every year to make investigations as to the effect of taking menhaden by use of the purse seine, unanimously agree that the taking of menhaden in this manner has not the slightest effect on the great body of fish; does not include in their capture any perceptible amount of food fish; that a thousand millions of menhaden are destroyed by predaceous fish where a single fish is taken by man; that as a matter of food the presence or absence of bluefish is not at all dependent upon the menhaden; that the fish of the ocean appear or disappear for reasons over which man or his legislation has no control whatever.

Yet, in spite of these facts, and also the fact that the markets of New York were glutted last summer with bluefish, and there never were known such quantities of scup and other food fish, including shad, as were taken last year, these people persist in endeavoring to force a law through Congress that would destroy the entire fisheries for menhaden or any other fish on the Atlantic or Pacific coast which could be converted into oil or fertilizers; which would destroy the net and twine industries of the country; depriving the farmer and cultivator of his most important factor in raising crops; would destroy the bait supply for our ocean fisheries; and embarrass and restrict the great food supply obtained by traps and seines in every section of the country. Many of the food fish of the ocean can be taken in no other way than by nets, seines, or traps, and the trap fish, especially, are in better condition for consumption, as they can be kept alive and are superior in every respect to dead fish packed on ice. And all these immense industries, all this great food supply, is to be constantly threatened if not destroyed because a few amateurs think, or don't know but what they might catch fifteen bluefish where they now take fourteen.

The underlying principle of this kind of legislation is wrong. There is no question that legislation for inland inclosed waters and for anadromous fish can be profitably used, although the pollution of our rivers and streams leading to the ocean by chemicals from factories and oftentimes sewerage absolutely prevents the use of our streams and rivers by these fish. But when we attempt to legislate on fish in the ocean, who spawn we know not where, whose numbers are beyond the computation of figures, who come in myriads for years to our shores and then are seen no more for years, then reappear for reasons which we cannot comprehend, and have done so for centuries before a purse seine or trap was ever known, how puerile the lawyer and his law appear in the presence of these great natural facts. The results of scientific investigation, the observation of practical fishermen, and the laws of God and nature on one side, and the amateur fishermen on the other!

The great oil and guano fish producing industries of the Pacific coast are untouched. Already vessels equipped for their development are on their way there from New England. The State of Florida has in her inland waters and also along her coasts the fish material for canning, oil-producing, and guano for fertilizing her orange groves. There is no branch of the American fisheries, which now produce over one billion, six hundred millions of edible fish, that is not invaded by this bill. Sumptuary legislation may be good in morals, but the life of the ocean is not amenable to the laws of man, and the great highway of the nation should be ever open to the enterprise of its citizens, and not be made a marine Yellowstone Park simply for the purposes of pleasure.

Huxley, Mackintosh, Baird, Goode, all agree that all the efforts of man in depreciating the great life of the ocean is but a drop in a bucket compared to the natural destruction by predaceous and other fish, and one of the most destructive species is the bluefish, which like a dog among sheep kills and destroys a thousand times more than he can eat, and the mackerel fishermen of the coast would regard the extirpation of the bluefish as the greatest blessing that could befall their industry, as the bluefish drive, harrass, destroy and scare the mackerel when on our coast more than all other influences combined. And yet this law is for the ostensible purpose of protecting the bluefish, the pirate of the ocean. It is not expected that this bill can be passed, but it has required constant and untiring work and the presence of thirty witnesses to furnish undeniable information. It is impossto presume that any Congressional Committees are experts on anything but law. All practical matters must be explained in detail, and much writing and many personal interviews are required to establish what are simple facts to plain practical people. The National Fishery Association has accomplished an enormous quantity of work in various directions. Gen. Cogswell is following every point of interest to his constituents with faithfulness and power. Senators Dawes and Hoar, Frye and Edmunds, and Gov. Dingley, are with many others alive to the marine and fishery interests. Things look well, but we need unceasing effort and vigilance.

COL. MARSHALL MCDONALD.

Fish Commissioner of the United States.

(See personal sketch in issue of Jan. 26, p. 10.)

MR. THOS. MOWAT, inspector of fisheries for this province, received a letter yesterday from Mr. K. Ito, president of the Hokusui Kyokwai Society, at Sappora, Japan, informing him that he had been elected a corresponding member of the society, which entitled him to the monthly reports. The letter was accompanied by a copy of the report which, unfortunately, is printed in the Japanese character, and will probably occupy Mr. Mowat's attention during the balance of the year. K. Ito is one of the number of distinguished Japanese who have received a liberal English education at the expense of the government, for the purpose of enabling them to become thoroughly familiar with the customs and principles of government prevailing in civilized nations. He has traveled through Europe and America, and visited this city last fall on his way home to Japan. The Hokusui Kyokwai is a society established for the purpose of promoting the fishing interests in Northern Japan, and in his letter K. Ito asks Mr. Mowat to contribute some articles on fisheries for publication in the society's monthly report.—*Daily British Columbian.*

CODFISH EGGS are easily killed by too low a temperature. The first batch of eggs put in the jars at the new station ou Ten Pound Island was killed by severe cold. Another lot has been obtained and the Grampus is still collecting more.

Best mastiff, Myrtlewood Kennels' Agrippa, owned in Utica; T. R. Proctor. Otis B.; St. Bernard, Chequasset Kennels' Monte Rosa; Newfoundland, J. F. Lewis's Carlo; collie, Chestnut Hill Kennels' David; under 12 months, Utica Kennels' Utica Belle; greyhound, Harmony Kennel's Harmony, owned in Utica; G. D. Pomeroy's Tony; St. Bernard under 12 months, divided by H. R. T. Coffin's Ben Hur and Cato II.; field spaniel, J. P. Willey's Newton Abbot Beau; cocker, same owner's Baby Obo; pug, Chequasset Kennels' Young Toby; bitch and litter, J. P. & W. W. Gray's Guenn; pointers, dog, Count Croxteth; bitch, Devonshire Countess. Setter dog, any breed, Don (Gordon); bitch, Rose (Gordon). Homeliest dog, Sir Lucifer. Kennel, St. Bernards, Hospice Kennels; pointers, Myrtlewood Kennels; spaniels, J. P. Willey; collies, Chestnut Hill Kennels; beagles, Harmony Kennels.

SYRACUSE KENNEL CLUB.—Articles of incorporation of the Syracuse Kennel Club have been filed with the County Clerk. The capital stock is fixed at $10,000 and is to be issued in 50 shares of $200 each. The objects of the organization are the breeding of sporting dogs and the ownership of fishing and shooting preserves within easy distance of this city. A tract of land has been secured near Hastings, accessible by way of the Syracuse Northern Railroad, which will be protected as a preserve for the use of the club. A club house will be erected, and attached to this will be a kennel for the dogs, with pens and training yards. This department will be stocked with the best animals of the English setter and pointer species to be obtained. The incorporators are Moses D. Burnet, Marsh C. Pierce, Howard B. Rathbone, E. Overton Ward, W. J. Wallace, Alexander H. Davis, A. Ames Howlett.

WHAT KIND OF CHAMPIONS?—St. Paul, Minn.—*Editor Forest and Stream:* In your report of the Indianapolis bench show you give the names of two mastiffs, dog and bitch, as winners in the champion classes. Is there not some mistake about this? If not, where did they qualify? The only previous record of the dog I can find is first Indianapolis, 1886. But may be it is some special form of championship—as say champion of Indianapolis? Although of no value, such a "championship" should not go on the record without protest.—WACOUTA.

TROY DOG SHOW.—The first annual dog show of the Rensselaer Kennel Club will be held at Troy, N. Y., March 20 to 22. Mr. Chas. H. Mason has been appointed judge. The premium list will be ready in a day or two and may be had by addressing the secretary, Mr. A. M. Ide, Troy, N. Y.

THE NEW YORK SHOW.

THE bench show of the Westminster Kennel Club now in progress in this city is notable for its unprecedented entry list. There are probably a full thousand or more dogs actually present. The quality is good. The Garden has been filled with a large attendance of visitors. Following is a list of awards for the first day:

Wheatleigh's Yuma Yuma and Yum Yum and J. W. Howell's Flora. High com., A. Wilkins's Bunnie. *Puppies:* 1st, 2d and 3d, Dr. H. R Surles's Little Duke, Jr., Ouida and Jerry II. Reserve, G. W. Fisher's Little Gem.

MEXICAN HAIRLESS.—Mrs. H. S. Foote's Me Too; 2d, Mrs. S. J. Mayer's Black Jack; 3d, H. T. Foote's White Wings. High com., S. J. Mayer's Nellie.

MISCELLANEOUS.—1st, P. Lawrence's Pin.

The following protest will be laid before the A. K. C. to day:

F. R. Hitchcock, Secretary Westminster Kennel Club:

SIR—I protest the award of the prize in Class 32 (Champion Pointers, 55lbs. and over), at your present show, given to the dog Bracket. I base this protest on the ground that the award was erroneous, inasmuch as the competition in the class was restricted. By an arbitrary, illegal and unjust action, the Bench Show Committee of the Westminster Kennel Club refused the entry or entries of another dog or of other dogs qualified to compete in this class against the winner. It is indeed well known to the public that one dog so illegally barred out had already at Boston in 1887 been placed over the present winner by the same judge. For this reason, namely, that free competition was barred, the judge was prevented from arriving at a correct decision or a decision just to all the pointer owners concerned. I ask therefore that the decision in Class 32 be set aside and the record corrected accordingly.

CLUMBER SPANIEL STANDARD.

ADOPTED BY THE AMERICAN SPANIEL CLUB.

	Value.		Value
General appearance and size..	10	Body and quarters.....	20
Head	15	Legs and feet.....	10
Eyes.....	5	Coat and feather.....	10
Ears.....	10	Color and markings.....	5
Neck and shoulders.....	15		
		Total.....	100

General appearance and size.—General appearance, a long, low, heavy-looking dog, of a very thoughtful expression, betokening great intelligence. Should have the appearance of great power. Sedate in all movements, but not clumsy. Weight of dogs averaging between 55 and 65lbs.; bitches from 35 to 50lbs.

Head.—Head large and massive in all its dimensions; round above eyes; flat on the top, with a furrow running from between the eyes up the center. A marked stop and large occipital protruberance. Jaw long, broad and deep. Lips of upper jaw overhung. Muzzle not square, but at the same time powerful looking. Nostrils large, open and flesh-colored, sometimes cherry-colored.

Eyes.—Eyes large, soft, deep-set and showing haw. Hazel in color, not too pale, with dignified and intelligent expression.

Ears.—Ears long and broad at the top, turned over on the front edge; vine-shaped; close to the head; set on low and feathered only on the front edge, and there but slightly. Hair short and silky, without slightest approach to wave or curl.

Neck and shoulders.—Neck long, thick and powerful, free from dewlap, with a large ruff. Shoulders immensely strong and muscular, giving a heavy appearance in front.

Body and quarters.—Body very long and low, well ribbed up and long in the coupling. Chest of great depth and volume. Loin powerful and not too much arched. Back long, broad and straight, free from droop or bow. Length an important characteristic; the nearer the dog is in length to being two and one-half times his height at shoulder the better. Quarters shapely and very muscular, neither drooping nor stilty.

Legs and feet.—Forelegs short, straight and immensely heavy in bone. Well in at elbow. Hindlegs heavy in bone but not as heavy as forelegs. No feather below hocks, but thick hair on back of leg just above foot. Feet large, compact, and plentifully filled with hair between toes.

Coat and feather.—Coat silky and straight, not too long, extremely dense; feather long and abundant.

Color and markings.—Color, lemon and white and orange and white. Fewer markings on body the better. Perfection of marking, solid lemon or orange ears, evenly marked head and eyes, muzzle and legs ticked.

Stern.—Stern set on level and carried low.

THE REJECTION OF ENTRIES.

Editor Forest and Stream:

Mr. Peshall's action and remarks as to the refusal of Mr. Mason's entry of Beaufort by the W. K. C. committee are much to the point. If Mr. Peshall will not deem it impertinent, I hope he will go a step further and enlighten us on the general features of the case as viewed in the light of legal rights. Not that there is any probability of any injured exhibitor appealing to the law for redress, but it is always safe to consider questions in the light of legal principles, for jeer at the law as much as we laymen may, we all know that it is but the crystallization of centuries of experience, moulded for the perpetuation of justice, and that it always aims at justice. To the layman it would seem that as dog shows invite public patronage, they have no right to discriminate between patrons, save on good public grounds or lack of accommodations, but then a layman's law is very poor goods.

Some such rule as the one relied on by the W. K. C. committee, is just and reasonable, and must necessarily be very general in its provisions, as it is easy to see how many circumstances may arise, justifying a committee in rejecting an entry which cannot be foreseen and provided for, but there must be some corresponding restriction to prevent such "outrages" as rejecting entries from personal spite or to insure victory for somebody's dogs. How would it do to require that with the rejection of the entry the committee must give a written statement of their reasons? We can imagine the figure any one would cut if confessing that Buster is too dangerous a competitor, or that Broomstick's owner wielded too sharp a pen.

Generally all clubs are liable to the danger of underestimating their responsibilities. They appeal to the public for support, and should remember that they owe the public a just return. W. WADE.

HULTON, Pa., Jan. 20, 1888.

INDEX OF SHOW WINNERS.

AN index of ten pages, four columns to the page, giving reference to every dog that won a prize at any show in 1887, is a new feature of the *American Kennel Register*. The value of such a work of ready reference can best be appreciated by those persons who have occasion to look up a dog's record. Writing of this dog show index Mr. R. A. Craig says: "Let me congratulate you on the very effective way you have indexed the prize winners of 1887. I would willingly pay the subscription to the *American Kennel Register* for that alone."

RULE 2.

THE compulsory registration rule will be discussed and perhaps amended at the meeting of the A. K. C. this afternoon. The rule in any shape which retains the compulsory clause will be obnoxious. Breeders and exhibitors, a hundred to one, are opposed to the notion of compulsory registration. The Westminster Kennel Club, the first to attempt to enforce the rule, has been compelled in a number of instances to pay the registry fee itself, because owners refused to contribute to the secretary's support.

MARQUETTE, Mich., Feb. 17.—Last evening a copper train of thirty cars on the Duluth and South Shore road got out of control of the men at the Prince mine, five miles above this city, and came thundering down the heavy grade at the rate of over a mile a minute. The shrieks of the locomotive whistle caused thousands to rush out of doors. In four minutes after the engineer blew the first danger whistle, five miles above, the train came thundering through the yards. The big mogul engine kept up its shrieks, and the rush of the cars shook the earth, while the train seemed running on a sheet of flame by the sparks caused by the friction of the brakes. Nine cars of heavy timber were in the train, and at the third crossing the timbers began to fly. They shot through the air in all directions. Buildings were demolished and cars thrown from the track on every side. Three cars held to the engine and dragged a fourth with timbers caught under the wheels. The engine stopped within two hundred feet of a sharp curve which would surely have thrown it into the lake. For three blocks, timber and car trucks and cars are scattered. Two streets are blockaded. The engineer and fireman stuck to their posts. One brakeman jumped in the dark and was saved by being thrown into an immense snowdrift. The conductor and other brakeman cut loose the caboose and escaped. The only loss of life was Gov. Swineford's Newfoundland dog, which was killed by one of the flying timbers.—*Sun.*

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the February number of the *American Kennel Register:*

BEAGLES.

5854. Belle III., J. Gibson.
5855. Bridget, I. W. Goss.
5856. Floss II., J. Gibson.
5857. Little Spy, T. W. Hemphill.
5858. Rowdy, R. F. Rutter.

COLLIES.

5859. Black Cecile, R. J. Walker.
5860. Collie IV., F. E. Beane.
5861. Daisy Pyper, W. L. Pyper.
5862. Dundee III., R. J. Walker.
5865. Fannie Fern, W. A. Wickham.
5864. Flora McIvor of A., T. A. Cloud.
5865. Iowa Queen, W. A. Wickham.
5866. Joe D., J. R. Draper.
5867. Jolly Jack, W. L. Pyper.
5868. Midge II., R. J. C. Walker.
5869. Pinto, C. Wilson.
5870. Rex D., J. R. Draper.
5871. Roderick Dhu IV., A. R. Hemingway.
5872. Rose, Barton & Maynard.
5873. Shepherd, W. Weightman.
5874. Snip, J. E. Eldred.
5875. Trevor II., R. J. C. Walker.

DACHSHUNDE.

5876. Schenke, N. H. Davis.
5877. Skelett, N. H. Davis.

GREAT DANES.

5878. Juno II., A. Zimmerman.
5879. Minka II., A. Zimmerman.
5880. Paula, A. Zimmerman.

GREYHOUNDS.

5881. Balkis, H. W. Huntington.
5882. Bonfanti, E. Van Winkle.
5883. Cassandra, H. W. Huntington.
5884. Dandy, Cumberland Kennels.
5885. Glendon, Cumberland Kennels.
5886. Grace, E. S. Van Winkle.
5887. Harmony, Harmony Kennels.
5888. Hazelhurst, Harm'y Kennels.
5889. Lancashire Witch, H. W. Huntington.
5890. Midnight, E. B. Van Winkle
5891. Speed, E. B. Van Winkle.

MASTIFFS.

5892. Ashmont Brutus, Lewis A. Berger.
5893. Ashmont Cleopatra, L. A. Berger.
5894. Beauquesne Neville, J. N. Chaplin.
5895. Beech Grove Bessie, D. J. Duncan.
5896. Beech Grove Dick, Geo. E. Townley.
5897. Beech Grove Macduff, W. M. Thrasher.
5898. Bouncer, T. C. Wallace.
5899. Cedric II., A. J. Smythe.
5900. Chispa II., D. J. Duncan.
5901. Clytie, F. B. Osgood.
5902. Colonel Dix, J. Clary & Son.
5903. Connecticut, W. Meecham.
5904. Don IV., F. H. Osgood.
5905. Duke D., C. Guilder.
5906. Ilford Rex, H. F. Woods.
5907. Julict G., C. Guilder.
5908. Kenneth, J. Boyd.
5909. Lincoln Neville, H. Childs.
5910. Lion IV., H. M. Wood.
5911. Mark Anthony, W. Weightman, Jr.
5912. Mission, J. M. Harner.
5913. Montgomery, G. S. Roberts.
5914. Portia Neville, J. M. Chaplin.
5915. Prince III., W. J. Ustick.
5916. Princess Louise, A. M. Pinkham.
5917. Reginald Neville, J. M. Chaplin.
5918. Winnifred Neville, Wm. Knodder.

POINTERS.

5919. Dan IV., C. A. Baird.
5920. Donald B., R. Wheeler.
5921. Gift, C. Stuetzle.
5922. Glenarm, E. G. Peterson.
5923. Pete II., P. McGill.

PUGS.

5924. Babie Bunting, Jesse D. Welsh.
5925. Bunnie, J. D. Welsh.
5926. Mikado II., Mrs. C. Wheatleigh.
5927. Peter, Mrs. F. H. Prentiss.

ST. BERNARDS—ROUGH-COATED.

5928. Dick, P. H. Henley.
5929. Francis of Pinegrove, N. P. Boyer.
5930. Friar, J. C. Berry.
5931. Gruss Bayard, Weimer & Lincoln.
5932. Leo, W. M. Bullivant.
5933. Leon, G. M. Edwards.
5934. Maggie of Pinegrove, N. P. Boyer.
5935. Nero II., K. Croskey.

SMOOTH-COATED.

5936. Billee Boy, S. B. Macfarlane.
5937. Daisy of Pinegrove, N. P. Boyer.
5938. Dread, C. W. Jackson.
5939. Gipsey of Pinegrove, N. P. Boyer.
5940. Mazeppa of Pinegrove, N. P. Boyer.

SETTERS—ENGLISH SETTERS.

5941. Cannon, J. F. Simmons.
5942. Dart Glen Rock, M. M. McMillan.
5943. Don Bondhu, S. A. Ellis.
5944. Foreman's Ned, A. J. Kolb.
5945. Queen R. & M., C. E. Merrill and H. S. Reynolds.
5946. Ted, Samuel Parker.

IRISH SETTERS.

5947. Annie Elcho II., S. D. Kell.
5948. Bridget Baily, K. Brown.
5949. Clede, C. C. Edwards.
5950. Conn IV., F. H. Burns.
5951. Flounce T., C. A. Snowden.
5952. Glencho's Shamrock, Francis Larkin, Jr.
5953. Mr. Taylor, C. A. Snowden.
5954. Norah H., George Hudson
5955. Pat J., C. A. Snowden.
5956. Peg Merrilies, Cumberland Kennels.
5957. Rex II., W. M. Rebasz.
5958. Rye Lily, Donald McVicar.
5959. Starlight, Louis Contoit.
5960. Tony, George Snyder.

SPANIELS—CLUMBER SPANIELS.

5961. Joan, F. H. D. Vieth.

FIELD AND COCKER SPANIELS.

5962. Cap. Stubbs, E. Cohoon.
5963. Col. Black Pete, J. P. Wheelock.
5964. Dervish, Louis Contoit.
5965. Lady Madge, H. D. Brown.
5966. Lady Obo, E. Cohoon.
5967. Maud S. II., E. Cohoon.
5968. Miss Topsy, American Cocker Kennels.
5969. My Lady Betty, F. W. Kitchel.
5970. Pekoe, John N. Bagley.
5971. Prince Obo III., E. Cohoon.
5972. Rochester Prince, E. P. B. Southworth.
5973. Topsy II., Chas. W. Porter.

TERRIERS—BULL-TERRIERS.

5974. Clover, S. T. Field.
5975. San Diego, Henry Fierman.
5976. Sheila, H. M. Wirz.
5977. Smoke, J. C. Holman.

FOX-TERRIERS.

5978. Badger, W. G. Foster.

SKYE TERRIERS.

5979. Toodles, C. H. Smith.
5980. Frousey, C. H. Smith.

YORKSHIRE TERRIERS.

5981. Ben II., Mrs. Cora A. Campbell.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Buck. By Chas. M. Raymond, West Brighton, S. I., for black, white on breast, spaniel dog, whelped Nov. 28, 1887, by Black Prince (Benedict—Madcap) out of Chapman's Beauty.

Sport. By J. D. Sperry, Iowa City, Ia., for red Irish setter dog, whelped May, 1886, by Elcho out of Bess.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Mollie Brant—Little Red Rover. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Mollie Brant (Obo, Jr.—Devon Beauty) to his Little Red Rover (Obo II., A.K.R. 432—Dinah), Jan. 25.

Galatea—Tom Pinch. J. Martin Barney's (Dutch Flat, Cal.) pointer bitch Galatea (Nick of Naso—Temptation) to his Tom Pinch (Wise's Tom—Beulah), Feb. 3.

Newton Abbot Lady—Black Prince. A. C. Wilmerding's (New York) spaniel bitch Newton Abbot Lady (Bend Or—Lady Bird) to his Black Prince (Benedict—Madcap), Feb. 15.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Oxford Belle. R. S. Ryan's (Baltimore, Md.) fox-terrier bitch Oxford Belle (A.K.R. 4597), Jan. 30, five (two dogs), by his Gerald (A.K.R. 4961).

Sal. G. W. Amory's (Boston, Mass.) pointer bitch Sal (A.K.R. 3653), Feb. 14, five (four dogs), by his Bob (A.K.R. 3649).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Nina. Stone fawn pug bitch, whelped September, 1887, by Duke out of Jipsey, by Chas. M. Nelles, Brantford, Ont., to S. F. Glass, London, Ont.

Benjo. White bull-terrier dog, whelped July 3, 1886, by Coun out of Little Nell, by T. R. Varick, Manchester, N. H., to Rockdale Kennels, New Bedford, Mass.

Don Petrel. Black, white and tan English setter dog, whelped 1885, by Don Juan out of Petrel III., by J. H. Meyer, New York, to J. F. Hughes, same place.

Bissell. Black, white and tan beagle bitch, whelped April 20, 1886, by Bannerman out of Pet, by H. Jacobs, Wrightsville, Pa., to P. M. Carman, same place.

Straynote. Black, white and tan ticked beagle dog, whelped May 15, 1887, by Rover out of Silk, by P. M. Carman, Wrightsville, Pa., to J. M. Froncfield, General Wayne, Pa.

Con. Red Irish setter dog, whelped April 13, 1887, by Jim out of Nell II., by Onota Kennels, Pittsfield, Mass., to Robert Dutton, same place.

Norah Laverack. English setter bitch, whelped Aug. 8, 1887, by Prince Napoleon II. out of Nellie Laverack, by Jos. H. Brady, Pawtucket, R. I., to Bernard Keenan, same place.

Nina Laverack. Black and white English setter bitch, whelped Aug. 8, 1887, by Prince Napoleon II. out of Nellie Laverack, by Jos. H. Brady, Pawtucket, R. I., to Bernard Keenan, same place.

Clede. Red Irish setter dog, whelped Oct. 13, 1887, by Chief out of Bizreena, by Onota Kennels, Pittsfield, Mass., to C. S. Edwards, Bowling Green, Mo.

Sport II. Black and white English setter dog, whelped Jan. 8, 1887, by Sport out of Nellie Laverack, by Jos. H. Brady, Pawtucket, R. I., to Wm. Hyde, same place.

Teddy. Red Irish setter dog, whelped July 17, 1887, by Sarsfield out of Noreen IV., by Wallace Graham, Paterson, N. J., to Edward A. Hibbs, Philadelphia, Pa.

Don. Black and white English setter dog, whelped Jan. 8, 1887, by Sport out of Nellie Laverack, by Jos. H. Brady, Pawtucket, R. I., to Henry Doyle, same place.

General Middleton—Luna whelp. Orange tawny and white St. Bernard dog, whelped Oct. 2, 1887, by S. F. Glass, London, Ont., to Chas. M. Nelles, Brantford, Ont.

Racket—Bissel whelp. Black, white and tan beagle bitch, whelped Nov. 28, 1887, by H. Jacobs, Wrightsville, Pa., to P. M. Carman, same place.

Black Prince—Chapman's Beauty whelp. Black, white on breast, spaniel dog, whelped Nov. 28, 1887, by A. C. Wilmerding, New York, to Chas. M. Raymond, West Brighton, S. I.

PRESENTATIONS.

Pet Nelles. Black cocker spaniel bitch, whelped July 22, 1887, by Brant out of Bonita (A.K.R. 2891), by Chas. M. Nelles, Brantford, Ont., to Dr. M. V. B. Saunders, Detroit, Mich.

IMPORTATIONS.

Kastelhorn II. Rough-coated St. Bernard dog, color and age not given, by Kastelhorn (Monk—Bernina) and out of Topsy (champion Bayard—Ruby II.), by Contoocook Kennels, Peterborough, N. H.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

H. C. B., Lock Haven, Pa.—Please inform me what to give to a beagle pup 8mos. old for worms? Ans. Give a tablespoonful of castor oil and 3 hours afterward give a large pill containing 20grs. of powdered areca nut. Pill can be made with lard. Give another dose (teaspoonful) of oil afterward.

NAP.—My dog's right ear hurts him when he barks and he shakes his head from right to left. He shakes it when he don't bark every once in a while. It seems to be sore right under the ear so it has to be handled with care. He's been so for 7 or 8mos.? Ans. Canker. Get the following:

℞ Bromo-chloral..... ʒi
Tr. opii..... ʒi
Aq. q. s. ad..... ʒii
Mix. Drop a little in the ear night and morning after cleansing and drying.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co

RANGE AND GALLERY.

BOSTON, Feb. 18.—The shooting was very lively at the Massachusetts rifle range to-day, a large number of riflemen being present, and a good deal of interest was taken in the revolver and militia matches. Following are the best scores made to-day:

Creedmoor Match—200yds.

WILMINGTON, Feb. 13.—An interesting rifle contest is in progress at Healdmoor range, Wilmington, Del., commencing the first of this month; it will run continuously for two months. The contest will be divided into two separate matches, both at 200yds, and open to all comers. Match No. 1 will be shot off-hand and No. 2 at rest, the conditions of both being the same, viz.: Standard American target, with rest center for rest match, any rifle under the N. R. A. rules, with an allowance of 5 points in each score of 10 shots for military rifles, only the best score in each day's shooting to be credited to the score total, and the total of 5 best scores to count in the contest. Entrance fee 10 cents for each score of 10 shots, with a small charge extra for use of range. At the end of the contest the total receipts of each match will be divided into five cash prizes as follows: First prize 40 per cent., second 25, third 20, fourth 10 and fifth 5. To-day the following scores were made at 200yds., standard American target. The military scores are given "fat" as is customary, but they are entitled to an allowance of 5 points for each score of 10 shots:

H Johnson	8 6 10 8 10 6 7 6 7 8—76		
T F Carlin (mil)	7 6 6 9 5 5 6 7 8 5—64		
J W Geyer (mil)	5 10 5 6 5 6 8 6 7 7—63		
G W Howard	10 7 6 4 5 5 5 4 4 3—53		
J Wilson (mil)	9 4 8 8 4 2 5 2 7 9—55		

At Rest.

H Johnson	7 9 9 6 7 6 9 9 9 7—78		
G W Howard	7 7 7 7 6 6 9 6 7 7—69		

Feb. 18.—The following scores were made at the midweek shooting at Healdmoor Rifle Range on Thursday afternoon on standard target at 200yds.:

H Johnson	9 4 10 5 7 9 5 7 5 8—69		
J Williams (mil)	8 4 5 9 7 6 6 4 10 7—66		
G W Howard	3 5 3 7 4 6 9 8 3 5—51		
J Wilson (mil)	3 4 5 3 3 6 6 6 10 6—52		
F Peterson (mil)	1 1 3 8 7 4 6 5 3 7—45		
H Padberg (mil)	2 4 4 3 4 4 6 4 6 1—38		

The Wilmington Rifle Club contested on Wednesday at Wyoming with the Kent County Rifle Club, and for the second time carried off the H. M. Thomas cup. The scores stood as follows:

Wilmington.		Kent County.

THAT SYRACUSE RIFLE CHALLENGE.—We have another letter from Messrs. Warner and Lowe offering new conditions to Messrs. Moore, Garfield and Perry. When these gentlemen have come to some understanding about what they will do, the FOREST AND STREAM will be ready to publish it, but this continued dickering appears to us to be quite purposeless.

NEWARK, N. J.—The contest between F. A. Freiensehner, of the Our Own Club, and M. J. McArdle, of the Rutgers Club, was settled last week in two matches, at gallery distance, both of which were won by Freiensehner. They shot at ten targets each on both occasions. In the first match Freiensehner made 112, 115, 111, 109, 116, 109, 96, 109, 106, 107; total, 1,090. McArdle 110, 105, 106, 110, 106, 105, 110, 106, 109, 103; total, 1,058. This was on the Our Own range. On Thursday evening they shot again on the Rutgers range, and the scores were: Freiensehner, 113, 113, 116, 109, 112, 109, 111, 115, 113, 112; total, 1,106. McArdle, 108, 110, 104, 111, 106, 103, 108, 108, 105, 103; total, 1,066. The stake, $100, was handed to Freiensehner on Friday night.

HAVERHILL, Mass., Rifle Club, Feb. 18, 200yds., off-hand, standard target:

J Busfield	10 8 8 8 7 9 10 8 8 7—83		
H Tuck	10 8 9 10 8 8 6 8 7 9—83		
J F Brown	7 10 8 8 9 7 9 10 7 8—83		
F Merrill	7 7 7 7 7 5 5 10 6 10—77		

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TORONTO, Feb. 11.—At McDowall's shooting grounds the most successful blackbird shoot yet held took place to-day. The weather was all that could be desired, and there was a large attendance. Several interesting contests at 18yds. rise, took place, and, as the following scores show, the grounds are well suited for artificial bird shooting. First shoot, 15 birds each:

Alexander	111111111111110—14	Wakefield	110101110110111—10
McDowall	011011111111101—12	McClure	111011111001101—10
Johnston	111101101011101—11	Jould	111000101011010— 8
Charles	111011110011101—11	Clabrough	110111001101001— 8
Rice	111100110111101—11	Ayre	110101110101001— 8

Second shoot, 10 birds each:

Alexander	1011111101—8	McCully	0101011101—6
Johnston	1011011111—8	Charles	1110110000—5
Dollery	1011010111—7	Wakefield	1010111000—5
Rice	1011001101—6	Ayre	0011010011—5
McClure	0001111101—6		

The two eights divided first and second prize, and the 7 took third.

Third shoot, 5 birds each, at 18yds. rise: Johnston 5, Wakefield 4, Jould 4, Baillie 3, McClure 3; ties divided. Fourth shoot, 5 birds: Wakefield 5, Jould 5, Alexander 4, McDowall 4, Baillie 2; ties divided.

TORONTO, Feb. 14.—The West Toronto Junction Gun Club held their second shoot for the gold medal presented by the president, to-day, with the following result:

Fifteen birds each, Toronto Gun Club rules:

J Bailey	011110111111111—13	H Power	110111010001010—8
P Wakefield	111111011111100—12	C Hinton	110000101011010—8
H George	110111110100110—10	W Davidge	001110011011001—8
J Worden	1100110110100010— 8		

Mr. Charles Stark, the jeweler and gunsmith, 52 Church street, has on view in his window three beautiful specimens of the gunsmith's art. They are the highest grade of breechloading guns and were manufactured by Messrs. Enos, James & Co., the eminent gunmakers of Birmingham, Eng. They were especially made for presentation to Toronto marksmen as prizes, and Mr. Stark has determined to present one each to the Toronto, Owl, and West Toronto Gun clubs, to be competed for by members, and each gun to be won three times by a competitor before becoming his personal property. The guns are valued at $75 each, and have fine Damaseus barrels, with top lever, rebounding steel bar-locks, pistol grip, percussion, large firing pins, fancy rib, chokebored.

A CANADIAN JOKE.—On Feb. 17, the members of the Owl Gun Club turned out in strong force at McDowall's new grounds for the club's annual shoot at sparrows. Owing to a failure on the part of a contractor the sparrows did not materialize, and the boys were ready for fun of any sort. An opportunity was not long in presenting itself. One of Toronto's best and most genial all-round sportsmen—a veritable prince of good fellows—has a shooting match in prospect, and he was present with a paper target to try his gun, which was loaded with a concentrating cartridge. The trial was to be made at 35yds., and the marksman took up his position a short distance from the end of the hut, the target being in front of the building. One of the Owls stood at the corner nearest the gentleman who wished to try his gun, and another Owl, who is a capital snap shot, was stationed at the other corner with his loaded gun ready to fire at the target the instant his partner gave him the signal to do so. Owl No. 1 watched the marksman at 35yds., and signaled Owl No. 2 (who was only 25yds. from the target) so that the latter fired simultaneously with the former. Of course the target wast terribly riddled and the Owls were all loud in their praises of the phenomenal work done by Jim's concentrating cartridge.

OTTAWA, Feb. 17.—The St. Herbert Gun Club has prepared a programme for their annual tournament, which is to take place on Easter Monday, April 2. First match, open to teams of five each, members to belong to a regularly organized gun club, 15 single rises, Ligowsky clay-pigeons, 18yds. rise, no handicapping for guns. For this there will be a champion cup and other valuable prizes, the winning team to hold the cup. Second individual championship and third, an all-around sweep, at 15 birds each.

MONTREAL, Feb. 11.—To-day the Lachine Gun Club invited representative teams of picked shooters from the Montreal, Cote St. Paul and St. Lambert gun clubs, to meet them in a friendly match for supremacy, at live-bird shooting. The birds were strong, fast flyers, and taxed the skill of the gunners to the utmost. The Lachine men came out ahead, killing 12 birds out of 15; Montreal, 10; Cote St. Paul, 9; St. Lambert, 7. Return match will take place shortly.

THE LONG BRANCH SHOOT.

THE handicap, open to all tournament, which was shot at Long Branch on Tuesday and Wednesday of last week brought out some good scoring and a good deal of growling. Those who took part in it are not particularly pleased with the arrangements for the shoot, and spectators found an open lot, which on one day was a quagmire, in which they stood ankle-deep in snow slush, and on the second they met a blizzard, which made any watching of the shoot a rod of martyrdom. The shoot opened on Tuesday with but one change from the list as published, and that turned out to be a very significant one. Frank Class, of Bound Brook, N. J., had been No. 10 in the list. He did not come, but Wm. Sigler, of Newark did come, and he having sent on his entry in time consented to fill up the vacant place. He did so in the very best fashion and at the end stood first man.

The notoriety given the match through the FOREST AND STREAM and otherwise had gathered a score or more of fine marksmen and one jaunty little markswoman, Miss Annie Oakley, of exhibition fame.

On the first day of the contest the birds as a whole were good, for although somewhat slow to take wing, they were very fast and strong when they did get up. The shooting was nearly entirely confined to professionals.

The shooting began at noon, and, as a whole, proved very good, for when "time" was called at 5:25 P. M., 20 rounds having been shot, 6 of the 23 shooters, viz.: Cubberly, W. Sigler, Wertsner, Graham, Van Dyke and Stice had clean scores of 20 killed. Among the shooters Annie Oakley attracted considerable attention, herself score standing 16 killed and 4 missed. She opened in very bad form, missing 3 out of her first 4, dead over the boundary, and then again losing her seventh bird. But with an offer to back her at 5 to 3 she killed her eighth bird. She continued on killing 13 straight in as good form as any of the men, and better, if proper allowance is made for her gun, which is a very light weapon as compared with some of the guns in use, which, judged by the report, especially of the second barrels, were miniature cannons. Of the men Graham and Stice's shooting was about the best. Stice was the popular typical shooter. He shot to kill. His first barrel was generally effective. He is 6ft. tall, and his shooting costume consisted of a broad-brim felt hat and dark corduroy coat, trousers in his boots, and red handkerchief around his neck. C. W. Budd was the favorite at the outset, but having missed his second and seventeenth bird, he was 2 behind at the close of the day. The champion wing shot of England, W. C. Graham, seemed almost invincible on the first day.

In shooting, the contestants had to face the sun, but it was the only disadvantage under which they labored. By unanimous consent Mr. Al. Heritage ("Old Southpaw"), of the Jersey City Heights Gun Club, was referee. It was then decided that the contestants should shoot in turn, 1 bird at a time. Cubberly went first to the score, and brought down a right quarterer from No. 4 trap.

L. B. Campbell, the well-known trap-and-handle shot, was the only left-handed marksman among the lot.

Five hours and twenty-five minutes were consumed on the first day and the shooters were instructed to be at the score by 10:30 on the next morning.

The record of the match has been prepared with special care by the representative of the FOREST AND STREAM; not content with the mere tabular record of dead and missed birds, he has prepared a technical history of each shooter's outfit, and this has been arranged in most convenient shape for reference and comparison in the annexed table, where the scores may also be found.

The second day of the shoot brought disappointment to many. One expert observer present put the situation tersely, saying:

"An excessively cold day coupled with half a gale of wind and unlimited whisky, made the second day of the shoot at Long Branch anything but enjoyable. In fact, if Mr. Phil Daly wishes to inaugurate winter or any kind of pigeon shooting in the Monaco style he will have to make some radical changes. The crowd present was such that shooters found it difficult to reach the score, while so utterly unqualified were the officials that the referees, Messrs. Heritage and Quimby, gave birds as 'dead' that flew out of bounds before they were gathered, while correct scoring was a task that puzzled the most expert at the business."

The wind blew a gale from the northwest all day, and had a bad effect upon the shooting. The weather also was exceedingly cold. The number of spectators was larger than on the day previous, but before the close of the match the majority were frozen out, and they left the grounds. A decidedly poor lot of birds were in the traps. More than half refused to fly when the traps were opened.

The shooting, however, as a whole, was very good, and some of the best of amateurs would have found it difficult to equal the top scores. Mr. Wm. Sigler, of Newark, winning the first prize, $1,000, with a score of 47 out of 50; C. S. Wertsner, of Baltimore, taking second money, $200, with 46, and J. R. Stice, of Des Moines, Ia., third money, $200, with 45 killed, with 2 others at 44, 3 at 43 and 2 at 42 each killed. At the Monaco boundary (21yds.) no such scores could have been made, but even at 80yds. it was very creditable shooting. The feature of the shooting was Mr. Seigler's straight 35; his 36th, a fast driver, falling dead just over the boundary. The English representative, W. C. Graham—who was the favorite, starting at 3 to 1 against—did very well on the first day, killing 20 straight. But the weather was too cold for him yesterday and he failed to sustain his reputation. A special feature of the shooting was an inside match between Miss Annie Oakley and Phil Daly, Jr., as to which would make the best score. The result was in the lady's favor. The referees on the second day were Al. Heritage and Fred Quimby and the time taken 8½ hours, making a total of 14 hours for the match.

The shoot fortunately ended without any place ties and thus left the next day clear for sweepstake shooting. It was a good day, without wind, but intensely cold.

The birds were about the poorest lot imaginable. In some instances they could not be chased out of the traps and were caught by the attendants on the ground, making no attempt to fly. The cry, "Another duffer!" got to be a chestnut before the day was over. The spectators had dwindled to a few local lookers-on and the pot-hunters on the outside of the fence, who were far in the majority, and seemed to enjoy the sport more than those engaged in it. Occasionally a bird would escape and come sailing out over the fence. The moment it appeared outside it was the signal for a general fusilade from which no bird could ever hope to escape. The reports sounded like that of a skirmish line, and had all the gradations of sound from a cannon to a popgun.

Miss Annie Oakley failed to appear. The English champion, W. C. Graham, also was absent. He left Long Branch at the close of the big match, as did Fred Erb, Jr., and a number of the other contestants. Wm. Sigler, who carried off the $1,000 prize, was around, smiling and happy, although he did not take part in any of the sweepstakes. C. S. Wertsner, who won second prize, $200, left in the afternoon for his home in Baltimore. J. R. Stice entered one or two of the sweepstakes in the morning, after which he took a train for Jacksonville, Ind., where he resides. Late in the afternoon Charley Budd packed his traps for his home in Des Moines. Mr. Budd had bad luck during this shoot, which he attributes to the fact that he used a heavier gun than he is accustomed to. The ordinary weight of his gun is 7lbs. W. D. Campbell was around, suffering with an attack of rheumatism in the shoulders. He said had it not been for that it would have taken 47 different birds than were killed in the match to have beaten him.

The first sweepstakes had six entries at $5 each, with 5 birds apiece. Quinlan, of Newark, Budd and Stice killed all and tied, while Jones and Sigler killed only 4. The tie was shot off miss and out. Quinlan failed to kill his first bird in the tie and Stice and Wertsner divided the money.

Six entries were also made in the second round, at $5 each, with 4 birds apiece. Quinlan made a clean score and got first money. Cubberly, Ostram and Malone tied on 3 birds each for second. The tie was shot off, miss and out, and Malone won.

Miss and out, with four entries, at $5 each, was the next sweepstake arranged. Fletcher missed his first bird and went out. Malone went out on his sixth and Quinlan on his eighth, and L. B. Campbell took the money on 9 straight birds.

The next sweepstakes, miss and out, with seven entries at $4 each, won by J. R. Stice on the eighth bird.

C. W. Budd won the next miss and out match on the fourth shot. Only three entries were made at $3 each.

The next shoot was the biggest one of all. Twelve entries at $5 each, with 4 birds to shoot. The money was divided into 50, 30 and 20 per cent. Stice and Fletcher tied for first money and divided. Quinlan and Budd did the same with second, while Malone took third.

Quinlan carried away the first money on the next shoot on the second bird. Five entries were made at $5 each.

In the following miss and out, H. C. White and L. B. Campbell divided the stakes on the seventh bird. Six entries were made at $3 each.

Among the contestants in the last-mentioned sweepstakes was Cannon, a one-armed shooter, of Newark. He is a well built man, about 30 years old, with light sandy moustache and hair. Although he missed the first bird he shot at, yet he displayed considerable ability as a marksman. He held the gun firmly to his shoulder with his right arm and blazed away with both barrels with apparently no effort.

DETAILED RECORD OF THE LONG BRANCH SHOOT, FEB. 14 AND 15, 1888.

Quinlan and Disbrough came in for equal shares of the next money on the fifth shot. Five entries at $4 each, miss and out.

There were five entries in the last sweepstakes at $5 each. Price and Disbrough had the pleasure of dividing the money between themselves on the fifth bird.

BALTIMORE, Feb. 17.—The gun club is well satisfied, though not completely, with the outcome of the Long Branch shoot. Mr. C. S. Wertsner, captain of the Baltimore Gun Club, who won second money, has been the recognized champion of Maryland at trap shooting for several years. He made probably the best score of his life a few weeks ago by killing 48 out of 50 birds at the club grounds at Acton's Park. When he performed this feat snow covered the ground, and as many of the pigeons were white the shooting was difficult. Mr. Wertsner uses a Clabrough hammer gun, 10-gauge. He is rapid, though graceful, in his style of shooting. Under his management the Baltimore Gun Club has proved an almost invincible organization. Mr. Wertsner's score after shooting at 45 birds was 44 killed, 1 missed. When his turn came to shoot at the last 5 birds it was necessary for him to kill 3 of them to tie for first place with Wm. Sigler, who had the leading score, which was 47 out of 50. This would entitle Wertsner to one-half of first money, which was $1,000, but should he kill but 2 birds his score would stand 48 out of 50 and he would secure second money. It was understood by Wertsner's friends that the latter plan would be adopted, as he could then, by mutual agreement with Sigler, divide first and second money, making $1,300, and thus giving each $650 instead of $500. The other Baltimore shooters in the match also made creditable scores. J. A. Willar killed 26 out of 34, and James R. Malone 25 out of 29. Wertsner's score of 48 out of 50 was better by 2 birds than that made by Dr. Carver, and better by 3 than either Brewer or Mitchell made on the Baltimore Club's grounds in the match which they shot last season.

BANDLE--VERGES.

CINCINNATI, O., Feb. 17.—An interesting match was shot at live birds the morning of Feb. 13, on the grounds of the Price's Hill Gun Club, between Albert Bandle, a local celebrity, and C. E. Verges, of Lowell, O. The match differed from others usually shot here because of the short dead boundary rules which governed, the rules shot under being the Monaco, generally used by the French and German noblemen in their big subscription live bird matches at Monaco. There the shooting is done on a narrow cliff which projects out to the sea, and which measures but 10yds. across and forward to the edge 21yds., all birds falling over the cliff are scored lost.

Mr. C. E. Verges had quite a swelling on the right side of his head from reading your report of the recent Floyd-Jones match that he could kill as many birds in a 21yd. boundary as in that of the old English 30. Bandle took exception to Verges's belief, the result being a back-down on the part of Verges about his being able to do so, but fully convinced he could as the term goes give Bandle cards and spades in such a race; the match shot being the result of the argument. As it was rather an impromptu match and shot in the morning only some 25 shooters put in their appearance.

The pigeons used were a batch of tough customers, about one-third having run the gauntlet of previously shot matches, and when they were sprung invariable got away as though urgent business called them elsewhere. The match opened at 10 o'clock with the Cincinnati favorite at the score. The first six he killed, then missed, killed the next then to the great astonishment of his friends, missed two, then made a run of six straight kills again, followed with another miss, then two kills, next also killed but dead out of bounds, then another kill and then another, the last dead out of bounds. Verges killed as a starter five straight, made a clean miss on his next, then unluckily lost two dead out of bounds; scored the next, lost the next two, then made a spurt of six kills, then one miss, followed with three fine kills and finished, as well as lost his money and match by having the last three birds fall dead out of bounds. The birds were sprung from three ground traps, 30yds. rise. English club rules governing; barring of course the boundary. Score:

Al Bandle	1 1 1 1 1 1 0 1 3 0 1 1 1 1 1 1 0 1 1 * 1 1 * 1 0—18
Verges	1 1 1 1 1 0 * * 1 1 0 0 1 1 1 1 1 1 0 1 1 1 * * *—17

Two days after Captain A. W. West, once the leading double-bird shot of the Forest City Gun Club, of Portland, Me., but now a resident of Parkersburg, W. Va., where he is an extensive mill owner, met W. E. Limberg (Wick), gun and kennel editor of the Cincinnati *Commercial Gazette*, in a friendly match at 25 pairs American clay birds, and defeated him handily by 6 birds, he scoring 40 out of 50 to Wick's 34. Through some oversight, but more through carelessness of Wick, the shells used by the two in the match became mixed, the consequence being West in the match used Wick's shells, loaded with Laflin & Rand FFF special powder and Wick West's shells loaded with FFG dead shot. The loser could not account for his consecutive misses on his second rises through the match, but at the close was satisfied of a mistake in the shells, which was verified, too, by the loader, Bandle. West is a good shot, but from an unprejudiced standpoint it was apparent to the writer, Wick, though he has of late been shooting in poor luck and form, is his equal in spite of the result. The traps, owing to poor handling, worked miserably, and Wick, if anything got the worst of it, but that all through his own negligence in accepting birds he could, according to the rules, have evaded. West, the winner, had little to say about the match at the close, but thought he could beat Wick any race he or his friends might name.

Bandle, for Wick, after the match placed $10 forfeit for a similar match, to take place on the Independent Gun Club grounds between the 27th and 29th inst., between the two. West used a 10½lb. L. C. Smith gun, and Wick a 13lb. Parker, both 10 gauges.

Scores:

West	Wick
11 11 11 10 11	10 11 10 11 10
10 11 10 11 10	11 10 11 11 01
11 11 11 10 11	11 10 10 11 11
11 11 11 10 10	00 10 10 10 11
11 10 11 11 00—40	11 10 10 10 01—34

Judges, P. Kessler and R. Montford. Referee, "Blue Dick." Time of match, 35m. Balks, Wick 6, West 2. Scorer, C. F. Weil.

The following from a local paper is self-explanatory, as per letter received by Al Bandle, of this city, captain of the Price's Hill Gun Club:

"CLEVELAND, O., Feb. 14, 1888.—There is a sort of feeling among Cuyahoga county shooters that a team of twenty or twenty-five men, all residents of Cuyahoga county, can be picked that can out shoot a similar team picked from Hamilton or any other county in Ohio in a telegraphic match at twenty-five or fifty birds per man, shot under Chamberlin or National Gun Association rules. * * * I think, with a little work, such a match could be brought about, and if it is, will be very interesting.

The challenge will be accepted by the Price Gun Club."

C. G. NEWSBOY.

* Denotes dead out of bounds.

C. E. K.

WORCESTER, Mass., Feb. 17.—The members of the Worcester Sportsmen's Club had a meet at Coal Mine Brook Range this week. During the afternoon there were eight events. The principal event was a possible 21 clays, two angles:

Gilman	1110111—6	Tapken	1011110—5
Kroger	0111111—6	Biglow	1111001—5
Barlow	1111110—6	Siems	1111111—7
Eberhardt	1101101—5	Evers	0101001—3
Wahlen	0011011—4	Morgan	0010100—2
Berger	0111101—5	Dr Franz	1111011—6
Shand	1100011—4	Lyon	0110001—3

S. Lyon, referee.

WOODSIDE, N. Y., Feb. 14.—North Side Gun Club, of Long Island, eleventh average shoot for the year ending March 13, 1888. Match at live pigeons, King's patent ground trap, handicap, no back bound, 80yds. bound, club rules. Prizes, club badge, three moneys:

Winholz	1110111—6	Tapken	1011110—5
Kroger	0111111—6	Biglow	1111001—5
Barlow	1111110—6	Siems	1111111—7
Eberhardt	1101101—5	Evers	0101001—3
Wahlen	0011011—4	Morgan	0010100—2
Berger	0111101—5	Dr Franz	1111011—6
Shand	1100011—4	Lyon	0110001—3

SOUTH SIDE GUN CLUB.—It is the intention of the management to hold a series of open shoots at artificial targets, to take place once a month. The programme for each shoot will be announced in due time. All will be class shooting under club rules. Prizes divided 40, 30 and 20 per cent. Targets three each. Loaded shells and refreshments always on hand. Shooting will take place rain or shine. The grounds are situated on New Jersey Railroad avenue, near Lehigh Valley coal depot, and may be reached via the Pennsylvania Railroad, Emmett street station; Newark & New York Railroad, Broad street station, and Delaware, Lackawanna & Western Railroad. W. R. Hobart, Isaac H. Terrill, Oswald von Lengerke, Committee. The first shoot of the series will take place on Washington's birthday, Feb. 22, at 10 o'clock.

MINNEAPOLIS GUN CLUB.—Minneapolis, Minn., Feb. 13.—The annual meeting of the Minneapolis Gun Club was held at the West Hotel, Feb. 6. The following officers were elected for the ensuing year: President, M. Whitcomb; Vice-President, E. Ensign; Secretary, F. C. Lawrence; Treasurer, H. Krueger; Captain, A. D. Rocky; Directors, J. C. Joyslin, T. Dunn, Jr., H. Houghtelling, James Pye, S. E. Kennedy. It was decided to hold the annual tournament on May 22, 23 and 24, open to sportsmen of Minnesota, Dakota, Wisconsin, Iowa and Manitoba, professionals debarred.

STATEN ISLAND, Feb. 16.—Over 500 members of the sporting fraternity were assembled at Sea View Park, New Dorp, Staten Island, this afternoon, to witness the shooting of the New York German Gun Club. The conditions of the shoot were, 25yds. rise, 80yds. bound, 10 birds each. The prize was a gold medal with diamond settings. The match resulted as follows: E. G. Retter 7, H. Muller 6, A. Schmidt 6, F. Souter 5, J. Schleicht 5, J. Boerseniecker 5, S. Schidlow 5, S. Pfaender 5, A. Bonden 5.

NEWARK, N. J.—The South Side Gun Club intends to inaugurate a series of shoots, open to all comers, at artificial targets, which will be provided at 3 cents each, with prizes divided into 40, 30, 20 and 10 per cent. stakes. The programme will be announced in advance of each shoot, and it will take place rain or shine. The grounds are on the uplands at the edge of the meadows, near the Lehigh Valley coal depot.

GLOUCESTER CITY.—An Independent Gun Club was organized on Feb. 11 with the following officers: President, Wm. P. C. Davis; Vice-President, Isaac Budd; Treasurer, Edward Hutchinson; Secretary, Lionell Beryman.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Anyone. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON..... } Albany, N. Y
Secretary-Treasurer: F. L. MIX, } Albany, N. Y

Vice-Com. Rear-Com. Purser.

Central Div..R. W. Bailey.....W. R. Huntington.....J. K. Bakewell.
Atlantic Div. Henry Stanton...A. S. Pennington..E.W. Brown, 146 B'way, N.Y.
Eastern Div..L. Q. Jones.....Geo. M. Barney....W. B. Davidson, Hartford.
N'thern Div..A. D. T. McGachen..W. G. McKendrick. S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warden, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

PRIZES FOR PADDLING RACES.

Editor Forest and Stream:

I had intended, like "Cruiser," to withdraw from the controversy as far as becoming a champion of Pecowsic is concerned, for that little boat seems perfectly capable of championing herself, but Mr. MacKendrick's appeal for light is so piteous, and his ignorance on the subject of the standing rig seems so dense that I cannot refrain from one more.

In reading his contribution to the FOREST AND STREAM of Feb. 9 it strikes me that in his description of personal experience on Humber Bay, he has made the best argument in favor of the Pecowsic's rig that I have ever seen. He says, I think, that he started out of the Gap to go along the lake shore with wind dead ahead and very light. Masts stepped but sails lowered on deck. Suddenly a squall blew up, and though he was but 400yds. (one-fifth the length of Brooklyn Bridge) from shore, he had to climb out on the weather gunwale in order to prevent the force of the wind against his bare poles blowing him over. Now just think what would have happened had he been fitted with a standing rig of two sails, say with 35 and 30sq. ft.—Pecowsic's racing rig. When he started out under paddle only he would have folded masts and sails two little 8ft. in length and as large as his arm, and stowed them neatly below deck, one on each side of the cockpit in gaskets made to receive and hold them there. He could then have paddled more easily and surely much more safely than he did with masts towering above him, and deck hampered with the lowered sail. Then when the blow came on there would have been no tall masts for wind to blow against, no low-hung sail to get ballooned, no climbing out on the weather gunwale, no "acrobatic performances" which I must say strongly resemble, if not go ahead of any seen in the trophy race. Nothing to do but sit low in his canoe, and having headed her up into the wind, keep her there with a few strokes of his paddle, and if his boat is not too pot-bellied he need not have worried a bit, for a boat with good deadrise and clean lines like Pecowsic will never swamp in any such water.

In regard to the number of sails to which Pecowsic is entitled I should say that as her full complement is three, she might be allowed to carry two extra ones in a box to the meet. That makes less than two complete sets, and most of the canoes are provided with that number. However, that discussion may end, for having interviewed Mr. E. H. Barney, he says: "I shall go to the Lake George meet next season with a full size 16×30 Ruggles canoe, with two mast tubes and two sails, the order for the boat having been given Ruggles last August at Bow-Arrow Point, and consequently could not have been influenced by the missionary work done by Mr. MacKendrick and others." He intends hereafter to adopt the "one man, one canoe, one rig" motto, but is generous enough not to wish to compel everybody else to do the same (a trait of character which might with advantage be imitated by some others). He expressed himself also as hoping that the A. C. A. would allow him to increase the size of his famous box-on-the-wharf (which seems the source of trouble to some correspondents) so that it can hold the canoe, tent, bedding, two sails and a few bottles of ginger ale, as he might not be fortunate enough to have Dr. Wakeman to prescribe in case of pain in the stomach after midnight hours.

Since sending my last article to you, in which I proposed that a subscription for a paddling cup, as well as one for "cruising races," be started, it has occurred to me that as Class I. paddling directly encourages racing machines for paddling, and would in all probability bring to the next meet boats for that one race, which would be very narrow and light and totally unfit for any other use, that it would be a good plan to offer the cup for Classes III. and IV. sailing canoes decked with wood. This would admit all sailing canoes and honest paddlers, while it would discourage mug-hunters and racing shells decked with muslin or silk. If speed is the one thing to be gained by Class I., then let the course be made a mile straightaway, and they will show speed enough. No buoy to turn and no fouls to settle afterward. Let us hear what the cruisers and paddlers think of it. PADDLE.

Editor Forest and Stream:

There has been much talk lately of changes and improvements in the regatta programme of the A. C. A., both in and out of print, and some have suggested that the trophy race be changed from the prize for a pure sailing contest to one for a combined race, as thereby the all-round boat would be encouraged.

It seems to me that there are two weighty objections to such a change. In my opinion it would not be within the power of the regatta committee to do this without exceeding their authority. I did considerable hard work in connection with establishing this race and collecting the cost of the cup, and did this willingly, believing that the contest would forever represent the sailing supremacy of the holder in the canoe world. Others, nearly all, contributed with the same idea, and would I am sure not be willing to see the Association sailing trophy offered instead for a combined race, which contest, however desirable for encouraging a wholesome type of boat, can never represent the best attainable speed under sail of a canoe.

The other objection grows out of the first and is this, viz., that the policy of diverting an established trophy given for a sailing race to any other form of contest would fail of its object. The human being who has been once seized with the racing instinct is never contented to go any less fast than he believes possible in his chosen craft. The change proposed would not cure the evil. What should I care whether my Springfield friend could beat me over a short three-cornered course in a combined race so long as it was conculsively demonstrated that my new boat could walk out to windward and away from him in a thrash over open water.

Mine would be the faster boat and I would be happy so long as I could keep in that proud position, and I should be content, perfectly so, that some other man who did not hate paddling as I do, should slave and toil for the combined prize. In this respect I agree with your correspondent "Paddle," who has hit the true remedy, *i. e.*, to let those who wish more prominence given to any feature and want to see good racing, contribute as they see fit to suitable cups for such events.

I second his subscription of $5, opened with you, for suitable challenge cups for the combined and paddling races and heartily echo his closing words as follows: "Let the trophy cup stand as it does at present, an emblem of the highest degree of speed that time, money, and brains can develop in a canoe under the existing rules of measurement."

I trust his manly words and prompt action may result in something definite, much to be desired after the sea of talk poured forth this winter. WM. WHITLOCK.

AN AMATEUR'S EXPERIENCE.

Editor Forest and Stream:

Under above heading, in your issue of Feb. 2, "Gracie L." says he fully agrees with "Deja" "that boat building is beyond the skill of the amateur carpenter." He says he started to build one on the lines of the Jersey Blue, and found when launched that she was dangerously cranky and nowhere near the shape intended. It seems he did not use any amount of care, started by cutting the rabbet wrong, and after two or three strakes were on he found the keel curved down about 2in., but went on without correcting it, and then sets himself up to say it is too much for an amateur carpenter to attempt. Would he be more successful at anything else, using the same want of care?

I know many find themselves in the same fix I was in a few years ago. I had seen two or three canvas canoes on the river, but never close enough to examine; but I wanted one, and so did a friend, but did not have money to buy one. We talked it over and determined to build. We knew of no one who could give us any information, but finally found a column and a half article, with lines, etc., in the *Scientific American Supplement*, describing the Jersey Blue canoe and how to build it. As we wanted it for tandem use, we enlarged it to 16ft. We had no special difficulty in building, and when done she was remarkably stiff, kept her shape, was fast, and to this day is a good, serviceable canoe that can hold her own beside professional built craft. Her only fault was she was too heavy for my use, and so I sold her and last year built a Vesper (which came in eighth out of thirteen in the N. Y. C. C. cup race last fall, being 10 or 11 minutes behind Pecowsic on a 10-mile course), which weighs, leaving out centerboards, just 40lbs. less than a Rushton smooth skin of same model, which is one of the cracks of the river. There are nearly or quite 100 canoes on the Passaic River, and fully four-fifths of them were built by amateurs, many of whom do not even claim the title of amateur carpenter.

They also make their own sails and do all the rigging, and there was not a flatter or better sitting set of sails on the river last summer than a set made entirely by a young man who built his own canoe.

Canvas was the favorite material, but since "Canoe and Boat Building" was published many are using cedar.

I state these facts simply to show that almost any one who will take pains, particularly if he has the above book, can build a canoe that will answer well as a substitute when a high-priced canoe cannot be purchased, and who might be kept from building and so lose such splendid sport by reading what such poor judges as "Deja" and "Gracie L." think on the subject. The Rat is a good sample of a fast and thoroughly well-built and rigged canoe, the work of a young amateur.

I have had very little experience, but want more, in rapid running, and that in a flat canoe, and I would ask "Gracie L." 1. Why a canoe with considerable deadrise is better for such work? 2. Why it does not stick on the rock as much as a flat canoe? 3. When it does stick, if it does not capsize more easily? 4. Why it draws very little, if any more water than the flat canoe?

BELLEVILLE, N. J. ILDEMERE.

THE PRESENT TENDENCIES OF CANOEING.

Editor Forest and Stream:

Will you please explain why a 5ft. cockpit is more desirable than a 3ft. one?

The sleeper in a 5ft. cockpit would have to have either his feet or head under deck if over 5ft. in height. His feet would not be any larger if they had to be pushed under deck 2ft. more. If the canoeist takes a companion 3ft. is large enough, as the canoeist sits on the deck behind him, which would take the place of the 15in. after hatch now used to sit on, so that the cockpit now called 5ft. long is in reality but 3ft. 9in. long. So the real 3ft. cockpit is only 9in. shorter than the real length of a 5ft. cockpit, and is plenty large enough for two persons, especially as the canoeist himself sits on deck, leaving 3ft. for his guest. What objection is there to the board projecting above the coaming 4 or 5in? Canoeists who sleep in their canoes generally do so on shore, and those who have canoes with any dead rise, even as slight as the Notus, cannot do so, as they would strain them. But most of them have small shore tents, so what harm does the board do near the center? In the first place that is the most effective place, as it takes away the strong weather helm which most canoes carry. Next it is the handiest place as the board is within reach without leaving seat. If a man wants to sleep in his canoe let him have two boards and a flat floor.

But as for changing the dimension and model rules, without at least one year's notice of doing so, is very unfair, as it violates the faith which members of the A. C. A. have placed in the rules, regarding them as fixed and building accordingly. The FOREST AND STREAM evidently thinks that it would be perfectly fair to throw out those canoes not suited to the modern idea of slow cruising. If any rules are to be changed regarding dimensions of cockpit, board, etc., why not have one seasons's warning, so that those spending time and money need not be the losers by it.

G. C. F.

[However well adapted for racing, a cockpit but 3ft. long is too small for cruising, and by no means permits of the best arrangement of space in a canoe. For sleeping a man must have nearly half his body under deck, while it is difficult to stow luggage so far under. With a 5ft. cockpit only 6 to 9in. of the legs and feet are below deck and there is space to move about, the body is cooler, the bed and rugs can be conveniently arranged, while a large amount of stuff can be easily stowed or unpacked. A 3ft. cockpit will not allow two to sit in the canoe, the best and safest method, especially where a lady passenger is carried. It may do for one to sit on deck for a short paddle, but for a long tandem pull or a day's outing, both must be able to sit below. As always used, the sliding bulkhead and hatch are removed for sleeping or for tandem use, leaving the cockpit of full length, and our correspondent's arithmetic is a little difficult to follow. There is not the least difficulty in sleeping on shore in such a canoe as Notus, or even one with much more deadrise if properly built. Thus far there are few canoes with very small cockpits, and these could be lengthened at small expense. It is specially suggested that if any rule be passed as to boards in the well, the existing boats be exempted from its action, so that our correspondent's objections hardly fit the case. We have never advocated any sudden changes which could not be easily complied with by all, and would thus throw out any boat. No doubt for racing only a big board in the center is very handy and fast, but half a dozen boats fitted in this way and with small openings in deck, will drive every honest cruising craft out of the races, no matter how good in model, build and rig she may be.]

A CHRISTMAS CRUISE.

CHRISTMAS is the occasion of family reunions and domestic bliss; consequently, a bachelor in a foreign land, though he may have many and kind friends ready and willing to take him in, feels rather out of it and fearful of being an intruder in circles bound by ties of relationship. Where, then, should he naturally turn but to the little canoe, his faithful friend and companion in many a cruise? Yes, glorious idea! We will spend one Christmas on the water, shake off all restraints, and see if our festival cannot be made quite as enjoyable, though unsurrounded by the usual emblems of Santa Claus and the season.

The party consisted of the Skipper and his friend Will in the canoe Flirt, and the program was to start on Saturday afternoon, camp on Goat Island that night, and the next day make Sausalito, where, not to be entirely out in the cold, they would eat a Christmas dinner with friends, and return home on Monday. The Flirt's full cruising outfit is all in the Oakland House, so very few preparations were necessary. Lots to eat and drink was the guiding principle, and strictly adhered to. Two P. M. saw the Skipper with the canoe alongside the float, trundling in stuff at a great rate: tent, blankets, buffalo robe, sleeping bag, each in their rubber covers. Lanterns, cooking utensils, etc., rapidly disappear, and by the time Will'um turns up she is pretty well crowded. He, however, has brought a dozen last happy thoughts which must be stowed away somewhere, all of which is finally neatly accomplished. At this moment a wild war whoop is heard, and two more canoeists turn up and announce that they are going over to San Francisco, returning by moonlight, and will accompany us part of the way. Great scheme! They can dispatch some forgotten Christmas gifts and greetings for us over here which we had been in despair at forgetting.

The Pirate is soon afloat, and shutting up the boat house, away we go. To get to the bay it is necessary to pass under the swing railroad bridges, so that sail has to be made after paddling under them, which is a great nuisance, and it is to be hoped the railroad will some day see what an annoyance they are to the canoe club and raise or remove them, or perhaps one of us will get into Congress and make it hot for the bloated monopolies. However, here they are, and the tide running in stiff against us. The Pirate with her light load forges ahead and has sail made by the time we pass the second bridge; that's all right, boys, you have not the glorious trip before you we have, so make the most of your fun. There is a nice beam wind from the north to take us out of the estuary in good style, and we are soon in the bay; the strong flood tide is now abeam, and when about a mile out a good deal of leeway is apparent; so with a parting toot of the horn to the Pirate, who is heading well up for the city, we 'bout ship and stand up for the Broad Gauge Mole. The breeze now gives signs of failing, and she appears to be only just holding her own with the tide. Yes, I think we might hit her a lick or two with the paddles, Will'um, so as to try and make camp by daylight. Presently a ferry steamer comes booming along, and a passenger, evidently a friend, is seen frantically waving and dancing about on the upper deck. In with those paddles, smart. Somehow we find it rather undignified paddling, and stow them whenever we wish to be admired. Then letting her off a little till she fills away we assume picturesque poses and give him a condescending toot of the horn as she rushes by. Now the wind drops entirely and we tackle the work in earnest, making the cove on the east shore of Goat Island about 5:30 and just as it begins to get dark. The Skipper slides into his rubber boots and packs things up beyond high-water mark as they are handed out by the Mate, and when quite empty a yank on the painter enables the passenger, doctor, engineer, first, second and third mates to step ashore dry shod. The sails are then lowered, furled and tied up in their covers. This is a golden scheme, as they can then be chucked down anywhere without fear of dirt, besides keeping them dry from dew. Now for it, up she comes; she must weigh a ton surely, but by short relays she is lifted into the little bed up on the beach which has been shoveled out for her with the paddles. The Skipper now proceeds to make the beds and put the canoe tent up, while the Mate stops to interview the old custodian of the island, surnamed the Goat, on the water question. He is fortunately found in very good humor, and wishes to know why in blankety blank we want to come out here Christmas Day, but, nevertheless, lends a bucket and his presence, the former useful and the latter instructive.

The canoe all ready for night, dinner is the next question. It is quite dark by this time, but a blazing fire and lanterns give a cheerful look to the scene, the first officer makes a splendid table and seat out of driftwood, he also makes a little soft toddy in a mug, just to show there's no ill feeling, he said, before dinner. Bill of fare: Fried widgeons à la Goat Island, chops flirteuse, boiled eggs à la Will'um, that is one of them a lime by mistake; for dessert, cookies presented by the Goat, which, as he observed, had none of that gol-darned patent yeast in them, but lots of plums, they were good; bread and marmalade to finish up. Dinner over we piled up the fire and laying down on the rubber blanket gave way to that glorious lassitude succeeding heavy exercise and a square meal. Let me see, yes, there was a little punch, I think, made later in the coffee-pot, but then it's Christmas eve you know, and there are all the old folks and friends abroad and here, too, to toast. Well, it was jolly and warm by the fire, and finally all hands were so sleepy it was resolved to turn in; the Goat shouts down from the bluff that we'd better have the canoe high up ashore as it was going to blow from the S.E., which does not receive as great credence as it should from such a prophet—the moon is shining in a clear starry sky and it certainly looks like a cold snap and light northerly winds. It would never do to forget Santa Claus, so a rubber boot is hung outside fore and aft, one for each of us, remarks the Mate. Alas for the traditions of our childhood, the old gentleman must have overlooked that little boot on the sand, for a plentiful pool of dew in the foot of each was all that the morrow brought forth. Good-night Skipper; good-night old man, and the interior of the Flirt is as quiet as a nursery after the gas is out. The Skipper wakes once during the night and hears an ominous surf breaking, but it is too snug for a little thing like that to bother him, and pulling a coat which had been buttoned round the Mate's tootsy-wootsies into the sleeping bag he is soon asleep again.

"Wouff, woh, Merry Christmas, my boy," and Will'um's foot taps the Skipper in the face. "Great guns! Christmas morning! Well, it's too cold to get out yet," and the brisk S.E. breeze makes the tent cavort about, and the jolly waves break on the beach with the provoking insistant thud. At 7:15 the Mate makes a desperate effort and pokes his head out for a reconnoiter; leaden sky, cold fresh breeze; darned frigid is the verdict, tumble out. Once out, the fire is soon going again, and in five minutes both are peeled off and into the water. Whew! how it nips, but it's glorious drying to leeward of the blaze, and very soon breakfast is under way. Will'um shakes his head as he empties the squozen limes out of the coffeepot and remarks that the stores won't last long at that rate, but the hot coffee substituted is fit for the Gods and canoeists. The victuals vanish like smoke; and presently a gleam of sunshine breaks out on the camp. The festive campers sit opposite each other munching away and applauding themselves and everything else. Surely it is pleasant to be alive and out on a canoe trip.

Toting the canoe to the shelving sandbank bow on she is soon loaded, the sails put on and driver hoisted, and now comes the ticklish operation of launching in the surf. The Skipper dons the rubber boots and takes the bow, while Will'um and the friendly Goat hoist the stern. Now, boys, altogether; there she goes; jump. Will; well done, all safe on board with scarcely a teacupful of water, and the little canoe bobbing and bowing to the waves as pleased as Punch.

With a farewell wave to the Goat the mainsail is hoisted and sheets hauled taut. She can just weather the point of the bay, leaving a bare 12ft. of foaming water between the lee rail and the rocks. Once around, we square off wing and wing into the broad bay before us and a spanking breeze dead aft. How glorious it is; we are going as fast as the wind, so feel no cold. The sun is shining right into the cockpit and there is just enough roll on to make us feel the exhilaration of rapid motion. The next thing to be done is to make things shipshape. First of all, the crew; off come the rubber boots, neat canvas shoes substituted. Let me see, won't a red sash look rather more high-toned than this old belt; and—yes—straw hats to replace the old Tam o' Shanters. Well, well, this must be Christmas Day and holiday attire. Now for the boat; all the ropes' ends want stowing out of sight after an extra pull at the halliards, cushions shaken out, and finally all the sand washed off the deck, the Mate even reaching the extreme bow with repeated tossing handfuls of water; he spoke of tackling the stern in the same way, but the Skipper on deck, mindful of that red sash and immaculate knickerbockers, thought he could attend to that himself. No old salt could cavil at our shipshape appear-

ance. So pipes are lighted and we settle ourselves down to solid enjoyment of the day and scene. With a strong ebb tide in our favor and a good breeze we are just making things hum.

The wind, being with the tide, only raises long, undulating waves, which do not impede progress. Alcatraz looms up away off in a fog on the port bow, and Angel Island more in the sunshine beyond. We intend going through Raccoon Straits, between Angel Island and the Marin county shore, for by so doing we shall carry the tide right through there and then have a straight cut across Richardson's Bay to Saucelito, besides which, we want to give the boys at the Corinthian Y. C. house a rally as we go by. Angel Island gets bigger and bigger, but seems to be about as far off, especially when we get abreast of it, some two miles off shore, but we notice the little headlands trundling by in good shape, and presently we enter the straits. We have come seven miles in precisely one hour and ten minutes, which is quick traveling. Scarcely had we got fairly inside than we are almost becalmed, being under the lee of the island, which rises into quite a mountain and effectually shuts off our fine southeast breeze. However, that's the odds, the tide is in our favor and the sun delightful. So drifting and now and then catching a puff, we make good enough progress. When off the yacht club house the Mate exercises on the horn, at which performance he is unequaled, but we cannot make out any signs of life. We afterward heard that the boys saw the canoe and immediately got out the barge, but that it took a long time to get her afloat, and that just as they got fairly under way we struck the breeze off Hershaws and disappeared round the point like a scared eel.

Saucelito looks lovely as we come tearing across the bay. One could scarcely believe it December, the sun is so warm and the green hills look so summer-like. The ships anchored off shore are gaily decorated; one, the Kenilworth, is so pretty we sail round her and cheer them. At the end of each yard is a Christmas tree, and also on the trucks and bowsprit. The gangway is fairly covered with evergreens, with a fine arch at the top. The Flirt boasts similar, if more modest display, having little bunches at the mastheads and peaks. The ferry boat is just then seen approaching, and round we go to give them a salute. Running right for her broadside, we go close alongside, and jibing, follow in her wake, mounting the rollers she churns up into her paddles and acknowledging the cheers of the passengers by an appropriate ecstacy on the horn by Will'um.

By this time nature asserts herself, and emphatically says lunch, and be it known the Skipper's partner in business has a bachelor household in one of those houses up on the hill, he has been warned we should be on hand for dinner, why not also for the lesser meal. Yea, verily, let us hence. Quickly running along the shore past the ferry landing we reach Captain Johnson's boat house, and tying up fore and aft where she can do herself no harm, we are soon en route with hunger in one eye and determination betrayed in every lineament.

It were needless to describe our doings on shore. Christmas gatherings are always jolly everywhere, and this one very much so. During the afternoon the Flirt was again in requisition, sailing the ladies up and down and around the ships. The wind had gone right round to the nor'west; blew stiff off shore with every indication of more to come. In the evening the canoe was hauled out on to the float, everything being left in her ready for the start next morning. The deck cover buttoned right aft and the rubber blanket tied down over the remaining opening in case of wet, and putting sails under cover, with a last injunction to the friendly boatman, we left her feeling assured she was all safe.

Come to think of it that was a very gay evening. The wind fairly howled outside, but with warmth and good fellowship within, it would be a sorry canoeist indeed who could not dismiss dull care and vote life a holiday. The Skipper, however, was one of the first to retire, thinking it well to put in a fair night's sleep, while the first mate drifted into their room sometime in the early morning, and after exercising on that unconscious mariner's dexter toe till he awoke, informed him that canoeing was the only pastime fit for a gentleman, and Saucelito the only place to sail to on the civilized globe, to which he of the bruised member gravely assented, and turning over resumed his slumbers.

At 7:30 the window was flung open and one of our hosts appeared, looking fresh as a daisy and wanting to know who it was that had voted an early breakfast. Both were shortly on deck, and after a frigid plunge did ample justice to a square meal. It had rained during the night, and threatened lots more; great clouds obscured Tamalpais and a stiff nor'wester made the gum trees bend and squeak in the garden. None of the other boys were up, so after viewing the sleeping beauties we made tracks for the boat house, thinking if we were going to catch it we might as well start in at once. There she was all serene, with a big pool of water in the rubber blanket and the deck cover as tight as a drum. Whew! how the gusts came tearing along; it was hard to keep one's foothold on the greasy planks, but there was very little work to be done. Sliding her into the water all the heavier articles were packed well aft snug and tight, driver dropped into the lazy jacks, mainsail hoisted and double reefed, and everything being tied down she was ready for sea. The Skipper had just designed and had made his new cruising mainsail; it is a Mohican settee, about 60ft., with long spars, the reefing battens being wide apart to make a large reef; the gaff goes up at a very small angle to the upper batten, making a very small sail when double reefed, by this means the driving power is all low down, considerable sail being spread on account of the long spars; the sail also goes forward of the mast, making a more even balance when running.

Well; all set; let her go; and away we rush. At first we strike a lull, and in smooth water in the bay go very steadily. This doesn't look so bad, so up goes a reefed driver and then she begins to move. We look up the hill and see signals from several houses, to which we wave a cheery good-bye; but look out; here it comes, and all alert we fly through the water. The squalls come thick and fast, and off Raccoon Straits a nasty chop sea makes her pitch and jump about in a lively manner. Now she rushes forward, cocking her rudder out and nearly getting away; down comes that driver, the Skipper has only to reach back and slip the cord out of the snatch block and the deed is done. We are passing the lighthouse on the west point of Angel Island, the other side from the way we came, and the Golden Gate opens before us and the broad bay. The sea is now not to be despised, and the little Flirt begins shoving her bow under a bit when the squalls strike her, and we congratulate ourselves on being so well trimmed by the stern; every now and then the wind will let up, only to come up more viciously than ever.

Looking back, a storm is seen coming down Tamalpais, and the whitecaps in the bay denote its approach. We are running with the wind dead aft and pointing for Goat Island, just eight miles off by the chart, open water, with a strong ebb tide running against us, and consequently also against the wind, making a heavy sea. All goes well until we have Alcatraz abeam and are about half way across to Goat Island, our refuge, when the storm breaks on us; the squalls, accompanied by rain, are terrific, and last for several minutes at a time, and the waves get higher every moment, till the canoe is plunging nearly end for end. "Whew! that was tight," gasps the Skipper, as the last puff is survived with about four close calls on jibing. "Royal sport," murmurs the Mate, "and worse to come," and sure enough it begins to look serious. The great curling whitecaps break with a roar all around, and occasionally the canoe will drop like a stone some two or three feet, only to be flung off again in some other direction. At one moment we will be looking up hill at a mountainous wave, and the next, after poising on the top, rush down with a speed that makes the head swim, running our bow into the next roller as far aft as the cockpit. They are no longer waves, but great billows. The canoe seems mad the way she races along, flung hither and thither, the water coming along her deck in a continuous stream. Once while right on the summit of a big fellow, the boat settled down in its thin, curling top and the water rushed into the cockpit on both sides. William bravely tried to keep it out with his arms, but a second more and we are through and beyond it. "Royal sport, but hot," suggests the Skipper in a lull. "You bet, and more to come, but we'll pull through," answers the redoutable Will'um.

We now about off the Blossom Rock Buoy, and in about the worst place we shall have, the squalls coming up stronger than ever. It begins to look pretty bad, our only chance is Goat Island, that is certain; the city (San Francisco) is about the same distance, but more difficult; the island is about three miles off and once under its lee we shall be safe. The rudder is continually out of water in the plunges, but the speed is such that it is in again before she can begin to get round at all. "Gad, I believe we have to risk it and try to heave her to; she can't stand much more of this," but a glance shows it would be folly to attempt it; once in the trough of that sea and it would be all up with Joseph. No, straight on is the only course, and one consolation is that every rush is so much nearer.

Here comes a schooner, booming along under reefed mainsail and jib, and knocking the water over her bow in fine style. Give her a rally boys just to show we don't mind, and from the salute she received it might be supposed we were having a summer sail on a garden lake, and caused infinite astonishment to the crew, who gather at the rail and give the little boat a cheer as she flies by. "Think I'd better not talk to you now," says the Mate as the Skipper squirms like lightning from one side to the other, twenty times in a minute. "No, better not," and on we rush, getting a breathing spell every now and then and each time being sure we can't catch any more as bad as that, only to be undeceived. Well, everything has an end, and finally the canoe goes tearing round the outermost rocks and into comparatively smooth water off the south shore of the island; the crew silently shake hands as the Skipper jibes her over and finds the arm with which he held the sheet is almost pulled out of joint. "Royal sport," again murmurs the Mate.

What a peculiarly friendly look has old Goat Island. We never saw him look so well. There he rears himself between us and danger as if conscious that the canoe boys love him dearer than any other soul in California, except, perhaps, the railroad, which would like to grab him, grind him down and cover him with unsightly wharves and warehouses. Running close along shore, we give her the whole driver and salute the lighthouse and passing ferry steamer. Presently we are out beyond again, but still pretty well sheltered. When half way over we again strike some heavy squalls, but do not mind them much here and keep her at it, finally entering the mouth of the estuary in just twelve minutes less than the two hours from Saucelito. This knocks the record, and was made in a heavy sea against tide, under a double-reefed mainsail. The three miles down the estuary are knocked out in fine style to musical accompaniments, and presently we are shaking ourselves in the O. C. C. boat house float.

Christmas is over, and how happily spent. We would not exchange our outing for any to be named; and if the Skipper is so stiff after his acrobatics in that two hours' run that he can't walk up-stairs, and if Will'um does have a bald spot on the back of his head, where the sheet took it, what of it? Nay, the happier we. And the little Flirt in her corner is by no means the least satisfied of the three, for has she not nobly filled her part and added her quota of proof to the ever growing verdict, that for the promotion of health, good fellowship, manliness, joy and true sport there is nothing to equal our "dear little light canoes?"

THE ATLANTIC DIVISION MEET.—*Editor Forest and Stream:* I would suggest that the meet be held on the Delaware at the Rancocas Creek, where about two acres can be procured free, it is well shaded, sandy beach, spring water, and a station on the Amboy Division of the West Jersey R. R., within 500yds. of the ground, and the steamboats plying between Trenton and Philadelphia stop at Delanco, about ½ mile below. It is in a cove where a triangular course of 3 miles could be sailed with ease. There are about 50 canoeists who would come to such a meet from Philadelphia alone if it were held in the third week of July.—H. Ridnih (Philadelphia, Pa.).

YONKERS C. C.—*Editor Forest and Stream:* On Feb. 7 the Yonkers C. C. elected the following officers: Com., Gabriel Reevs; Vice-Com., Talboat Simpson; Sec.-Treas., Paul Rossier, 229 Woodworth avenue; Purser, J. W. Simpson. A committee was appointed to secure a club house at Glenwood (Yonkers) for coming season. The club now numbers twenty-five members and eighteen canoes. The club totem is a red dolphin on mainsail. Two or three regattas will be held this season, the rest of the time will be devoted to club cruises.—Paul B. Rossier, Sec.-Treas.

MOOSEHEAD LAKE AND NORTHERN MAINE.—A correspondent asks for information as to a canoe trip from Fredericton, N. B., to Moosehead Lake, Maine, whether such a trip is practicable, and whether any reliable maps of the locality are to be procured.

LEANDER CLUB, OF HAMILTON.—The Leander Rowing Club has united with the Hamilton C. C. and will hereafter be known by the above name. The membership is nearly 200.

ENGLISH MISINFORMATION.

Editor Forest and Stream:

Please note in your columns, for the special benefit of Englishmen in general and the enlightenment of the London *Field* in particular, that Mr. Burgess, over his own signature, writes in the new book, "American and English Yachts," as follows: "As for the comparative merits of centerboard and keel, the question is, I think, more one of convenience and safety than of speed. For the smaller classes, where sufficient draft of water can be given, the keel boat has some advantages, but in large boats, where the draft must be limited, the centerboard is a most desirable addition."

This opinion from Mr. Burgess coincides exactly with the utterances in your columns, and will be accepted by all competent judges on this side of the Atlantic. But the London *Field*, in connection with Mr. Beavor-Webb and poorly-informed English contributors to the *Field*, has seen fit to attribute the defeat of their cutters in the international races solely to the centerboard of the American vessels, a conclusion not at all justified by the general records of yacht racing in America, and diametrically opposed to the opinion expressed by Mr. Burgess and the Forest and Stream through many long years. Mr. Burgess says the keel is just as good as the board for speed, and the use of the board rests solely upon convenience. Now, will the London *Field* please disabuse the English public of the false notions it has recently put into circulation? Thistle was so notoriously deficient in lateral resistance that her fault in this respect did not escape even tyros in the business. Genesta and Galatea suffered on the same score, and not because they were keel boats. These three cutters are the only prominent ones seen in American waters which failed to point and fetch with American centerboard yachts. Other cutters, designed by John Harvey and Mr. Burgess and American amateurs, are distinguished for their close-winded and high-fetching characteristics—facts sufficiently well known on this side of the Atlantic, but studiously overlooked by the *Field's* American correspondents, and kept from the British public through the characteristic negligence of the British press to inform itself concerning developments outside of the tight little island. If our English cousins allow themselves to be misled in face of testimony from such a source as Mr. Burgess's pen, and start a fresh era of bungling with the centerboard, in the absurd belief that the board is in itself a faster contrivance than the keel, they are destined to meet with worse failures than ever, and "Served 'em right" will be the verdict of an American.

PACIFIC Y. C.—Officers, 1888: Com., Philip Caduc; Pres., Stewart Menzles; Vice-Pres.: C. O'Connor; Treas., O. F. Willey; Sec., N. D. Messer.

THE NAVIGATION OF LAKE GEORGE.

THE constantly increasing travel over Lake George, as well as the interests of a large number who use pleasure craft of various kinds, has called attention to the need for a thorough survey of the lake and the setting out of buoys wherever required. The matter has been taken up by Com. J. Buchanan Henry, of the Lake George Y. C., who wrote as follows last season:

Hon. Charles S. Fairchild, Secretary of the Treasury:

Dear Sir—By resolution of the Lake George Y. C. I have been directed to communicate with you as ex-officio head of the Lighthouse Board and U. S. Coast Survey, to ask your kind consideration of the question whether under the laws of the United States your department could attend to the buoying of Lake George and the making of a hydrographic survey of its waters. We have now a very large traffic on this lake, over forty steam craft of all sizes ply upon its waters, and over 10,000 passengers are now annually transported over its dangerous channels, with no guides for navigation except the small and imperfect buoys, 20 in all, put down during the summer months by this club at its own expense. There are no lights, no other buoys, and no charts, and Lake George, as you may personally know, is a mass of ledges and isolated rocks surrounded by deep water. Neither the United States nor the State Government has ever done anything to improve or render safe its navigation, nor has, I believe, any application heretofore been made. Champlain and other near lakes have been thus improved by charts, buoys and lights. Of course I am aware that there may be a question of legal authority on the part of the Federal Government doing this for waters wholly within a State, however desirable or necessary such work may be. I trust, however, that you may be able to decide that it can be legally done, and that the wishes of the club can be granted. Com. Rhind, U. S. N., and formerly in the Lighthouse Board, while at the lake last summer, expressed the opinion that, by the aid of a small steam launch (to be hired, out of the fashionable season, for $10 per day) and a few good men, the soundings and survey for a chart could be made in a few weeks, and that third-class spar buoys only would be needed, and that they could be contracted for there at very low figures. If it is competent for the United States to thus improve the navigation of this fine lake this club could readily obtain a petition signed by all residents on its shores, and boat owners, who so greatly feel the need of it. May I therefore express the hope, on behalf of the club, that you will give their request your early consideration, so that, if your decision should be favorable, the work of buoying could be done at the opening of next season's navigation (May) and the soundings and other work for a hydrographic survey and chart be then begun. Yours very respectfully,

J. Buchanan Henry, Com. Lake George Y. C.

New York, Nov. 15, 1887.

The following answer has lately been received:

Treasury Department,
Office of the Secretary,
Washington, D. C., Jan. 20, 1888.

Mr. J. Buchanan Henry, Commodore Lake George Y. C.:

Sir—Referring to your letters of Nov. 15, 1887, and Jan. 15, 1888, in regard to the necessity for placing buoys in Lake George, N. Y., etc., you are informed that the matter having been referred to the Lighthouse Board, a report dated the 18th inst. has been received in reply, in which it is stated that the subject has been considered by the Board, and the conclusion reached that inasmuch as the powers of the Board in regard to buoyage were confined to the navigable waters of the United States, and as Lake George is an inland lake entirely within the jurisdiction of the State of New York, the waters of which are not navigable waters in the broad and legal sense of the term, the Board has no authority to establish buoys therein. In regard to the portion of your letter of Nov. 15 last relating to charts of the lake, etc., you are informed that the matter has been referred to the Superintendent of the U. S. Coast and Geodetic Survey, and upon the receipt of his reply you will be duly apprized of its contents.

Respectfully yours,
F. S. Fairchild, Secretary.

It thus appears that nothing can be done by the United States in the matter of buoyage, but the subject seems to be of sufficient importance to be undertaken by the State of New York.

AN INLAND YACHT CRUISE.

I HAVE always loved the water, so last summer decided to spend my vacation in as much sailing as could be crowded into three months. A vexatious delay caused by the stupidity of a boat builder, prevented my starting by the middle of June as intended, and indeed obliged me to give up the idea of having a boat, such as I desired, built in Baltimore at all; the builder vowing that though Baltimore once built the fastest and best sailing vessels afloat, she had now let boat building, like her sugar, coffee and other industries, go to New York, and that he could not find a white oak log 37ft. long to make a keel of in the whole city. As every one knows, you can get anything you want in New York—if you will pay for it—so there I went for it, and in twelve hours had, not just what I would have built, but a thoroughly staunch centerboard sloop yacht. Right here I may say she proved satisfactory in every respect, roomy, strong, fast and the best sea boat I ever saw. She measured 41ft. over all, 12ft. beam, and drew about 4ft. 6in.; was built in Kennebunkport, Maine, of oak inside and out and was only one year old, so as good as new.

The "cabin party" consisted of Mrs. L. and I, better known as "Doctor," from having an appendage to my name, with Master Yart, an all sufficient Skye terrier; while two men formed our crew. I secured the services of Capt. F. and a man he recommended and called George. Capt. F. proved a decided failure, he had the boat in charge eleven days, with orders to put her in A 1 order; during this time he put a coat of copper paint on her bottom, painted her sides (black and very badly done), and "limed" her sails, about three days' work in all, his charges were for eleven days' work, three dollars per day, thirty-three dollars; two men's assistance, two days, two dollars each per day; paint ten dollars; groceries eight dollars. He sailed us up the Hudson to Albany, that is, he steered a small part of the time, and George did three-fourths the work.

Starting from N. Y., July 3, at 3 A. M., we sailed to Poughkeepsie by sundown, and as we desired to see all the river we anchored for the night, started again at 4 A. M. and with a fair wind were soon booming up the river, enjoying the beautiful view. By 2 P. M. we were at Hudson and here Capt. F., who had reported himself thoroughly acquainted with the river to Albany, announced he didn't know it any further, and we would have to get a pilot; any one could have brought the boat that far, for with ordinary attention you literally could not go wrong. Well, we did get the pilot (charge $3) and arrived in Albany at 6 P. M., making the run from Hudson, thirty-three miles in 2½ hours. Here we bade farewell to Capt. F. and George, and right glad we were to see the former go. George was a good worker and knew his place and business well.

The N. Y. C. R. R. has a tug at Albany that takes boats from the lower to the upper bridge without charge, and they towed us into the basin and up to Davis's dry dock. The bridges on the Erie Canal are too low to allow any boat with a spar in her to pass, so we had ours hoisted out and laid on deck, charge $5. This took about one hour, of course the sails had been removed and placed in the cabin previous to this.

July 6 we were towed up to the entrance of the canal at Troy, that being considered a better point to enter, as by so doing you escape the "lumber region;" tug charge from Albany to Troy, $3. I engaged a man in Albany who had been a canal boatman for eleven years, and "knew every snubbing post from Albany to Buffalo;" he proved invaluable, a sober, honest, hard working man, always willing to do his best, not a sailor, but a thorough canalman, and a fair all-round cook. I parted with him with genuine sorrow in September. His address is C. C. Diehl, 33 Moore street, Brooklyn, E. D., N. Y. Any one taking or sending a boat through the canal will find it to their advantage to secure him or some one as well acquainted with canal ways. I paid him $25 per month, and he earned it.

Immediately above Troy are sixteen locks very close together, with the most impudent and unaccommodating set of lock tenders on the canal; it is almost impossible to pass through here without "scaling," *i. e.*, tipping these men, a dime, or even a nickel at each lock will, however, pass you O. K. Perhaps as good a plan as any is to invest in a box of cheap cigars and use them as "tips." The one idea in the minds of these men seems to be that a yacht is stored with whisky, cigars, and small coin for their special benefit. It requires two men to work a boat through a lock, one to be on the lock and "snub" her, the other to tend deck lines and steer, a driver does nothing but look out for his own line. I paid $1.50 for a second man's help to head of "Sixteen Locks," and $3.50 for a horse that far.

The Erie Canal and its branches are free; all you have to do is to clear at the Clearance House at each end. The lower Clearance House is just above the "Sixteen Locks," and here we found most polite and kind officials, who gave us our papers and helped us in every way possible with their advice. At Cohoes, just above this point, the drivers, seeing we were green, formed a combination to extort an extra price for towing the boat to Oswego, charging variously $60, $70 and $75 for the trip. Fortunately for

us, a log drive from Black River came along, and the "old man" agreed, as soon as he got his rafts through the "Sixteen," to tow us to Swego for $40. So we engaged him. Then every other driver in the crowd was anxious for the job at the same figure.

The trip up the canal was a novel experience. Certain rules govern the passing of boats; for instance, an "up" boat always has the towpath side; another is, if you go faster than the boat ahead of you, he has to pull out and let you pass, thus reversing the trotting rule, where you must pass him. Most of the captains were very pleasant about this, but some of them, seeing we were small, crowded us rather close to the bank, and then there would be an exchange of canal compliments which, to say the least, were peculiar. The views in passing through the country by this method can be thoroughly enjoyed; and as the snow dashes against the window as I write this, I can shut my eyes and see again the lovely Mohawk Valley, so justly famed for its beautiful scenery. All along the canal are stores where bread, butter, eggs, fruit and poultry can always be purchased at reasonable prices.

The first night we tied up (of course on the heel path side) at Spraker's Lock; the second found us at Little Falls; the views here are remarkably fine. The third night was passed about three miles beyond Utica, and the next day we ran to Canastota. The fifth day we passed out of the Erie and into the Syracuse Canal, spending the night at Mud Lock, the only place we had any trouble in procuring provisions and horse feed.

Started at 6 A. M. the next day, about the usual time for the drivers, who then go until noon, when they "feed" for an hour, and then drive till 6 P. M. This day we drove till 8 P. M. and tied up under the railroad bridge at Oswego, a rather unfortunately chosen place it seemed, for a peddler was killed by a train almost directly over our heads. In the morning we passed through the last lock and tied up on the river front below.

Right here began some of the most pleasant incidents of our trip. We had hardly made fast when a committee, sent by the genial commodore of the Oswego Y. C., came to invite us to go to the club house, to use one of their buoys, and make ourselves thoroughly at home, just as soon as we could get our spar set. The spar was put in place by using a coal trestle as a fixed point for an ordinary double block tackle, the charge for tackle and use of trestle being $3, and a tug towed us around to the boat house for $2.

Here I made a great mistake, instead of having the boat scraped, painted and put in order by the job, I tried having it done by the day, the consequence being it cost some $65 or $70, where $25 or $30 should easily have covered the bill. We had also a vexatious delay and loss of time. The kindness of the O. Y. C. made our enforced delay almost a pleasure, and their thoughtfulness in many little things will be long remembered. One item that makes me shiver now, but was particularly appreciated in that hot weather, was the daily appearance of Harry, the club steward, with a supply of ice. Vice-Com. Phelps will always be remembered for his many kindnesses, not the least of which was his preparing for us our reception by the Rochester Y. C., and his introduction of us to its most influential members on our arrival at Charlotte, whither he had preceded us a few days in his yacht the Katie Grey, a boat that in his able hands is "a witch to sail" and "handy as a kitten." As to our reception and treatment by the R. Y. C., words fail, suffice it to say, when talking of the trip we say, "before we went to Charlotte" and "after we left Charlotte," and I feel like drinking "the success the club deserves and hopes for" every time I see a Rochester beer sign.

I can tell the lake dwellers nothing new about yachting on their beautiful lake; it would, indeed, be presumptuous for an "old salt" to try to say anything about fresh-water sailing. One thing, however, I will say, Lake Ontario can kick up a nasty cross sea and a puffy wind quicker than on any salt water I have ever sailed on, and I have tried it from Canada to South America.

After coasting Lake Ontario we started down the St. Lawrence. Any one with ordinary precaution can run the river as far as Ogdensburg, but here they will want a tow as far as the Barnwall Canal; for this we paid $10. The tug only tows on the river proper, and you must hire horses for the canals round the rapids; for these we paid on the Cornwall Canal, $2.50; on the Barnwall Canal, $2.50; on the Racine Canal, $2.25, and the canal fee (reckoned by tonnage) on our boat amounted to 25 cents. This lands you at Montreal. The river from here to Sorel is so plainly buoyed that a "fool need not err therein;" but not knowing this, I took a pilot (charge, $5) to Sorel. Going up the Sorel, a very crooked river, we kept the lead going, and had little difficulty in reaching the Richelieu River Canal, where we paid 50 cents canal fees, and fortunately caught a tug going to Chambly (charge, $3).

Let no one attempt to sail Lake Champlain without a chart. I could not procure one until I got to Burlington, and on inquiring of a pilot where to go, he said, "no use taking a pilot for your boat, go anywhere, go in the middle, plenty of water." I did; and the consequence was I hung the sloop up on Iron Point Reef, just in the middle. We stuck just hard enough not to be able to get off without assistance, but a gentleman with a steam yacht kindly gave us a "yank" and we slid into deep water, with only the loss of a little paint and our temper, the latter for following such stupid advice. At Burlington we procured the charts ($1.60) and had no further difficulty in reaching old Fort Ticonderoga. Here the lake, or rather the river, becomes so narrow it is impossible to tack, and rather than wait for a fair wind, I chartered a passing tug, which towed us to Whitehall for $5. A coal derrick, kindly loaned by the owner, helped us lift our spar out here and place it on deck, preparatory to going through the Champlain Canal. This canal resembles the Erie in but one respect, it is free, in all others it differs; the Erie, broad, plenty of room, plenty of water; the Champlain is lacking in all these important points, it is narrow and low, with barely room for two boats drawing 4½ft. to pass, in fact we were on the towpath, or the mud on the other side several times going down. The mule, we only had one, and driver on this canal cost $15 to Albany. I would strongly advise any one not especially anxious to see Lake Champlain to keep off this canal.

Now, a word about protecting your boats in going through the locks, etc. There are on this trip some hundred and odd locks to pass through, some "lock up," some "down," and all are liable to scratch, scar and gouge your boats. I bought in Albany a lot of 4 or 5in. (in diameter) hawser from a junk house, paying, I think, about five cents per pound, and cutting this into proper lengths, placed it in two parallel lines all round the boat; this worked pretty well, but on coming down I had the hawser cut into short lengths and made into fenders, seven to the side, and do not think I had a scratch anywhere. It is inevitable that the decks will have gravel, sand and mud pushed, pulled and dropped on them and trodden in unless they are covered with old canvas or otherwise.

Our run down the Hudson was as pleasant as the one up had been, we had fair wind, plenty of it, and no trouble all the way. We spent two days moving round New York harbor, saw the Mayflower, Volunteer and Thistle, also that "witch of a boat" the Now Then. I can't blame the boatmen for thinking her rather uncanny, her peculiar build, and the marvelous way in which she apparently slides over instead of through the water is, to say the least, surprising. Before leaving New York I secured the services of Capt. Hussey, one of the most competent sailors and navigators I ever met, and going by the outside passage we stopped at Long Branch, Key East, Barnegat, Cape May, Hampton Roads, Old Point, and so up the Chesapeake Bay to Baltimore, making the run from New York in twelve days, the only mishap being at Old Point, where a puff carried away our topmast, causing a delay of four hours for repairs. So ended our trip. OLD H.

CENTERBOARDS IN GREAT BRITAIN.

AT the meeting of the Y. R. A. in London on Feb. 21, Lieut. Henn introduced a motion to abolish the rule prohibiting centerboards. It was decided to take no action at present, but to lay the matter before all the clubs in the Association and ascertain their opinions. This postpones the subject for at least another year.

BUILDING NOTES.—Most of the builders about Boston are now busy with cutters and schooners of moderate size, and a number of modern craft will make their appearance this season. The reforms in design are not confined to Mr. Burgess and Boston alone, but throughout the East generally substantial improvements in model, ballast and rig are found. At Marblehead, in addition to the schooner and cutter building by Mr. Eddy, Mr. Billows is busy with the Witch, putting in iron floors and a hollow mast, besides a general overhauling. He has also the sloop Sachem up for an iron keel of 1,400lbs. Mr. Billows has built this winter, from his own designs, a centerboard boat for the class of the Pleon Y. C., 18ft. over all, 15ft. l.w.l., 5ft. beam and 5ft. 6in. draft, with board.... At Bath, Me., the Sapphire is partly planked. Story has been delayed by a change of plan in Mr. Seccomb's yacht, the topsides being raised so as to gain headroom. She will soon be ready for launching. Mr. Fabyan's yacht is partly in frame at McKie's yard.... Lawley & Son have made a model for the new Burgess steam yacht, and she will be laid down and the moulds made by Mr. Keogh, in East Boston.... Wood Bros. have now two steam yachts in hand, and will lay down a third, 76ft. over all.... At Lawley's yard Marguerite is about planked up. Mr. Mean's yacht is nearly completed, also Messrs. Flint's and Eaton's boats. Mr. Fowle's cutter is planked, Mr. Codman's boat is in frame, Mr. Longfellow's cutter will soon be ready for framing, while the keel of Mr. Adams's Baboon is just ready. The firm has also an order for a steam launch.... The keel for Com. Canfield's schooner has been laid by Harlan & Hollingsworth.... At City Island Mr. Piepgrass is preparing for the new second class boat for Mr. Auchincloss.... The steam yacht Narod is now ready for launching.... A sloop 50ft. long is in frame at Englis's yard, Greenpoint, for Inspector Williams.... At Bay Ridge Mr. Mumm has commenced work on a centerboard sloop, 46ft. l.w.l. and 60ft. over all, including a clipper stem. The centerboard sloop built last fall has been sold by Mr. Mumm to Mr. Emmons, of Boston .... The new sloop for Com. Chas. Pryer, New Rochelle Y. C., will be named Eurybia.

BOSTON FISHERMEN.—The many exciting newspaper races of the Boston and Gloucester fishing vessels have at length culminated in a race on the water between the Roulette, the J. H. McManus and the new Burgess boat, Carrie E. Phillips. The former boat arrived at Newport on Feb. 17, and claimed to have beaten both the others badly, but they have not yet told their side of the story, so the result is still in doubt. The following challenge has been issued by the owner of the I. J. Merritt: "We, the undersigned, representing the Gloucester fishing schooner I. J. Merritt, Jr., hereby challenge the Boston schooner John H. McManus to a race, on the following terms: We will sail her on a triangular course of 40 miles, or on a course of 20 miles to windward and return, the course to be laid in Boston Bay. We will sail for any amount between $100 and $1,000, the owners of the McManus to choose the amount within these limits. We will sail the race on any day between the 15th and 25th of May. The vessels to be restricted to the sails carried in the former fisherman's race, viz.: mainsail, foresail, forestaysail, jib, flying jib, standing maintopsail and maintopmast staysail. To avoid racing in a drift, the distance of 40 miles to be completed by one vessel within 10 hours of the time of starting or no race. In case the owners of the McManus do not see fit to accept this challenge, we will sail the Sarah H. Prior a race on the same terms. This challenge to remain open for ten days from date. CHARLES HARTY, GEORGE M. MCCLAIN."

MONATIQUOT Y. C.—*Editor Forest and Stream:* The annual meeting of the Monatiquot Y. C. was held at the club house, Weymouth, on Feb. 13. Fifty members were present. The following list of officers were elected: Com., Joel F. Sheppard; Vice-Com.; Geo. H. Bicknell; Sec., Frederick S. Hunt; Treas., Dana Smith; Fleet Captain, Andrews Lane; Meas., Wm. F. Maybury; Directors, the Com., Vice-Com., Sec., Treas. ex-officiis, J. M. Knight, H. Gardner; Regatta Committee, A. D. Bagley (chairman), A. W. Blanchard, C. G. Sheppard, Russell G. Hunt, C. F. Colby, A. E. Pratt, J. M. Knight, A. L. Spinney; Membership Committee, C. G. Sheppard, R. G. Hunt, E. B. Glover, A. E. Pratt, J. M. Knight; House Committee, J. M. Knight, A. W. Blanchard, A. C. Spinney. A lunch was served at the close of the meeting. The regatta committee will meet at an early date, when dates for regattas will be arranged. It has been decided to sail fewer races than last year and to give larger prizes. The club is in a flourishing condition, financially and otherwise, with a present membership of 145 active members. A club book will be published early in the season.—FREDERICK S. HUNT, Sec'y M. Y. C.

BUFFALO Y. C.—This club has elected the following officers for 1888: Com., H. D. Williams; Vice-Com., A. S. Chisholm; Sec'y, H. L. Chisholm; Asst.-Sec'y, E. L. French; Treas., W. C. Cowle: Meas., J. A. Tempest; Fleet Surgeon, Dr. H. Mickle; Chaplain, Rev. C. T. J. Wrigley. The club has lately taken a most important step in prohibiting shifting ballast, a reform that is sure to make itself felt in a general improvement of the fleet. The reports of the officers showed a very satisfactory condition for the club. The State has given it the control of a site on Sand Catch Pier, with a good anchorage, and the plans are now ready for a large and handsome club house. Several new boats are ordered and the old ones are being thoroughly overhauled. Much interest is felt in the club in the proposed international races on the Lakes this season, and if they are finally arranged Buffalo will take part.

LYNN Y. C.—This club has been incorporated by the Legislature of Massachusetts, by an act approved Oct. 5, 1887, with the privileges and responsibilities provided by law. The officers for the ensuing year are: Com., E. C. Neal; Vice-Com., C. H. Lockhart; Capt. of Fleet, Louis Cole; Treas., J. N. Atwill; Clerk, Walter Hawkes, 22 W. Baltimore street, Lynn; Meas., A. W. Hay. Directors—F. E. Baker, H. K. Wheeler, E. B. Newhall, W. E. Neal, B. W. Rowell. Regatta Committee—Walter Hawkes, E. H. Taylor, H. P. Armstead, J. W. Haines, W. F. W. Martin. Membership Committee—J. H. Tufts, F. E. Newhall, W. A. Estes.

WHY OLD ENGLISH?—The valuable testimonials presented by Boston yachtsmen to Messrs. Paine and Burgess are both described as excellent specimens of "English antique" design, one being original and the other an accurate reproduction. The cups given every year by the leading yacht clubs show that there is no lack of American designers fully capable of turning out original and artistic work, and it hardly seems fitting that trophies given in honor of American enterprise and skill should be mere copies of old English fashion. Certainly modern Yankee would be far more appropriate than English antique.

CRUISING.—Alva, steam yacht, was at Villefranche when last reported. Oneida, steam yacht, E. C. Benedict, arrived at Hamilton, Bermuda, on Feb. 6, after a rough passage from New York. She will cruise among the West Indies for some time. Mohican, steam yacht, Wm. Clark, left Fortress Monroe on Feb. 13 for the West Indies. Nonpareille, yawl, S. B. Pomeroy, arrived at St. Thomas from New York on Feb. 3. Gitana, schr., W. F. Weld, called at Key West on Feb. 9, and sailed next day for Charlotte Harbor.

ICE YACHTING.—On the Shrewsbury the ice has been good for some time, and a number of races have been sailed by the local boats. On the Hudson, however, there has been very little sailing and no racing this season, the Scud, from the Shrewsbury, still being at Poughkeepsie, where she was taken two winters since, waiting for a race. The present warm weather is apt to close the season on the Shrewsbury, and probably on the Hudson also.

BOSTON'S GIFTS TO MESSRS. PAINE AND BURGESS.—The sum of $12,000 has been raised in Boston, part of which has been expended for two pieces of silver, the balance being presented to Mr. Burgess. The testimonial to Mr. Paine is in the form of a salver of 275oz. weight, costing $1,200. The design is a copy of old English work. The piece presented to Mr. Burgess is a loving cup, purchased in England, the cost being $500.

ARIEL.—Rear-Com. Chas. A. Stevenson, Larchmont Y. C., has purchased the 3-tonner Ariel, one of the fastest of her class, and will have her out here about the middle of April. Ariel was designed by Mr. Wm. Fife, Jr., and built in 1886 at Fairlie, Scotland, for Mr. W. P. Donaldson, of Glasgow. She is of the extreme cutter type, 39ft. on deck, with clipper stem, 29ft. l.w.l., 4ft. 6in. beam, and about 6ft. draft.

ATLANTIC Y. C.—Officers, 1888: Com., J. Lawrence Marcellus; Vice-Com., Jefferson Hogan; Rear-Com., H. W. Coates; Recording Sec., Paul W. Jeannot; Treas., R. C. Field; Meas., George McNulty; Corresponding Sec., L. M. Sheldon, Jr. Trustees—S. Loines, J. R. Maxwell, Wm. Peet, N. D. Lawton, A. H. Farrington, W. H. Thomas. Regatta Committee—Chas. T. Pierce, H. B. Howell, W. T. Wintringham.

STEAM LAUNCHES.—Mr. R. B. Hill, the steam launch builder of Guilford, Conn., has now on exhibition at the office of Mr. Valk, in the Tribune building, a handsome model of a launch built last year for that gentleman for use on Long Island Sound. Mr. Hill is now at work on a duplicate of the same boat, 37ft. long and 8ft. beam.

JERSEY CITY Y. C.—This club will move its house from the present location near Communipaw ferry to a point further south, at the foot of Communipaw avenue, building out from the shore on piles. The new location will be far more accessible than the old.

HOLLOW SPARS.—Mr. Mumm has lately completed a hollow boom for the Shamrock and a spinaker boom for Mr. Chas. Pryer's new sloop Eurybia. The spars are in two parts, joined by Jeffreys's marine glue.

FORTUNA.—Mr. Hovey will go to England in May, returning home in Fortuna later in the season.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. B.—We know of no reliable work of the nature you wish.

S. H. B.—There is considerable trapping in the North Woods.

F. B.—You should take your gun to a gunsmith to be repaired.

J. L. E., Alabama.—For dealers in beagles see our advertising columns.

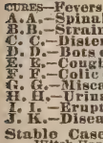
H. E. N., Lincoln, Neb.—For the sleeping bag described in a recent issue, should the fur be turned in or out? Ans. In.

N. C. L., Salem, Mass.—For canvas canoe use boiled linseed oil, with terebin or any other good dryer. This better than varnish.

R. B. P.—The best sail plan for ice yacht was published in the FOREST AND STREAM of Dec. 25, 1885, and Jan. 14, 1886. We can not give you an exact rule.

IF W. H. G., of Chicago, will address J. Pendleton, P. O. Box 585, Rockland, Me., he may learn something to his advantage in breaking gun fright dogs.

J. M. W., New Brighton, Pa.—You will find rules and constitutions for canoe clubs in "Canoe Handling," published by the Forest and Stream Publishing Co.



BOSTON, Newburyport, Mass.—Duke II. was bred by C. T. Brownell, New Bedford, Mass., and is by Duke (Doane's Tom—Chloe) and out of Maud (Copeland's Lon—Clytie).

G. B. P., Ramapo, N. Y.—Please inform me when pickerel begin to spawn and when their spawning season ends or is over. We have a pond here which we wish to protect or preserve against any fishing while pickerel are spawning. Ans. It begins in May and is over by the 10th to 15th of June in your locality. They are not protected in many parts of the country because of their destructiveness. We would advise the planting of black bass in your pond if it has gravel in it. The bass will afford more sport and are not as destructive to other fish as pickerel are.

"UNCLE LISHA'S SHOP."

THE New York *Tribune*, Jan. 7, says: It is a series of *genre* pictures, in fact. A Vermont village of the old time, half in the mountains, and thus combining hunting with agricultural pursuits, has been chosen as the scene, and here the village rendezvous, the shop of Uncle Lisha, the shoemaker, is made the forum wherein all sorts of queer people tell stories and argue and discuss their affairs. Thus the various amusements and pursuits of the people—the coon hunt, the turkey shoot, the fox hunt the sugar camp, the school meeting, Thanksgiving, country courting, etc.—are in turn described, and with a naturalness and force indicative of decided talent in the author. The slow craft and quaint but shrewd philosophy of Uncle Lisha is extremely well done, and indeed many of the village folk appear to be genuine men and women who have sat for their portraits.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

CANVAS CANOES;

AND

HOW TO BUILD THEM.

BY PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in.×27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.

FOREST AND STREAM PUBLISHING CO.,

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actua canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene In the foreground a buck, just shot, is falling on the edge of a lake. Leaning down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channe outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scen is a marsh, on whose broken surface the sun is s tting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an edition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.

Plate 1, The Reverie.
" 2, The Dawn.
" 7, Trout Fishing.
" 8, Deer Hunting.

Group B. (Upland.)

Plate 3, Snipe Shooting.
" 4, Woodcock Shooting.
" 5, Quail Shooting.
" 6, Grouse Shooting.

Group C. (Duck).

Plate 9, Duck Shooting—over decoys.
" 10, Duck Shooting—Flight
" 11, Homeward.
" 12, Home.

JOHN E. DEVELIN.

ONE by one the old sportsmen of New York are passing away, and we look about us in vain for those who are to take their place. The men whose memory goes back to a time when New York was a town of but less than 200,000 people, who used to shoot woodcock and quail and snipe where now stand close blocks of buildings, and the roar and rattle of business fill the air all day long, are growing few in number. Their experience in and about the city of their home can never be repeated. The ever changing conditions of our American life have made impossible for the future what happened in the past.

It is but little more than a year ago since one of the noblest and best of these old-time sportsmen, Shepherd F. Knapp, was laid away for his long sleep, and the touching tribute to his memory which appeared in these columns was written by the hand of his old friend John E. Develin. Now Mr. Develin has followed.

John E. Develin was born Aug. 31, 1820, on the old Van Courtland estate, now a part of this city, but in those primitive days far out in the country. His early education was received at the old grammar school in Murray street, and he afterward entered Georgetown College in the District of Columbia, from which he graduated with honors. He studied law in the office of Jonathan Miller, then a leading lawyer of this city, and after his admission to the bar became a partner in the firm. Mr. Develin succeeded Mr. Miller in the Direction of the Mutual Life Insurance Company, and at the time of his death was one of its Trustees. As a lawyer he was sagacious, acute and eloquent.

He was very active in the political arena for many years, and few men have done so much to purify city and State politics as he. He was many times sent to the Legislature, and from 1844 up to the time of his death his influence was constantly felt in the politics of New York city and State, and always for good. At the breaking out of the war Mr. Develin became a strong war democrat, and did much to aid the government in the trying times which ensued. Later he fought and was largely instrumental in the overthrowing of the Tweed ring. The good that he did in this and other ways can hardly be overestimated.

He was a man of abounding charity, and his benefactions in all directions, though privately given, were very large. He was one of the trustees of St. Patrick's Cathedral, and was in one way or another closely connected with the New York Catholic Protectory, the St. Vincent Hospital, the Foundling Hospital, and other charitable institutions.

The number of positions of trust and honor which he honorably filled during his long career in this city was very great.

Mr. Develin was an enthusiastic sportsman and devoted to shooting, angling and yachting. He was a successful breeder of red Irish setters, and his dogs were equally good in the field and on the bench. One of the founders of the Southside Sportsman's Club, of Long Island, the Wawayanda Club, and long a member of the Southampton Sportsman's Club, he was a leader among that body of old-time sportsmen who were, in their day, the types of all that was best and most honorable in American sport. Such names as Hackett, Arthur, Rogers, Folger, the Knapps, Jones, Waldo, Banks, the Wilmerdings, and the Johnsons, come up to us as we recall his associates and friends in the field and by the trout stream or salmon river. Up to within a comparatively short time he would follow the dogs over the stubble fields with the enthusiasm and energy of a boy of twenty. It seems but a year or two ago that he consulted us as to the prospects of sport in Newfoundland, and made the journey thither with the intention of shooting caribou and ptarmigan, though owing to an attack of illness, his trip was a fruitless one. In recent years he had taken most of his sport on the grounds of the Southside Club on Long Island.

No man has done more for game protection in New York than John E. Develin. His eminence in the law and his familiarity with politics especially qualified him to advise in matters connected with the improvement and change in the law, and his eloquence made him a potent advocate of such changes. The subject deeply interested him, and he was ever ready to freely give his time to those who wished to consult him on this topic. He frequently went to Albany to speak before game law committees, putting off important business matters so that he might give his powerful aid to further measures that he believed would benefit sportsmen.

Mr. Develin was one of the most genial of men and delighful of companions. Highly educated, possessed of eminent powers, a gifted conversationalist and a man of wide and varied reading, and withal witty and bright, his society was eagerly sought for by all who knew him, and an hour passed in his company was one long to be remembered.

To few men is it given at their last hour to look back on a career so honorable, so uniformly successful, and so highly creditable to himself and to the community among whom he passed his life, as was John E. Develin's.

And now he is gone. The active brain is at rest. The voice whose eloquence could sway listening multitudes is hushed. The hand which wielded with equal skill the rod, the gun or the pen, is stilled forever. And we can only say, a good man has passed away from earth.

THE NATIONAL PARK BILL.

THE Senate Bill (S. 283) relating to the Yellowstone National Park was on Feb. 20 reported by Mr. Manderson with these chief amendments: The civil and criminal jurisdiction of the Park is that of the county or district of Wyoming in which the Park is situated; and the courts of that district are given jurisdiction of all indictable offences committed within the park. Persons charged with non-indictable offences or violation of the rules of the Park are tried and punished by a Commissioner resident in the Park, who may also cause arrest for indictable offenses and turn the accused parties for trial over to the Wyoming courts. The willful violation of rules or regulations for the control and management of the Park is declared to be an offence (instead of a misdemeanor) punishable by fine or imprisonment.

It is made the duty of the officer in charge of the Park to act as superintendent of the reservation, and to employ five (instead of three) persons from civil life to act as policemen and scouts. Hunting or killing game is punished by a penalty of not less than $50 nor more than $200 (instead of $20 and $100) or imprisonment, or both. The period for which leases may be granted for hotels is extended from ten years to twenty, and the site may be within one-eighth (instead of one-quarter) of a mile of any of the geysers, the Yellowstone Falls or the Grand Cañon; or one-eighth of a mile (instead of 300ft.) of the Mammoth Hot Spring; and such leases must contain proper provisions for their forfeiture in case of breach of conditions or covenants.

SNAP SHOTS.

THE bearer of this note came into the office last Friday and presented it to the editor:

Forgive me for introducing the bearer if he annoys you. He goes to New York to look up a boat load of potatoes, which he sent by a brother Canuck, but he is burdened with a story which he hopes you would publish. When you hear it you can judge. It is something like Uncle Lisha's adventure with a bear, which he has heard, but thinks his better. He has worked for me more than for any one else; is honest (for a Canuck, *i. e.*, will not steal much), and if you can help him to find his canal boat, you will oblige me. If he wants to borrow money I would advise polite but firm refusal. As he cannot read, I write freely. With kind regards, yours truly, R. E. ROBINSON.

To introduce, Pierre Dubuque, and if he does not light his pipe within five minutes, it is not he.

Mons. Dubuque did not appear much like a Canuck, though he spoke the lingo with the purity of an Antoine Bassette; nor was there any of that Yankee twang which might mark the speech of one coming fresh from the neighborhood of Danvis. It did not take long to discover in the bogus Dubuque the author of "Uncle Lisha's Shop" himself, whom though knowing for lo these many years we knew not. And may the identity of every friend and stranger who comes sailing into one's office under an assumed name be determined in a way equally pleasant and gratifying.

Michigan duck shooters are much interested in the prolonged dispute over the ownership of the Marsh Middle Ground in Sagmaw Bay. In 1883, Mr. H. H. Warner, of patent-medicine fame and a great duck shooter, bought Maison Island, in Sagmaw Bay, for a duck-shooting preserve. The island comprises one hundred acres, and adjacent to it is an island of seven hundred acres, known as the Marsh Middle Ground. This is a famous shooting ground, and Mr. Warner has sought to gain control of it on the plea that it is an accretion to his own island of Maison. His claim has been disputed, and in the Forty-eighth Congress the representative from Rochester introduced a bill to confirm the Warner title. The State of Michigan, which also claims the ownership, succeeded in defeating the bill. The matter was referred to the General Land Office, which decided after special survey that the land was an accretion to Warner's island. This was met by testimony that the island was hundreds of years old and had produced crops of hay from the time of the settlement of the State. In spite of this, a decision has just been rendered giving to Warner the island as accreted land. This decision has been appealed. The ground will not be surrendered without further contention, for though only a waste marsh it is said to be worth over $50,000 for a game preserve, and the Lansing Gun Club will purchase it at that price whenever the State can give a good title.

The proceeds of the Troy dog show will be devoted to a fund for the Troy monument to the soldiers and sailors of the civil war. The dogs will all wag their tails with patriotic pride and the citizens of Troy ought to swell the door receipts, for they have here a rare opportunity to combine patriotism and the acquisition of canine lore.

It is proposed by the Alpine Club of Portland, Oregon, to petition Congress to set apart Mount Hood as a national reservation. The territory will consist of seven townships, and as none of it has been settled the public park project will not interfere with any vested rights. There cannot be too many of these reservations.

Catskill Mountain waters have been receiving attention from the New York Fish Commissioners. Big Indian, once a magnificent trout stream, has just received 30,000 fry; and the hotel men and boarding-house mistresses in that part of the country are 30,000 degress happier than they were before.

THE ROCK CLIMBERS.

X.—STORM BOUND.

DEEP over mountain and valley lay the snow about St. Mary's Lakes. Bitter the cold that bound in icy fetters all the lesser pools and streams, and spread out over half the lower lake a polished covering, against which the cruel wind beat in vain, while the open water was a turmoil of white foam. High up over Singleshot and Flat Top hovered changing clouds of snow, not falling from the clear, brilliant sky, but lifted from the mountaintops, and in dense masses whirled about hither and thither in writhing, twisting shapes, to be at length carried over the edge of the highest precipices and to add fresh drifts to those in the valleys below. The wind blew constantly, and with a constantly increasing fury, and as it blew and beat the lake into foam, and as the intense cold closed all the open waters, except these great bodies, the fowl hurrying southward and caught by the gale, flocked into these lakes in great numbers.

Sometimes the water looked like a stretch of Currituck Sound, black with fowl and resonant with the hoarse clamor and whistling wings of the migrating myriads. The cove opposite the camp was a great resort of geese and of trumpeter swans, and hundreds of these great birds were seen there day after day, feeding and resting after their long journey. Gradually, as the ice stretched out further and further from the shore, the birds were forced off the shallows, and leaving their safe and pleasant loitering place, scattered themselves in the wide bays, where, if they did not find good feeding grounds, they had at least a shelter from the wind. The ducks were here in enormous numbers; canvasbacks and redheads, mallards and gadwalls, pintails and widgeons, broadbills and ruddy ducks, with a great multitude of teals and whistlers and buffleheads and sheldrakes, loons, grebes, gulls and terns, made up a feathered company so numerous and so varied as to be almost bewildering.

Now and then, emerging from some point where he had been perched watching his opportunity, a great white-headed eagle would swing slowly out over the lake, carrying terror to the hearts of the timorous wildfowl. At his first appearance the geese would call out to each other in tones of alarm, and as he drew nearer they with the swans would rise by hurried, yet laborious, wing beats until all were in the air and on the way to some place of safety. The ducks manifested less anxiety and would let the great bird approach quite close to them before moving, but if he attempted to get above them they too would hurry away with a great splashing of water and whistling of wings, but after going a short distance drop down again and quietly sit on the water, rising and falling on the dancing surges. The little terns, when the weather would permit it, fished in the shallows at the head of the lake, and when the wind blew, sat out on the sandbars in rows with their breasts to the sun.

The snowy mountains were brilliant in the bright sunlight. Even the naked eye could detect on their steep sides fresh trails made in the snow by bands of sheep wandering hither and thither in search of food. Evidently the storm did not drive these hardy creatures down into the valleys for shelter. The snow was too deep and the cold too intense to permit hunting, and for the present the sheep were safe from molestation.

The men hugged the fire pretty closely during these bitter cold days. A walk of two or three miles up or down or across the lake was all they ventured on, and no signs of game were seen. Now and then the track of a fox or a coyote or a bay lynx would be seen, where these prowlers had passed along near the lake shore, hoping to surprise a wounded duck upon the beach, but of true game animals there were none about. There was no especial reason why the men should climb the mountains in such weather. They had plenty of wood and the greater part of three fat goats hung upon a tree within 3ft. of the tent door.

One night this meat caused a little excitement in camp. It was perhaps two o'clock on a bright moonlight night, when Yo, who from some cause or other was half awake, heard a noise as of something falling, followed immediately by the sound of galloping quite near the tent. The first idea that flashed through his brain was that one of the horses had come up to the tent, knocked something over, and being frightened had galloped away. The dogs, however, at once set up a tremendous barking, and the sound of the retreating footsteps stopped so quickly that it was evident that no horse had made it. Thoroughly awakened, he raised himself on his elbow, just in time to see Jack getting up, and in a moment more the latter had stepped out of the tent and called out, "Something has carried off a ham of meat," then an instant later, "Why, I see the darned thing there in the brush!" Yo rose and went to the door, and from the blanketed forms in the tent came the question, "What is it?" and the recommendation, "Shoot the darned cuss!" Jack reached into the tent for his gun, and both men cheered on the dogs who could be plainly seen against the white snow in the bushes dancing around a dark object sitting there. That the dark object was not at all disturbed either by their dancing or their furious barking was made sufficiently plain by its quiescent attitude, and the further fact that it was crunching the bones of the captured meat and was evidently making a hearty meal of it. At length, encouraged by cries of "Sick him, Keno," "Go for him, Babbette," the dogs mustered up pluck enough to rush in upon the creature, but they did not stay there long. The animal suddenly assumed enormous proportions, flew up in the air as if propelled by a mighty spring, and came down again on the back of the largest dog. The later gave one wail of anguish, and stood not upon the order of his going, but fled at once out on to the prairie 50yds. behind the tent, where he positively rent the air with his howls and yelps, while Babbette, who accompanied him, continued to bark in a half-hearted way, as if saying "Come out here into the open, if you dare." Meantime the creature had once more turned his attention to the meat.

"Well," said Jack, "I guess he calculates he'll drive us out of camp, but we'll see first if we can't get that meat back." He then fired four shots at the animal, which calmly went on with its meal until the fourth shot had been fired, when it again sprang into the air and bounded off into the deeper shadows of the brush. Jack stepped out to where the animal had been, picked up the ham, brought it back and hung it up in the tree, and then they went into the tent and crept into their blankets again. A good deal of speculation was indulged in as to what the animal was. That it was a cat of some kind was evident, and it had scarcely seemed large enough for a mountain lion. It was probably a wildcat or a Canada lynx, but all hands agreed that it had courage enough for a lion of the largest size.

The next morning before breakfast Jack went out to where the meat had been brought from and returned with a little tuft of hair, gray mixed with rufous, which had been knocked off by the ball and evidently belonged to a lynx or a wildcat. The depression in the snow where the animal had sat showed by its small size that it had not been made by a mountain lion. After breakfast Jack and Yo took their rifles and started out on the animal's track to see where it led to. It was readily followed, as it wound about through the thick willows, and about thirty steps from where it had left the meat was a bed where it had lain for some time, and in this bed was a drop or two of blood. Evidently it had not been much frightened by the row, and it was quite possible that they might come upon it anywhere. They followed the tracks very carefully, proceeding as noiselessly as possible, and stopping every few steps to look. When they had gone nearly a hundred yards, the tracks swerved suddenly to the right, and just as they had turned to follow them, Jack, who was ahead, made a motion with his hand and stopped, and Yo, stooping and looking under his arm, saw the animal not twenty yards away. It was lying in the sun at the foot of, and beyond, a great spruce tree, and only its hips were visible from behind the tree. Jack motioned to his companion to shoot, but before he could do so he was obliged to creep several yards to the right under the low spreading branches of a willow. This exposed nearly half the animal's side and the shot was fired as close to the tree as possible. At the report the animal gave a spring and stretched itself out on the snow in the death agony. It proved to be a Canada lynx of the largest size, and as it lay there, its thick legs terminating in huge paws armed with long claws, gave it a much more ferocious appearance than it was really entitled to.

An examination showed that Jack's shot of the night before had grazed one of the forelegs, not penetrating the flesh, but just knocking loose a little flap of skin, from which scratch a few drops of blood had flowed. This would, of course, entitle Jack to the skin, for by old-time hunters' law, established and sanctified by long custom, the first shot that draws blood is entitled to the hide and half the meat. They carried the carcass back to camp and skinned it.

Day after day the bitter cold continued. In the morning when it was still, the lake would smoke with the cold like a boiling kettle, and it was impossible to see across it. This mist from the lake froze upon the grass and on the branches of trees and bushes in beautiful shapes, and when the bright sun shone on these frosted twigs the scene was brilliant. The grass on the beach was often covered with a soft feathery frost until it bent double beneath the weight of its load. This frost lay only on one side of the stalks, and was half an inch high, with straight sides like a wall. It seemed to be made up of a series of straight cylindrical rods at right angles to the stalk, and about these rods clustered little spherical particles of ice which united the rods. As soon as the wind rose, which it did each day at about 9 o'clock, all this frost work was blown away, and the lake was cleared of its mist.

Each day it snowed more or less, and the wind blew more fiercely. This is the home of the blizzard. Starting from these mountain gorges the winds rush out over the plains, bearing, in winter, death and destruction on their snow-clad pinions. Until Manitoba and Dakota are reached there are but few settlements, and but little is heard of the storm, but there it begins to do its deadly work, and then the people in the East hear that a cold wave is coming, and shiver as they contemplate it.

During these days the blasts of wind would sometimes lift a mass of water up from the surface of the lake and carry it along as a white cloud of spray eight or ten feet high, far down the valley. Several times, instead of rolling along like a white cloud, this water was carried up in a solid column, looking like a waterspout, until it was one or two hundred feet high, and then was suddenly dissipated by another blast and vanished. Near the tent the small boat was drawn upon the beach, only two or three feet of its stern being in the water, which was here, owing to the shelter of the brush, scarcely ruffled by the gale. From this place one day the wind lifted the boat up into the air, turned it over and deposited it right side up in the same relative position eight or ten feet further down the shore. In its passage one of the rowlocks was broken and the boat partially filled with water.

Sometimes one of the men would go down the lake or across it to the bay where Appekunny and Yo had camped two years before, and try to get a shot at the swans that were resting there, but these walks never resulted in anything more than a hearty appetite for the following meal, and the few shots fired produced no results. In the Inlet just above camp, where the water flowing swiftly over the shallows was free from ice, there were generally from thirty to fifty ducks feeding, and now and then, when they desired broiled duck, one of the men would go up there and shoot half a dozen with his rifle. Sometimes two of them would take a long round through the snow in the hope of stumbling on a lynx or mountain lion or wolverene, and would come in after two or three hours' brisk tramping all aglow with exercise and eager for dinner.

Once or twice attempts were made to climb the mountains, but the snow was too deep and the walking was very laborious. There were plenty of wild creatures abroad in the timber. Tracks of mountain lions and bears and bobcats and lynxes could be seen. Wolverenes, fishers and martens had been traveling about over the snow looking for the snowshoe rabbits, squirrels and mice, on which they feed. The clear-cut tracks of the dusky, the Franklin's and the ruffed grouse were often seen, and other winter birds, such as pine grosbeaks, crossbills and jays were hard at work in the branches of the trees; but of hoofed animals there was no sign on the lower levels.

At length there came a day when the cold broke. By this time most of the waterfowl had departed, and only geese, whistlers, and buffleheads remained on the lake. One morning it was observed that the wind had changed from cold to warm, and presently the snow began to melt. One after another little brown patches appeared on the flat behind the tent, as the snow became less deep, and tufts of grass began to show their heads above it. For two days the chinook continued—a soft warm wind which played havoc with the work that winter had done. The ice disappeared from the lake and the south hillsides became bare.

And now came a mournful event—a parting. The Rhymer's time was up, and one afternoon he and Jack packed a mule, and after hearty hand-clasps rode away, the Rhymer to return over the Canadian Pacific Railway to his Western home, while Jack, after escorting him to the settlements, was to return to the camp. Yo.

The Sportsman Tourist.

SAM LOVEL'S CAMPS.—VII.

THE camp was astir early next morning, so early that Antoine was prancing about the fire with a frying-pan of fish before the morning breeze had swept the cobwebs of mist off the marshes, and so early that, when breakfast was announced, Joseph Hill remarked:

"I never did set no gret on gittin' up in the night t' eat a meal o' victuals, that is 'f I've hed supper in kinder decent season. Not to say but what I kin gin'ally eat hearty—that is, tol'able hearty—but mornin' naps, when you wake up jist 'nough tu sense 't you haint got tu git up, is turrible comf'table, an' I hate bein' cheated aout on 'em. But I'll try tu rise tu the 'casion," and he crawled into place by the stone table.

"Some skeety talkin' was mek me gat up hairly dis mornin'," Antoine said in explanation of his early rising.

"Skeeters talkin'!" said Joseph. "Gosh! I never heard 'em du nothin' but sing, an' dum'd poor singin' at that; I d' know but it's good 'nough singin', but I don't like the tune."

"Wal, sek, boy, Ah'll hear it talk dat tam, an' Ah hear all what he'll said. Fust wen dat leetly mowse woked me up, Ah'll ant know what he was mek it. Den Ah'll fan aout he was four skeety standlin on top of it me an' Sam an' Solem an' Zhozeff. Dat one standlin on Sam say, 'Dis man hide so tough Ah can' steek ma beel in it.' De one standlin on Zhozeff say, 'Ah can' push ma beel in dis one, but Ah can' tol' what Ah'll get, bloods or water or sometings, an' guess he ant know hesef what he got hees inside of it.' De one bore Solem say, 'Ah'll bore hole in dis mans an' de win' blowed aout of it so he'll mos' knock ma head off.' Den de one seet on me he say, 'Ah'll bore in dis one very easy, an' he gat more bloods as dey was water in de lake, an' it tase more better as wines. Come here, boy, dey 'nough for all of it.' Den dey 'll come on me an' Ah'll gat to joump ap pooty quick!"

"It's lucky they waked you," said Sam, "seein' 'at I've got tu gwup betimes arter Peltier. An' come tu think on't, I forgot tu tell ye, Antwine, 'at I see a feller up t' the Slang 'at come f'm the same place 't you did, I guess. Like 'nough you know him."

"He come f'm Saint Cesaire?" asked Antoine with interest.

"No, he didn't give that name, but he come f'm Canady, erles he's strayed away f'm Uncle Lisha's Colchester P'int. He looks ol' 'nough for that."

"From Canady! Oh, bah gosh! you'll s'pose Ah see everybody in Canada? Dat mos' bigger as Danvit prob'ly, an' you'll not know everybody lieve dar, ant it, hein?"

"Wall, no, not quite all on 'em, an' the' 's some 't I du know 'at I wish't I didn't. But I was a tellin' on him 'baout you," Sam continued, indulging in a white lie, "an' he claimed 'at he knowed a man o' the name o' Antwine Bisette. Like 'nough he lied, I've knowed Canucks 'at did git a leetle mite off 'm the act'al facts sometimes, but I guess you'd better gwup 'long wi' me an' see him."

"Frenchmans ant never lie," Antoine protested with a great flourish of gestures, "'fore he'll be here long 'nough for learn it of Yankee, 'cep once a while mebby he ketch it of Injin. Injin lie lak' a dev'."

"Wal, they're turrible easy tu learn, some on 'em."

"Bah gosh! He'll gat good school mom fer dat w'en he'll gat Yankee!"

"Wal, nev' mind 'baout that naow, you'd better gwup an' see him, an' when you git through parly vooin'—you'd orter heard me an' him talkin' French!—you c'n come daown where Peltier did, an' some on us 'll g' over 'n' git ye. Come on."

"Wal, Ah guess Ah'll goin'," Antoine said, arising after relighting his pipe. "Ah'll wan' talk French wid somebody 'fore Ah'll fregit of it. An' it don't healt'y for Frenchman's talk so good Angleesh Ah do, all de tam."

They were well on their way before the touch of the rising sun began to transmute their broad path of silver into one of gold, and it was just gilding the roots of the old hemlocks and patches of the forest floor where the canoe crushed through the rushes to the old camp landing. Antoine had no sentimentality to expend on the place which had given him all he could ever expect from it and was at once ready to follow Sam.

They had not gone far along the path when the sunlight of a little clearing shone before them, and then they saw a small log house with whitewashed sides and notched shingles along its eaves. Coming nearer, they saw an old woman at the door wearing a white cap and short white gown which Sam wondered at, whether meant for day or night attire, and then an old man, on all fours, weeding an onion bed close beside the house. When presently he sat upright to fire with flint and steel a bit of punk to light his pipe, his leathern old visage became plainly visible.

"There, du ye know him, Antoine?" Sam asked in a low tone.

The younger Canadian's face, which had till now shown only amused curiosity, suddenly flashed into an expression of recognition and strong emotion.

"Ah, Mon Dieu!" he cried huskily, "c'est mon poupa et ma mouman!" and he ran forward to the old people.

"Huggin' an' kissin' on 'em julluk any little boy," said Sam with a quaver in his voice, and with tender memories of his own mother who had been asleep under the graveyard sumachs since he was a child, he retired before the rejoicing trio came fairly to their speech. As he went his way back to the boat, the three voices broke forth in such a confusion of incessant gabble that he could not help laughing and remarking, "By the gret horn spoon! A flock o' blackbirds, no, nor all the noises in the ma'sh put together, haint a primin."

He was glad to find Pelatiah waiting at the "John Clark place," his unhappiness somewhat lessened by the prospect of a day's outing. Sam had had the forethought to bring trolling tackle along, and as they fared slowly down stream Pelatiah trailed the lure along the border of lily pads and listened to the story of the discovery of Antoine's parents, and thought it almost as wonderful as a story in a book.

He struck a large pickerel and had the luck, in spite of his flurried awkwardness, to get it safely into the dugout, and rejoiced exceedingly in its capture and in Sam's praise of his skill, as well as in anticipation of the display of such a trophy on his return to friend Bartlett's. He would like, he thought, to see that little dandy spark of Lowizy's struggling with such a fish, almost as big as he, and as likely to haul him overboard as to be hauled inboard. Was it possible that Lowizy might feel a sympathetic pride in his achievement? He had fancied that his heart was steeled against her blandishments, some of which had been vainly expended on him last evening, succeeded by an air of injured innocence that proved as ineffectual. But now he began to feel a forgiving softness and some twinges of remorse. He began to frame excuses for her conduct and accused himself of cruelty in answering her in monosyllables and for not having filled the washboiler for her before he came away. Sam dispelled this silent mood by proposing plans for the spending of the day. "I ben kinder wantin' tu go aout tu Gardin Islan' ever sen we ben here," he said as he sent the canoe on her way with slow strokes of the paddle, never changed from side to side, but steadily delivered on one side without a perceptible deviation of the bow from its direct course.

"The bay's as still as a mill pawnd tu-day, an' s'posin' you 'n' me take a v'yage aout there in the scaow? We c'n git back afore noon an' then fish 'long wi' Sole an' Joe till it's time for you to go hum."

The prospect of voyaging more than half a mile out into the immensity of the lake was rather appalling to Pelatiah, but his faith in Sam was unbounded, and the prospect of setting foot on a real solid island was as alluring as an adventure of discovery, and so after a little deliberation he fell in with the proposal.

Arriving at camp the plan was broached to Solon and Joseph, who at once declared that they had no inclination for so perilous a voyage.

"It's still 'nough naow," said Joseph after a careful inspection of the cloudless sky, "but the's time 'nough for it tu up an' blow like all git aout 'fore we c'ld git aout there and back agin, an' the's no knowin' what dum'd caper that plegged ol' she boat 'ld take a notion tu cut up if the win' did blow, I b'lieve I'd druther look at the lake f'm one side 'an f'm the middle. You c'n see more on't tu oncte that way, an' I b'lieve that'll sati'fy me tol'able well, though 'f I felt julluk goin' I p'sume to say I'd go."

Solon advised keeping to the shore or near it, and gave it as his opinion that the contemplated visit to the island was "an attemptin' of improvidence." They were told of the meeting of Antoine and his parents, and Solon declared it was like the "return of the prodigy son, only proberbly the' wa'n't no calf infatuated for the o-casion."

"This was more as't orter ben 'cordin' tu my idee," said Joseph, "a sorter meetin' half way, an' nob'dy a gittin' tuckered a trav'lin' as that ere Scriptur' young man did."

While Pelatiah tethered his precious pickerel safely in the shallow water, Sam got a lunch of bread and pork, some poles, lines and bait from camp, and the two set forth in the scow. Sam took the oars, a rough pair of Antoine's fashioning, which Joseph Hill said "it wouldn't be no sin tu warship, for they wa'n't like nothin' in heaven or airth, erless the' was some more somewhere 'at Antoine hed made," and Pelatiah took his first lesson in steering with the paddle.

"Gol darn it!" he cried, when in spite of his best endeavors the boat had veered to half the points of compass. "I can't make the dum'd boat p'int nowheres! I don't b'lieve it's half broke!"

"Why, Peltier," Sam said, amused, though half impatient with his awkwardness, "you haven't no cause tu say that, for you make it p'int most everywheres."

"I b'lieve," Pelatiah remarked, "'at they call it steerin' 'cause the gosh dum'd thing acts so much like steers 'at haint broke. It do' know gee f'm haw."

"Uncle Tyler, the ol' feller 'at fetched Sole an' Joe an' to'ther duds daown in his scaow, says 't a boat don't know gee an' haw, but it does starb'd and larb'd. My! 'F you'd a heard him hollerin' at 'em you'ld a thought 't was Cap'n Peck a trainin' his floodwood comp'ny!"

Pelatiah improved rapidly under Sam's patient instruction and was soon able to keep the scow quite closely headed for the island, whose rocky shore, green trees and blossomy shrubs steadily loomed larger, near and more distinct.

While they were on the shallows, frequent touches of the paddle on the sandy bottom, assurances that connection with the solid earth was not yet severed, had given Pelatiah a feeling of safety. But now that the paddle could not touch the bottom, the clams and their slowly traced tracks faded out of sight in the deeper water, the ripples of sunshine no longer crinkled the sands with gold, and there was nothing but water to be seen beneath the boat save where some great rock dimly showed in the green depths like an ugly monster lying in wait for a victim, he wished himself on land, and was glad enough when the scow grated on the rocky slant of the island's southern shore. He could hardly tell whether such isolation was quite pleasant, but it was a new and strange sensation to have this little patch of rock and scant soil all to himself and Sam, but for its few inhabitants, the birds and reptiles, mice and perhaps a family of minks, for they saw one gliding along the shore, as lithe and silent as a snake.

They made the round of all its borders, the sheer wall of the north shore, where storm-bent cedars and birches clung along the brink, and the long incline of rock on the south shore, where thickets of flowering shrubs made a breastwork of bloom just behind the line of driftwood and pebbles thrown up by the high water of spring. They explored the interior, where a goodly growth of almost all the deciduous trees of the region was unaccountably nourished in the thin red soil. In one place they noticed that a pit deep enough for a grave had recently been dug, but for what purpose they could not imagine. They carved their names and the date of their visit on the largest white birch in characters which some later comer might possibly decipher. Then they fished off the eastern and western points of the island, catching perch whose armor of green and gold was darker and brighter than those of their brethren of the creek.

Once when Pelatiah cast his bait into a wide fissure of the submerged rocks, it was seized in a sudden onset that reminded him of the biting of his familiars, the trout. But this was a lustier fellow than any denizen of Danvis' brooks, one that would not be jerked out overhead at the first stroke, but clung to the water tenaciously till, the line's length away, he broke the surface and sprang thrice his length above it, then regained his watery grasp almost as soon as the parted wavelets closed above his bristling dorsal fin. It was no exercise of skill, but only stout tackle and a strong pull that overcame him, yet Pelatiah was none the less exultant when at last he hauled his prize out on to the rocks and pounced sprawling upon him, as Sam said, "Julluck a boy ketchin' a frog."

"This must be a 'Swago, as they call 'em," he said when its captor ventured to quit hovering the goodly 3lb. bass and gave him a chance to examine it. "Seems 's 'ough that feller speared one julluk this that night las' spring, an' him an' Time called it a 'Swago. They say they're the beaters of all the fish in these waters, on the hook or on the table, an' by the way this one skived an' flurrupped 'raound I jedge they've got the fust on't right. Cordin' tu their tell, Lewis Creek's chuck full on 'em, an I wanter hev a slap at 'em one day 'fore we g' hum."

After a while, when both had tired of trying to catch another bass, the pulsing rumble of a steamer's paddles was heard, and they hurried to the next point to see her pass. Compared with the little steamboat he had seen at Vergennes at the time of Uncle Lisha's departure, and the only one he had seen till now, this was a leviathan. Pelatiah thought he could never tire of watching her majestic progress as with flags and pennons flaunting bravely in the sunlight, she spurned the vexed waters behind her in a long line of foam. Gayest and most conspicuous of her bunting shone the stars and stripes, and it made his heart swell with pride to see the flag of his country floating above so grand and beautiful a craft, and he was proudly thankful to be even the humblest of Yankees.

So intently did he and his companion regard the steamer that it was not till she had passed out of sight and the waves of her wake began to beat the rocks at their feet with sullen surges that they noticed what a change had come upon the sky, how silvery domes of thunder heads had reared themselves above the mountains, shadowing some in a blue-black as sombre as the bases of the great cloud temples had become, till mountain and cloud were an undistinguishable, looming mass of blackness. The south wind which had risen from a scarcely perceptible waft of soft air to a breeze that ruffled the lake and briskly stirred the leaves was now hushed, and no sound was heard but the slow wash of the steamer's wake and some voices of shore life, faint, occasional and far away. It was as if nature was holding her breath in expectation of some outburst of her elements, presently voiced by a threatening growl of distant thunder, rolling along the western horizon.

"Wal, naow," said Sam after a brief survey of the storm signs, "I guess we'd better be pickin' up an' pullin' foot for camp, I d' know but we'll ketch it as 'tis."

Gathering their tackle and fish, they hastened to where they had landed, but the boat was not there. She had only been fastened by grounding her bow on a rock, and the wash of the steamer had set her adrift. Standing at the water's edge, with craned necks, they speechlessly watched her drifting away, her oar handles bobbing up and down and creaking and bumping with the swells as if plied by some invisible mischievous water sprite.

By the gre't horn spoon! if we haint in a boat naow," Sam said, as he exhaled his long-held breath.

"I wish tu Lord o' massy we was in a boat," Pelatiah said dolefully, "erless we never'd a-ben anigh one. I won't never git inter one o' the gol blasted things agin, I swum!"

"You'll hafter 'f you ever git away f'm here, erless you wait till the lake freezes."

"I don't s'pose we will git away for a good spell 'f we ever du 'fore we starve tu death! Tew reg'lar Robi'son Crusoes we be an' not a dum'd goat on this pleggid islan'! O, dear me suz!" Pelatiah wailed as a new and greater anxiety fell upon him. "What be I goin' tu du 'baout my chores? The' won't be nob'dy tu help milk t'morrer mornin', an' Mr. Bartlett an' the hull toot on 'em 'll think I'm the meanest lyin' skunk in all creation."

"Wal," said Sam, "we can't help it naow and hev tu make the best on't. Joe and Sole won't dast tu come arter us, but when Antwine gits through parly vooin' with his ol' folks, 'f he ever does, he will. We c'n eat fish an' play 't we own the islan' till someb'dy comes. Le's go an' see haow it gits 'long stormin'," and he led the way to the west point.

FERRISBURGH, Vt.

WILDERNESS CANOE ROUTES.

Editor Forest and Stream:

As sportsmen and tourists will presently begin to map out their vacation rambles for the summer campaign, I have taken the pains to outline some backwoods excursions for that very large class of the angling fraternity, who are making inquiries about canoe routes. Having had early experience in wilderness river trips, I receive a good many letters asking for information as to desirable routes which afford good salmon and trout fishing, and I am hoping that I shall reach a larger number of such persons through the medium of your widely circulated journal than by private correspondence. I have given the Province of New Brunswick the first place, as I consider it superlatively beyond any other district or known region for this kind of manly diversion. Rising like an emerald bar out of the encircling sea, and crowned by umbrageous forests and bald mountain knobs, it includes within its central eminence a multitude of lakes and rain-water reservoirs which supply the delectable streams which radiate therefrom in all directions, expanding finally into the considerable rivers known to commerce and erstwhile filled with salmon. It was my very good privilege to navigate it in every part a quarter of a century ago, before the rivers were leased, and when salmon fishing was free to rods. Then the forests were virgin, and few logging roads threaded the intricacies of its secluded precincts. To the birch canoe alone was there an "open sesame." Now it is crossed in every part by railroads, and one can obtain guides at stated points and those articles of the outfit which once had to be packed the entire distance, making these forest trips vastly more convenient, but to me less charming than when comparative solitude reigned throughout. Steam takes the romance out of the woods. I had rather get sap in my eye, lying face up under the pines, than pamper my indulgence in the snuggest club house apartment extant. For those who wish to rough it, with a couple of Indian guides to each canoe, the subjoined itinerary will be valuable. They are the old-time routes re-traced. Sir Arthur Gordon, Governor of the Province of New Brunswick, went over a number of them in 1864, and wrote quite an interesting pamphlet, entitled, "Wilderness Journeyings," which is still on the shelves of some libraries. If one could follow the Grovernor's earnest advice, he would take not only mosquito bars but the finest woven illusion to keep out the punkies, midges, sand-flies, and "bite-'em-no-see-'ems," all of which are the same bird under different synonyms.

ITINERARY OF CANOE ROUTES.

1. From the St. John River and the Grand via Waagan and Waagansis to the river Restigouche.

2. River Restigouche and Tom Kedgewick to Rimouski and the St. Lawrence.

3. River Nepissiguit via portage to the Northwest Mirimichi.

4. From Bay Chaleur via Restigouche and its confluent Upsalquitch to the Nepissiguit.

5. St. John River via the Tobique and Nictor to the river Nepissiguit.

6. From St. John River via the Madawaska, Lake Tenniscouta and Trois Pistoles to the St. Lawrence.

7. Via the Southwest Mirimichi and portage to the Nashwaak and St. John rivers.

8. From the St. John via the Tobique River and Right Hand Brook to Long Lake, and portage to the Little Southwest Mirimichi and the main river.

9. From St. Stephen on Bay of Fundy via St. Croix River, Chepetunacook Lake and Monument Brook, to portage and via Meduxnakik to Woodstock on the St. John.

10. From city of St. John on river St. John to Grand Lake, Salmon River, and portage to Richibucto River and Gulf of St. Lawrence.

11. From St. John up the Kenebeccasis bay and river, with portage to the Peticodiac and Chignecto Bay.

12. From St. John River via the Washdemook and New Canaan River to portage and the Cocagne River to Northumberland Strait on the Gulf of St. Lawrence.

The nine first named are the most interesting by long odds. Of course the tourist must know that he is not at liberty to catch salmon anywhere except by favor, but trout fishing can be indulged in *ad libitum*, and no doubt the privilege of trying for a salmon or two would not be denied on occasion by the lessee or river guardian. I don't think salmon can now be found on the three last named routes, but there are other nice fish, and the

scenery is charming, being for the most part pastoral, and long since civilized out of its wilderness characteristics.

The northern part of Maine has somewhat similar advantages for protracted and continuous canoe routes. There being a watershed about midway of the Aroostook which throws the streams northward to the upper St. John, and southward into the larger rivers which run to tidewater on the Atlantic, one can choose among several. The tributaries of the Penobscot spread out like fingers to touch the feeders of the opposite slope. From the headwaters of the Mettawamkeag you can portage the Aroostook River and the St. John; from headwaters to the west branch of the Penobscot to the Walloostook; from the Seboois into the Aroostook, from Wasataquoirk into the Allegash, from the little Maciah's Brook, which is a feeder of the Aroostook, into the well-known Fish River chain of lakes emptying into the Upper St. John. Then there is the old-time circumbendibus route up the Kennebec, through Moosehead Lake to the upper waters of the west branch of the Penobscot, and down that stream south to the main river.

If the tourist would prefer an extended Western trip, there are the two old-time Hudson's Bay traders' routes, one known as the Pigeon River route, from the northeastern Minnesota boundary on Lake Superior, through the Rainy River to Lake of the Woods; and the other from Fort William, on the Kaministiquia (Lake Superior), by the Dawson Route to Winnipeg. The tourist can do as much of these as he prefers by steamer. There are in northern and middle Minnesota many groups of lakes connected by streams, which afford most excellent black bass fishing, and indeed fishing for all fish but speckled trout. The choicest of these, and one which ladies can enjoy without discomfort or fatigue, is the Pelican chain of lakes near Detroit, on the Northern Pacific Railroad, involving a two-days' trip. This can be extended to an unbroken journey of 136 miles. An equally agreeable trip is the Intermediate system of lakes in northern Michigan—a favorite steamboat route for tourists. The Vermillion Lake system in northwestern Minnesota is incomparable, and a trip on these waters can be extended indefinitely. Lake trout can be caught in abundance. I could tell you of a wonderful region in the Mille Lac and White Earth Indian Reservation, but these waters are not open to the public. I have heard the Gogebic waters spoken highly of, though I have never visited them. Of course the Adirondack waters are so well known as to need no reference. The great charm of all these routes consists in the continual change of scenery, the zest of exploration being added to the exhilaration of nerves and the enjoyment of varied pastimes and the vicissitudes of roughing it in the bush.

I suppose there is no craft like the canvas canoe for such work. Nowadays I use no other for stream navigation, and they are as portable as a trunk.

WASHINGTON, Feb. 23.

Natural History.

BIRDS AND BIRD SPECIMENS.

Editor Forest and Stream:

I notice an article headed "Killing Rare Birds" in your last week's issue that places me in the list of quasi naturalists who shoot birds merely for the sake of having a collection, and take more pleasure in shooting and mounting a bird than viewing it alive in all its grace and beauty.

Now nobody likes to view our birds in their freedom and listen to their songs more than myself, and, moreover, I do not shoot birds for the sake of having a collection, and mounting them. O. O. S. says I shot the bird (evening grosbeak) because I had never seen it before and did not have it in my collection. This is true, but when I state that I have been studying the birds of the State over ten years and am perfectly familiar with all of them, he can understand that when I saw a bird that was new to me; it was one that I knew was an unknown bird for this region, and I shot it for the express purpose of sending it to the Smithsonian Institution and having it identified and placed on the list of birds taken in New York State, and when I saw that the evening grosbeak has never but once been taken before in this State, I was right in my conjecture that it was a new bird for this State, had I been sure that it was not, I would not have shot it. There is no one more in sympathy with the AUDUBON SOCIETY than myself, and I heartily agree with O. O. S. in regard to the shooting of our feathered friends by quasi-ornithologists whose only desire is to have a collection, just for the sake of being in the craze, and who soon forget all about their birds and are ready to go into the next craze that comes along. Hoping that O. O. S. will see the reason why I killed the evening grosbeak in the same light I do, and thanking the editor for allowing me this space to explain the matter to O. O. S., I remain, a friend of the birds,

EDWARD SWIFT.

ELMIRA, N. Y.

EAGLES IN CAPTIVITY.—*Editor Forest and Stream:* Driving over the river this afternoon I stopped at Mr. Henry Hulce's to renew my acquaintance with his eagles. It will be remembered that his pair of American eagles nested last spring for the second time, hatching both eggs after an incubation of forty-two days. One of the eaglets lived only two weeks, if I remember rightly, having been choked by food given it by some meddlesome boy in the absence of the owner. The remaining bird (a male) throve well, and is now a promising youngster, measuring 6ft. 2¼in. across the wings. The birds of 1886 are also fine specimens, and neither they nor the parents seem to suffer any in health or appearance from confinement. Until within a day or two the younger "chick" has occupied a large cage with his parents. But they have already begun to mate, and yesterday drove the youngster out of the cage. If Mr. Hulce keeps on he will soon stock the country with the national fowl.—JAY BEEBE (Toledo, O., Feb. 13.).

THE DEER'S LIVER.—Lexington, Va., Feb. 20.—I was surprised to see any question as to the edibility of deer's liver. With us it is considered a *bonne bouche*, and is carefully preserved, especially as it may be used within twelve hours after killing, while the venison is not first-rate for some days, the longer the better.—T. M. S.

THE FOOD OF RAPACIOUS BIRDS.

A COMMON belief exists among the greater number of the people that hawks and owls are great destroyers of poultry and game, and that they should be shot and persecuted by any and every one who has a gun, and great quantities of these birds are slain every year by men and boys who think they have done a great service to the grouse, quail and other game.

In a few cases this is so, but in a large number it is nothing but heartless murder of a feathered denizen of the woods that does more good in a week than he does damage in a year. I am something of a taxidermist and have a large number of birds brought to me every year, and among these are many Raptores; in fact, about two-thirds of the entire number are birds of prey. I have always made a practice of examining the contents of their stomachs to find out what I can about their "bill of fare." Below will be found a list of the contents of the stomachs of a number that I have examined. The results show that a majority of our hawks and owls should be protected by law.

I see by last week's FOREST AND STREAM that in the Senate of the Massachusetts Legislature the Committee on Agriculture have been directed to consider "the expediency of providing by law for the offering of bounties for the destroying of injurious birds and other animals." I notice that hawks and owls are classed among the birds that are thought to be obnoxious. I send you the results of my experience in handling and dissecting these birds for the consideration of the committee and those interested. Below will be found a list of some of the birds I have examined, and the result plainly shows that most of our hawks and all of the owls except the great horned owl should be protected by law instead of a price being set upon their head. Especially is this true of the sharp-shinned and sparrow hawks, and all the small owls, which kill great numbers of the English sparrows. Another bird which destroys large numbers is the great northern shrike (*L. borealis*).

If any bounty is to be offered, let it be for foxes and the great horned owl. These two are the most destructive to our game of any of our animals, especially the latter, who moves through the woods with his silent wings and snatches many a ruffed grouse from his roosting place. I hope that if the Legislature of Massachusetts passes a law for the payment of bounties on any animals, it will be for the scalps of foxes, great horned owls, and the greatest of all pests, the English sparrow.

MARSH HAWK (*C. hudsonius*).

SEX.	WHERE SHOT.	DATE.	CONTENTS OF STOMACH.
♂	Elmira, N. Y.	5- 7-86	3 mice, 1 mole.
♂	Elmira, N. Y.	7-11-86	1 mole, several beetles.

♀	Tioga, Pa.	2- 9-86	Several field mice, 1 mole.
♂	Elmira, N. Y.	2-19-87	Remains of small birds.
♂	Elmira, N. Y.	3- 3-86	Field mice.

GREAT HORNED OWL (*Bubo virginianus*).

♂	Elmira, N. Y.	10- 4-85	Shot while devouring skunk.
♂	Elmira, N. Y.	10- 7-86	Remains of ruffed grouse.
♂	Corning, N. Y.	8-15-84	Gray squirrel.
♀	Tyrone, N. Y.	9- 4-86	Remains of poultry.
♂	Elmira, N. Y.	11- 5-85	Feathers of poultry.
♀	Breesport, N. Y.	11- 2-86	Remains of rabbit. [closely.
♀	Canton, Pa.	12-13-84	Skunk; too strong smell to examine
♀	Tioga, Pa.	12-15-84	Remains of mammal (? weasel).
♀	Gaines, Pa.	12-29-85	Ruffed grouse.
♂	Elmira, N. Y.	1- 3-84	Feathers of poultry; strong smell of
♂	Elmira, N. Y.	1- 5-85	Stomach empty. [skunk.
♀	Big Flats, N. Y.	1-17-86	Remains of poultry.
♂	Erin, N. Y.	1-29-87	Remains of ruffed grouse.

ELMIRA, N. Y. EDWARD SWIFT.

KINGFISHERS IN WINTER.—Seymour, Conn., Feb. 23.—*Editor Forest and Stream:* Reading the accounts lately published regarding kingfishers wintering in the North brings to my mind a like instance here. On the morning of Jan. 14, I was walking along a road parallel with a small river, which in certain places, owing to the swiftness of the current, seldom freezes. My attention was attracted by hearing the rattle of a kingfisher, which was repeated before I discovered the bird. It was a common belted kingfisher (*Ceryle alcyon*) and was standing on the bare limb of a tree overhanging the stream, apparently on the lookout for a breakfast. Whether he made any attempt to catch fish in the icy water or not I do not know, I could not remain to watch him. He flitted disconsolately back and forth aud I heard his sharp rattle several times after I had passed out of sight of the bird. I do not know exactly how cold it was, but we were having our coldest weather about this time, and as it was early in the morning the mercury must have stood at least several degrees below zero.—GEORGE H. SHELTON.

WOLF-DOG HYBRIDS.—Denver, Col., Feb. 18.—Your correspondent "N. A. T.," writing under the head of "The Ways of Wolves," expresses a doubt of the female associating with the domestic dog. Possibly in a wild state the bitch wolf will not consort with the domestic dog. And from what your correspondent says touching the domestic habits and paternal care of the wild father, the bitch is not to be blamed. A black bitch wolf owned in Denver is now mother of nine puppies, the result of a connection with a mongrel shepherd and Newfoundland dog belonging to a neighbor of the owner of the wolf. One of the puppies is brown, the others are black. The mother was captured when a puppy, and was raised by the present owner, is quite gentle and playful, or has been up to the time of her maternity. At present she looks rather savage and indicates clearly that she is not at home to strangers. When the father of the puppies steps in, as he does occasionally, she is ready for a frolic with him, but he will have nothing to say to her—a genuine brute, evidently.—L. B. F.

DELAWARE GULLS.—Dover, Del., Feb. 23.—The annual migration of gulls from the Delaware Bay to Silver Lake, nine miles in the interior, is in progress. Owing to the mild weather at present, the migration is earlier than usual. When the ice in the lake is melted, great quantities of fish that were frozen in the ice, come ashore. This is always attended by great numbers of gulls flocking to the spot. After a few days, all that remains of the masses of fish that were washed ashore, are scattered piles of bones.—DEL. A. WARE.

O. P. Ordway, an employee of the Boston & Albany rail road, who resides at Saxonville, at about 3 o'clock a few mornings ago, heard a strange noise in his yard. He arose from bed and went out to investigate. He found a pet deer, which, for some time past, has been kept on the Simpson estate in Saxonville, trying to demolish a trellis in Mr. Ordway's yard. When he attempted to drive the animal away, the deer turned savagely upon him. Mr. Ordway seized a snow shovel to protect himself with, but the deer, a powerful animal, soon got the better of him. Mr. Ordway grasped his antagonist by the antlers and called for help. Alfred Bradshaw, a neighbor, came to the rescue with a hatchet, and broke both the hindlegs of the animal, which then gave up the fight and was killed.—*Boston Herald.*

ONCE a year the great life insurance companies amaze the public by a statement of their world-wide operations and their immense resources. To-day the New York Life Insurance Company calls attention to a premium income for 1887 of over eighteen million dollars, payments to policy-holders of over nine millions, and an increase in net assets of over eight millions. The assets of the company now exceed eighty-three million dollars. If it be asked—why so much money on hand? the answer is, so many people have a share in it. The company is purely mutual, and the membership exceeds one hundred thousand. This shows the company's policies to be valuable securities other than as death claims. Indeed, this is one of the company's strong points—policies that are valuable to the insured members, if they survive certain periods, when their contracts have large cash surrender values. For other interesting features of the report, reference is made to the very full exhibit published in another column.

PILGRIMAGE OF THE SAGINAW CROWD.

II.

THE ranch house of the Saginaw Cattle Co. is inside of the fence line about, I should imagine, a mile and a half. It is a one-story log-house built in three parts, all connected together with the regular southern gallery, a midway area roofed with shingles, like the rest of the house. One part is used for a kitchen and dining room, and the other two facing each other, one at the right for the general living room having its big roaring fireplace and best furniture air, the other divided off into sleeping rooms. At the rear is the spring house where the butter, eggs and milk are kept cool, for up out of the solid rock bubbled a clear crystal spring of the usual cold spring temperature. At the rear of the house are the stables in which the team horses and other horses in use are kept. Below is the horse pasture, some 200 or 300 acres fenced in bordering on the banks of the Ute. Facing the house is a growth of heavy timber, and at the time we arrived the ground seemed to be literally covered with all kinds of nuts; the squirrels were playing about, the quail calling, and the air was filled with the songs of many birds. On the other side of the ranch from which we approached gurgled and bubbled a sprightly little creek that wound its crooked path between rocky crevices and joined the river below us. Its steep banks on the other side proved merely a balking spot for the not much to be depended on horses, as we afterward found.

We were warmly welcomed by Jerome and Paine, both members of the company from our own town, and Combs, a Tennesseean, who is interested in the ranch. It was the time of the round-up and most of the cowboys were out with the cattle, and the three amateurs had just come in from the last night's camping ground, some fifteen miles beyond, to give us a welcome. The addition of our party made the house rather full, and it was necessary to put up a few beds on the floor. However, as we came on a camping trip this was considered no hardship, but in fact rather something to be appreciated.

The household was looked after by Mrs. Davidson, the wife of the foreman, he being away with the outfit at the round-up. Mrs. Davidson had as an assistant in the kitchen a Creek squaw, with about as villainous a face as one ever saw, and it was a good index to her nature as we afterward learned. She did not seem to take kindly to us, and we heard her tell Mrs. Davidson one day that if we were a sample of the miserable white trash that came down to take the poor Indian's land, she did not wonder that some of them were killed; showing that her disposition was not thoroughly angelic nor cheerful. However, this did not interfere with the Saginaw contingent's consumption of a ton of well-cooked rations. A nice piece of beef had been brought in that day, and was well cooked, and with plenty of sweet potatoes and a few vegetables from Mrs. Davidson's kitchen garden, we felt much better and were willing to sit around the open fireplace with our pipes and cigars and discuss the prospects for the coming hunt.

The boys wanted us to join them at the round-up the next day, saying that it would be a sight well worth seeing, and as it was soon to break up, the most favorable opportunity would be on the morrow. This plan was decided upon and soon good-nights were said, and nothing was to be heard but the melodious snore of the City Official accompanied by a solo on the nasal flute played with good effect by Brooks. Bright and early we were awake in the morning, the dogs were fed, and all was hurly burly for the round-up. This is told by the City Official and I will make a little addition thereto after you have read what he has to say on the subject.

"Preparations were made for an early start on the morning after our arrival, and shortly after daylight we set forth, a portion of the party in a two-seated wagon and the remainder, with Messrs. Jerome, Paine and Coombs, mounted on bronchos.

"The distance to where the round-up was in progress was about 13 miles, and through as lovely a country as one could wish to see, being very rolling and interspersed with 'draws,' which were heavily timbered with oak, pecan, hickory, walnut, etc., but mainly oak, somewhat dwarfed. The weather was simply delightful, a coat of any kind being unnecessary. Between 9 and 10 o'clock we arrived at the place selected for the round-up, which was a large, level plateau, surrounded by hills, with ravines or draws leading up into them; from our station it was a pretty sight, and a very encouraging one to the stock raiser, to see in the distance the herders, or cowboys, coming in from every point of the compass, driving before them motley covered droves of fine fat cattle of all ages and sizes.

"In a short time all the herders were in with their charges, and we had before us a crowding, pushing, hooking and bellowing mass of from 3,000 to 4,000 steers; this was the round-up. The next thing in order was the 'cutting out' or selecting from this great herd, of all the cattle of proper age and condition for shipment, and this proved to be quite an interesting scene. The herders would ride into the crowd and selecting a steer which was suitable, would make a dash for it, and notwithstanding the reluctance of the animal to leave its companions, would follow it madly through the herd and finally succeed in driving it out from the others and across the plains for a distance of perhaps 500 yards, where it was taken in charge by two or three cowboys, whose duty was to keep together all the beef cattle 'cut out' from the main herd.

"It seemed quite wonderful to watch the bronchos in this operation. They seemed to follow by instinct the animal selected by the rider and would dodge to and fro in pursuit at full speed through the other thousands of cattle, yet, once put upon the track, never make a mistake but kept at the heels of the animal chosen, until it was driven over to the herd of 'cut outs'. The operation of cutting out was continued until all the suitable animals had been selected, when the cowboys, with a whoop and a general charge and cracking of whips drove the remainder of the herd off a quarter of a mile or so, and then left them to scatter over the beautiful pastures until again wanted at the next annual round-up. The beef cattle selected were then driven off to join those which had been cut out at other parts of the range, and the round up at this point was finished.

"Our party were then invited to ride over to the 'outfit,' so called, being a four-horse wagon which accompanies the herders, and carries the cook, kitchen, blacksmith tools and blankets of the men. We found the outfit about one mile distant, under some oaks on the bank of a stream. Dinner was ready, and we all partook heartily and without being particular as to the names of some of the dishes. After dinner we witnessed the branding, etc., of some yearlings, which operation appeared to me to be cruel, although undoubtedly necessary. The yearlings were caught by two riders by means of lariats, one being thrown around the neck of the animal and the other around its hindlegs. By means of these ropes it was then thrown down, bound and branded.

"The outfit being out of fresh meat, a two-year-old steer was shot, butchered and cut up in a rather rough and primitive manner, although the work was rapidly done. The best parts of the meat were placed upon the wagon, and the balance left on the ground for the buzzards and coyotes; the outfit then moved off to be in readiness for another round-up in a different part of the range, on the morrow. Our party remained near the camp for a while after the departure of the wagon, and it was curious to see how soon the buzzards caught sight of the remains of the slaughtered animal; for although, when killed, there was scarcely a bird to be seen, yet within fifteen minutes after the wagon drew out, there were scores of them upon and around the carcass, and more coming in every direction, as far as the eye could see.

"We then returned to headquarters to be in readiness for our first hunt, which was to begin next day."

The City Official omitted to state that two of the dogs were taken with us that day. After getting some seven or eight miles from the camp, Mose running along by the side of wagon suddenly put up his nose and going into a little draw of red top, came to a stiff point, and stood there like a picture. Those on horseback turned their heads, and finally their horses see the sight, and we in the wagons hastily tumbled out, put cartridges in our guns and walk four abreast toward where the dog was standing like a rock. We were confident that a whole covey of birds was to be flushed, but such did not prove to be the fact. It was only one old hen and she got up in front of Brooks, who very nicely tumbled her over. This was the only one to be found, and after hunting the ground well over, we bundled into the wagon again and went on. Finally topping a high hill, down in the valley before us spread out for a long distance was the cattle herd. In the bright sunlight with the vivid green as a background it was as pretty a picture of moving live colors as one would wish to see. However, this beautiful view and the anticipated pleasure of witnessing a round-up were counterbalanced by something more potent in the minds of Brooks and the writer. I had spent many weary days thumping cattle in Texas and knew too well the process of roping, branding and cutting out. Therefore, when turning to the left in the opposite direction from the herd, we saw meandering through the valley a little watercourse, fringed on either side with the usual quota of trees and foliage, and noticed that it joined another branch some two miles further down, and that they both then strove to reach the point where the nooning was to take place at the round-up, the temptation could not be resisted to get out and hunt down its banks, and meet the boys some time in the middle of the afternoon for the homeward journey. This was all well planned and supposed to have been understood. We understood that we were to go to the top of a high hill midway between the forks of the creek and the round-up, and there await the return of the vehicle did we not get in to their camping place, but this was misunderstood as subsequent events showed.

The day was very warm, and after leaving the rest of the party, Brooks took the bank and I the bed of the creek, following it along for probably half an hour, when suddenly old Bob came to a point and Mose backed. The trees were very thick at this point and a large covey of quail rose with a whir, disappearing in every direction, and the three shots counted but two birds. They scattered badly and we had very poor luck, getting but four out of the covey. It became very warm and the dogs could not work if they were away from the water, and this being our first tramp, we were not ambitious; but by and by began to wonder if we had made a mistake in leaving the wagon. One or two coveys of quail were found in this way and our bag began to assume fair proportions. Noon came and passed, and as we came into the valley where we expected to see the round-up ahead of us, not a single animal was in sight. We could not have made a mistake as we had been following the water course, and we had plainly marked it out from the hill top, but where had that immense herd moved and what had become of the party? When anything of this kind takes place one either suddenly becomes very thirsty or very hungry. There was plenty of water near so we could not be thirsty, but we immediately imagined we were starving, and mounting the high hill on which we were, as we supposed, to await the return of the boys, and nothing being in sight we moved further up to where it was fringed with a thin and scattering growth of scrub oak. The wind by this time had come up, and seemed to be blowing a gale. It was a relief in one sense as it cooled the air, but it made it dangerous to light a fire, and we had firmly resolved to have some of our quails broiled before we budged another inch, so we run the risk. The coals were glowing, and stuck upon a twig, each was holding a bird over the embers. We had no salt, but we did have a little jig water in our flasks and it answered as an excellent substitute. We poured about a tablespoonful over each bird, and I am frank to say that never did a morsel taste better to either of us than these broiled quails with the liquored seasoning. We lit our cigars and stretched out on the grass for half an hour's smoke, and still seeing nothing of the missing party began to be slightly alarmed, when between two hills away off to the left we saw a moving body of cattle. This we were confident was the round-up, and we were sure that the boys must be near there, as the cattle were moving toward the stream and the general direction was where we expected to find them; therefore we once more hurried to the river bed and about the same time finding a nice covey of birds began to enjoy the sport. Both had made a nice clean right and left and were congratulating each other on our good shooting, when it occurred to us to look at the time and saw that it was nearly three o'clock, an hour past the time for starting home. The situation began to look serious to us, as we were probably fifteen miles from the ranch in a direct, line and what that line was we hardly knew.

Crossing the creek and moving up the hillside toward where the cattle were going we saw away in the distance some one riding as if bent on business and coming in our direction. When within hailing distance this proved to be Jerome. He seemed quite excited, saying he had been ransacking the prairie in every direction, that we had not kept to our agreement as to the place of meeting. There was no time for explanations, but he insisted on my taking his horse and riding in the direction he pointed; he said at a certain point I would find Paine waiting, and then I was to take Paine's horse and ride in the direction he was to show me, and he was to bring his horse back to himself and Brooks who would be tramping along in the direction I was to take. Argument was unnecessary and I mounted his horse and set off at a rapid gait. After I had gone about a mile I found Paine and the rest of the programme was carried out. I was directed to a point crossing a ravine and here George was waiting for me, and said that the party was a mile or two beyond us and that the City Official and the rest of them had given us up for lost and were very much exercised and afraid that we would have to lie out over night. It was rapidly nearing sundown and there was no track over the prairie to guide us back. Jerome, Paine and Combs were to stay with the herd for the next day's round-up and then ride into the Agency some sixty miles distant, and we probably would not see them again while at the ranch, consequently we had no one to pilot us back, but our own recollection of the direction taken in the morning.

George and myself rode side by side toward where the wagon was waiting, passing by the way, at the foot of an old dead tree, a dead cow, and in a circle around it, in the air and on the trees were probably a thousand turkey buzzards, screaming and fighting for their repast, and making a very weird and uncanny spectacle. The City Official was very much relieved when he saw me with George. Combs was at the wagon, and after Brooks joined us on Jerome's pony took the two horses back, bidding us good-bye and cautioning us about driving as fast as we could, and pointing out the direction to take. We started off feeling quite confident and happy, but had not gone over a mile before one of the horses balked, being played out. Our little jehu, Charlie, had neglected to bring corn enough for his team, and they were hungry and fagged out, but he had brought a plentiful supply of tobacco, and if the amount of tobacco juice expectorated could have been equalled by horse food, a good sized livery stable could have been maintained thereon. But it did not seem to worry him, notwithstanding the fact that all of us ripped and profaned considerably. There was nothing to do for it, however, but jump out to see what they would do with the empty wagon. They would pull that, but every time any of us got in they would balk. We were in a hurry and a long way from home, and it was rapidly growing dark. The City Official being weighty and not given to walking, was urged to ride, and finally the jaded nags consented to pull him, and the rest of us swung out at a good pace and really distanced the tired horses. After going four or five miles we struck the main road and then knew the direction home for a certainty. The horses seemed to feel better and the road was easier for them, the evening cooler, and our spirits began to rise, and as if affected in like manner the horses began to pull us. With much persuasion they were gotten into quite an acceptable trot, and we had great hopes of reaching home that night. However, we knew we had to ford the Ute at a very dangerous place, and as it was liable to be a very dark night this was quite a stumbling block in our way, still, if the horses did not again give out, we were all right. An hour before we had sent the Doctor ahead, he riding a mustang, to try and reach the ranch or Whistler's and send out some fresh horses to us.

We found that by striking up some lively air, and all singing at the top of our voices, the horses were so badly frightened that they dare not stop trotting, or else they appreciated the music so much that they repaid us the best they could. At any rate, when the so-called music commenced, the horses pricked up their ears and quickened their pace. An hour or so rolled by and we were confident we had travelled twenty miles instead of ten, for it certainly was the longest hour's ride I ever had, when out of the black darkness ahead loomed up a light, and it proved to be the Doctor on horseback, with a lantern. He said that we were near the ford and we were glad of it. The lantern was carried across ahead of the horses, and all jumped out before attempting to ascend the opposite bank, as they would at least pull the empty wagon to the top. We finally arrived home, and were welcomed by the baying of the hounds, and to a more practical extent by Mrs. Davidson's well-cooked supper.

I suppose the incidents that took place that day would have made four times as lengthy an article as this, had I time to narrate them, but this bids fair to be long enough without, and I will describe now the following day's hunt which had been partially agreed upon the night before, but definite arrangements were to be made in the morning.

BLIZZARD BILL.
